Defines a conceptual framework for decision making that can be applied across levels of biological organization. Surveys current research on how animals make decisions using genetic, neurobiological, and evolutionary approaches. Three lecture hours a week for one semester. Only one of the following may be counted: Biology 380V, 384K (Topic: Biological Foundations of Decision Making), Neuroscience 380V, 385L (Topic: Biological Foundations of Decision Making). Prerequisite: Graduate standing.

**BIO 381. Advanced Plant Physiology.**

Concepts in the broad field of plant physiology. Includes aspects of plant growth, development, cell signaling, and stress responses that are very similar to these processes in animals, but will also illustrate unique aspects of plants that exemplify the diversity of life strategies on earth. Explores the critical skills needed to evaluate the current literature, data interpretation, and methods for solving key questions in the field. Three lecture hours a week for one semester. Only one of the following may be counted: Biology 381, 389 (Topic: Advanced Plant Physiology), and 389 (Topic 12). Prerequisite: Graduate standing.

**BIO 381E. Ecology Seminar.**

Listen to and discuss presentations ranging from research progress reports to practice conference talks and well-versed presentations of long term research programs. Three lecture hours a week for one semester. Biology 381E and 384K (Topic: Ecology Seminar) may not both be counted. May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Graduate standing, consent of the graduate advisor, and consent of instructor.

**BIO 381K. Ecology, Evolution, and Behavior: Physiology and Biophysics.**

Lectures, conference discussion, and laboratory projects, depending on topic. Not all topics are offered every year. May be repeated for credit when the topics vary. Prerequisite: Graduate standing, and consent of instructor and the graduate adviser; additional prerequisites vary with the topic.

**Topic 1: Topics in Biophysics.** Irritability of living systems and the principles of energy transformation and transfer in organisms;
emphasis on bioelectrical processes and electrical energy changes. Three lecture hours a week for one semester.

**Topic 2: Comparative Neurophysiology.** General treatment of the physiology of neurons, synapses, sensory and motor systems; neural basis of behavior; emphasis on invertebrates. Three lecture hours a week for one semester.

**Topic 3: Sensory Physiology.** Physiology and biophysics of the transduction and peripheral processes of the major sensory systems. Three lecture hours a week for one semester.

**Topic 4: Current Concepts in Neurobiology.** A series of seminars designed to give students a broad background in neurobiology. Three lecture hours a week for one semester.

**Topic 5: Laboratory in Neurophysiology.** Training in research techniques useful for the neurophysiological study of vertebrate and invertebrate nervous systems. Three lecture hours a week for one semester.

**Topic 6: Insect Physiology.** An in-depth study of the physiology of insect organ systems, development, and behavior. Three lecture hours a week for one semester.

**Topic 7: Developmental Neurobiology.** Neurological cell lineage and differentiation, neural migration, axon guidance, neural cell death, synapse formation and maintenance. Three lecture hours a week for one semester.

**Topic 8: Addiction Biology.** Three lecture hours a week for one semester. Biology 381K (Topic 8) and Neuroscience 385L (Topic 3: Addiction Biology) may not both be counted.

**Topic 9: Comparative Animal Physiology.** Examine the physiology of organ systems in animal phyla, with special emphasis on the neural and behavioral adaptations of organisms to their environment. Three lecture hours a week for one semester.

**Topic 11: Current Concepts in Neurophysiology.** Three lecture hours a week for one semester.

**BIO 381N. Basic Processes of Nerve Cells.**

Same as Neuroscience 381N. Degeneration and regeneration in nervous systems following traumatic injury; invertebrate versus vertebrate, peripheral nervous system versus central nervous system, axonal versus cell body, role of glia versus neurons. Three lecture hours a week for one semester. Only one of the following may be counted: Biology 381K (Topic 10), 381N, Neuroscience 381N, 385L (Topic 1). Prerequisite: Graduate standing.

**BIO 381P. Advanced Plant Physiology.**

General principles of mineral nutrition, water relations, metabolic activities, growth and development of green plants. Biology 381P and 389 (Topic 12) may not both be counted.

**BIO 182, 282, 382, 682, 982. Advanced Study and Research.**

For each semester hour of credit earned, the equivalent of one class hour a week for one semester. May be repeated for credit. Prerequisite: Graduate standing and consent of instructor and the graduate adviser.

**BIO 382E. Epigenetics.**

Same as Neuroscience 382E. Study of how epigenetic modifications are covalent modifications of DNA or histones that cause changes in gene expression and how epigenetic modifications appear to be a method through which nurture or the environment can influence nature. Emphasis on how experience or environmental factors epigenetically modify health or behavior of animals. Three lecture hours a week for one semester. Only one of the following may be counted: Biology 381K (Topic: Epigenetics), 382E, Neuroscience 382E. Offered on the letter-grade basis only. Prerequisite: Graduate standing and consent of instructor.

**BIO 382K. Computational and Statistical Biology.**

Three lecture hours a week for one semester. May be repeated for credit when the topics vary.

**Topic 1: Recent Advances in Computational Biology.** Discussion of current scientific papers, methods, and ideas in computational biology and bioinformatics.

**Topic 2: Network Modeling in Biology.**

**Topic 3: Modeling Infectious Disease Dynamics.**

**Topic 4: Current Subjects in Biological Statistics.** Emphasis on the practical aspects of data management and analysis, including programming in R and related tools. Subjects may include general linear models, multivariate statistics, Bayesian statistics, model selection, and graphical presentation of data. The equivalent of three lecture hours a week for one semester. Additional prerequisite: At least one prior course in probability or statistics, at the undergraduate level or above.

**Topic 5: Informatics and Data Analysis in Life Sciences.** Introduction to concepts and methods of data-driven life science. Three lecture hours a week for one semester.

**Topic 6: Programming for Biology.** Explores programming skills that are relevant to research in the biological sciences, including but not limited to programming in Python, R, Perl, C++. Three lecture hours a week for one semester.

**Topic 7: Ecological Theory and Modeling.** Explores concepts and methods of modeling ecological systems including populations, communities and ecosystems. Focus on the methodology and utility of ecological theory and modeling. Examines the basic techniques and classic insights derived from differential equation, statistical, and individual based models. The ability to interpret and evaluate models in the literature will be emphasized.

**Topic 8: Introduction to Biology for Data Science.** Explore biological concepts and methods (including its assumptions and limitations), particularly in the areas of systems biology, medical and evolutionary genomics, and neuroscience. Focus on approaches that produce a lot of data but are analysis-challenged. Biology 382K (Topic: Intro to Bio for Data Science) and 383K (Topic 8) may not both be counted.

**BIO 383K. Ecology, Evolution, and Behavior: Development and Reproduction.**

Three lecture hours a week for one semester, or as required by the topic. Not all topics are offered every year. May be repeated for credit when the topics vary. Prerequisite: Graduate standing, and consent of instructor and the graduate adviser.

**Topic 1: Hormonal Control of Development and Reproduction.** Three lecture hours a week for one semester.

**Topic 2: Techniques in the Study of Development and Reproduction.** Eight laboratory hours a week for one semester.

**Topic 3: Comparative Endocrinology.** Structure, function, and interrelationships of endocrine glands, with emphasis on the control of hormone synthesis and secretion and mechanisms of hormone action. Three lecture hours a week for one semester.

**Topic 4: Recent Advances in Development and Reproduction.** Discussion of recent scientific papers and their contribution to modern work in development and reproduction. Three lecture hours a week for one semester.

**Topic 5: Molecular Analysis of Development.** Lectures and discussion concerning the principles of animal development at the molecular level. Three lecture hours a week for one semester.

**Topic 8: Development and Evolution.** Three lecture hours a week for one semester.

**Topic 9: Survey of Animal Development.** Three lecture hours a week for one semester.
BIO 384C. Subjects and Skills in Ecology, Evolution, and Behavior I.
Designed for first-year graduate students in ecology, evolution, and behavior. Study of why animals behave the ways they do. Study of the proximate and ultimate issues of animal behavior, how it is acquired and regulated, and how it evolved. Emphasis on integration of proximate and ultimate analyses in the various domains in which animals behave. First part of a two-semester sequence. Three lecture hours and one discussion hour a week for one semester. Biology 384C and 389D may not both be counted. Prerequisite: Graduate standing, and consent of instructor and the graduate adviser.

BIO 384D. Subjects and Skills in Ecology, Evolution, and Behavior II.
Designed for first-year graduate students in ecology, evolution, and behavior. Continuation of the study of why animals behave the way they do. Continued overview of both the proximate and ultimate issues of animal behavior, how it is acquired and regulated, and how it evolved. Emphasis on integration of proximate and ultimate analyses in the various domains in which animals behave. Second part of a two-semester sequence. Three lecture hours and one discussion hour a week for one semester. Biology 384D and 389E may not both be counted. Prerequisite: Graduate standing, Biology 384C, and consent of instructor and the graduate adviser.

BIO 384K. Ecology, Evolution, and Behavior.
Basic concepts and methods of laboratory and field analysis in various fields of biology; systematics and ecology of natural populations. Lectures, conference discussions, and laboratory work, depending on topic. May be repeated for credit when the topics vary. Prerequisite: Graduate standing, and consent of instructor and the graduate adviser; additional prerequisites vary with the topic.

Topic 29: Recent Advances in Population Ecology. Seminar course; some written assignments required. Faculty- and student-led discussions of current subjects in population ecology. Three lecture hours a week for one semester. Additional prerequisite: Undergraduate upper-division ecology course (Biology 373 or similar course).

Topic 30: Recent Advances in Community Ecology. Seminar course. Faculty- and student-led lectures and discussions of current topics in community ecology. Some written assignments required. Three lecture hours a week for one semester. Additional prerequisite: Undergraduate upper-division ecology course (Biology 373 or similar course) required.

Topic 31: Recent Advances in Ecosystem Ecology. Seminar course. Faculty- and student-led lectures and discussions of current topics in ecosystem ecology. Some written assignments required. Three lecture hours a week for one semester. Additional prerequisite: Undergraduate upper-division ecology course (Biology 373 or similar course).

Topic 32: Recent Advances in Macroecology. Examines recent ideas and new findings in the fields of Macroecology, Biogeography, and Ecosystem Science. Three lecture hours a week for one semester.

Topic 33: Recent Advances in Conservation Biology. Seminar course. Faculty- and student-led discussions of current topics in population ecology. Some written assignments may be required. Three lecture hours a week for one semester. Additional prerequisite: Undergraduate upper-division ecology course (Biology 373 or similar course); undergraduate upper-division evolution course recommended.

Topic 34: Recent Advances in Microbial Ecology. Explores current subjects and controversies in microbial ecology, including community and ecosystem perspectives. Includes faculty- and student-led discussions of primary literature. Some written assignments required. Three lecture hours a week for one semester.

Topic 35: Global Environmental Change. Explores the knowledge to understand and predict changes in the future through both experimental manipulations and models. Discussion of the scientific philosophy behind this work. Three lecture hours a week for one semester. Additional prerequisite: Undergraduate upper-division ecology course (Biology 373 or similar course); undergraduate upper-division evolution course recommended.

Topic 36: Recent Advances in Evolution. Examines recent and classic research and primary literature concerning general subjects within evolutionary biology. Three lecture hours a week for one semester. Additional prerequisite: Undergraduate upper-division evolution course (Biology 370 or similar course).

Topic 37: Recent Advances in Coevolution. Examines current and classic literature related to the coevolution of interacting species, including but not limited to host-parasite interactions, and mutualistic interactions. Three lecture hours a week for one semester.

Topic 38: Recent Advances in Ecological and Evolutionary Genetics. Discussion and analysis of current and classic literature related to ecological and evolutionary genetics. Three lecture hours a week for one semester.

Topic 39: Phylogenetic Perspectives in Ecology, Evolution, and Behavior. Theory, methods, and applications of phylogenetics in ecology, evolution, and behavior. The development of phylogenetics; the various phylogenetic optimality criteria and their advantages and disadvantages (include non-parametric, semi-parametric, and parametric methods); models of evolution for molecular and morphological data; algorithms and heuristics for searching solution space, including discussion of Bayesian Markov chain Monte Carlo approaches; phylogenetic simulation; statistical assessment of phylogenetic results; molecular clocks; and major applications of phylogenetics. Three lecture hours a week for one semester.

Topic 40: Recent Advances in Biogeography and Phylogeography. Reviews concepts and recent literature in Biogeography, Phylogeography, or Macroecology. Three lecture hours a week for one semester.

Topic 41: Recent Advances in Molecular and Genomic Evolution. Three lecture hours a week for one semester. Additional prerequisite: Undergraduate upper-division evolution course (Biology 370 or similar course).

Topic 42: Human and Primate Evolutionary Genetics. Three lecture hours a week for one semester. Anthropology 388 (Topic: Human/Primate Evolution Genetics) and Biology 384K (Topic 42) may not both be counted.

Topic 43: Ancient and Environmental DNA. Explores the prospects and challenges of ancient/environmental DNA research, and considers the applications in evolutionary biology, paleontology, and anthropology. Three lecture hours a week for one semester. Only one of the following may be counted: Anthropology 388 (Topic: Ancient DNA) Biology 384K (Topic: Ancient DNA), 384K (Topic 43).

Topic 44: Recent Advances in Behavior. Explores recent and classic research and primary literature concerning general topics within behavioral ecology, and the evolution of behavior. Three lecture hours a week for one semester.

Topic 45: Seminars in Brain Behavior and Evolution. Explores how to give a seminar and/or writing a grant proposal. Preparation for job talks, paper presentations, or writing grants.

Analysis at an advanced level of currently active areas of research in population biology. Three lecture hours a week for one semester. Offered on the credit/no credit basis only. Prerequisite: Graduate standing, and consent of instructor and the graduate adviser.

BIO 386. Topics in Plant Science: Ecology and Evolution.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing, and consent of
instructor and the graduate adviser; additional prerequisites vary with the topic.

**Topic 10: Recent Advances in Plant Systematics.** Basic concepts and methods of laboratory and field analysis in various fields of biology; systematics and ecology of natural populations.

**Topic 11: Advanced Subjects in Plant Evolution.**

**Topic 12: Advanced Subjects in Plant Molecular Biology.**

**BIO 386K. Plant Sciences.**

Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

**Topic 1: Advanced Subjects in Plant Ecology.** Seminar course with faculty- and student-led lectures and discussions of current subjects in plant ecology. Additional prerequisite: Undergraduate upper-division ecology course (Biology 373 or similar course).

**Topic 2: Advanced Subjects in Plant Evolution.** Seminar course with faculty- and student-led lectures and discussions of current subjects in plant evolution. Additional prerequisite: Undergraduate upper-division ecology course (Biology 370 or similar course).

**Topic 3: Advanced Subjects in Plant Systematics.**

**Topic 4: Advanced Subjects in Plant Molecular Biology.** Seminar course with faculty- and student-led lectures and discussions of current subjects in plant molecular biology. Additional prerequisite: Undergraduate upper-division ecology course (Biology 373 or similar course).

**BIO 386P. Foundations of Plant Biology.**

Restricted to students in the plant biology graduate program. Study of foundational ideas across the breadth of plant biology. Three lecture hours a week for one semester. Offered on the credit/no credit basis only. Prerequisite: Graduate standing, and consent of the instructor and the graduate adviser.

**BIO 287F. Plant Systematics.**

Principles of plant taxonomy, as exemplified by families of flowering plants found seasonally around Austin. Two lecture hours a week for one semester. Prerequisite: Graduate standing, and consent of instructor and the graduate adviser.

**BIO 487G. Taxonomic Plant Anatomy.**

An advanced course that emphasizes those aspects of plant anatomy that are most reliable and useful for systematic purposes. Three lecture hours and two laboratory hours a week for one semester. Biology 472L and 487G may not both be counted. Prerequisite: Graduate standing, and consent of instructor and the graduate adviser.

**BIO 387J. Advanced Plant Anatomy.**

Plant anatomy in relation to development and differentiation, systematics, and evolution. Three lecture hours a week for one semester. Prerequisite: Graduate standing, consent of instructor and the graduate adviser, and concurrent enrollment in Biology 187L.

**BIO 387K. Plant Evolution.**

The properties of plant populations, considered from genetic and ecological perspectives; mechanisms of evolution within and among populations. Three lecture hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing, and consent of instructor and the graduate adviser.

**BIO 187L. Laboratory in Advanced Plant Anatomy.**

Demonstration of cellular details and tissue systems of plant organs, and instruction on the preparation of plant materials for histological examination. Three laboratory hours a week for one semester.

**BIO 387M. Reproductive Biology of Flowering Plants.**

Pollination biology, breeding systems, and fruit and seed dispersal from evolutionary and ecological vantage points. Three lecture hours a week for one semester. Prerequisite: Graduate standing, and consent of instructor and the graduate adviser.

**BIO 387N. Plant Ecology.**

Advanced topics in plant ecology, including evaluation of ecological concepts, aspects of experimental ecology, and the principles of plant distribution. Three lecture hours a week for one semester. Prerequisite: Graduate standing, consent of instructor and the graduate adviser, and credit or registration for Biology 387N.

**BIO 387R. Population Ecology of Plants.**

A combination of lectures and student-led discussions covering major concepts and current literature in plant population ecology. Three lecture hours a week for one semester. Prerequisite: Graduate standing, and consent of instructor and the graduate adviser.

**BIO 387S. Laboratory Methods in Molecular Ecology and Systematics.**

An introduction to DNA methods in the study of molecular ecology, systematics, and evolution: DNA isolation and purification; DNA quantification; polymerase chain reaction; restriction fragment length polymorphism; random amplified polymorphic DNA; amplified fragment length polymorphism; cloning; simple sequence repeat (microsatellite) marker development; DNA sequencing; automated sequencing; automated genotyping; phylogenetic and population genetic analyses. Seven laboratory hours for one semester. Prerequisite: Graduate standing, and consent of instructor and the graduate adviser.

**BIO 387T. Angiosperm Diversity Laboratory.**

Practical experience in recognizing, identifying, and classifying families of flowering plants. Four laboratory hours a week for one semester. Prerequisite: Graduate standing, and consent of instructor and the graduate adviser.

**BIO 387U. Transmembrane Signaling Mechanisms.**

Mechanisms by which hormones, light, and other stimuli trigger changes in plant and animal cell metabolism. Three lecture hours a week for one semester. Biology 343M and 388C may not both be counted. Prerequisite: Graduate standing, and consent of instructor and the graduate adviser.

**BIO 387V. Research Topics in Plant Biology.**

An introduction to various fields of plant biology. Students attend seminars, faculty research presentations, and other meetings. Three lecture hours a week for one semester, with additional meeting times to be arranged. Prerequisite: Graduate standing in the School of Biological Sciences.

**BIO 388E. Plant Growth and Development.**

Emphasis on whole plant physiology, especially growth and development, water relations, and mineral nutrition of vascular plants. Three lecture hours a week for one semester. Prerequisite: Graduate standing, and consent of instructor and the graduate adviser.
**BIO 388J. General Phycology.**
Survey of the algae, including significant biological aspects of selected genera, research techniques, and readings in the literature. Three lecture hours a week for one semester. Biology 327 and 388J may not both be counted. Prerequisite: Graduate standing, consent of instructor and the graduate adviser, and concurrent enrollment in Biology 188K.

**BIO 188K. Laboratory in General Phycology.**
Survey of various algal groups, including direct observations of their biology, exposure to research techniques, and instruction in cultural procedures. Three laboratory hours a week for one semester. Prerequisite: Graduate standing, consent of instructor and the graduate adviser, and concurrent enrollment in Biology 388J.

**BIO 388L. Laboratory Studies in Cell Biology: Plant Biology.**
Research exercises involving light microscopy, including polarization, phase contrast, Nomarski interference, dark field, fluorescence, and bright-field optics. High-resolution transmission electron microscopy. Hands-on experience with atomic and molecular imaging, including digital image processing and time-lapse video microscopy. One lecture hour and four laboratory hours a week for one semester. Prerequisite: Graduate standing, consent of instructor and the graduate adviser.

**BIO 388M. Plant Molecular Biology.**
Fundamentals of plant molecular biology, including structure and expression of the chloroplast and mitochondrial genomes. Three lecture hours a week for one semester. Biology 350M and 388M may not both be counted. Prerequisite: Graduate standing, consent of instructor and the graduate adviser.

**BIO 389C. Chemistry and Biology of Membranes.**
Consideration of the origin and structure of biological membranes at the microscopic and molecular levels; describes membrane function, especially with regard to transport properties. Three lecture hours a week for one semester. Prerequisite: Graduate standing, consent of instructor and the graduate adviser.

**BIO 389D. Subjects and Skills for Graduate Students in the Biological Sciences.**
Designed for first-year graduate students in ecology, evolution, and behavior. Provides training in many of the skills required of research scientists. Introduction to the writing, presentation and appraisal skills needed to excel in all fields of biological research. Three lecture hours a week for one semester. Biology 384C and 389D may not both be counted. Prerequisite: Graduate standing, consent of instructor and the graduate adviser.

**BIO 389E. Subjects and Skills for Graduate Students in the Biological Sciences II.**
Explores the general subjects and skills required of research scientists, with an emphasis on the research, teaching, and service skills needed by professional biologists, as well as on the major research themes and questions in ecology, evolution, and behavior. Builds on the writing skills developed in Biology 389D to include issues of ethical behavior in research, effective presentation of results, oral presentation skills, interacting with the media, work-life balance, and public outreach. Three lecture hours a week for one semester. Biology 384D and 389E may not both be counted. Prerequisite: Graduate standing, Biology 389D, and consent of instructor and graduate adviser.

**BIO 389K. Advanced Cell Biology.**
Three lecture hours a week for one semester. Prerequisite: Graduate standing, consent of instructor and the graduate adviser.

**BIO 190, 290. Topics in Microbiology.**
Discuss current topics in microbiology. For each semester hour of credit earned, one lecture hour a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of instructor.

**BIO 390C. Fundamentals of Evolution.**
Introduction to major principles and questions in evolutionary biology. Subjects include population genetics, genetic diversity, adaptation, origin of species, phylogenetics, molecular evolution, and macroevolution. Emphasis on identifying open questions, analysis and interpretation of data, and gaining familiarity with the primary scientific literature. Three lecture hours a week for one semester. Prerequisite: Graduate standing, consent of instructor and the graduate adviser.

**BIO 390D. Fundamentals of Integrative Animal Behavior.**
Introduction to major principles and questions in animal behavior with emphasis on why animals behave the way they do. Study of both the proximate and ultimate issues of animal behavior, how it is acquired and regulated, and how it evolved. Emphasis on integration of proximate and ultimate analyses in the various domains in which animals behave. Three lecture hours a week for one semester. Prerequisite: Graduate standing, consent of instructor and the graduate adviser.

**BIO 390E. Fundamentals of Ecology.**
Fundamentals of ecology, ranging from organism physiology to population, species, community, and ecosystem-level processes across landscapes and biomes. Three lecture hours a week for one semester. Prerequisite: Graduate standing and consent of instructor.

**BIO 890G. Applied Public Health and Medical Microbiology.**
One semester (or one summer session) of full-time training in the Texas Department of Health Laboratories, with rotation in the divisions of medical microbiology, mycology, parasitology, virology, sanitary bacteriology, and biologics. Assigned reading and regular meetings with the Department of Health Laboratories staff and the molecular genetics and microbiology faculty. Forty hours of supervised fieldwork a week for one semester. Prerequisite: Graduate standing, consent of instructor and the graduate adviser, and courses in immunology, public health bacteriology, and virology.

**BIO 290K. Scanning Electron Microscopy, Theory and Practice.**
Theory of scanning electron microscopy and basic principles of instrument design; basic procedures in specimen preparation; hands-on experience. Two lecture hours and six laboratory hours a week for six weeks. Prerequisite: Graduate standing, consent of instructor and the graduate adviser.

**BIO 490M. Electron Microscopy I: Theory and Practice.**
An introduction to electron optics; emphasis on basic operation and maintenance of the transmission microscope; theory and practice of basic preparative techniques. Two lecture hours and six laboratory hours a week for one semester. Prerequisite: Graduate standing, consent of instructor and the graduate adviser.

**BIO 390P. Techniques in Molecular Genetics.**
Laboratory training in modern molecular genetics, with emphasis on the manipulation of bacterial plasmid DNA as a model system. DNA purification, gene mapping and cloning, site-directed mutagenesis, polymerase chain reaction, and DNA sequencing. One lecture hour and seven laboratory hours a week for one semester. Biology 368L and 390P may not both be counted. Prerequisite: Graduate standing, consent of instructor and the graduate adviser, and Biology 366.
**BIO 391. Grant Writing and Presentation Skills.**
Restricted to second-year graduate students in the microbiology and cell and microbiology programs. Preparation of a detailed proposal of the dissertation research goals of each student with a presentation in the form of a short talk. Emphasis on critical evaluation of research aims, methodology, and communication skills. Designed for second-year doctoral students in biology. Three lecture hours a week for one semester. Biology 391 and 394 (Topic: Grant Writing and Presentation Skills) may not both be counted. Offered on the letter-grade basis only. Prerequisite: Graduate standing, and consent of instructor and the graduate adviser.

**BIO 391K. Cellular Immunology.**
Cell-associated immune responses, with emphasis on transplantation, immunity, tumor immunology, delayed hypersensitivity, and acquired cellular resistance. Three lecture hours a week for one semester. Prerequisite: Graduate standing, consent of instructor and the graduate adviser, and Biology 360K and 260L.

**BIO 391P. Advanced Virology.**
Replication of and transformation by DNA and RNA animal viruses. Three lecture hours a week for one semester. Prerequisite: Graduate standing, consent of instructor and the graduate adviser, and Biology 330.

**BIO 391R. Advanced Metabolism and Biochemistry of Microorganisms.**
Study of the metabolic processes of microorganisms, using a biochemical approach. Three lecture hours a week for one semester. Biology 339 and 391R may not both be counted. Prerequisite: Graduate standing and consent of instructor and the graduate adviser.

**BIO 391S. Microbial Genetics.**
Molecular biology of nucleic acids; biosynthesis of macromolecules, transfer of genetic material from cell to cell, recombination, mutagenesis, and regulatory mechanisms. Three lecture hours a week for one semester. Biology 366 and 391S may not both be counted. Prerequisite: Graduate standing and consent of instructor and the graduate adviser.

**BIO 392. Problems in Host-Parasite Biology.**
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing, consent of instructor and the graduate adviser; additional prerequisites vary with the topic.

**BIO 392D. DNA Repair.**
Broad overview of the repair of DNA in archaea, prokaryotes, eukaryotes, and viruses, focusing on the primary research literature, and developing critical thinking and presentation skills. Three lecture hours a week for one semester. Biology 392D and Biology 393 (Topic: DNA Repair) may not both be counted. Prerequisite: Graduate standing.

**BIO 393. Problems in Molecular Genetics.**
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing, consent of instructor and the graduate adviser; additional prerequisites vary with the topic.

**BIO 394. Problems in Microbial Physiology.**
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing, and consent of instructor and the graduate adviser; additional prerequisites vary with the topic.

**BIO 394M. Advanced Studies in Microbiology.**
In-depth study of microbiology topics. Students read original research papers in addition to text assignments. Three lecture hours a week for one semester. Prerequisite: Graduate standing, consent of instructor and the graduate adviser; additional prerequisites vary with the topic.

**BIO 394T. Tumor Biology.**
Explore core aspects of cancer pathology, treatment, epidemiology, the discovery of oncogenes and tumor suppressors, and the molecular genetics underlying the characteristic features of malignant tumors (including metastatic behavior, genomic instability, angiogenesis, cell cycle regulation, and apoptosis). Emphasize the biochemical functions of cancer-related proteins and enzymes and therapeutic approaches based on understanding of these proteins. Examine important experimental approaches that have influenced the current understanding of cancer. Three lecture hours a week for one semester. Biology 384M (Topic: Tumor Biology) and 394T may not both be counted. Prerequisite: Graduate standing; consent of instructor and the graduate adviser.
week for one semester. Prerequisite: Graduate standing. An introductory course in genetics, such as Biology 325, is strongly recommended.

**BIO 395G. Structure and Function of Proteins and Membranes.**

Same as Biochemistry 395G and Molecular Biology 395G. Explore advanced biochemistry concepts and the scientific process. Examine a detailed consideration of the structure and function of proteins, carbohydrates, lipids and nucleic acids, as well as discussion of enzyme mechanisms and kinetics. Three lecture hours a week for one semester. Only one of the following may be counted: Biochemistry 395G, 395I, Biology 395I, 395G, Molecular Biology 395I, 395G. Prerequisite: Graduate standing; a one-year undergraduate sequence in biochemistry is strongly recommended.

**BIO 395H. Cell Biology.**

Same as Chemistry 395H and Molecular Biology 395H. Detailed consideration of mechanisms of growth control, cell cycle regulation, mitosis, cell signaling, protein targeting, and the integration of these processes. Three lecture hours a week for one semester. Prerequisite: Graduate standing; and consent of instructor or Biology 395F and 395G, Chemistry 395F, Molecular Biology 395F and 395G.

**BIO 395I. Advanced Biochemistry.**

Same as Biochemistry 395I and Molecular Biology 395I. Explore advanced biochemistry concepts and the scientific process. Consider the structure and function of proteins, carbohydrates, lipids and nucleic acids, and discuss enzyme mechanisms and kinetics. Three lecture hours a week for one semester. Only one of the following may be counted: Biochemistry 395F, 395G, Biology 395I, 395G, Molecular Biology 395I, 395G. Prerequisite: Graduate standing; a one-year undergraduate sequence in biochemistry is strongly recommended.

**BIO 395J. Genes, Genomes, and Gene Expression.**

Same as Biochemistry 395J and Molecular Biology 395J. Detailed consideration of prokaryotic and eukaryotic mechanisms of DNA replication and transcription; posttranscriptional processing of transcription products; and mechanism and regulation of the translation of messenger RNAs. Three lecture hours a week for one semester. Only one of the following may be counted: Biochemistry 395J, Biology 395J, Molecular Biology 395J. Prerequisite: Graduate standing; and Biology 395F and 395G, or Chemistry 395F and 395G, or Molecular Biology 395F and 395G, or consent of instructor.

**BIO 395L. Laboratory Studies in Molecular Biology.**

Explore modern molecular biology with a research project focus in a laboratory setting. Use methods such as eukaryotic RNA purification, quantitative PCR, CRISPR or site-directed mutagenesis cloning, cell fractionation, protein purification and Western blotting detection toward experimental goals. One lecture hour and six laboratory hours a week for one semester. Biology 395 and 395L may not both be counted.

**BIO 395M. Advanced Microbiology.**

Restricted to microbiology students. Prokaryotic and lower eukaryote genome organization; control of gene/operator/regulon expression; chromosome replication and its control; signal transduction; protein trafficking; organelle assembly; the cell cycle and its control; developmental processes; cell to cell communication; and DNA polymorphisms and adaption. Three lecture hours a week for one semester. Prerequisite: Graduate standing and consent of instructor and the graduate adviser.

**BIO 396. Membranes and Walls of Bacteria.**

Structure, biosynthesis, and function of bacterial envelopes and walls, including associated optional components. Three lecture hours a week for one semester. Prerequisite: Graduate standing, consent of instructor and the graduate adviser, and a course in general microbiology and a course in general biochemistry.

**BIO 396R. Microbiology Research Seminar.**

Students present their research findings and receive feedback from faculty and peers. Designed to help students refine their presentation techniques, practice giving critical feedback, and gain familiarity with a wide variety of research topics. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

**BIO 197. Seminar in Microbiology.**

One lecture hour a week for one semester. Required of all molecular genetics and microbiology majors. May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Graduate standing and consent of instructor and the graduate adviser.

**BIO 397J. Advanced Genetics.**

Intended mainly for first- and second-year graduate students. Selected related topics of current interest with an emphasis on molecular developmental genetics, and any needed review of classical genetics. Designed to help the student to read the literature critically, deliver a good seminar, and participate in thoughtful discussion. Three lecture hours a week for one semester. May not be counted toward the doctoral degree in microbiology. Prerequisite: Graduate standing, consent of instructor and the graduate adviser, and a course in genetics.

**BIO 698. Thesis.**

The equivalent of three lecture hours a week for two semesters. Offered on the credit/no credit basis only. Prerequisite: For 698A, graduate standing in the School of Biological Sciences and consent of the graduate adviser; for 698B, Biology 698A or the equivalent.

**BIO 398R. Master's Report.**

Preparation of a report to fulfill the requirement for the master's degree under the report option. The equivalent of three lecture hours a week for one semester. Offered on the credit/no credit basis only. Prerequisite: Graduate standing in the School of Biological Sciences and consent of the graduate adviser.

**BIO 398T. Supervised Teaching in Biological Sciences.**

Teaching under the close supervision of course instructors; weekly group meetings with the instructor, individual consultations, and reports throughout the teaching period. The equivalent of three lecture hours a week for one semester. Prerequisite: Graduate standing and appointment as a teaching assistant.

**BIO 399W, 699W, 999W. Dissertation.**

May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Admission to candidacy for the doctoral degree.

**Professional Courses**

**BME - Biomedical Engineering**

**Biomedical Engineering: BME**

**Lower-Division Courses**

**BME 303. Introduction to Computing.**

Restricted to biomedical engineering majors. Introduction to computing and programming, focusing on high-level programming languages. Emphasis on programming skills using C++ and Python as well as data acquisition using open-source computer hardware. Emphasis is on biomedical engineering applications for computing. Three lecture hours
and two recitation hours a week for one semester. Offered on the letter-grade basis only.

**BME 303L. Introduction to Biomedical Engineering Design.**
Restricted to biomedical engineering majors. Biomedical engineering design concepts with hands-on learning applications. Three lecture hours and three laboratory hours a week for one semester. Biomedical Engineering 102L and 203L, 303L may not both be counted. Offered on the letter-grade basis only.

**BME 306. Fundamentals of Computing.**
Restricted to biomedical engineering majors. Introduction to computing including bits and operations on bits, number formats, arithmetic and logic operations, digital logic. Explore the Von Neumann model of processing including memory, arithmetic logic unit, registers, and instruction decoding and execution. Examine structured programming and debugging, machine and assembly language programming, the structure of an assembler, physical input/output through device registers, subroutine call/return; trap instruction, stacks and applications of stacks. Three lecture hours a week for one semester. Additional lab hours to be arranged. Only one of the following may be counted: Biomedical Engineering 306, Electrical and Computer Engineering 306, 306H, Electrical Engineering 306, 306H. Offered on the letter-grade basis only. Prerequisite: Credit with a grade of at least C- or registration for Mathematics 408C or 408K.

**BME 311. Network Analysis in Biomedical Engineering.**
Restricted to biomedical engineering majors. Basic concepts in circuit analysis and design of systems for biomedical engineering; Ohm's law, Kirchhoff's laws, and nodal and loop analysis; Thévenin's and Norton's theorem; operational amplifiers; high-order circuit and basic AC circuit analysis using Fourier and Laplace transforms. Three lecture hours a week for one semester. Only one of the following may be counted: Biomedical Engineering 311, Electrical and Computer Engineering 411, 411H, Electrical Engineering 411. Offered on the letter-grade basis only. Prerequisite: Physics 303K with a grade of at least C-; and credit with a grade of at least C- or registration for Mathematics 427J and Physics 303L.

**BME 313L. Introduction to Numerical Methods in Biomedical Engineering.**
Restricted to biomedical engineering majors. Introduces principles and techniques of numerical analysis of biomedical engineering problems. Examines numerical methods of integration, differentiation, interpolation, curve fitting, data analysis, sampling and estimation, error analysis, analysis of ordinary differential equations, numerical modeling of biomedical engineering systems, symbolic computation, and scientific visualization. Three lecture hours and three laboratory hours a week for one semester. Only one of the following may be counted: Aerospace Engineering 211K, 311, Biomedical Engineering 313L, Computational Engineering 211K, 311K. Offered on the letter-grade basis only. Prerequisite: The following coursework with a grade of at least C-: Biomedical Engineering 303 or Computational Engineering 301, Biomedical Engineering 303L, and Mathematics 427J.

**BME 214L. Computational Fundamentals of Biomedical Engineering Design.**
Restricted to biomedical engineering majors. Overview of computational methods used to model biomedical systems, analyze data, and assist in the engineering design process. Subjects and hands-on learning applications include 3D modeling tools and computer aided manufacturing, flow simulation, instrumentation, biomedical imaging modalities, and biomedical informatics. Two lecture hours and three laboratory hours a week for one semester. Biomedical Engineering 314 and 214L may not both be counted. Offered on the letter-grade basis only. Prerequisite: The following coursework with a grade of at least C-: Biomedical Engineering 303 or Computational Engineering 301, Biomedical Engineering 303L, Physics 303K, and Physics 103M or 105M; and credit with a grade of at least C- or registration for: Biomedical Engineering 311 or Electrical and Computer Engineering 411 (or Electrical Engineering 411), Mathematics 427J, Physics 303L, and Physics 103N or 105N.

**Upper-Division Courses**

**BME 320. International Perspectives on Biomedical Engineering Design.**
Activities to consider sociotechnical factors in designing clinically translatable solutions with a focus on international perspectives. Three lecture hours a week for one semester. Biomedical Engineering 320 and 377T (Topic: International Perspectives on Biomedical Engineering Design) may not both be counted.

**BME 129S, 229S, 329S, 429S, 529S, 629S, 729S, 829S, 929S. Topics in Biomedical Engineering.**
This course is used to record credit the student earns while enrolled at another institution in a program administered by the University’s Study Abroad Office. Credit is recorded as assigned by the study abroad adviser in the Department of Biomedical Engineering. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary. Offered on the letter-grade basis only.

**BME 333T. Engineering Communication.**
Restricted to biomedical engineering majors. Advanced communication skills for engineers, with emphasis on biomedical engineering topics. Strategies for written, visual, and interpersonal communication, and for oral presentation. Introduction to library research and to ethical decision making in biomedical engineering. Three lecture hours and one recitation hour a week for one semester. Only one of the following may be counted: Aerospace Engineering 333T, Biomedical Engineering 333T, Chemical Engineering 333T, Civil Engineering 333T, Communication 333T, Electrical and Computer Engineering 333T, Electrical Engineering 333T, Engineering Studies 333T, Mechanical Engineering 333T, Petroleum and Geosystems Engineering 333T. Offered on the letter-grade basis only. Prerequisite: English 303C (or 603A) or Rhetoric and Writing 306 with a grade of at least C-.

**BME 335. Engineering Probability and Statistics.**
Restricted to biomedical engineering majors. Fundamentals of probability, random processes, and statistics with emphasis on biomedical engineering applications. Includes hypothesis testing, regression, and sample size calculations. The equivalent of four lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Biomedical Engineering 303 or Computational Engineering 301, and Mathematics 408D or 408M with a grade of at least C- in each.

**BME 336. Cancer Bioengineering.**
Restricted to biomedical engineering majors. Comprehensive overview of the biology and pathology of cancer. Emphasis on the fundamental nature of cancer, the roles of genetics and the environment, and the contributions of heterotypic tissues in the tumor microenvironment. Exploration of current challenges in the field and ways that various engineering tools are transforming the future of cancer research. Three lecture hours a week for one semester. Biomedical Engineering 336 and 377T (Topic: Cancer Bioengineering) may not both be counted. Prerequisite: Upper-division standing, Biochemistry 369 and Biology 311C or 315H with a grade of at least C- in each.
BME 337. Nanomedicine.
Restricted to biomedical engineering majors. Explore the fundamental properties, synthesis, and characterization of nanomaterials, including their applications in nanomedicine. Discuss micro- and nano-particles for drug delivery and imaging, microfluidics for in vitro diagnostics and biological systems modeling, and nanomaterials and platforms for biological applications. Examine biomedical applications such as cancer, cardiovascular disease, and infectious diseases. Three lecture hours a week for one semester. Biomedical Engineering 337 and 377T (Topic: Nanomedicine) may not both be counted. Prerequisite: Biomedical Engineering 349 and 352 with a grade of at least C- in each.

BME 338. Thin Film Mechanics.
Restricted to biomedical engineering majors. Examine mechanical testing, design, and failure analysis of thin film structures and devices, with an emphasis on mechanics-related subjects including stress, fracture, delamination, and instability. Explore important technological applications of film materials, including integrated circuits, micro- and nano-electromechanical systems, flexible and stretchable electronics, bioelectronics, and surface coatings. Three lecture hours a week for one semester. Prerequisite: Biomedical Engineering 349 and 352 with a grade of at least C- in each.

BME 339. Biochemical Engineering.
Restricted to biomedical engineering majors. Principles of fermentation and cell culture technologies; introduction to recombinant DNA technology and protein expression; the development of therapeutics, vaccines, and diagnostics using genetic engineering. The equivalent of four lecture hours a week for one semester. Only one of the following may be counted: Biology 335, Biomedical Engineering 339, Chemical Engineering 339, 379 (Topic: Introduction to Biochemical Engineering). Prerequisite: Upper-division standing, Biochemistry 369 and Biology 311C or 315H with a grade of at least C- in each.

BME 340. Soft Tissue Biomechanics.
Restricted to biomedical engineering majors. Explore soft tissues and soft tissue mechanics. Examine fundamentals of continuum mechanics (kinematics, stress, balance of linear momentum, hyperelasticity), experimental and nonlinear finite element analysis of soft tissue mechanics, and relevant imaging modalities and facilities available on campus. Three lecture hours a week for one semester. Biomedical Engineering 340 and 377T (Topic: Soft Tissue Biomechanics) may not both be counted. Prerequisite: Biomedical Engineering 352 and 353 with a grade of at least C- in each; and consent of instructor.

BME 342. Biomechanics of Human Movement.
Restricted to biomedical engineering majors. Modeling and simulation of human movement; neuromuscular control; computer applications; introduction to experimental techniques. Three lecture hours a week for one semester. Biomedical Engineering 342 and Mechanical Engineering 354M may not both be counted. Prerequisite: Biomedical Engineering 344 or Engineering Mechanics 319 with a grade of at least C-.

BME 343. Biomedical Engineering Signal and Systems Analysis.
Restricted to biomedical engineering majors. Signals and systems representation; sampling and quantization; time and frequency domains; Laplace and z-transforms, transfer functions, and frequency response; two-port networks; Bode plots; convolution; stability; Fourier series; Fourier transform; AM/FM modulation; filter design; and applications in biomedical engineering. Three lecture hours a week for one semester. Only one of the following may be counted: Biomedical Engineering 343, Electrical and Computer Engineering 313, 313H, Electrical Engineering 313. Offered on the letter-grade basis only. Prerequisite: The following coursework with a grade of at least C: Biomedical Engineering 311 or Electrical and Computer Engineering 411 (or Electrical Engineering 411), Biomedical Engineering 313L or Computational Engineering 311K, and Mathematics 427J.

BME 344. Biomechanics.
Restricted to biomedical engineering majors. Examine the principles of engineering mechanics and their applications to basic problems in biomechanics and biomedical engineering. Explore internal forces and deformations in solids, including stress, strain, tension, compression, torsion, bending, internal pressure, and failure analysis under combined mechanical loading. Three lecture hours a week for one semester. Biomedical Engineering 344 and 377T (Topic: Biomechanics) may not both be counted. Offered on the letter-grade basis only. Prerequisite: The following coursework with a grade of at least C: Biomedical Engineering 303L, Mathematics 427J, and Physics 303K.

BME 345. Graphics and Visualization Laboratory.
Restricted to biomedical engineering majors. Introduction to techniques for graphical display of biological data. Subjects include transformations, geometric modeling, and two- and three-dimensional display algorithms. Includes computational projects with biomedical applications. Three lecture hours a week for one semester. Prerequisite: Electrical and Computer Engineering 422C (or Electrical Engineering 422C) and Mathematics 340L or 341 with a grade of at least C- in each.

BME 245L. Experimental Principles of Biomedical Engineering Design.
Restricted to biomedical engineering majors. Exploration of biomedical design principles through open-ended, hands-on research applications involving mechanical testing, cell culture, and biomaterials. Analysis and interpretation of experimental data, including written reporting of outcomes in scientific journal format. Two lecture hours and two laboratory hours a week for one semester. Biomedical Engineering 221 and 245L may not both be counted. Offered on the letter-grade basis only. Prerequisite: The following coursework with a grade of at least C: Biology 206L, Biomedical Engineering 214L, Biomedical Engineering 335 or Mechanical Engineering 335, Biomedical Engineering 344 or Engineering Mechanics 319, and one of the following: Aerospace Engineering 333T, Biomedical Engineering 333T, Chemical Engineering 333T, Civil Engineering 333T, Communication 333T, Electrical and Computer Engineering 333T (or Electrical Engineering 333T), Engineering Studies 333T, Mechanical Engineering 333T, or Petroleum and Geosystems Engineering 333T.

BME 346. Computational Biomolecular Engineering.
Restricted to biomedical engineering majors. Introduction to computational structural biology and molecular modeling, including the fundamentals of biomolecular structure and molecular thermodynamics. The principles and applications of biomolecular modeling used to explore the critical relationship between structure, function, and thermodynamic driving forces in molecular biology. Three lecture hours a week for one semester. Prerequisite: The following coursework with a grade of at least C: Biochemistry 369, Biology 311C or 315H, Biomedical Engineering 313L or Computational Engineering 311K, and one of the following: Biomedical Engineering 355, Chemistry 353 or 353M.

BME 347. Fundamentals of Biomedical Optics.
Restricted to biomedical engineering majors. Introduction to the field of biophotonics. Subjects include light scattering theory, tissue optical properties, analytical and numerical techniques for determining light propagation in tissue, light-tissue interactions, and bioheat transfer including solution methods. Three lecture hours a week for one semester. Biomedical Engineering 347 and 377T (Topic: Fundamentals
of Biomedical Engineering Optical Imaging) may not both be counted. Prerequisite: Biomedical Engineering 353 with a grade of at least C-.

**BME 348. Modeling of Biomedical Engineering Systems.**
Restricted to biomedical engineering majors. Lumped and distributed models of physiological system function from molecular through organismal levels. Linear system steady-state and transient behaviors. Interactions among multiple energy domains, including electrical, chemical, diffusional, mechanical, fluid, and thermal. Introduction to feedback control. Three lecture hours and two laboratory hours a week for one semester. Prerequisite: Biomedical Engineering 214L, and Biomedical Engineering 343 or Electrical and Computer Engineering 313 (or Electrical Engineering 313) with a grade of at least C- in each.

**BME 348P. Introduction to Computational and Systems Biology.**
Restricted to biomedical engineering majors. Introduction to big data technology platforms, data science analytical algorithms and artificial intelligence in computational biology and medicine and network science. Examine DNA sequence alignment and search, high-throughput big data platforms and analysis, network science, multi-omics profiling, statistics, motif finding, molecular structure prediction, genome-wide association studies, artificial intelligence, and personalized precision medicine. Explore computational algorithms including hidden Markov model, clustering, classification methods, and others. Three lecture hours a week for one semester. Only one of the following may be counted: Biomedical Engineering 348P, 377T (Topic: Intro to Comp/System Bio), Chemistry 368 (Topic: Intro to Comp/System Bio), Computer Science 378 (Topic: Intro to Comp/System Bio). Prerequisite: The following coursework with a grade of at least C- in each: Biochemistry 369, Biology 311C or 315H, Biomedical Engineering 335 or Mechanical Engineering 335, and Biomedical Engineering 343 or Electrical and Computer Engineering 313 (or Electrical Engineering 313).

**BME 349. Biomedical Instrumentation.**
Restricted to biomedical engineering majors. Introduction to biomedical instrumentation, design, and applications. Emphasis on the complete instrumentation development cycle, design for bio-compatibility, safety and efficacy, and design considerations specific to various medical specialties. Three lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Biomedical Engineering 343 or Electrical and Computer Engineering 313 (or Electrical Engineering 313) with a grade of at least C-.

**BME 350. Computational Methods for Biomedical Engineers.**
Restricted to biomedical engineering majors. Study of and hands-on experiences with computational methods commonly employed in biomedical engineering research. Three lecture hours a week for one semester. Biomedical Engineering 350 and 377T (Topic: Computational Methods for Biomedical Engineers) may not both be counted. Prerequisite: The following coursework with a grade of at least C-: Biomedical Engineering 313L or Computational Engineering 311K, Biomedical Engineering 214L, and Biomedical Engineering 335 or Mechanical Engineering 335.

**BME 352. Engineering Biomaterials.**
Restricted to biomedical engineering majors. Overview of properties of metallic, ceramic, polymeric, and composite biomaterials used in biomedical applications. Material synthesis and processing. Analysis of mechanical and chemical properties, including stress-strain. Material interactions with the body and blood. Soft and hard biomaterials applications. Three lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: The following coursework with a grade of at least C-: Biochemistry 369, and Biomedical Engineering 344 or Engineering Mechanics 319.

**BME 353. Transport Phenomena in Living Systems.**
Restricted to biomedical engineering majors. Introduction to the principles of heat, mass and momentum transfer and their application to solve problems in living systems. Three lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: The following coursework with a grade of at least C-: Biomedical Engineering 311 or Electrical and Computer Engineering 411 (or Electrical Engineering 411); Biomedical Engineering 214L; Mathematics 427J; Physics 303L; and Physics 103N or 105N.

**BME 354. Molecular Sensors and Nanodevices for Biomedical Engineering Applications.**
Restricted to biomedical engineering majors. Introduction to major types of molecular sensor systems, device miniaturization, and detection mechanisms, including molecular capture mechanisms; electrical, optical, and mechanical transducers; micro-array analysis of biomolecules; semiconductor and metal nanosensors; microfluidic systems; and microelectromechanical systems (MEMS, BioMEMS) fabrication and applications for biomedical engineering. Three lecture hours a week for one semester. Prerequisite: The following coursework with a grade of at least C-: Biomedical Engineering 313L or Computational Engineering 311K, Biomedical Engineering 335 or Mechanical Engineering 335, and Biomedical Engineering 344 or Engineering Mechanics 319.

**BME 355. Molecular Engineering.**
Restricted to biomedical engineering majors. Working principles of biomolecules such as proteins and nucleic acids. Physical and chemical basis for biomolecular structure, energetics, and function. Three hours of lecture a week for one semester. Offered on the letter-grade basis only. Prerequisite: The following coursework with a grade of at least C-: Biochemistry 369; Biology 311C or 315H; Mathematics 427J; Physics 303L; and Physics 103N or 105N.

**BME 356. Polymer and Bioconjugate Chemistry.**
Restricted to biomedical engineering majors. Introduction to synthetic principles of polymeric biomaterials and bioconjugate chemistry with an emphasis on synthetic strategies to achieve specific properties. Explores characterization methods of polymers and bioconjugates as a function of chemical composition, as well as tissue engineering and drug delivery applications as case studies of the biomaterial design process. Three lecture hours a week for one semester. Biomedical Engineering 356 and 377T (Topic: Polymer/Bioconjugate Chem) may not both be counted. Prerequisite: Biomedical Engineering 352 or Chemical Engineering 350 with a grade of at least C-.

**BME 357. Biomedical Imaging Modalities.**
Restricted to biomedical engineering majors. Introduction to major biomedical imaging modalities, including X-ray radiography, computed tomography (CT), nuclear medicine (SPECT and PET), magnetic resonance imaging (MRI), and ultrasound. Emphasis on principles, approaches, and applications of each imaging modality. Basic physics and imaging equations of the imaging system; hardware and software; sources of noise and primary artifacts; safety and patient risk. Three lecture hours and two laboratory hours a week for one semester. Prerequisite: Biomedical Engineering 349 and 261L with a grade of at least C- in each.

**BME 358. Medical Decision Making.**
Restricted to biomedical engineering majors. Understanding of the nature of expertise and related subjects of cognitive psychology and human-made interaction to be able to design more effective systems.
for supporting medical decision making. Three lecture hours a week for one semester. Biomedical Engineering 358 and 377T (Topic: Medical Decision Making) may not both be counted. Prerequisite: The following coursework with a grade of at least C-: Biomedical Engineering 313L or Computational Engineering 311K, Biomedical Engineering 214L, and Biomedical Engineering 335 or Mechanical Engineering 335.

BME 358M. Imaging Clinical Immersion.
Restricted to biomedical engineering majors. Identify current unmet clinical needs via close interaction with healthcare professionals and patients. Explore biomedical imaging across the healthcare enterprise. Three lecture hours a week for one semester. Biomedical Engineering 358M and 377T (Topic: Imaging Clinical Immersion) may not both be counted. Prerequisite: Consent of instructor.

BME 359. Cellular and Molecular Biomechanics.
Restricted to biomedical engineering majors. Introduction to the concepts needed to understand and work in the emerging field of cellular and molecular biomechanics. Examination of dynamic interplay between chemical, thermal, and physical forces in determining the mechanics of cells/tissues and their molecular components. Three lecture hours a week for one semester. Prerequisite: Biomedical Engineering 344 or Engineering Mechanics 319, and Biomedical Engineering 353 with a grade of at least C- in each.

BME 261L. Development and Analysis in Biomedical Engineering Design.
Restricted to biomedical engineering majors. The design and development of a working biomedical engineering device prototype. Focus on the full engineering design process, including reviews and documentation, and general project management strategies. Also considers the impact of markets, budgets, and the FDA on device requirements and design. Two lecture hours and three laboratory hours a week for one semester. Biomedical Engineering 251 and 261L may not both be counted. Offered on the letter-grade basis only. Prerequisite: The following coursework with a grade of at least C-: Biomedical Engineering 343 or Electrical and Computer Engineering 313 (or Electrical Engineering 313), and Biomedical Engineering 245L.

BME 362. Introduction to Nonlinear Dynamics in Biological Systems.
Restricted to biomedical engineering majors. Introduction to various concepts from nonlinear mathematics and their application to biological systems, ranging from sub-cellular to whole ecosystems levels of investigation. Three lecture hours a week for one semester. Biomedical Engineering 362 and 377T (Topic: Introduction to Nonlinear Dynamics in Biological Systems) may not both be counted. Prerequisite: Biomedical Engineering 313L or Computational Engineering 311K, and Biomedical Engineering 344 or Engineering Mechanics 319 with a grade of at least C- in each.

BME 362E. Medical Device Innovation.
Money, markets, and entrepreneurship with particular focus on medical and health markets. Two lecture hours a week for one semester. Additional hours to be arranged. Biomedical Engineering 362E and 277T (Topic: Medical Device Innovation: From Lab to Marketplace) may not both be counted.

BME 363. Bioelectronics and Biointerfaces.
Restricted to biomedical engineering majors. Examine critical concepts and strategies in materials development, electronics fabrication and genetic innovations that interface with biological systems. Explore neural interfacing technology, flexible electronics, wearable technology, bio-nanotechnology, and genetic engineering. Focus on the recently developed technology for recording and manipulating neural systems. Three lecture hours a week for one semester. Biomedical Engineering 363 and 377T (Topic: Bioelectronics/Biointerfaces) may not both be counted. Prerequisite: Biomedical Engineering 349 and 352 with a grade of at least C- in each.

BME 363E. Medical Device Design and Manufacturing.
Restricted to biomedical engineering majors. Application of engineering principles in the conception, design and prototyping of medical devices. Development of team projects with emphasis on clinical and market needs analysis, creative and useful concept generation, engineering requirements and specifications, and written and oral reporting of intermediate and final prototype outcomes. Three lecture hours a week for one semester. Only one of the following may be counted: Biomedical Engineering 363E, 377T (Topic: Medical Device Design and Manufacturing), Mechanical Engineering 371D, 379M (Topic: Medical Device Design and Manu). Prerequisite: The following coursework with a grade of at least C-: Biomedical Engineering 349, 353, and 261L.

BME 364. Biological Responses to Medical Devices.
Restricted to biomedical engineering majors. Explore common biological responses elicited by biomaterials and the impact of these responses on material performance. Emphasis on key challenges in the development and assessment of biomaterials used in medical devices. Includes material surface properties, modification, and characterization; protein/ cell interactions with materials; biocompatibility, inflammation and wound healing, cell-mediated biodegradation of materials; thrombosis, infection and calcification of medical devices. Three lecture hours a week for one semester. Biomedical Engineering 364 and 377T (Topic: Biol Responses to Medical Dev) may not both be counted. Prerequisite: Biomedical Engineering 352 with a grade of at least C-.

BME 365. Tissue Microenvironments.
Restricted to biomedical engineering majors. Introduction to, and hands-on applications for, fabrication/bioprinting of tissues on a chip and characterization of mechanical, thermal, transport, and cellular/tissue responses to varying properties of associated microenvironments. Three lecture hours a week for one semester. Biomedical Engineering 365 and 377T (Topic: Tiss Microenv Fab/Tran/Mech) may not both be counted. Prerequisite: Biomedical Engineering 352 and 353 with a grade of at least C- in each.

BME 365R. Quantitative Engineering Physiology I.
Restricted to biomedical engineering majors. A quantitative, model-oriented approach to human physiology, including basic cellular physiology, electrophysiology of nerve and muscle, the motor system, the central nervous system, and the cardiovascular system. The equivalent of four lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: The following coursework with a grade of at least C-: Biology 311C or 315H, Biomedical Engineering 214L, Physics 303L, and Physics 103N or 105N, and credit with a grade of at least C- or registration for: Biochemistry 369 and Biomedical Engineering 343 or Electrical and Computer Engineering 313 (or Electrical Engineering 313).

BME 365S. Quantitative Engineering Physiology II.
Restricted to biomedical engineering majors. Biological control systems: sensory, renal, respiratory, and immune systems. Focuses on a quantitative, model-oriented approach to physiological systems. Three lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Biomedical Engineering 365R with a grade of at least C-.

BME 366. Immune Engineering.
Restricted to biomedical engineering majors. Introduction to various aspects and applications of immune engineering. Subjects include vaccine design, cancer immunotherapy, genomics, infection, auto-
immune diseases and emerging tools and methodologies. Three lecture hours a week for one semester. Biomedical Engineering 366 and 377T (Topic: Immune Engineering) may not both be counted. Prerequisite: Biomedical Engineering 365R and 365S with a grade of at least C- in each.

**BME 367. Design of Artificial Organs.**

Restricted to biomedical engineering majors. Analysis of the design process for blood-contacting medical devices with an emphasis on ventricular assist devices. Application of computational fluid dynamics and blood rheology to computer-aided design and testing of devices using specific software programs and 3D printing of functioning prototypes. Three lecture hours a week for one semester. Biomedical Engineering 367 and 377T (Topic: Design of Artificial Organs) may not both be counted. Prerequisite: Credit with a grade of at least C- or registration for Biomedical Engineering 353 and 365R.

**BME 368. Introduction to Mathematical and Physical Biology.**

Restricted to biomedical engineering majors. Introduction to common mathematical and physical techniques used in modeling various aspects of biology at multiple spatial and temporal scales. Analyze critical techniques with words and pictures, and then equations including the computational implementation and simulation of those equations. Three lecture hours a week for one semester. Biomedical Engineering 368 and 377T (Topic: Intro Mathematical & Phys Bio) may not both be counted. Prerequisite: Biomedical Engineering 343 or Electrical and Computer Engineering 313 (or Electrical Engineering 313) with a grade of at least C-.

**BME 369. Biomimetic Design and Engineering.**

Restricted to biomedical engineering majors. Overview of the core concepts of biomimetic microengineering with particular focus on engineered microphysiological models of human organs, tissues and disease pathophysiology. Three lecture hours a week for one semester. Biomedical Engineering 369 and 377T (Topic: Biomimetic Dsgn/Engineering) may not both be counted. Prerequisite: Upper-division standing, Biochemistry 369 and Biology 311C or 315H with a grade of at least C- in each.

**BME 369C. Matrices, Organoids, and Microphysiological Systems.**

Restricted to biomedical engineering majors. Explore current technologies and scientific literature seeking to construct human-relevant, in vitro systems representing tissues, organs, and disease physiologies as platforms for development of new therapies. Focus on how concepts in biomaterials, stem cell biology, microfluidics, additive manufacturing, and biosensing are integrated to create such platforms. Three lecture hours a week for one semester. Biomedical Engineering 369C and 377T (Topic: Matrices/Organs/Microphys Sys) may not both be counted. Prerequisite: Biomedical Engineering 352 and 365S with a grade of at least C- in each.

**BME 370. Biomedical Engineering Capstone Design I.**

Restricted to biomedical engineering majors. Structured methodologies for designing systems or to interface with living systems. Creative design, analysis, selection, development, and fabrication of biomedical components and systems. Three lecture hours and two laboratory hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: The following coursework with a grade of at least C-: Biomedical Engineering 349, 352, 353, 261L, and 365S.

**BME 371. Biomedical Engineering Capstone Design II.**

Restricted to biomedical engineering majors. Development of team projects in biomedical engineering with emphasis on prototype development and quantitative analysis, and written and oral reporting of the outcome. Two lecture hours and four laboratory hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Biomedical Engineering 370 with a grade of at least C-.

**BME 372. Computational Modeling of the Cardiovascular System.**

Restricted to biomedical engineering majors. Analyze mathematical models and simulations of the cardiovascular system. Examine biomechanical simulations including the biomechanical function of the heart, heart valves, and the vasculature. Three lecture hours a week for one semester. Biomedical Engineering 372 and 377T (Topic: Comput Modlg: Cardiovas Sys) may not both be counted. Prerequisite: Biomedical Engineering 349 and 365R with a grade of at least C- in each.

**BME 372P. Mathematical Physiology.**

Restricted to biomedical engineering majors. Explore mathematical modeling in human physiology. Focus on how physiological problems can be formulated and modeled, and how such models give rise to interesting and challenging functional features. Examine several exemplary physiological systems and discuss the mathematical aspects of growth and remodeling in living systems, an area unique to living systems. Three lecture hours a week for one semester. Biomedical Engineering 372P and 377T (Topic: Mathematical Physiology) may not both be counted. Prerequisite: Biomedical Engineering 349 and 365S with a grade of at least C- in each and consent of instructor.

**BME 373. Tissue, Scaffold, and Cell Biomechanics Applications.**

Restricted to biomedical engineering majors. Fundamentals of biosolid mechanics via the mechanical behavior of scaffolds and living tissues and cells. Emphasis on biomechanical applications to contemporary problems in biomedical research and medical devices. Three hours of lecture a week for one semester. Biomedical Engineering 373 and 377T (Topic: Cell, Tissue and Scaffold Biomechanics for Contemporary Biomedical Engineering Applications) may not both be counted. Prerequisite: The following coursework with a grade of at least C-: Biomedical Engineering 313L or Computational Engineering 311K, Biomedical Engineering 335 or Mechanical Engineering 335, Biomedical Engineering 344 or Engineering Mechanics 319, Biomedical Engineering 353, 365R, and 365S.

**BME 374. Optical Design.**

Restricted to biomedical engineering majors. Explore the principles of optical design for imaging and laser delivery systems. Examine the development and testing of designs using optical design software. Three lecture hours a week for one semester. Biomedical Engineering 374 and 377T (Topic: Optical Design) may not both be counted. Prerequisite: Biomedical Engineering 343 or Electrical and Computer Engineering 313 (or Electrical Engineering 313) with a grade of at least C-.

**BME 374K. Biomedical Instrument Design.**

Restricted to biomedical engineering and mechanical engineering majors. Application of electrical engineering principles in the design of electronic instrumentation at the circuit-board level for the measurement of pressure, temperature, flow, and impedance. Also includes the study of light intensity, bioelectric potentials, and stimulation devices such as pacemakers and defibrillators. Focus on design considerations specific to electro-medical environments, safety and efficacy, and public policy issues. Three lecture hours a week for one semester. Prerequisite: Electrical and Computer Engineering 438 (or Electrical Engineering 438) with a grade of at least C-.

**BME 374L. Applications of Biomedical Instrumentation Lab.**

Restricted to biomedical engineering and mechanical engineering majors. An in-depth examination of selected subjects in biomedical
engineering, including optical and thermal properties of laser interaction with tissue; measurement of perfusion in the microvascular system; diagnostic imaging; interaction of living systems with electromagnetic fields; robotic surgical tools; ophthalmic instrumentation; and noninvasive cardiovascular measurements. Students have the opportunity to design analog and digital measurements and acquire and process meaningful biomedical signals. Three lecture hours and six laboratory hours a week for one semester. Prerequisite: One of the following with a grade of at least C: Biomedical Engineering 349, 374K, Electrical and Computer Engineering 438 (or Electrical Engineering 438), or Electrical and Computer Engineering 374K (or Electrical Engineering 374K).

**BME 375. Stem Cells in Cell and Tissue Engineering.**
Restricted to biomedical engineering majors. Analysis of recent cell and tissue engineering applications of human embryonic stem cells (hESC) and induced pluripotent stem cells (iPSC). Focus on case studies of each organ in the human body and how it can be engineered using stem cells. Three lecture hours a week for one semester. Biomedical Engineering 375 and 377T (Topic: Stem Cells in Cell and Tissue Engineering) may not both be counted. Prerequisite: Biomedical Engineering 352 and 365S with a grade of at least C- in each.

**BME 376. Cell Engineering.**
Restricted to biomedical engineering majors. Introduction to principles that govern the structure, organization, and processes at cellular and subcellular levels. Special focus on engineering and quantitative aspects of cellular machinery. Employs engineering approaches to study receptors, macromolecular complexes, and cellular signaling; clinical and pharmaceutical approaches to perturb cellular structure and function for disease prevention and drug design. State-of-the-art experimental and computational techniques to study cellular engineering. Three lecture hours a week for one semester. Prerequisite: Upper-division standing. Biochemistry 369 and Biology 311C or 315H with a grade of at least C- in each.

**BME 177, 277, 377. Undergraduate Research Project.**
Initiate opportunity individually and select project in conjunction with a faculty member on the Department of Biomedical Engineering’s Graduate Studies Committee (GSC) or in another approved University department. A final written report or the equivalent is required. Recommended for students considering graduate study or medical school. Three, six, or nine laboratory hours a week for one semester.

**BME 377M. Medical Internship.**
Restricted to biomedical engineering majors. Initiate opportunity individually, which may include participation in a variety of medical and clinical activities which apply engineering principles to solve problems in healthcare. A substantial final report or the equivalent is required. Designed for students considering medical school. The equivalent of three lecture hours a week for one semester.

**BME 377R. Research Internship.**
Restricted to biomedical engineering majors. Initiate opportunity individually and select project in conjunction with a faculty member at an approved institution. A final written report or the equivalent is required. The equivalent of three lecture hours a week for one semester.

**BME 377S. Industrial Internship.**
Restricted to biomedical engineering majors. Practical work experience in industry or a government agency under the supervision of an engineer, scientist or business professional. A substantial final report or the equivalent is required. The equivalent of three lecture hours a week for one semester.

**BME 177T, 277T, 377T. Topics in Biomedical Engineering.**
Restricted to biomedical engineering majors. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Prerequisites vary with the topic.

**BME 678. Undergraduate Thesis in Biomedical Engineering.**
Restricted to biomedical engineering majors. Research performed during two consecutive semesters under the supervision of a biomedical engineering faculty member or other approved faculty member; topics are selected jointly by the student and faculty member. The student provides a progress report at the end of the first semester and writes a thesis and gives an oral presentation at the end of the second semester. Individual instruction for two semesters. Students pursuing both the Bachelor of Arts, Plan II, and a Bachelor of Science in Biomedical Engineering may use this course to fulfill the thesis requirements for the Bachelor of Arts, Plan II. Prerequisite: For 678A, admission to the major sequence in biomedical engineering and a University grade point average of at least 3.50; for 678B, a University grade point average of at least 3.50 and Biomedical Engineering 678A.

**BME 379. Tissue Engineering.**
Restricted to biomedical engineering majors. Introduction to biomedical research in tissue engineering. Includes case studies of tissues and organs of the body, physiology and biology of tissue, pathologies of tissue, current clinical treatments, the role of engineers in development of new technologies to diagnose and treat pathologies, quantitative cellular and molecular techniques, and applications of synthetic and natural biomaterials. Three lecture hours a week for one semester. Only one of the following may be counted: Biomedical Engineering 379, Chemical Engineering 339T, 379 (Topic: Cell and Tissue Engineering). Prerequisite: Biomedical Engineering 352 and 365S with a grade of at least C- in each.

**BME 679H. Undergraduate Honors Thesis.**
Restricted to biomedical engineering majors. Research performed during two consecutive semesters under the supervision of an engineering faculty member; topics are selected jointly by the student and the faculty member with approval by the director of the Engineering Honors Program. The student makes an oral presentation and writes a thesis. Individual instruction for two semesters. Students pursuing both the Bachelor of Arts, Plan II, and a bachelor’s degree in engineering may use this course to fulfill the thesis requirement for the Bachelor of Arts, Plan II. Prerequisite: For 679HA, enrollment in the Engineering Honors Program; for 679HB, Biomedical Engineering 679HA and enrollment in the Engineering Honors Program.

**Graduate Courses**

**BME 180J, 380J. Fundamentals of Biomedical Engineering.**
One or three lecture hours a week for one semester, or as required by the topic. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

**Topic 1: Mathematical Modeling in Biomedical Engineering.**
Conservation of mass, momentum, energy, and charge; first and second laws of thermodynamics; first- and second-order differential equations; nonlinear differential equations; partial differential equations as applied to biomedical engineering problems.

**Topic 2: Quantitative Systems Physiology and Pathophysiology.**
Modeling of physiological systems from the molecular and cellular levels to the systems level; focus on the neuromuscular and cardiovascular systems. Prerequisite: An undergraduate physiology course or the equivalent, and consent of instructor.

**Topic 3: Principles of Biomasurement.**
Principles of signal measurement in the biomedical field; survey of transducers used...
for chemical, mechanical, electrical, and thermal biomedical measurements; analysis of how signals are converted into digital form; analysis of noise; aliasing: data storage.

**Topic 4: Fields, Forces, and Flows.** Introduction to mathematical models that integrate different energy domains and length scales, with an emphasis on the coupling between them. Prerequisite: Biomedical Engineering 380J (Topic 1) and 380J (Topic 2).

**Topic 5: Biostatistics, Study Design, and Research Methodology.** Principles for hypothesis testing; confidence limits; regression analysis; correlation; analysis of variance; experimental design and factorial analysis; discriminate analysis; applications of statistics. Prerequisite: An undergraduate probability theory course or the equivalent, and consent of instructor.

**Topic 6: Analysis of Biomedical Engineering Systems I.** Quantitative examination of the cardiovascular and respiratory systems from the cell to system levels. Presents the cardiovascular and respiratory systems in three phases: (1) anatomy and physiology; (2) energetics (thermodynamics), cellular processes, and engineering analysis; and (3) engineered devices, instrumentation, and imaging for therapeutics and diagnosis. Additional prerequisite: A course in physiology, proficiency in MATLAB, and consent of the graduate adviser.

**BME 080M. Dual MD/PhD Program with UT Medical Branch.**

Preclinical medical study at the University of Texas Medical Branch at Galveston. May not be taken concurrently with another course at the University of Texas at Austin. Prerequisite: Graduate standing and admission to the MD/PhD dual degree program in biomedical engineering.

**BME 381J. Topics in Cell and Molecular Imaging.**

Three lecture hours a week for one semester, or as required by the topic. May be repeated for credit when the topics vary. Prerequisite: Graduate standing in engineering and consent of instructor; additional prerequisites vary with the topic.

**Topic 1: Laser-Tissue Interaction: Thermal.** Same as Electrical and Computer Engineering 385J (Topic 9). The thermal response of random media in interaction with laser irradiation. Calculation of the rate of heat production caused by direct absorption of the laser light, thermal damage, and ablation. Only one of the following may be counted: Biomedical Engineering 381J (Topic 1), Electrical and Computer Engineering 385J (Topic 9), Electrical Engineering 385J (Topic 9).

**Topic 2: Laser-Tissue Interaction: Optical.** Same as Electrical and Computer Engineering 385J (Topic 16). The optical behavior of random media such as tissue in interaction with laser irradiation. Approximate transport equation methods to predict the absorption and scattering parameters of laser light inside tissue. Port-wine stain treatment; cancer treatment by photochemotherapy; and cardiovascular applications. Only one of the following may be counted: Biomedical Engineering 381J (Topic 2), Electrical and Computer Engineering 385J (Topic 16), Electrical Engineering 385J (Topic 16).

**Topic 3: Imaging Signals and Systems.** Same as Electrical and Computer Engineering 385J (Topic 18). Physical principles and signal processing techniques used in thermographic, ultrasonic, and radiographic imaging, including image reconstruction from projections such as CT scanning, MRI, and millimeter wave determination of temperature profiles. Only one of the following may be counted:

**Topic 4: Optical Spectroscopy.** Same as Electrical and Computer Engineering 385J (Topic 23). Measurement and interpretation of spectra: steady-state and time-resolved absorption, fluorescence, phosphorescence, and Raman spectroscopy in the ultraviolet, visible, and infrared portions of the spectrum. Only one of the following may be counted: Biomedical Engineering 381J (Topic 4), Electrical and Computer Engineering 385J (Topic 23), Electrical Engineering 385J (Topic 23).

**Topic 5: Therapeutic Heating.** Same as Electrical and Computer Engineering 385J (Topic 26). Engineering aspects of electromagnetic fields that have therapeutic applications: diathermy (short wave, microwave, and ultrasound), electrosurgery (thermal damage processes), stimulation of excitable tissue, and electrical safety. Only one of the following may be counted: Biomedical Engineering 381J (Topic 5), Electrical and Computer Engineering 385J (Topic 26), Electrical Engineering 385J (Topic 26).

**Topic 6: Noninvasive Optical Tomography.** Same as Electrical and Computer Engineering 385J (Topic 28). Basic principles of optical tomographic imaging of biological materials for diagnostic or therapeutic applications. Optical-based tomographic imaging techniques including photothermal, photoacoustic, and coherent methodologies. Only one of the following may be counted: Biomedical Engineering 381J (Topic 6), Electrical and Computer Engineering 385J (Topic 28), Electrical Engineering 385J (Topic 28).

**Topic 7: Digital Image and Video Processing.** Digital image acquisition, processing, and analysis; algebraic and geometric image transformations; two-dimensional Fourier analysis; image filtering and coding. Additional prerequisite: Credit or registration for Biomedical Engineering 335 or Electrical Engineering 351K.

**Topic 8: Functional Imaging Laboratory.** Explores in vivo functional imaging, including aspects of imaging hardware and instrumentation, contrast agents, image processing, management of large imaging data sets, and applications of physiological modeling. Three lecture hours a week for one semester. Additional hours to be arranged. Biomedical Engineering 381J (Topic: Functional Imaging Laboratory) and 381J (Topic 8) may not both be counted. Additional prerequisite: Graduate standing in engineering.

**Topic 9: Fundamentals of Biomedical Optical Imaging.** Fundamentals of the interaction of light with tissue for the purpose of imaging and treatment of disease. Focuses on quantitative modeling of tissue optical properties, light propagation in the tissue, heat transfer of laser irradiated tissue, and thermal damage models. Includes discussion of applications in laser surgery, pulse oximetry, and disease diagnosis using spectroscopy. Biomedical Engineering 381J (Topic: Fundamentals of Biomedical Optical Imaging) and 381J (Topic 9) may not both be counted.

**Topic 10: Optics and Lasers.** Fundamentals of geometric and physical optics, interaction of light with matter, spectroscopy, and laser and electro-optics applications. Biomedical Engineering 381J (Topic: Optics and Lasers) and 381J (Topic 10) may not both be counted.

**Topic 11: Medical Imaging.** Biomedical Engineering 381J (Topic: Medical Imaging) and 381J (Topic 11) may not both be counted.

**Topic 12: Optical Design.** The principles of optical design for imaging and laser delivery systems are given. Students develop and test designs using a commercial optical design software package. Biomedical Engineering 381J (Topic: Optical Design) and 381J (Topic 12) may not both be counted.

**Topic 13: Fluorescence Micro- and Spectroscopy.** Fundamentals of fluorescence microscopy, spectroscopy, and techniques; single-molecule detection; advanced microscopy, including multi-photon microscopy, super-resolution imaging, and molecular tracking. Other subjects include metal-enhanced fluorescence, optogenetics, nanomedicine and microfluidics. Biomedical Engineering 381J (Topic:
Fluorescence Micro-/Spectroscopy) and 381J (Topic 13) may not both be counted. Additional prerequisite: Understanding of biochemistry and biology; lab experience using microscopic technology and tools.

**Topic 14: Digital Video.** Same as Electrical and Computer Engineering 381K (Topic 16). Examine video sampling and transform; video (retinal and cortical) filters; motion detection and estimation; statistical models of videos; neuroscience of video perception; natural video statistics; modern video compression standards; video quality prediction; video denoising; active contour models; and video saliency. Only one of the following may be counted: Biomedical Engineering 381J (Topic: Digital Video), 381J (Topic 14), Electrical and Computer Engineering 381K (Topic 16), Electrical Engineering 381K (Topic 16), 381V (Topic: Digital Video).

**Topic 15: Imaging Clinical Immersion.** Identify current unmet clinical needs via close interaction with healthcare professionals and patients. Explore biomedical imaging across the healthcare enterprise. Biomedical Engineering 381J (Topic 15) and 385J (Topic: Imaging Clinical Immersion) may not both be counted.

**BME 681M. Normal Body Structure and Function.**

Restricted to students in the Master of Science in Engineering and Doctor of Medicine dual-degree program. Exploration of the structure and function of the human body at all levels of organization, from molecular and cellular to the integrated function of multiple organ systems attempting to maintain homeostasis. Emphasis on wellness and normal structure/function, in addition to the mechanistic disruptions that cause illness as well as the scientific rationale for methods to diagnose and treat selected diseases. Six lecture hours a week for one semester.

**BME 382J. Topics in Cellular and Biomolecular Engineering.**

Three lecture hours a week for one semester, or as required by the topic. May be repeated for credit when the topics vary. Prerequisite: Graduate standing in engineering and consent of instructor.

**Topic 1: Cell and Tissue Engineering.** Use of case studies to explore pathologies of tissue, current clinical treatment, and the role of engineers in developing new technologies to diagnose and treat these pathologies. Emphasis on the use of quantitative cellular and molecular techniques. Applications of synthetic and natural biomaterials. Additional prerequisite: Quantitative physiology or pathophysiology course.

**Topic 2: Introduction to Biochemical Engineering.** Microorganisms in chemical and biochemical synthesis; genetic manipulation of cells by classical and recombinant DNA techniques; enzyme technology; design of bioreactors and microbial fermentations; and separations of biological products.

**Topic 3: Molecular Sensors and Nanodevices for Biomedical Engineering Applications.** Introduction to a variety of methods used to detect biological molecules with optical and electrical transduction mechanisms. Covers the classical approaches to biosensors for the detection of specific molecules in biological systems.

**Topic 4: Advanced Engineering Biomaterials.** Overview of biomaterials, including prosthetics, ceramics, metal implants, and polymers, with specific emphasis on properties and applications. The immunology of material-tissue interactions and the issues of biocompatibility.

**Topic 5: Structured Surfaces, Fabrication, Characterization, and Application.** Introduction to fabrication and characterization techniques used to create and analyze microstructured and nanostructured surfaces for biomedical and biotechnology applications. Focuses on the use of self-assembly processes for the fabrication of biological functionality in surface structures.

**Topic 7: Cellular and Molecular Biomechanics.** Introduction to the concepts needed to understand and work in the emerging field of cellular and molecular biomechanics. Examination of dynamic interplay between chemical, thermal, and physical forces in determining the mechanics of cells/tissues and their molecular components. Three lecture hours a week for one semester, with additional hours to be arranged. Biomedical Engineering 382J (Topic: Cellular and Molecular Biomechanics) and 382J (Topic 7) may not both be counted. Additional prerequisite: Graduate standing; and coursework in calculus, physics, solid mechanics, and basic chemical/biological principles.

**Topic 8: Molecular Biophysics: Measurements and Methods.** In-depth study and development of intuition for thermodynamics and mechanics and application of understanding to molecular-scale problems in cell biology and biomedical engineering. Focus on increasing students’ familiarity with modern methods of biophysical measurement, their strengths and limitations, and how they are being applied to address current research problems. Biomedical Engineering 382J (Topic: Molecular Biophysics: Measurements and Methods) and 382J (Topic 8) may not both be counted. Additional prerequisite: Undergraduate biology, calculus, chemistry, and physics is recommended.

**Topic 9: Biomimetic Design and Engineering.** Introduction to biomimetic reverse engineering, including the weaknesses of animal models to predict human physiology, microphysiological systems, the potential of human organs on chips to accelerate drug development processes, pharmaceutical preclinical testing requirements, human microbiome, disease models to study pathophysiology, and related subjects. Biomedical Engineering 382J (Topic: Biomimetic Design and Engineering) and 382J (Topic 9) may not both be counted.

**Topic 10: Immune Engineering.** Introduction to the concept of immune engineering. Discussion of vaccine design, cancer immunotherapy, genomics, infection, auto-immune diseases and emerging tools and methodologies. Biomedical Engineering 382J (Topic: Immune Engineering) and 382J (Topic 10) may not both be counted. Additional prerequisite: Understanding of biology.

**Topic 11: Polymer and Bioconjugate Chemistry.** Examine principles of polymeric biomaterials and bioconjugate chemistry with an emphasis on synthetic strategies to achieve specific properties. Includes characterization methods of polymers and bioconjugates as a function of chemical composition, as well as tissue engineering and drug delivery applications as case studies of the biomaterial design process. Three lecture hours a week for one semester. Biomedical Engineering 382J (Topic: Polymer/Bioconjugate Chem) and 382J (Topic 11) may not both be counted.

**Topic 12: Biological Responses to Medical Devices.** Examine key challenges in the development and assessment of biomaterials used in medical devices, including common biological responses elicited by biomaterials and the impact of these responses on material performance. Includes material surface properties, modification, and characterization; protein/cell interactions with materials; biocompatibility, inflammation and wound healing, cell-mediated biodegradation of materials; thrombosis, infection and calcification of medical devices. Biomedical Engineering 382J (Topic: Biol Responses to Medical Dev) and 382J (Topic 12) may not both be counted.

**Topic 13: Delivery of Therapeutic Agents.** Explore molecular, biological, chemical, and mathematical fundamentals of the use of macromolecular carriers for the release of small and high molecular weight therapeutic agents in vitro and in vivo. Examine design and advanced techniques of protein, peptide, antibodies, and gene therapy. Discuss targeted delivery, mucosal/therapeutic, and therapeutic, as well as advanced biomedical devices for treatment of diseases.
Biomedical Engineering 382J (Topic: Delivery of Therapeutic Agents) and 382J (Topic 13) may not both be counted.

**Topic 14: Nanomedicine.** Explore the fundamental properties, synthesis and characterization of nanomaterials, including their applications in nanomedicine. Discuss micro- and nano-particles for drug delivery and imaging, microfluidics for in vitro diagnostics and biological systems modeling, and nanomaterials and platforms for biological applications. Examine biomedical applications such as cancer, cardiovascular disease, and infectious diseases. Biomedical Engineering 382J (Topic: Nanomedicine) and 382J (Topic 14) may not both be counted.

**Topic 15: Matrices, Organoids, and Microphysiological Systems.** Explore current technologies and scientific literature seeking to construct human-relevant, in vitro systems representing tissues, organs, and disease physiologies as platforms for development of new therapies. Focus on how concepts in biomaterials, stem cell biology, microfluidics, additive manufacturing, and biosensing are integrated to create such platforms. Biomedical Engineering 382J (Topic: Matrices/Organs/Microphys Sys) and 382J (Topic 15) may not both be counted.

**BME 682M. Biodesign: Needs Identification.**

Restricted to students in the Clinical Innovation and Design Program. Identify concrete clinical needs via clinical immersion experience with healthcare professionals and patients. Apply engineering design methodologies to identify clinical needs based upon the most meaningful problems observed. Three lecture hours and three laboratory hours a week for one semester. Biomedical Engineering 682M and 385J (Topic: Biodsgn: Needs Identification) may not both be counted. Prerequisite: Consent of instructor.

**BME 383J. Topics in Computational Biomedical Engineering and Bioinformatics.**

Three lecture hours a week for one semester, or as required by the topic. May be repeated for credit when the topics vary. Prerequisite: Graduate standing in engineering and consent of instructor; additional prerequisites may vary with the topic.

**Topic 1: Network Thermodynamics in Biophysics.** Modeling and simulation methods for nonlinear biological processes, including coupling across multienergy domains; practical implementation by bond graph techniques. Additional prerequisite: Mechanical Engineering 344 or consent of instructor.

**Topic 3: Introduction to Computational Oncology.** Computational techniques commonly used in modeling various aspects of cancer at multiple spatial and temporal scales. Exploration of how computational modeling offers unique and complementary information to traditional methods of cancer research. Emphasis on the integration of theory and experiment while identifying the current barriers preventing computational modeling from having a broader impact on both cancer biology and clinical oncology. Only one of the following may be counted: Biomedical Engineering 383J (Topic: Introduction to Computational Oncology), Biomedical Engineering 383J (Topic 3), Computational Science, Engineering, and Mathematics 397 (Topic: Introduction to Computational Oncology).

**Topic 4: Biomechanics of Human Movement.** Same as Kinesiology 395 (Topic 36: Biomechanics of Human Movement). Additional prerequisite: Kinesiology 326K, two semesters of calculus, one semester of college physics (mechanics), and consent of instructor.

**Topic 5: Introduction to Nonlinear Dynamics in Biological Systems.** Same as Kinesiology 395 (Topic 63: Introduction to Nonlinear Dynamics in Biological Systems). Basic concepts of nonlinear mathematics and their application to biological systems. Additional prerequisite: Two semesters of college-level calculus and consent of instructor.

**Topic 7: Data Mining.** Analyzing large data sets for interesting and useful information; online analytical processing, finding association rules, clustering, classification, and function approximation; scalability of algorithms and real-life applications.

**Topic 8: Systems Biology.** The biological function of genetic and biochemical networks from a quantitative perspective. Students use mathematical tools to model network modules, such as boolean switches, oscillators, and amplifiers. Discusses recent papers on a variety of biological problems that can be addressed with a systems biology approach. Additional prerequisite: Biology 311C and Mathematics 427K, an introductory course in biochemistry, and knowledge of MATLAB, are recommended.

**Topic 9: Computational Methods for Biomedical Engineers.** Study of and hands-on experiences with computational methods commonly employed in biomedical engineering research. Three lecture hours a week for one semester. Biomedical Engineering 383J (Topic: Computational Methods for Biomedical Engineers I) and 383J (Topic 9) may not both be counted. Additional prerequisite: Graduate standing in engineering.

**Topic 10: Computational Biomolecular Engineering.** Provides an introduction to the principles and applications of biomolecular modeling and simulation, including the theoretical background of molecular thermodynamics and molecular mechanics, major simulation/computational techniques and commonly used software tools. Biomedical Engineering 383J (Topic: Computational Biomolecular Engineering) and 383J (Topic 10) may not both be counted. Additional prerequisite: Undergraduate biochemistry coursework, and thermodynamics or physical chemistry coursework; or consent of instructor.

**Topic 11: Dynamical Modeling of Biological Signaling and Regulatory Systems.** Introduction to various approaches currently used for modeling and simulating cellular signal transduction, metabolic, and gene regulatory networks. Biomedical Engineering 383J (Topic: Dynamical Modeling of Biological Signaling and Regulatory Systems) and 383J (Topic 11) may not both be counted. Additional prerequisite: Understanding of biochemistry and biology; familiarity with a programming environment.

**Topic 12: Computational Modeling in Bioengineering and Medicine.** Comprehensive introduction to methods used in simulation of biological systems and processes. Emphasis on selected applications from single channels, cells, and tissues up to whole organs. Only one of the following may be counted: Biomedical Engineering 383J (Topic 12), 385J (Topic: Compnt Mdlng Bioengr and Med), Computational Science, Engineering, and Mathematics 397 (Topic: Compnt Mdlng in Bioengr & Med).

**Topic 13: Introduction to Mathematical and Physical Biology.** Introduction to common mathematical and physical techniques used in modeling various aspects of biology at multiple spatial and temporal scales. Explore the integration of theory and experiment while identifying the current barriers preventing computational modeling from having a broader impact in biology. Only one of the following may be counted: Biomedical Engineering 383J (Topic: Intro Mathematical & Phys Bio), 383J (Topic 13), Computational Science, Engineering, and Mathematics 397 (Topic: Intro Mathematical & Phys Biol).

**Topic 14: Mathematical Physiology.** Same as Computational Science, Engineering, and Mathematics 397 (Topic 9). Explore mathematical modeling in physiology, how physiological problems can be formulated and modeled, and how such models give rise to
interfacing technology, flexible electronics, wearable technology, bio-nanotechnology, and genetic engineering. Focus on the recently developed technology for recording and manipulating neural systems. Biomedical Engineering 384J (Topic: Bioelectronics/Biointerfaces) and 384J (Topic 9) may not both be counted.

BME 384T. Topics in Biomechanics.

Restricted to students in the Cockrell School of Engineering. Three lecture hours a week for one semester, or as required by the topic. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of instructor; additional prerequisites vary with the topic.

**Topic 1: Bioheat Transfer.** Explore the application of the principles of heat transfer to the solution of a series of advanced, open-ended problems in medicine and biology. Identify and pursue solution strategies for a range of cutting-edge problems in bioheat transfer. Biomedical Engineering 384T (Topic 1) and 385J (Topic 12) may not both be counted. Additional prerequisite: Prior course in heat transfer or transport phenomena.

**Topic 2: Cellular, Tissue, and Scaffold Biomechanics.** Explore an analysis of biosolid mechanics via the mechanical behavior of scaffolds and living tissues and cells. Examine biomechanical application areas, including cell mechanics, engineered materials, hard and soft tissues, and organs. Only one of the following may be counted: Biomedical Engineering 384T (Topic 2), 385J (Topic: Tissue/Scaffold Biomechanics), 385J (Topic 7).

**Topic 3: Soft Tissue Biomechanics.** Explore the fundamentals and critical applications of soft tissue mechanics. Examine continuum
mechanics (kinematics, stress, balance of linear momentum, hyperelasticity), experimental and nonlinear finite element analyses of soft tissue mechanics, and relevant imaging modalities and related facilities available on campus. Only one of the following may be counted: Biomedical Engineering 384T (Topic 3), 385J (Topic: Soft Tissue Biomechanics), Engineering Mechanics 397 (Topic: Soft Tissue Biomechanics), Mechanical Engineering 385J (Topic: Soft Tissue Biomechanics).

Topic 4: Thin Film Mechanics. Explore a comprehensive introduction to, and important applications of, thin film structures and devices. Discuss stress, fracture, delamination, instability, and other mechanics-related subjects involving thin films. Examine technological applications including integrated circuits, micro- and nano-electromechanical systems, flexible and stretchable electronics, bioelectronics, and surface coatings. Only one of the following may be counted: Biomedical Engineering 384T (Topic 4), 385J (Topic: Thin Film Mechanics), Engineering Mechanics 397 (Topic: Thin Film Mechanics).

Topic 5: Tissue Microenvironments. Explore varying native and bio-fabricated tissue microenvironments and hands-on opportunities for fabrication and bioprinting of tissues on a chip. Examine characterization of mechanical, thermal, transport, and cellular tissue response to microenvironments; imaging and computational approaches that enable prediction of cell and tissue behavior within physiological and pathological native or bio-fabricated tissues; and clinical perspectives which drive design of physiologically representative tissues on a chip and their use for diagnostic screening and therapeutic planning. Only one of the following may be counted: Biomedical Engineering 384T (Topic 5), 385J (Topic: Tiss Microenv: Fab/Tran/Mech), Mechanical Engineering 397 (Topic: Tiss Microenv: Fab/Tran/Mech), 397M (Topic: Tiss Microenv: Fab/Tran/Mech).

BME 385J. Topics in Biomedical Engineering.
Three lecture hours a week for one semester, or as required by the topic. Biomedical Engineering 385J and 387J may not both be counted unless the topics vary. May be repeated for credit when the topics vary. Prerequisite: Graduate standing in engineering and consent of instructor.

Topic 6: Analysis of Biological Systems. Biomedical Engineering 383J (Topic: Analysis of Biological Systems I) and 385J (Topic 6) may not both be counted.

Topic 39: Medical Decision Making. Selected subjects from cognitive psychology and human-machine interaction for engineering students to design more effective systems for supporting medical decision making. Biomedical Engineering 385J (Topic: Medical Decision Making) and 385J (Topic 39) may not both be counted.

Topic 40: Cancer Bioengineering. Analysis of the biology and pathology of cancer, including the fundamental nature of cancer, cellular oncogenes, growth factor signaling, tumor suppressor genes, apoptosis, multi-step tumorigenesis, angiogenesis, metastasis, and tumor immunology and immunotherapy. Also explores ways in which the tools of engineering are transforming the future of cancer research. Biomedical Engineering 385J (Topic: Cancer Bioengineering) and 385J (Topic 40) may not both be counted.

Topic 41: Medical Device Design and Manufacturing. Apply engineering principles in the conception, design and prototyping of medical devices. Develop team projects with emphasis on clinical and market needs analysis, creative and useful concept generation, engineering requirements and specifications, and written and oral reporting of intermediate and final prototype outcomes. Three lecture hours a week for one semester. Biomedical Engineering 385J (Topic: Medical Device Design and Manu) and 385J (Topic 41) may not both be counted.

Topic 42: Inquiry Based Instructional Design. Examine principles of inquiry-based learning methods and their applications to an engineering pedagogical context. Use multiple, open-ended engineering problems as case studies and develop an independent course integrating inquiry-based learning content. Only one of the following may be counted: Biomedical Engineering 385J (Topic: Dsgn IBL: Bioheat Transfer), 385J (Topic: Inquiry Based Instruc Dsgn), 385J (Topic 42).

BME 685M. Mechanisms of Disease.
Restricted to students in the Master of Science in Engineering and Doctor of Medicine dual-degree program. Overview of the disease-specific concepts required to participate in patient care by integrating clinical medicine, microbiology, pathology, and pharmacology into organ system modules, and the pathophysiology of diseases, the differential diagnosis of cardinal symptoms, and treatment modalities. Includes other concepts such as radiology and diagnostics. Six lecture hours a week for one semester.

BME 396. Research Internship.
Students participate in research in an industry, clinic, or academic laboratory setting selected with the approval of the faculty adviser. At least twenty hours of fieldwork a week for one semester. May be counted only once toward either the master's or the doctoral degree. Offered on the credit/no credit basis only. Prerequisite: Graduate standing.

Problems selected by the student with approval of the faculty adviser. For each semester hour of credit earned, three laboratory hours a week for one semester. Offered on the credit/no credit basis only. Prerequisite: Graduate standing in biomedical engineering.

BME 197D. Deep Reading in Science and Engineering.
Analyze primary research articles with the goal of improving understanding of experimental design/methods, writing scientific articles and critiquing current research. The equivalent of one lecture hour a week for one semester. May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Graduate standing and consent of instructor.

BME 197E. Professional Responsibilities in Imaging.
One lecture hour a week for one semester. Offered on the credit/no credit basis only. Prerequisite: Graduate standing.

BME 197M. Mentoring Undergraduates in Research.
Designed to support and develop students' skills in mentoring undergraduates engaged in science, technology, engineering and mathematics (STEM) research. The equivalent of one lecture hour a week for one semester. Biomedical Engineering 180J (Topic: Research Mentoring) and 197M may not both be counted. Offered on the credit/no credit basis only. Prerequisite: Graduate standing.

BME 197N. Integrated Biomedical Engineering Seminar.
Designed to support students' professional development as well as their broad understanding of the biomedical engineering research enterprise. One lecture hour a week for one semester. Prerequisite: Graduate standing.

Explores professional development goals of biomedical engineers. Subjects include an individual development plan, careers in academia, entrepreneurship, careers in industry, and more. For each semester hour of credit earned, one lecture hour a week for one semester. Offered on the credit/no credit basis only.
BME 197S. Graduate Seminar in Biomedical Engineering.
The equivalent of one lecture hour a week for one semester. May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Graduate standing.

BME 698. Thesis.
The equivalent of three lecture hours a week for two semesters. Offered on the credit/no credit basis only. Prerequisite: For 698A, graduate standing in biomedical engineering and consent of the graduate adviser; for 698B, Biomedical Engineering 698A.

BME 398R. Master's Report.
Preparation of a report to fulfill the requirement for the master's degree under the report option. The equivalent of three lecture hours a week for one semester. Offered on the credit/no credit basis only. Prerequisite: Graduate standing in biomedical engineering and consent of the graduate adviser.

May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Admission to candidacy for the doctoral degree.

Professional Courses
C C - Classical Civilization

Lower-Division Courses
C C 301. Introduction to Ancient Greece.
Same as Core Texts and Ideas 301G. Greatness of Greece as reflected in Greek history, literature, philosophy, art, religion, and politics. No knowledge of Greek is required. Three lecture hours a week for one semester. Only one of the following may be counted: Classical Civilization 301, Core Texts and Ideas 310 (Topic: Introduction to Ancient Greece), 301G.

C C 302. Introduction to Ancient Rome.
Survey of the highlights and the influence of Roman civilization. No knowledge of Latin is required. Three class hours a week for one semester.

C C 303. Introduction to Classical Mythology.
Survey of major Greek and Roman myths and their influence on literature, art, and music. Three class hours a week for one semester. Classical Civilization 303 and 352 may not both be counted.

C C 304C. Topics in the Ancient World.
An introductory survey of the highlights of Greek and Roman civilization and early Christianity. No knowledge of Greek or Latin is required. Three lecture hours a week for one semester. Classical Civilization 304C and 348 may not both be counted unless the topics vary. May be repeated for credit when the topics vary.

Topic 2: Paganism to Christianity: An Introduction.
Topic 3: Introduction to Ancient Egypt. Same as African and African Diaspora Studies 315J. A survey of the language, culture, and history of Egypt from the prehistorical period (13,000 BC) to the New Kingdom (1069 BC). Three lecture hours a week for one semester. Only one of the following may be counted: African and African Diaspora Studies 315J, 317C (Topic: Introduction to Ancient Egypt), 317C (Topic 5), Classical Civilization 304C (Topic 3).

C C 304D. Classical Mythology and the Occult.
Explore the background for the mythologies of Egypt, Greece, and Rome, and areas of occult practice. Three lecture hours a week for one semester. Only one of the following may be counted: Classical Civilization 304C (Topic: Ancient Philosophy), 304C (Topic 6), Philosophy 301K.

Same as Core Texts and Ideas 305N and Religious Studies 315N. Examines representative examples of the texts found in the Christian New Testament and selected noncanonical writings. Focuses on historical setting and systematic methods of interpretation. Three lecture hours a week for one semester. Only one of the following may be counted: Classical Civilization 304C (Topic: Introduction to the New Testament), 304E, Core Texts and Ideas 305N, 310 (Topic: Introduction to the New Testament), Religious Studies 315N.

C C 304F. Introduction to Classical Literature.
Explore the literature of ancient Greece and Rome, its relationship to other literatures and arts, and the main current approaches to research in the field. Three lecture hours a week for one semester. Classical Civilization 304F and 348 (Topic: Intro to Classical Lit) may not both be counted.

C C 304G. Jews, Pagans, and Christians.
Same as History 304S and Religious Studies 304G. Investigate, using a range of primary and secondary readings, how religious identity was imagined and expressed in the 4th-6th centuries CE. Examine the complex interactions of, in particular, Jews, Christians, and Pagans. Three lecture hours a week for one semester. Only one of the following may be counted: Classical Civilization 304C (Topic: Pagans/Christians Late Roman Emp), 304G, History 304S, Religious Studies 304G, 315 (Topic: Pagans/Christians Late Roman Emp).

C C 306. Introduction to the Latin and Greek Element in English.
The systematic study of the Latin and Greek elements in the English vocabulary with a view to increasing the student's facility and authority in English. No knowledge of Greek or Latin is required. Three class hours a week for one semester.

C C 306M. Introduction to Medical and Scientific Terminology.
A systematic study of medical and scientific terminology based on Greek and Latin roots. No knowledge of Greek or Latin is required. Three lecture hours a week for one semester. Classical Civilization 306M and 336M may not both be counted.

C C 307C. Introduction to Greek Archaeology.
A survey of the artifacts, monuments, and sites of ancient Greece, and their value for documenting Greek religious, social, and cultural history. No knowledge of Greek is required. Three lecture hours a week for one semester.
C C 307D. Introduction to Roman Archaeology.
A survey of the artifacts, monuments, and sites of ancient Rome, and
their value for documenting Roman religious, social, and cultural history.
No knowledge of Latin is required. Three lecture hours a week for one
semester.

C C 317. Classical Archaeology: Methods and Approaches.
An overview of the history of classical archaeology and its methods and
approaches. Focuses on case studies of major sites and their excavation and
interpretation. No knowledge of Greek or Latin is required. Three
lecture hours a week for one semester. Prerequisite: One of the following
courses: Ancient History and Classical Civilization 319 (Topic 1: The
Ancient Mediterranean World), Art History 302, Classical Civilization 301,

C C 318. The Rise of Christianity.
Same as Jewish Studies 306E and Religious Studies 318. Introduction to
the origins and development of Christianity. Three lecture hours
a week for one semester. Only one of the following may be counted:
Classical Civilization 318, Jewish Studies 306E, 311 (Topic: The Rise of
Christianity), 311 (Topic 3), Religious Studies 318.

C C 319D. The Ancient Mediterranean World.
Same as Ancient History and Classical Civilization 319D and History
319D. Survey of the ancient Mediterranean from ca. 3000 BC to AD 476.
Focus on the development of ideas and institutions in the Greek and
Roman worlds and on the active cultural exchange among the diverse
civilizations of the broader region that shaped Greek and Roman history
and cultural identity. Three lecture hours or two lecture hours and one
discussion hour a week for one semester. Only one of the following may be
counted: Ancient History and Classical Civilization 319 (Topic 1),
319D, European Studies 301 (Topic: Ancient Mediterranean World), 306
(Topic: Ancient Mediterranean World), Middle Eastern Studies 310 (Topic: Ancient
Mediterranean World), Classical Civilizations 319D, History 319D.

Topics in Classical Civilization.
This course is used to record credit the student earns while enrolled at
another institution in a program administered by the University's Study
Abroad Office. Credit is recorded as assigned by the study abroad adviser
in the Department of Classics. University credit is awarded for work in an
exchange program; it may be counted as coursework taken in residence.
Transfer credit is awarded for work in an affiliated studies program. May
be repeated for credit when the topics vary.

Upper-Division Courses

C C 322C. Ancient Epic.
Same as Core Texts and Ideas 340. Explore epic poems of Greece and
Roman in translation. Three lecture hours a week for one semester
Only one of the following may be counted: Classical Civilization 322 (Topic 4),
322C, Core Texts and Ideas 340, 345 (Topic: Ancient Epic), 345 (Topic 9).
Prerequisite: Upper-division standing.

C C 322D. The Ancient Historians.
Same as Ancient History and Classical Civilization 325 (Topic 13),
Comparative Literature 323 (Topic 59), and Core Texts and Ideas 329.
Examines the main works of ancient historiography, and provides
grounding in the central issues with which these works engage. Three
lecture hours a week for one semester. Only one of the following may be
counted: Ancient History and Classical Civilization 325 (Topic 13),
Classical Civilization 322 (Topic 13), 322D, Comparative Literature
323 (Topic 59), Core Texts and Ideas 329. Prerequisite: Upper-division standing.

C C 327. Parageography.
Survey of the classical and medieval roots of speculative literature,
especially those fantasies that involve the creation and presentation
of imaginary places, lands, and worlds. No knowledge of Greek or Latin
is required. Three lecture hours a week for one semester. Prerequisite:
Upper-division standing.

Topics in Classical Civilization.
This course is used to record credit the student earns while enrolled at
another institution in a program administered by the University's Study
Abroad Office. Credit is recorded as assigned by the study abroad adviser
in the Department of Classics. University credit is awarded for work in an
exchange program; it may be counted as coursework taken in residence.
Transfer credit is awarded for work in an affiliated studies program. May
be repeated for credit when the topics vary.

C C 340. Advanced Topics in Classical Archaeology.
Detailed study of topics such as architecture, sculpture, or topography of
sites. No knowledge of Greek or Latin is required. Three lecture hours
a week for one semester. Classical Civilization 307K and 340 may not both
be counted unless the topics vary. Classical Civilization 340 and 375 may
not both be counted unless the topics vary. May be repeated for credit
when the topics vary. Prerequisite: Upper-division standing.

Topic 1: Greek Archaeology. Study of the artifacts, monuments, and
sites of classical Greece; and their value for documenting ancient
Greek religious, social, and cultural history.

Topic 2: Art and Politics in Imperial Rome. Same as Art History 327N.
Public art of the Roman Empire from Augustus to late antiquity, ca.
31 BC to AD 350. Three lecture hours a week for one semester. Art
History 327N and Classical Civilization 340 (Topic 2) may not both be
counted. Prerequisite: Upper-division standing.

Topic 3: Greek Architecture. The architecture of mainland Greece,
Asia Minor, and Sicily from the Dark Ages to the end of the Hellenistic
period (ca. 1000 to 30 BC), with emphasis on public buildings, both
religious and secular. Prerequisite: For art history and visual art
studies majors, Art History 302 and 303; for others, at least one of the
following is advisable but not required: Art History 301, 302, 303.

Topic 4: Roman Architecture. Prerequisite: For art history and visual
art studies majors, Art History 302 and 303; for others, at least one of the
following is advisable but not required: Art History 301, 302, 303.

Topic 5: Hellenistic Art and Architecture. Art of the Hellenistic period
from the reign of Alexander the Great to the beginning of the Roman
Empire, ca. 336 to 31 BC. Prerequisite: For art history and visual
art studies majors, Art History 302 and 303; for others, at least one of the
following is advisable but not required: Art History 301, 302, 303.

Values and social practices in the ancient Mediterranean as expressed
by foodways and nutritional choices. Classical Civilization 340 (Topic
6) and 348 (Topic: Food and Drink) may not both be counted.

Topic 7: Pompeii. Uses ancient literary texts and various analytical
approaches to examine the ancient remains of Pompeii and
Herculaneum in context. Classical Civilization 340 (Topic: Pompeii) and
340 (Topic 7) may not both be counted.

Topic 8: Archaeology of Greek Prehistory. Same as Ancient History
and Classical Civilization 325 (Topic 8), Middle Eastern Languages
and Cultures 321 (Topic 33), and Middle Eastern Studies 342 (Topic
42). Explores the development of complex societies in ancient Greece by
studying its prehistory through archaeology. Only one of the
following may be counted: Ancient History and Classical Civilization
325 (Topic: Archaeology of Greek Prehistory), 325 (Topic 8), Classical
Civilization 340 (Topic: Archaeology of Greek Prehistory), 340 (Topic
8), Middle Eastern Languages and Cultures 321 (Topic: Archaeology of
Greek Prehistory), 321 (Topic 33), Middle Eastern Studies 320 (Topic:
Archaeology of Greek Prehistory), 342 (Topic: Archaeology of Greek Prehistory), 342 (Topic 42), Persian 372 (Topic: Archaeology of Greek Prehistory).

**Topic 9: Topography and Monuments of Ancient Rome.** Examines the architecture and urban development of Rome from its beginnings until late antiquity. Only one of the following may be counted: Classical Civilization 340 (Topic: Topography and Monuments of Ancient Rome), 340 (Topic 9), European Studies 346 (Topic: Topography and Monuments of Ancient Rome).

**Topic 10: Archaeology, Art, and Analysis of Greco-Roman and Aegean Pottery.** Various approaches to pottery and analytical techniques. Combines lectures with hands-on analysis of sherds, as well as the experimental manufacture of pottery in bonfires. Only one of the following may be counted: Anthropology 324L (Topic: Archaeology, Art and Analysis of Greco-Roman and Aegean Pottery), Classical Civilization 340 (Topic: Archaeology, Art and Analysis of Greco-Roman and Aegean Pottery), 340 (Topic 10).

**Topic 11: Water and the Roman City.** Same as Urban Studies 342C. Examine Roman urban development, design, and adaption from the perspective of hydrology, hydraulics, and cult and culture. Three lecture hours a week for one semester. Only one of the following may be counted: Classical Civilization 340 (Topic: Water and the Roman City), 340 (Topic 11), Urban Studies 342C, 353 (Topic: Water and the Roman City). Additional prerequisite: Upper-division standing.

**Topic 12: The Bronze Age: Kings and Heroes.** Examine the ancient civilizations of the Bronze Age Aegean (3000-1100 BCE): Crete, the Cyclades, Mainland Greece, and Western Anatolia. Three lecture hours a week for one semester. Classical Civilization 340 (Topic: Kings/Herodes-Aegean Bronze Age) and 340 (Topic 12) may not both be counted. Additional prerequisite: Upper-division standing.

**Topic 13: Shrines and Sanctuaries.** Same as Religious Studies 340C. Survey Greek and Roman religious architecture and sacred space from the Bronze Age to the Hellenistic and Roman Empires. Three lecture hours a week for one semester. Only one of the following may be counted: Classical Civilization 340 (Topic: Shrines and Sanctuaries), 340 (Topic 13), Religious Studies 340C. Additional prerequisite: Upper-division standing.

**Topic 14: Sicily: Cultures and Conquest.** Same as Italian Civilization 340. Examine Sicily from the earliest prehistoric settlements to its first Norman king, with a focus on questions of change, recurrence, and continuity as viewed within the dual frames of archaeology and history. Three lecture hours a week for one semester. Only one of the following may be counted: Classical Civilization 340 (Topic: Archaeology of Sicily), 340 (Topic 14), Italian Civilization 340. Additional prerequisite: Upper-division standing.

**Topic 3: Greek Private Life.**

**Topic 4: History of Ancient Philosophy.** Same as Philosophy 329K. Development of Western philosophy from the pre-Socratics to the early Christian era; emphasis on Plato and Aristotle. Three lecture hours and one discussion hour a week for one semester. Classical Civilization 348 (Topic 4) and Philosophy 329K may not both be counted. Additional prerequisite: Six semester hours of coursework in philosophy.

**Topic 5: Homosexuality in Antiquity.** Prerequisite: Upper-division standing.

**Topic 7: Women in Classical Antiquity.** Same as Women’s and Gender Studies 345 (Topic 9: Women in Classical Antiquity).

**Topic 10: Jesus in History and Tradition.** Same as Religious Studies 335. Critical issues, scholarly debates, and historical methods in studying the development of the Christian tradition regarding the figure of Jesus. Prerequisite: Upper-division standing.

**Topic 11: Ancient Egypt.** Same as African and African Diaspora Studies 340G and Middle Eastern Studies 342 (Topic 55). Discussion of Egypt’s culture, language, and history from the prehistorical period (13,000 BC) to the New Kingdom (1069 BC). Three lecture hours a week for one semester. Only one of the following may be counted: African and African Diaspora Studies 340G, 374C (Topic: Ancient Egypt), Classical Civilization 348 (Topic 11), Middle Eastern Studies 342 (Topic: Ancient Egypt), 342 (Topic 55). Additional prerequisite: Upper-division standing.

**Topic 13: Gender and Sexuality in Ancient Novel.** Same as Women’s and Gender Studies 345 (Topic 53). The major works of prose fiction from Greco-Roman antiquity and how those works relate to the intellectual, cultural, and social currents of late antiquity. Only one of the following may be counted: Classical Civilization 348 (Topic: Gender and Sexuality in Ancient Novel), 348 (Topic 14) may not both be counted. Additional prerequisite: Upper-division standing.

**Topic 14: Ancient Greek Medicine.** Examines ancient Greek medicine in light of the modern fields of pathology, surgery, pharmacology, therapy, obstetrics, psychology, anatomy, medical science, ethics, and education. Classical Civilization 348 (Topic: Ancient Greek Medicine) and 348 (Topic 14) may not both be counted. Additional prerequisite: Upper-division standing.

**Topic 15: Civil War in Rome.** Same as Ancient History and Classical Civilization 325 (Topic 15). Examines the sequence of civil conflict in Rome from the struggle of the orders through the rise of Constantine the Great. Only one of the following may be counted: Ancient History and Classical Civilization 325 (Topic: Civil War in Rome), 325 (Topic 15), Classical Civilization 348 (Topic: Civil War in Rome), 348 (Topic 15), History 362G (Topic: Civil War in Rome).

**Topic 16: Moral Agency In Greek Tragedy.** Same as Core Texts and Ideas 341. Subjects include the masterpieces of Greek tragedy, the social and cultural background of the texts, and questions posed by the texts. Three lecture hours a week for one semester. Only one of the following may be counted: Classical Civilization 348 (Topic 16), Core Texts and Ideas 341, 345 (Topic 3). Additional prerequisite: Upper-division standing.

**Topic 17: Egyptian Hieroglyphics in Cultural Context.** Same as African and African Diaspora Studies 340P. The vocabulary and grammar of ancient Egypt as a guide to understanding artifacts and monuments from the different periods of Egyptian history, whether in museums, exhibitions, or on site overseas. Three lecture hours a week for one semester. Only one of the following may be counted: African and African Diaspora Studies 340P, 374C (Topic: Egyptian Hieroglyphics in Cultural Context), 374C (Topic 5), Classical Civilization 348 (Topic 17). Additional prerequisite: Upper-division standing.

**Topic 18: Ancient Mediterranean Masculinities.** Same as Women’s and Gender Studies 340 (Topic 59). Examines in-depth literary and artistic evidence from multiple ancient cultures to determine how each society defined the distinctively “masculine” role it expected of men and boys and how each society transformed boys into men. Only one of the following may be counted: Classical Civilization 348 (Topic: Ancient Mediterranean Masculinities), 348 (Topic 18), Women’s and Gender Studies 340 (Topic: Ancient Mediterranean Masculinities), 340 (Topic 59).

**Topic 19: Nero.** Nero’s life in its larger social and historical context, as well as his reception in the medieval period and beyond. Only one of the following may be counted: Classical Civilization 348 (Topic: Nero), 348 (Topic 19), European Studies 346 (Topic: Nero).

C C 348. Topics in Ancient Civilization.

The development and progress of ancient civilization, including history, philosophy, literature, and culture. No knowledge of Greek or Latin is required. Three lecture hours a week for one semester; additional hours may be required for some topics. Classical Civilization 304C and 348 may not both be counted unless the topics vary. Classical Civilization 348 and 375 may not both be counted unless the topics vary. May be repeated for credit when the topics vary. Prerequisite: Varies with the topic.

2023-2024 General Information Catalog  ▶  General Information 2023 - 2024  353
**Topic 20: Roman Philosophy and Science.** Examines the aims, methods, and achievements of philosophy and science in the ancient Roman world.

**Topic 21: Lost Languages and Decipherment.** Same as Ancient History and Classical Civilization 330 (Topic 4), Middle Eastern Languages and Cultures 321 (Topic 37), and Middle Eastern Studies 342 (Topic 45). Only one of the following may be counted: Ancient History and Classical Civilization 330 (Topic: Lost Languages & Decipherment), 330 (Topic 4), Classical Civilization 348 (Topic: Lost Languages & Decipherment), 348 (Topic 21), Linguistics 350 (Topic: Lost Languages & Decipherment), Middle Eastern Languages and Cultures 321 (Topic: Lost Languages & Decipherment), 321 (Topic 37), Middle Eastern Studies 342 (Topic: Lost Languages & Decipherment), 342 (Topic 45). Prerequisite: Upper-division standing.

**Topic 23: Values and Leadership in Ancient World.** Same as Core Texts and Ideas 375 (Topic 8). Only one of the following may be counted: Classical Civilization 348 (Topic: Values and Leadership in Ancient World), 348 (Topic 23), Core Texts and Ideas 375 (Topic: Values and Leadership in Ancient World), 375 (Topic 8), History 350L (Topic: Values and Leadership in Ancient World). Additional prerequisite: Upper-division standing.

**Topic 24: Daily Life in Ancient Egypt.** Same as African and African Diaspora Studies 340Q, Middle Eastern Languages and Cultures 321 (Topic 29), and Middle Eastern Studies 342 (Topic 51). Delves into all areas of Egyptian daily life from the dawn of the dynasties to the age of Cleopatra. Three lecture hours a week for one semester. Only one of the following may be counted: African and African Diaspora Studies 340Q, 374C (Topic: Daily Life in Ancient Egypt), 374C (Topic 7), Classical Civilization 348 (Topic: Daily Life in Ancient Egypt), 348 (Topic 24), Middle Eastern Languages and Cultures 321 (Topic: Daily Life in Ancient Egypt), 321 (Topic 29), Middle Eastern Studies 342 (Topic: Daily Life in Ancient Egypt), 342 (Topic 51). Additional prerequisite: Upper-division standing.

**C C 348C. Hermits, Monks, and Saints in Early Christianity.** Same as Middle Eastern Studies 342 (Topic 54) and Religious Studies 365D. Examine individual and communal forms of Christian monasticism from the first through fifth centuries CE. Explore the social, economic and religious factors that may have made a life of self-denial attractive to many early Christians and the role of authority in these movements. Three lecture hours a week for one semester. Only one of the following may be counted: Classical Civilization 348 (Topic: Hermits, Monks, and Saints in Early Christianity), 348C, Middle Eastern Studies 342 (Topic: Hermits, Monks, and Saints in Early Christianity), 342 (Topic 54), Religious Studies 365 (Topic: Hermits, Monks, and Saints in Early Christianity), 365D. Prerequisite: Upper-division standing.

**C C 348D. Interpretation of Jesus’ Death and Resurrection.** Same as Religious Studies 353F. Examine the narratives of Jesus’ death and resurrection and their subsequent interpretation over the last two thousand years. Analyze historical Christian and Islamic texts, contemporary debates and cultural context. Three lecture hours a week for one semester. Only one of the following may be counted: Classical Civilization 348 (Topic: Interpretation of Jesus’ Death and Resurrection), 348D, Religious Studies 353 (Topic: Interpretation of Jesus’ Death and Resurrection), 353F. Prerequisite: Upper-division standing.

**C C 348E. Plato and His Philosophy.** Same as Philosophy 329C. Intensive study of selected works by Plato. Three lecture hours a week for one semester. Only one of the following may be counted: Classical Civilization 348 (Topic: Plato), 348E, Philosophy 329C, 329M (Topic: Plato). Prerequisite: Upper-division standing.

**C C 348F. Beyond the New Testament.** Same as Religious Studies 353E. Study of early Christian writings that were not included in the Christian Bible. Examines issues such as the effect of narrative, religion and violence, gendered expectations for women and men, the uses of fantasy literature, and religious authority. Emphasis on systematic methods for disciplined interpretation. Three lecture hours a week for one semester. Only one of the following may be counted: Classical Civilization 348 (Topic: Beyond the New Testament), 348F, Religious Studies 353E. Prerequisite: Upper-division standing.

**C C 348G. Death and the Afterlife in Graeco-Roman Antiquity.** Same as Core Texts and Ideas 328D and Religious Studies 365G. Explore the afterlife from Near Eastern myths and Homer through Greek and Roman antiquity to the early Church Fathers. Three lecture hours a week for one semester. Only one of the following may be counted: Classical Civilization 348 (Topic: Death/Afterlife Graeco-Roman), 348G, Core Texts and Ideas 328D, Religious Studies 365G. Prerequisite: Upper-division standing.

**C C 348I. Paul and His Social World.** Same as Religious Studies 353P. Examine the life and letters of the first-century Jewish missionary Paul by interpreting his writings within the context of diaspora Judaism and the broader Greco-Roman world. Explore his legacy within the context of early church history. Three lecture hours a week for one semester. Only one of the following may be counted: Classical Civilization 348 (Topic: Paul and His Social World), 348J, Religious Studies 353 (Topic 2), 353P. Prerequisite: Upper-division standing.

**C C 348J. Paul and His Social World.** Same as Religious Studies 353P. Examine the life and letters of the first-century Jewish missionary Paul by interpreting his writings within the context of diaspora Judaism and the broader Greco-Roman world. Explore his legacy within the context of early church history. Three lecture hours a week for one semester. Only one of the following may be counted: Classical Civilization 348 (Topic: Paul and His Social World), 348J, Religious Studies 353 (Topic 2), 353P. Prerequisite: Upper-division standing.

**C C 348K. Archaic Greece: Society and Culture.** Same as Core Texts and Ideas 327C. Three lecture hours a week for one semester. Only one of the following may be counted: Classical Civilization 348 (Topic: Archaic Greece: Soc/Culture), 348K, Core Texts and Ideas 327C. Prerequisite: Upper-division standing.

**C C 348L. Horror in Classics and Film.** Examine themes of modern horror films as they appear across genres and periods of ancient texts. Three lecture hours a week for one semester. Classical Civilization 348 (Topic: Horror in Classics and Film) and 348L may not both be counted. Prerequisite: Upper-division standing.

**C C 348M. Ritual and Belief in Ancient Greece.** Same as Religious Studies 356R. Investigate the practices, premises, and cultural contexts of ancient Greek religion through direct study of ancient sources informed by modern critical approaches. Three lecture hours a week for one semester. Only one of the following may be counted: Classical Civilization 348 (Topic: Ancient Greek Religion), 348M, Religious Studies 356R, 356 (Topic: Ancient Greek Religion). Prerequisite: Upper-division standing.

**C C 348N. Myths and Legends of the Ancient Near East.** Same as History 334D, Middle Eastern Studies 342 (Topic 85), and Religious Studies 359L. Explore myths and legends contained in a variety of ancient sources, including texts from Israel, Greece, Egypt, and Mesopotamia. Three lecture hours a week for one semester. Only
one of the following may be counted: Classical Civilization 348N, History 334D, Middle Eastern Studies 342 (Topic 85), Religious Studies 359L. Prerequisite: Upper-division standing.

C C 348P. Africa and Rome.

C C 362. Conference Course in Classical Archaeology.
Advanced archaeological instruction and research in classical archaeology. No knowledge of Greek is required. Conference course. May be repeated for credit. Prerequisite: Upper-division standing and consent of instructor.

Supervised work in various specialized aspects of classical civilization. No knowledge of Greek or Latin is required. Conference course. May be repeated for credit. Prerequisite: Upper-division standing and consent of instructor.

Restricted to students in the Department of Classics. Study of selected topics in classical studies. Some knowledge of Greek or Latin is expected. Three lecture hours a week for one semester. Classical Civilization 340 and 375 may not both be counted unless the topics vary. Classical Civilization 348 and 375 may not both be counted unless the topics vary. May be repeated for credit when the topics vary. Prerequisite: Upper-division standing.

Topic 1: Roman Law. Same as Ancient History and Classical Civilization 378 (Topic 1). Introduction to Roman law with close study of primary sources. Only one of the following may be counted: Ancient History and Classical Civilization 378 (Topic: Roman Law), 378 (Topic 1), Classical Civilization 375 (Topic 1).

Topic 2: Aegean Prehistory. Same as Ancient History and Classical Civilization 378 (Topic 2). Traces political, social, economic, and general cultural developments on Crete and the Greek mainland between roughly 2200 and 1100 BCE. Only one of the following may be counted: Ancient History and Classical Civilization 378 (Topic: Aegean Prehistory), 378 (Topic 2), Classical Civilization 375 (Topic 2), History 350L (Topic: Aegean Prehistory).

Topic 3: Writing Ancient History Today. Same as Ancient History and Classical Civilization 378 (Topic 3). Questions that engage ancient historians today and the methods that they use. Some background in ancient Greek history is recommended. Only one of the following may be counted: Ancient History and Classical Civilization 378 (Topic: Writing Ancient History Today), 378 (Topic 3), Classical Civilization 375 (Topic 3), History 350L (Topic: Writing Ancient History Today).

Topic 4: The Athenian Empire. Same as Ancient History and Classical Civilization 378 (Topic 4). Explores Athenian society, democracy, and empire from the development of Athenian hegemony in the 470s BCE through the break up of the Athenian Empire in 404 BCE. Only one of the following may be counted: Ancient History and Classical Civilization 378 (Topic: Athenian Empire), 378 (Topic 4), Classical Civilization 375 (Topic 4), History 350L (Topic: Athenian Empire).

Topic 5: Space and Place. Same as Ancient History and Classical Civilization 378 (Topic 5). Multidisciplinary approach to the cultural concepts of space and place using Greek and Roman literary, historical, and archaeological sources. Only one of the following may be counted: Ancient History and Classical Civilization 378 (Topic: Space and Place), 378 (Topic 5), Classical Civilization 375 (Topic: Space and Place), 375 (Topic 5).

Topic 6: Ancient Sparta. Same as Ancient History and Classical Civilization 378 (Topic 6). Examines topics and problems in the social, political, and economic history of the ancient city-state of Sparta. Only one of the following may be counted: Ancient History and Classical Civilization 378 (Topic: Ancient Sparta), 378 (Topic 6), Classical Civilization 375 (Topic 6).

Topic 7: Cognitive History of the Ancient World. Same as Ancient History and Classical Civilization 378 (Topic 7). Examines aspects of the organization of thought in the ancient world. Only one of the following may be counted: Ancient History and Classical Civilization 378 (Topic: Cognitive Hist of Anc World), (Topic 7), Classical Civilization 375 (Topic 7).

Topic 8: Herodotus, Ethnography, and Archaeology. Same as Ancient History and Classical Civilization 378 (Topic 8). Explore the ethnographic component of the Histories of Herodotus. Three lecture hours a week for one semester. Only one of the following may be counted: Ancient History and Classical Civilization 378 (Topic: Herodotus, Ethnograph, & Arch), 378 (Topic 8), Classical Civilization 375 (Topic: Herodotus, Ethnograph, & Arch), 375 (Topic 8). Additional prerequisite: Upper-division standing.

Topic 9: Literacy, Numeracy, and Visuality. Same as Ancient History and Classical Civilization 378 (Topic 9). Analyze literacy, numeracy, and visuality, that is "reading" and "writing" by means of visual representations, largely by tracing the history of how modern scholars have analyzed those practices. Only one of the following may be counted: Ancient History and Classical Civilization 378 (Topic: Literacy/Numeracy/Visuality), 378 (Topic 9), Classical Civilization 375 (Topic: Literacy/Numeracy/Visuality), 375 (Topic 9).

Topic 10: Roman Social History. Same as Ancient History and Classical Civilization 378 (Topic 10). Examine Roman social history: family structure and demography, gender systems, official social hierarchies, urban/rural interactions and labor. Consideration both of primary evidence and the historiography of the field. Only one of the following may be counted: Ancient History and Classical Civilization 378 (Topic: Roman Social History), 378 (Topic 10), Classical Civilization 348 (Topic: Roman Social History), 375 (Topic 10).

C C 679H. Honors Tutorial Course.
Supervised conference course for honors candidates in classics. Three conference hours a week for two semesters. Prerequisite: For 679HA, upper-division standing and admission to the Classics Honors Program; for 679HB, Classical Civilization 679HA.

Graduate Courses

C C 380. Seminar in Classical Archaeology.
Topics given in recent years include methods and theory, Greek and Roman Naples, landscape archaeology, and Hellenistic and Roman Egypt. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

C C 380J. Proseminar in Classical Literature.
Brief survey of the history of classical literature; orientation to the major periods and genres. Three hours a week for one semester. Designed for first-year graduate students. Prerequisite: Graduate standing.
C C 381. Conference Course in Classical Civilization.
Studies in classical antiquity. A knowledge of the ancient languages is not required. Three hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing and consent of instructor.

C C 382. Field Archaeology.
Involves the participation of the student in an archaeological excavation; the study of field techniques includes excavation procedure, documentation, conservation, and interpretation. Three hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of instructor.

Studies in various aspects of Greek and Roman literature, history, and culture. Three hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing; additional prerequisites vary with the topic.

- **Topic 1:** Roman Imperial Funerary Monuments.
- **Topic 2:** Introduction to Diachronic Linguistics: Germanic. Same as German 381 (Topic 3) and Linguistics 383 (Topic 8). Only one of the following may be counted: Classical Civilizations 383 (Topic 2), German 381 (Topic 3), Linguistics 383 (Topic 8).

Overview of important theories, issues, and research in classics. Three hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing.

C C 186K, 386K. Conference Course in Classical Literature.
Conference course. May be repeated for credit. Prerequisite: Graduate standing and consent of instructor.

**Professional Courses**

**C E - Civil Engineering**

**Lower-Division Courses**

**C E 301. Civil Engineering Systems.**
Introduction to civil engineering as a career; engineering problem solving; use of computers for text, graphics, and data analysis; introduction to civil engineering measurements; breadth of disciplines within civil engineering; engineering ethics, sustainability. Two lecture hours and three laboratory hours a week for one semester.

**C E 311K. Introduction to Computer Methods.**
Organization and programming of civil engineering problems for computer solutions. Five hours a week for one semester, including lecture and laboratory. Prerequisite: Mathematics 408D or 408M.

**C E 311S. Probability and Statistics for Civil Engineers.**
Basic theory of probability and statistics with practical applications to civil engineering problems, including statistical inference and sampling. Additional subjects may include reliability and risk analyses, estimation and regression analyses, and experimental design. Three lecture hours and one laboratory hour a week for one semester. Prerequisite: Mathematics 408D or 408M.

**C E 319F. Elementary Mechanics of Fluids.**
Fluid properties, hydrostatics, elements of fluid dynamics, energy and momentum, boundary layers, similitude, pipe flow, metering instruments, drag forces. Three lecture hours and two laboratory hours a week for one semester. Civil Engineering 319F and Mechanical Engineering 330 may not both be counted. Prerequisite: Engineering Mechanics 306.

**C E 119S, 219S, 319S, 419S, 519S, 619S, 719S, 819S, 919S. Topics in Civil Engineering.**
Used to record credit the student earns while enrolled at another institution in a program administered by the University’s Study Abroad Office. Credit is recorded as assigned by the study abroad adviser in the Department of Civil, Architectural and Environmental Engineering. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

**Upper-Division Courses**

**C E 321. Transportation Systems.**
Planning, economics, location, construction, operation, maintenance, and design of transportation systems; concepts of various modes of transportation. Three lecture hours a week for one semester. Prerequisite: Civil Engineering 311S.

**C E 324P. Properties and Behavior of Engineering Materials.**
Structure, properties, and behavior of engineering materials, including concrete and metals. Laboratory exercises illustrate mechanical behavior of typical materials and demonstrate selected principles of mechanics. Three hours of lecture, and three hours of laboratory and supervised work a week for one semester. Prerequisite: Chemistry 301, Civil Engineering 333T or Engineering Studies 333T, and Engineering Mechanics 319.

**C E 329. Structural Analysis.**
Classical methods of analysis for determinate and indeterminate structures under stationary and moving loads. Three or four hours of lecture and supervised work a week for one semester. Prerequisite: Engineering Mechanics 319 and Civil Engineering 311K.

**C E 129S, 229S, 329S, 429S, 529S, 629S, 729S, 829S, 929S. Topics in Civil Engineering.**
Used to record credit the student earns while enrolled at another institution in a program administered by the University’s Study Abroad Office. Credit is recorded as assigned by the study abroad adviser in the Department of Civil, Architectural and Environmental Engineering. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

**C E 331. Reinforced Concrete Design.**
Design of reinforced concrete beams and columns. Five hours of lecture and supervised work a week for one semester. Prerequisite: Civil Engineering 324P and 329.

**C E 333T. Engineering Communication.**
Technical communication skills for engineers, especially researching and writing technical documents for many kinds of readers, managing and documenting sources of information, using and explaining graphics, delivering oral presentations, working collaboratively, and eliciting information from experts and stakeholders. Two lecture hours and one and one half laboratory hours a week for one semester. Only one of the following may be counted: Aerospace Engineering 333T, Biomedical Engineering 333T, Communication 333T, Civil Engineering 333T, Chemical Engineering 333T, Electrical and Computer Engineering 333T, Electrical Engineering 333T, Mechanical Engineering 333T, Petroleum and Geosystems Engineering 333T. Prerequisite: Rhetoric and Writing 306.
C E 335. Elements of Steel Design.
Analysis and design of tension members, beams, columns, and bolted and welded connections. Five hours of lecture and supervised work a week for one semester. Prerequisite: Civil Engineering 324P and 329.

C E 341. Introduction to Environmental Engineering.
Quantitative evaluation of the environmental, economic, and technical problems involved in control of pollutants of the air, water, and land. Three lecture hours a week for one semester. Prerequisite: Chemistry 302 and Civil Engineering 319F.

C E 342. Water and Wastewater Treatment Engineering.
Application of chemical, biological, and physical principles to the analysis and design of treatment processes for drinking water, industrial process water, municipal wastewater, and water reuse applications. Three lecture hours a week for one semester. Prerequisite: Civil Engineering 341 or Environmental Engineering 312.

C E 346. Solid Waste Engineering and Management.
Characteristics of municipal and industrial solid wastes, generation rates, collection systems, recycling, processing, and disposal. Three lecture hours a week for one semester, with occasional field trips. Prerequisite: Civil Engineering 341 or Environmental Engineering 312.

C E 351. Concrete Materials.
Portland cement, aggregates, supplementary cementing materials, properties of fresh and hardened concrete, concrete durability, mixture proportioning, concrete construction, and special concretes. Three lecture hours and three laboratory hours a week for one semester. Prerequisite: Civil Engineering 324P.

Flow in closed conduits, hydraulic machinery; open-channel flow; flow measurement; design of storm sewers. Five hours a week for one semester, including lecture and laboratory. Prerequisite: Civil Engineering 319F.

C E 357. Geotechnical Engineering.
Engineering properties of soils; hydraulic conductivity and shear strength of soils; soil compaction and consolidation; stresses with the soil mass; settlement of foundations of structures; laboratory measurements. Six hours a week for one semester, including lecture and laboratory. Prerequisite: Civil Engineering 319F.

C E 358. Introductory Ocean Engineering.
Wave theory and its applications to coastal engineering, wave energy conversion, and offshore structure technology. Includes fundamentals of inviscid and viscous flow of incompressible fluids, and applications of computational fluid dynamics (CFD) in design. Three lecture hours a week for one semester. Prerequisite: Civil Engineering 319F.

C E 360K. Foundation Engineering.
Effect of geotechnical conditions on the behavior, proportioning, and choice of foundation type; design of shallow and deep foundations; study of foundation case histories. Five hours a week for one semester, including lecture and discussion. Offered in the fall semester only. Prerequisite: Civil Engineering 357.

C E 362M. Advanced Reinforced Concrete Design.
Design of reinforced concrete buildings, including floor systems and structural walls. Five hours of lecture and supervised work a week for one semester. Prerequisite: Civil Engineering 331.
design of air pollution control equipment. Three lecture hours a week for one semester. Prerequisite: Civil Engineering 341 or Environmental Engineering 312.

**C E 369R. Indoor Air Quality.**
Sources, properties, transport and fate, human exposure, and adverse responses to indoor air pollutants. Control strategies and engineered technologies to mitigate impacts of gaseous and particle phase air pollutants in indoor environments. Three lecture hours a week for one semester. Civil Engineering 369R and 377K (Topic: Indoor Air Quality) may not both be counted. Prerequisite: Civil Engineering 311K and 319F; and Architectural Engineering 346N or Civil Engineering 341 or Environmental Engineering 312.

**C E 370K. Environmental Sampling and Analysis.**
Principles of environmental chemistry; measurement of contaminants in air, water, and land environments; applications to municipal, industrial, and ambient samples. Six hours a week for one semester, including lecture and laboratory. Prerequisite: Civil Engineering 341.

**C E 370L. Climate Change Mitigation.**
Explore the large-scale solutions to climate change systematically. Examine the fundamentals of climate science, mitigation of climate change through transformation of energy supply and end-use, geoengineering, and industrial carbon management. Discuss the social and economic context for engineered solutions. Three lecture hours a week for one semester. Civil Engineering 370L and 377K (Topic: Climate Change Mitigation) may not both be counted. Prerequisite: Civil Engineering 341 or Environmental Engineering 312 or Architectural Engineering 346N.

**C E 370P. Engineering Professionalism.**

**C E 171P. Engineering Professionalism.**
Examines professional engineering licensure, ethics, leadership, public service, and public policy, with an emphasis on multidisciplinary perspectives, legal and business considerations, and the importance of lifelong learning. Includes participation in a culminating major design project in public service, reflecting knowledge from technical electives and base level coursework. Two lecture hours a week for one semester, with additional fieldwork hours to be arranged. Only one of the following may be counted: Civil Engineering 177K (Topic: Engineering Professionalism), 370P and 171P. Prerequisite: Credit or registration for one of the following: Civil Engineering 360K, 362M, 362N, 364, 365K, or 367G.

**C E 374K. Hydrology.**
Phases of the hydrologic cycle and associated transport processes; land surface-atmosphere interaction; soil infiltration; rainfall runoff; unit hydrograph; flow routing; hydrologic statistics; and extreme events, including design storms and flows. Three lecture hours a week for one semester. Prerequisite: Civil Engineering 311S and 356.

**C E 374N. Topics in Natural Water Systems Engineering.**
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Civil Engineering 356.

**Topic 1: River Mechanics.** Explore the application of engineering hydraulics to analysis of river behavior and sediment transport through complex natural topography. Examine basin-scale and reach-scale river dynamics as well as river restoration design and analyses.

**Topic 2: Ecohydraulics.** Explore the application of engineering hydraulics to analysis of river and stream behavior at small scales that interact with ecology. Examine sustainable design with vegetation to mitigate sediment impacts as well as hydraulic effects on invasive species.

**C E 374U. Topics in Urban Water Systems Engineering.**
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Civil Engineering 356.

**Topic 1: Urban Stormwater.** Explore the application of engineering hydraulics to design and analyses of urban stormwater infrastructure. Examine engineering hydrology for design storms; an introduction to hydraulic and hydrologic modeling tools; and design requirements for controlling urban water quality and enhancing sustainability.

**Topic 2: Smart Water Infrastructure.** Explore the application of engineering hydraulics to design and analyses of urban water distribution systems. Examine computational modeling and control of pipe networks as well as considerations of variable user demand, firefight, and contaminant transport.

**C E 375. Earth Slopes and Retaining Structures.**
Earth fills, excavations, and dams; soil compaction and ground improvement, seepage and dewatering; stability of natural slopes and embankments; earth-pressure theories; design of earth retaining structures. Three lecture hours a week for one semester. Offered in spring semester only. Prerequisite: Civil Engineering 357.

**C E 177K, 277K, 377K. Studies in Civil Engineering.**
Various specified topics or conference course. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. Additional hours may be required for some topics. May be repeated for credit when the topics vary. Prerequisite: Varies with the topic.

**Topic 7: Independent Study.** Restricted to civil engineering majors. Independent research with a tenure track faculty member in the Department of Civil, Architectural, and Environmental Engineering. Prepare a project proposal and a final report, each of which is evaluated by the faculty supervisor. C E 177K, 277K, 377K (Topic 7) and C E 177K (Topic: Independent Study) may not both be counted. Additional prerequisite: Consent of instructor.

**C E 177R. Internship.**
The equivalent of one lecture hour a week for one semester. May be repeated for credit. Offered on the pass/fail basis only.

**C E 679H. Undergraduate Honors Thesis.**
Research performed during two consecutive semesters under the supervision of an engineering faculty member; topics are selected jointly by the student and the faculty member with approval by the director of the Engineering Honors Program. The student makes an oral presentation and writes a thesis. Individual instruction for two semesters. Students pursuing both the Bachelor of Arts, Plan II, and a bachelor's degree in engineering may use this course to fulfill the thesis requirement for the Bachelor of Arts, Plan II. Prerequisite: For
Graduate Courses

C E 380D. Experimental Methods in Fluid Dynamics.
Explore experimental techniques and instrumentation for studying common turbulent flows. Examine fundamentals of signal processing, data pre- and post-processing techniques for optical and acoustic instrumentation, turbulent flow analysis, and experimental design. Utilize particle image velocimetry, laser induced fluorescence, and acoustic Doppler velocimetry. Three lecture hours and one laboratory hour a week for one semester. Civil Engineering 380D and 397 (Topic: Exper Mthds in Fluid Mech) may not both be counted. Prerequisite: Graduate standing and consent of instructor.

Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing; and a course in differential equations and a course in fluid mechanics, or consent of instructor.

Topic 4: Boundary Element Methods. Formulation and numerical implementation of boundary element methods; applications to problems in fluid mechanics, structural analysis, and solid mechanics.

Topic 5: Hydrodynamics of Marine Propulsors and Turbines. Hydrofoil and lifting surface theory, actuator disk and lifting line theory, modeling via vortex lattice, panel methods, and Reynolds-Averaged Navier-Stokes solvers, optimum loading and blade design techniques for propellers and turbines, unsteady blade and shaft forces, and modeling of sheet cavitation. Civil Engineering 380P (Topic 5) and 397 (Topic 32: Hydrodynamics of Propulsors and Dynamic Positioning Systems) may not both be counted. Additional prerequisite: Graduate standing, and consent of instructor and the graduate adviser.

C E 380S. Environmental Fluid Mechanics.
Fundamentals of fluid mechanics applied in natural systems; analysis of energy; momentum, diffusion, turbulence, and stratification in lakes, rivers, and estuaries. Three lecture hours a week for one semester. Prerequisite: Graduate standing, and Civil Engineering 319F or consent of instructor.

C E 380T. Computational Environmental Fluid Mechanics.
Basics of numerical methods as applied to the solution of the steady and unsteady fluid flow equations, such as the Euler and the Navier-Stokes equations and the advection-diffusion equation. Emphasis on finite volume methods as applied to fluid mechanics problems in civil and environmental engineering. Three lecture hours a week for one semester. Prerequisite: Graduate standing, Civil Engineering 380S or an equivalent graduate course in fluid mechanics, and knowledge of a programming language.

Presentations and discussions on various topics in water resources engineering. Three lecture hours a week for one semester. Offered on the credit/no credit basis only. Prerequisite: Graduate standing and consent of instructor.

Design of buildings for low energy use and optimal indoor air quality. Includes ventilation, energy efficiency, moisture problems, and prevention by design. Three lecture hours a week for one semester. Prerequisite: Graduate standing in engineering or consent of instructor.

C E 381P. Computer Methods in Structural Analysis.
Linear and nonlinear analysis of trusses and frames; introduction to structural stability; and computational aspects of linear and nonlinear structural analysis. Three lecture hours a week for one semester. Prerequisite: Graduate standing and consent of instructor.

C E 381R. The Finite Element Method.
Introductory concepts; weighted residual methods; strong and weak forms; boundary conditions; global v. local basis functions; error estimates; smooth and nonsmooth problems; one-dimensional second- and fourth-order problems; two-dimensional potential and plate problems; two-dimensional and three-dimensional elasticity; dynamic and eigenvalue problems; numerical, computational, and meshing issues; applications using commercial software. Three lecture hours a week for one semester. Prerequisite: Graduate standing, and Civil Engineering 381P or consent of instructor.

Survey of numerical methods; weighted residuals, finite differences, finite elements, boundary elements; applications to equilibrium, eigenvalue, and propagation problems. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

C E 381W. Introduction to Wave Physics.
An introductory course in the theory and modeling of propagating waves. Subjects may include scalar waves in 1-D and 2-D, traveling and standing waves, flexural waves in beams, dispersion, phase and group velocity, vector waves in 2-D and 3-D, waves in infinite media and semi-infinite media, P waves, SH waves, SV waves, Rayleigh and Love surface waves, Stoneley waves, reflection and transmission at interfaces, numerical modeling, radiation conditions, scattering and radiation from obstacles, and fluid-solid interaction. Three lecture hours a week for one semester. Civil Engineering 381W and 397 (Topic: Wave Propagation Analysis) may not both be counted. Prerequisite: Graduate standing.

C E 382H. Structural Health Monitoring and Nondestructive Evaluation.
Explore the principal methods used for non-destructive evaluation (NDE) and structural health monitoring (SHM) of structural components. Examine relevant physical principles of continuum mechanics, electrical engineering, acoustics, and elastic wave propagation underlying the experimental methods. Examine sensor data acquisition and interrogation and ultrasonic digital signal processing. Utilize laboratory demonstrations on selected subjects. Three lecture hours a week for one semester. Civil Engineering 382H and 397 (Topic: Str Hlth Mon and Nondstrc Eval) may not both be counted. Prerequisite: Graduate standing.

C E 382L. Plastic Design in Metals.
Principles and methods of plastic analyses and design, and their applications to continuous beams, frames, plates, connections, and multistory buildings. Three lecture hours a week for one semester. Prerequisite: Graduate standing, Civil Engineering 335, and consent of instructor.

C E 382N. Structural Systems.
Application of systems engineering principles to planning, design, and construction of building and bridge structures with emphasis on performance requirements and economic factors. Three lecture hours a week for one semester. Prerequisite: Graduate standing and consent of instructor.

Survey of experimental methods used in structural engineering, including loading and measurement techniques and systems used in structural
research. Two lecture hours and three laboratory hours a week for one semester. Prerequisite: Graduate standing.

C E 383D. Steel Bridge Design.
Design of steel highway bridges, including the analysis and design of composite girder, box girder, and cable-stayed bridges. Three lecture hours a week for one semester. Prerequisite: Graduate standing, and Civil Engineering 362N or the equivalent.

C E 383F. Structural Fire Engineering.
Behavior and design of structures subjected to fire; heat transfer fundamentals and modeling of fires; material properties at elevated temperature; structural fire resistance and protection; calculating structure-fire response. Three lecture hours a week for one semester. Civil Engineering 383F and 397 (Topic: Structural Fire Engineering) may not both be counted. Prerequisite: Graduate standing.

C E 383L. Advanced Reinforced Concrete Members.
Behavior of reinforced concrete members; critical review of specifications; limit states; anchorage and development of reinforcement; shear; torsion. Three lecture hours a week for one semester. Prerequisite: Graduate standing, Civil Engineering 331, and consent of instructor.

C E 383N. Advanced Reinforced Concrete Structures.
Behavior of reinforced concrete structures, with emphasis on ductility and detailing of frames, slabs, and braced (shearwall) structures. Detailing for seismic loads. Three lecture hours a week for one semester. Prerequisite: Graduate standing, Civil Engineering 331, and consent of instructor.

C E 383P. Prestressed Concrete.
Theory, advantages, and limitations; various systems of prestressing; composite construction; continuous span theory. Three lecture hours a week for one semester. Prerequisite: Graduate standing, Civil Engineering 331, and consent of instructor.

C E 383R. Repair and Strengthening of Reinforced Concrete Structures.
Evaluation of condition, strength, serviceability, and ductility of existing structures; criteria for rehabilitation; retrofit techniques for change in function, loading, and seismic forces. Three lecture hours a week for one semester. Civil Engineering 383R and 397 (Topic: Repair and Strengthening of Reinforced Concrete Structures) may not both be counted. Prerequisite: Graduate standing and consent of instructor.

C E 383S. Structural Concrete Bridges.
Planning, design, and construction of reinforced concrete and prestressed concrete bridges, including arch, frame, girder, and cable stay systems; aesthetics, economy, and durability. Three lecture hours a week for one semester. Prerequisite: Graduate standing, and credit or registration for Civil Engineering 383P.

C E 383T. Plasticity in Structural Concrete.
Application of plasticity theory to structural concrete columns, girders, frames, and joints. Development and application of transparent detailing methods such as truss models, strut-and-tie models, and both strip and yield line methods for slabs. Three lecture hours a week for one semester. Prerequisite: Graduate standing, Civil Engineering 383L, and consent of instructor.

C E 384P. Dynamic Response of Structures.
Single and multidegree-of-freedom systems; dynamic load factors, response to harmonic excitation; damping; modal analysis; direct integration of equations of motion; analysis in time and frequency domains; application to earthquake, wind, wave, and traffic loadings. Three lecture hours a week for one semester. Prerequisite: Graduate standing, and Civil Engineering 381P or consent of instructor.

C E 384R. Earthquake Engineering.
Earthquake characteristics; seismic loads; elastic and inelastic response; analysis and design of buildings for earthquakes. Three lecture hours a week for one semester. Prerequisite: Graduate standing, and Civil Engineering 384P or consent of instructor.

C E 384S. Structural Reliability.
Load and resistance factors in reliability-based design; first- and second-order reliability methods; Monte Carlo simulation techniques with variance reduction and importance sampling refinements; reliability of systems; fault-tree and event-tree models; inverse reliability procedures; and random fields and stochastic finite element analysis for reliability analysis. Three lecture hours a week for one semester. Prerequisite: Graduate standing and consent of instructor.

C E 384T. Blast-Resistant Structural Design.
Physics of explosions and basic blast phenomenology; structural loading due to blast effects; nonlinear dynamic response of blast-loaded structures; protective design; progressive collapse. Three lecture hours a week for one semester. Civil Engineering 384T and 397 (Topic: Blast-Resistant Structural Design) may not both be counted. Prerequisite: Graduate standing and consent of instructor.

C E 385D. Water Resources Planning and Management.
Application of engineering economics and operations research to the planning and management of water systems. Major subjects include water supply, water resources management, multi-objective planning, and optimization techniques. Focus on programming skills and implementation of the models using a programming language. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

C E 385G. Transboundary Water Resources.
Introduction to planning, policy, and development of water resources in the international setting, with emphasis on transboundary situations. Basic concepts of water rights and international law pertaining to transboundary water use and protection; economic analysis and applications to transboundary water resources problems; international development goals and how these relate to water supply and use. Three lecture hours a week for one semester. Civil Engineering 385G and 397 (Topic: Transboundary Water Resources) may not both be counted. Prerequisite: Graduate standing.

C E 385J. Hazardous Waste Management.
Legal and technological approaches to effective and sustainable control of hazardous wastes and contaminated sites, studied through problem evaluation and solution. Three lecture hours a week for one semester. Prerequisite: Graduate standing, and Civil Engineering 342 or consent of instructor.

C E 385K. Water Quality.
Analysis of water quality in natural systems and of effects of wastewater discharges. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

Topic 1: Stream, Impoundment, and Estuarine Analysis I.
Basic physical, chemical, and biological properties of streams, impoundments, estuaries, and coastal waters; methods for analysis of water quality problems. Additional prerequisite: Graduate standing.

Topic 2: Stream, Impoundment, and Estuarine Analysis II.
Application of methods of analysis to development of a water quality
management plan for a water body in Texas. Additional prerequisite: Graduate standing.

**Topic 3: Water Quality Modeling.** Mathematical modeling of water quality, including dissolved oxygen, nutrients, and toxic substances in lakes, reservoirs, rivers, and estuaries. Additional prerequisite: Graduate standing.

**Topic 4: Water Pollution Ecology.** Advanced topics in the application of engineering solutions to ecological problems in freshwater and marine environments.

**C E 385L. Water and Wastewater Treatment.**
Principles of sustainable treatment of domestic and industrial water, wastewater, and sludges. Three lecture hours or two and one-half lecture hours and one laboratory hour a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

**Topic 1: Physical and Chemical Treatment.** Three lecture hours a week for one semester. Additional prerequisite: Civil Engineering 342 or consent of instructor.

**Topic 2: Biological Wastewater Treatment and Sludge Processing.** Three lecture hours a week for one semester. Additional prerequisite: Civil Engineering 342 or consent of instructor.

**Topic 3: Advanced Treatment Processes.** Project-based course addressing advanced topics in treatment process design: alternative designs, computer models, laboratory testing, economics, and least-cost designs. Two and one-half lecture hours and one laboratory hour a week for one semester. Additional prerequisite: Civil Engineering 385L (Topic 1).

**C E 385M. Unit Operations in Water and Wastewater Treatment.**
Physical, chemical, and biological unit operations for sustainable water and wastewater treatment. One lecture hour and six laboratory hours a week for one semester. Prerequisite: Graduate standing, and Civil Engineering 385L (Topic 1: Physical and Chemical Treatment or Topic 2: Biological Wastewater Treatment and Sludge Processing) or consent of instructor.

**C E 385N. Industrial Wastewater Treatment.**
Industrial wastewater characteristics; methods of in-plant control; application of various biological, chemical, and physical processes in practical water pollution control systems. Three lecture hours a week for one semester. Prerequisite: Graduate standing, and Civil Engineering 385L or consent of instructor.

**C E 385R. Land Treatment of Wastes.**
Principles of the use of land in management of municipal and industrial wastewaters, sludges, and solids; includes problem evaluations. Three lecture hours a week for one semester. Prerequisite: Graduate standing, and Civil Engineering 342 or consent of instructor.

**C E 385S. Stochastic Hydrology.**
Probability and statistics applied to the solution of hydrological problems; extreme event frequency analysis, time series analysis of hydrologic data, autocorrelation and spectral analysis, theory of regionalized variables and applications. Three lecture hours a week for one semester. Prerequisite: Graduate standing, and Civil Engineering 311S or an equivalent course in statistical methods.

**C E 385W. Drinking Water: Treatment and Public Health Issues.**
Fundamentals and applications of drinking water treatment processes, interactions among treatment processes, source water quality, and public health issues. Three lecture hours a week for one semester. Prerequisite: Graduate standing, Civil Engineering 385L (Topic 1: Physical and Chemical Treatment), and consent of instructor.

**C E 386M. Water Treatment and Wastewater Treatment Plant Design.**
Design of water and wastewater treatment facilities; pumps and hydraulic considerations; design of wastewater collection systems; design of systems for handling and disposal of residuals. Specific facilities may be selected to meet individual interests. Six hours of lecture and design laboratory a week for one semester, with appropriate field trips to operating facilities. Prerequisite: Graduate standing, and credit or registration for Civil Engineering 385L or consent of instructor.

**C E 386P. Engineering Fracture Mechanics.**
Application of fracture mechanics to fracture-safe design of metal structures; material behavior and analysis of components containing cracks. Three lecture hours a week for one semester. Prerequisite: Graduate standing and consent of instructor.

**C E 386R. Inelastic Behavior of Materials.**
Introduction to theories of inelastic behavior; theory of plasticity; applications to materials such as steel, concrete, and soils; implementation of constitutive equations in structural analysis. Three lecture hours a week for one semester. Prerequisite: Graduate standing and consent of instructor.

**C E 387C. Geoenvironmental Engineering.**
Hydraulic conductivity of soils; clay behavior; compacted clay barriers; unsaturated soil behavior and barriers; geosynthetics and geosynthetic barriers; contaminants and solid waste; liquid drainage layers; stability of landfills; contaminant transport through barriers. Three lecture hours and three laboratory hours a week for one semester. Prerequisite: Graduate standing.

**C E 387G. Engineering Geology.**
Fundamental concepts of geology, including geologic time and plate tectonics. Interactions among earth materials, landforms, and geologic processes across a range of spatial and temporal scales. Emphasizes common interests shared by engineers and geologists, as well as gaps between the disciplines, such as those posed by the geologic vocabulary. Three lecture hours and three hours of laboratory or fieldwork a week for one semester. Prerequisite: Graduate standing in civil engineering.

**C E 387L. Soil Mechanics I.**
Three lecture hours a week for one semester; some topics require additional hours. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

**Topic 1: Consolidation and Shearing Properties of Soils.** Theoretical and experimental studies of the consolidation and shearing properties of both saturated and unsaturated soils. Three lecture hours and three laboratory hours a week for one semester.

**Topic 2: Foundation Engineering.** Bearing capacity, design of piers and pile foundations.

**C E 387M. Soil Mechanics II.**
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

**Topic 1: Stability of Earth Slopes.** Development and application of limit equilibrium procedures, including effects of seepage, rapid drawdown, and seismic loading and reinforcement for stability analysis of natural and constructed slopes.
C E 387R. Soil Mechanics III.
Three hours a week for one semester; some topics may require additional hours. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of instructor.

Topic 2: Soil and Rock Dynamics. Wave propagation in soil and rock, foundation vibration and isolation, dynamic behavior of soil. Five hours a week for one semester, including lecture and laboratory.

Topic 4: Earth Retaining Structures. Types of earth retaining systems, earth pressure theory; gravity, semi-gravity, and modular walls; reinforcing elements; mechanically stabilized earth walls and reinforced soil slopes; soil nail walls; sheet pile walls, drilled shaft walls and anchored walls; advances in soil reinforcement.

Topic 5: Geotechnical Earthquake Engineering. Application of soil dynamics to earthquake engineering; influence of soil conditions on ground motion characteristics; evaluation of site response using wave propagation techniques; liquefaction of soils; liquefaction mitigation; seismic response of earth structures; seismic slope stability.

C E 387T. Decision, Risk, and Reliability.
Principles and theory for modeling uncertainty in civil engineering, analyzing how uncertainties affect performance, and developing rational bases for design and decision making under uncertain conditions. Three lecture hours a week for one semester. Prerequisite: Graduate standing and an introductory course in probability and statistics.

C E 388H. Climate Change Mitigation.
Explore the large-scale solutions to climate change systematically. Examine the fundamentals of climate science, mitigation of climate change through transformation of energy supply and end-use, geoengineering, and industrial carbon management. Discuss the social and economic context for engineered solutions. Three lecture hours a week for one semester. Civil Engineering 388H and 397 (Topic: Climate Change Mitigation) may not both be counted. Prerequisite: Graduate standing.

C E 388N. Engineering and Management of Municipal and Industrial Residuals.
Characterization and collection of solid wastes; biological, chemical, and physical principles and integrated systems applicable to the treatment and disposal of municipal and industrial residuals. Two lecture hours and three discussion hours a week for one semester, with occasional field trips. Prerequisite: Graduate standing in civil or environmental engineering, or graduate standing and consent of instructor.

Explore technological advancements in measurements of indoor and outdoor air quality. Discuss operation principles of novel real-time trace-gas sensors and mass spectrometers. Examine air quality measurements at different spatiotemporal scales, utilizing analytical instrumentation, data acquisition, and data processing. Explore research questions in air quality through hands-on laboratory and field measurements. Three lecture hours a week for one semester. Civil Engineering 388R and 397 (Topic: Novel Air Qual Meas Technqs) may not both be counted. Prerequisite: Graduate standing.

C E 389C. Advanced Technical Communication for Engineers.
Advanced work in theory and practice of communicating research and design results to a variety of audiences, in print, orally, and through multimedia. Students use their own work and writing projects as the material to communicate. Three hours a week for one semester, including lecture and laboratory. Prerequisite: Graduate standing.

C E 389D. Sustainable Building Design.
Explore the physical basics of sustainable building design for reducing energy demand and providing on-site renewable energy. Three lecture hours a week for one semester. Civil Engineering 389D and 397 (Topic: Sustainable Building Design) may not both be counted. Prerequisite: Graduate standing.

C E 389H. HVAC Design.
Design of heating, ventilation, and air-conditioning systems. Three lecture hours a week for one semester. Prerequisite: Graduate standing and three of the following courses: Architectural Engineering 346N, Civil Engineering 319F, Mechanical Engineering 320, 326, 330, 339.

C E 389S. Smart Buildings and Cities.
Explore applied machine learning for analyzing data in the domain of buildings (nexus of cities, water and energy). Three lecture hours a week for one semester. Civil Engineering 389S and 397 (Topic: Smart Buildings and Cities) may not both be counted. Prerequisite: Graduate standing.

C E 389T. Indoor Air Quality: Transport and Control.
Transport and control of indoor pollutants. Includes particulate removal and pollutant transport into and within indoor environments. Three lecture hours a week for one semester. Prerequisite: Graduate standing in architectural or civil engineering.

Same as Architectural Engineering 389V. Restricted to architectural engineering or civil engineering graduate students. Fundamentals of indoor airflow modeling, use of computational fluid dynamics (CFD) for air quality and thermal comfort analyses, application of CFD for analysis of air velocity, temperature, humidity, and contaminant distributions with different ventilation systems. Three lecture hours a week for one semester. Only one of the following may be counted: Architectural Engineering 383 (Topic: Modeling of Air and Pollutant Flows in Buildings), 389V, Civil Engineering 389V, 397 (Topic: Modeling of Air and Pollutant Flows in Buildings). Prerequisite: Graduate standing; for architectural engineering and civil engineering majors, three semester hours of coursework in fluid dynamics; for others, consent of instructor.

C E 390J. Engineering Microbiology.
Fundamentals of microbiology and biochemistry as applied to environmental pollution and sustainable treatment processes, energetics and kinetics of microbial growth, and biological fate of pollutants; introduction to laboratory techniques. Three hours a week for one semester, including lecture and laboratory. Prerequisite: Graduate standing.

C E 390L. Environmental Analysis.
Advanced analytical procedures for the sampling, monitoring, and analyses of air, liquid, and other wastes. Six hours of lecture and laboratory a week for one semester. Prerequisite: Graduate standing, one year of chemistry, and consent of instructor.

C E 390N. Water Pollution Chemistry.
Advanced topics in the application of engineering solutions to chemical problems in freshwater and marine environments. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

C E 390P. Environmental Organic Chemistry.
Advanced subjects in the environmental chemistry of organic contaminants in groundwater, soil, and air systems; includes sustainable chemistry. Three lecture hours a week for one semester. Prerequisite: Graduate standing.
C E 390Q. Chemical Dynamics in the Environment.
Environmental chemodynamics: interphase equilibrium, reactions, transport processes, and related models for anthropogenic substances across natural interfaces (air-water-sediment-soil) and associated boundary regions. Three lecture hours a week for one semester. Civil Engineering 390Q and 397 (Topic: Chemodynamics) may not both be counted. Prerequisite: Graduate standing.

C E 390R. Engineering Microbiology Applications.
Application of microbiology and molecular biology tools for monitoring environmental systems and biological treatment processes. Six hours of lecture and laboratory a week for one semester. Civil Engineering 390R and 397 (Topic: Engineering Microbiology Applications) may not both be counted. Prerequisite: Graduate standing and Civil Engineering 390J.

C E 391C. Analysis and Design of Transportation Systems I.
Introduction to conceptual, methodological, and mathematical foundations of analysis and design of transportation services; review of probabilistic modeling; application of discrete choice models to demand analysis. Three lecture hours a week for one semester. Prerequisite: Graduate standing and consent of instructor.

C E 391D. Analysis and Design of Transportation Systems II.
Operations research techniques for modeling system performance and design of transportation services; routing and scheduling problems, network equilibration, and spatially distributed queueing systems. Three lecture hours a week for one semester. Prerequisite: Graduate standing and consent of instructor.

C E 391E. Advances in Transportation Demand Analysis.
Developments in the econometric and behavioral aspects of demand analysis and forecasting; supply-demand integration; dynamic models. Applications to passenger and freight transportation and other infrastructure services. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

Relations among traffic variables; distribution functions; single lane and multilane traffic flow; characterization of traffic in cities; kinematic waves; yellow signal dilemma; merging; fuel consumption; emissions; and special topics. Emphasis on the interplay among theory, experimentation, and observation. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

C E 391J. Transportation Planning: Methodology and Techniques.
Analysis of a wide range of planning studies to establish the logic and foundation for the transportation planning process. Emphasis on techniques of estimation and forecasting population, economic activity, land use, and mobility patterns; determination of goals and objectives; decision making; economic analysis; and alternative evaluation. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

C E 391L. Advanced Traffic Engineering.
Characterization and analysis of arterial street and freeway traffic operations using theoretical and experimental techniques, especially computer simulation. Introduction to the most current analysis and optimization tools for control device design and implementation. Three lecture hours and three hours of supervised work a week for one semester. Prerequisite: Graduate standing and consent of instructor.

C E 391M. Advanced Geometric Design.
Geometric design of highways and guideways, including topics on levels of service, alignment, vehicle operations, intersection and interchange design, roadside design, lighting, and economics. Three lecture hours and one hour of supervised laboratory work a week for one semester. Prerequisite: Graduate standing and consent of instructor.

Advanced methods for selection of transportation and other infrastructure systems in the presence of multiple criteria, multiple decision makers, and uncertainty. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

C E 391P. Highway and Airport Pavement Systems.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of instructor.

C E 391Q. Bituminous Materials.
Design and use of asphalt mixtures; chemical, physical, and rheological properties of asphalt; and practical applications in highways, airports, and other construction. Three lecture hours a week for one semester. Prerequisite: Graduate standing and consent of instructor.

C E 391R. Airport Design and Operation.
Aircraft characteristics, site selection, airport configuration, capacity, terminal design, traffic control, and interfacing with other transportation modes. Three lecture hours a week for one semester. Prerequisite: Graduate standing and consent of instructor.

C E 391T. Contemporary Transportation Issues.
Consideration, analysis, and evaluation of recent transportation-related innovations and developments. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Offered on the credit/no credit basis only. Prerequisite: Graduate standing and consent of instructor.

C E 391W. Transportation Systems Operations and Control.
Concepts and advanced methods for the design of control strategies for transportation systems operations, including highway traffic systems (signalized street networks and freeways), transit systems, and private carrier operations, including airlines. Three lecture hours a week for one semester. Prerequisite: Graduate standing and consent of instructor.

C E 392C. Transportation Network Analysis.
Transportation network analysis focusing on planning and optimization using static traffic assignment models. Subjects include deterministic and stochastic equilibrium, traditional and modern solution methods, shortest path algorithms, combined models, and basic nonlinear programming skills. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

C E 392D. Dynamic Traffic Assignment.
Theory and practice of dynamic traffic assignment as an evolving field. Subjects include basic flow models (point queues, cell transmission model, and link transmission model), time-dependent shortest path algorithms, equilibrium algorithms (convex combinations, simplicial decomposition, and gradient methods), and case studies from practice.
Three lecture hours a week for one semester. Prerequisite: Graduate standing.

C E 392E. Acquisition and Analysis of Transportation Data.
Methods and technologies for the acquisition and analysis of data on various aspects of transportation systems, including properties of different data sources and types; stated versus revealed preferences; traffic sensing; survey design; sampling strategies; probabilistic methods of data analysis; overview of statistical methods and various regression models, including random-utility, ordered-choice, simultaneous-equations, time-series, and spatial econometric models. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

C E 392H. Regional Transportation Planning: Applications and Tools.
Explore various aspects of regional transportation system performance forecasting, including methods for anticipating Americans’ evolving travel choices. Examine key data sources and model specifications for planning activities; forecasting and validation of predictions, for personal vs. commercial travel; and system-wide applications for traffic and travel pattern forecasts. Three lecture hours a week for one semester. Civil Engineering 392H and 392H may not both be counted. Prerequisite: Graduate standing.

C E 392L. Experimental Measurements of Soil Properties.
Theoretical and practical knowledge of transducers, sensors, and data acquisition systems for soil and general laboratory testing. Experimental techniques used to characterize properties of geomaterials. Two lecture hours and three laboratory hours a week for one semester. Prerequisite: Graduate standing.

C E 392M. Public Transportation Engineering.
Introduction to public transportation systems, including demand forecasting, operations, and design. Includes statistical methods, driver and vehicle scheduling, algorithms, and survey sampling techniques. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

C E 392N. Topics in Infrastructure Systems.
Management principles, modeling techniques, computer applications, and emerging technologies for the analysis, engineering, and management of infrastructure systems. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of instructor.

Topic 1: Infrastructure Systems Management. Concepts, principles, theories, and models for infrastructure management, with emphasis on civil infrastructure systems.

Topic 2: Reliability and Maintainability of Infrastructure Systems.
Theory of reliability, maintainability, and availability and its application for the analysis of infrastructure systems. Civil Engineering 392N (Topic 2) and 397 (Topic: Reliability and Maintainability of Infrastructure Systems) may not both be counted.

Topic 3: Intelligent Infrastructure Systems. Concepts, frameworks, and models of intelligent infrastructure systems, with emphasis on the application of emerging technologies and advanced modeling techniques.

C E 392P. Sustainable Pavement Engineering.
Pavement design; back calculation; use of locally available materials for pavement construction; recycled asphalt pavements and shingles; warm mix and cold mix asphalt; industrial by-products and waste incorporated in pavement materials; emerging technologies for sustainable pavement design and pavement management. Three lecture hours a week for one semester. Civil Engineering 392P and 397 (Topic: Sustainable Pavement Engineering) may not both be counted. Prerequisite: Graduate standing, and Civil Engineering 366K, 367P, 391P (Topic 2: Design and Performance of Pavements), 391Q, or consent of instructor.

Methods and statistics of model estimation, with emphasis on maximum-likelihood; individual choice theory; binary choice models; unordered multinomial and multidimensional choice models; sampling theory and sample design; ordered models and aggregate prediction with choice models; introduction to advanced concepts, such as unobserved population heterogeneity, joint slated preference and revealed preference modeling, and longitudinal choice analysis. Three lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Graduate standing, and Civil Engineering 391J or consent of instructor.

C E 392S. Intermodal Transportation Systems.
Strategic planning of intermodal freight transportation systems (infrastructure and rolling stock). Freight logistics, intermodal technology, and intermodal terminal operations. Intermodal freight transportation policy, planning, and operational systems and programs. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

C E 392T. Transport Economics.
Application of economic theory and principles to transportation systems analysis and evaluation. Subjects include individual demand decisions, optimal private and public transport supply (including pricing strategies and input demands), market imperfections and externalities, and welfare-based transport policy. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

C E 392U. Transportation Systems Management.
Evolving concepts of transportation agency organization, management, and delivery of transportation programs, products, and services. Separation versus integration of transport policymaking and service delivery functions; emerging models for delivering programs and services, such as outsourcing, privatization, and state-owned enterprises; review of national and international experiences with innovative approaches and the benefits and costs associated with change. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

C E 392V. Methods to Characterize Bituminous Materials.
Introduction to the design and performance prediction of asphalt mixtures. Experimental and computational methods used to characterize the chemical and mechanical properties and performance of bituminous materials at several different length scales. Includes computational models. Three lecture hours a week for one semester. Civil Engineering 392V and 397 (Topic: Characterization of Bituminous Materials) may not both be counted. Prerequisite: Graduate standing, and Civil Engineering 366K, 391Q, or consent of instructor.

Test methods and physical models used to characterize the mechanical response of linear and nonlinear viscoelastic materials. Use of correspondence principles to solve simple boundary value problems for linear viscoelastic materials. Introductory topics on modeling damage and nonlinear response of viscoelastic materials. Three lecture hours a week for one semester. Civil Engineering 392W and 397 (Topic: Characterization of Viscoelastic Materials) may not both be counted. Prerequisite: Graduate standing.

C E 393. Advanced Concrete Materials.
Comprehensive coverage of Portland cement concrete materials. Topics include cement and aggregate properties, chemical and mineral admixtures, concrete microstructure and the effects of chemical and
mechanical properties, durability issues, concrete construction, and special concretes. Three lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Graduate standing, and a materials course.

C E 393C. Experimental Methods in Cement Chemistry. Cement chemistry, hydration, and microstructural formation; analytical techniques used in the investigation of cement and concrete. Three lecture hours a week for one semester. Civil Engineering 393C and 397 (Topic: Experimental Methods in Cement Chemistry) may not both be counted. Prerequisite: Graduate Engineering 351, 393, or the equivalent, and consent of instructor.

C E 393D. Concrete Durability. Examine comprehensive coverage of durability issues affecting portland cement concrete. Includes transport properties (e.g., diffusion, osmosis, sorption, etc.), alkali-silica reaction, external sulfate attack, delayed ettringite formation, corrosion of reinforcing steel, freezing and thawing, and salt scaling. Explore, for each durability issue, the underlying mechanism are presented, along with methods for preventing such distress in new concrete construction. Three lecture hours a week for one semester. Civil Engineering 393D and 397 (Topic: Concrete Durability) may not both be counted. Prerequisite: Civil Engineering 393 or equivalent full-semester course in concrete materials, and consent of instructor.

C E 393M. Environmental Engineering Research Seminar. Presentation and discussion of environmental topics in surface water, groundwater, air resources, and land resources. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Offered on the credit/no credit basis only. Prerequisite: Graduate standing and consent of instructor.

C E 393N. Novel Structural Materials. Material selection criteria, including mechanical and environmental factors; selected case studies of emerging materials, including derivation of properties and potential applications. Three lecture hours a week for one semester. Civil Engineering 393N and 397 (Topic: Novel Structural Materials) may not both be counted. Prerequisite: Graduate standing and consent of instructor.

C E 393S. Structural Engineering Research Seminar. The equivalent of three lecture hours a week for one semester. Offered on the credit/no credit basis only. Prerequisite: Graduate standing.

C E 394. Interaction of Soils and Structures. Beams on foundation, laterally loaded piles, applications of the finite-element method, beam-columns with nonlinear soil support, and behavior of pile groups. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing, and a course in soil mechanics or consent of instructor.

Topic 1: Dynamic Soil-Structure Interaction. Fundamentals of wave propagation; determination of foundation stiffnesses; mat foundations on the surface of a layered soil; embedded foundations; pile foundations; effect of foundation conditions on dynamic response of structures to applied loads (machine foundations) and to seismic excitation. Additional prerequisite: Consent of instructor.

C E 394K. Engineering Hydrology. Three lecture hours a week for one semester. With consent of instructor, any topic may be repeated for credit. May be repeated for credit when the topics vary. Prerequisite: Graduate standing; and a basic course in hydrology and in differential equations, or consent of instructor.

Topic 2: Surface Water. Rainfall runoff processes, hydrograph theory, linear and nonlinear hydrologic system models, hydrologic and hydraulic streamflow routing, rainfall and flood flow frequency analysis, watershed models.

C E 394M. Advanced Analyses in Geotechnical Engineering. Development and application of linear and nonlinear finite element procedures for solution of geotechnical engineering problems related to embankments, excavations, static soil-structure interaction, and seepage. Three lecture hours a week for one semester. Prerequisite: Graduate standing and consent of instructor.

C E 395P. Project Automation. Three lecture hours a week for one semester. Some topics may require additional hours; these are identified in the Course Schedule. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of instructor.

Topic 2: Introduction to Construction Automation and Integration. Same as Architectural Engineering 395P (Topic 2: Introduction to Construction Automation and Integration). Construction automation and integration activities, methods for opportunity identification and financial analysis of systems, and tools from several disciplines that are used in construction automation and integration; students prepare a project that synthesizes this information.

Topic 3: Design of Automated Construction Systems. The elements of construction systems, including mechanisms, sensors, and control; systems design methods and concerns. Students develop an individual design project.

Topic 4: Sensing in Civil Engineering. Sensor types and properties, data acquisition, sensor data analysis, sensor fusion, and classes of civil engineering applications. Students are encouraged to work on projects related to their research areas.

C E 395Q. Project Controls. Three lecture hours a week for one semester. Some topics require two lecture hours and three laboratory hours a week; these are identified in the Course Schedule. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of instructor.

Topic 1: Project Controls. Fundamentals of planning, scheduling, and cost management on projects. Topics include network scheduling, activity and resource management, cost loading and cost control, and computer tools used for project controls, such as schedule simulation and three-dimensional and four-dimensional CAD.

Topic 2: Project Production Systems. Advanced topics in project controls, including supply chain management, procurement, interorganizational controls and incentives, process modeling, and simulation.

Topic 5: Financial Management for Engineering and Construction Firms. Introduction to financial, managerial, and tax accounting concepts, as well as corporate finance and strategy as they relate to engineering and construction firms. Emphasis is on content,
interpretation, and uses of various accounting reports and financial statements in general, as well as those specific to engineering and construction industries. Topics include determination and reporting of net income methods and financial position unique to engineering and construction firms, and theories underlying business financial statements, as well as the consideration of managerial accounting and financial management topics that cover the planning and controlling of business operations and how financial management impacts a company’s overall business success. Civil Engineering 395Q (Topic 5) and 397 (Topic: Financial Management for Engineering and Construction Firms) may not both be counted.

**C E 395R. Project Information Systems.**

Three lecture hours a week for one semester; some topics require additional hours. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of instructor.

**Topic 2: Project Information Management Systems.** Information systems design and management concepts and their implementation in construction projects. Data acquisition, transmission, and storage; database management systems and information systems design.

**Topic 3: Decision and Risk Analysis.** Fundamentals of decision analysis and risk assessment; construction engineering/project management applications in decision analysis; methods of risk management; overview of project insurance.

**Topic 4: Metrics.** Measurement systems and benchmarking approaches for many aspects of construction projects. Included are measurement systems for design effectiveness, construction productivity, safety, cost and schedule controls, and overall industry statistics.

**Topic 6: Quantitative Methods for Project Analysis.** Practical methods of data analysis for evaluating project performance metrics. Includes quantitative methods for solving everyday problems such as bid selection, capital budgeting, assignment of resources, equipment replacement analysis, and the optimization of capital structure. Techniques for developing models under conditions of risk using Microsoft Excel and add-ins such as At Risk. Civil Engineering 395R (Topic 6) and 397 (Topic: Quantitative Methods for Project Analysis) may not both be counted.

**Topic 7: Building Information Modeling for Capital Projects.** Building information models in plan execution for a building construction project. Focus on implementation of building information modeling concepts throughout the lifecycle of a building, from planning and design to construction and operations. Civil Engineering 395R (Topic 7) and 397 (Topic: Building Information Modeling for Capital Projects) may not both be counted.

**Topic 8: Urban Systems Engineering.** Explore system thinking concepts and sociotechnical system modeling of civil infrastructure systems. Examine defining system boundaries, abstracting interdependencies and system structure; and implementing mathematical models for the analyses of systems. Civil Engineering 395R (Topic 8) and 397 (Topic: Urban Systems Engineering) may not both be counted.

**C E 395S. Project Organization.**

Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of instructor.

**Topic 1: Human Resources Project Management.** Evaluation of individual, group, and organizational behavior in construction work. In-depth study of communication, decision making, and the relationship between controls and behavior.

**Topic 2: Construction Productivity.** Construction productivity improvement by group field studies. In-depth study of the way overtime, changes, weather, and staffing levels influence productivity. Industrial engineering techniques are applied to the construction environment to improve the use of equipment and human and material resources.

**Topic 4: Project Management.** Same as Architectural Engineering 395S (Topic 4: Project Management). Overall aspects of project and portfolio management from inception to successful operation: project selection and feasibility, contracting methods, project scheduling, cost control systems, project communications, project scope and quality management, human resource management, partner selection and management, project leadership, project closeout, and global project management.

**C E 395T. Project Technology.**

Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of instructor.

**Topic 3: Heavy Civil Construction.** Methods and materials in heavy civil construction; earthwork, concrete, structural steel, and deep foundations; equipment selection, configuration, productivity, and safety issues; site and craft planning, environmental issues, and optimization modeling; and field studies.

**Topic 6: Value Management Processes I.** Industry value management processes, including value engineering and life cycle costing, process simplification, function analysis concept development, design to capacity, constructability, modularization and preassembly, and design effectiveness.

**Topic 7: Value Management Processes II.** Industry value management processes, including mechanical reliability modeling, predictive maintenance, design for maintainability, waste minimization and pollution prevention, sustainable design and construction, planning for startup, lean construction, postoccupancy evaluation, and knowledge management and lessons learned systems.

**Topic 8: Industrial Construction.** Methods and materials in industrial construction; heavy lifts, mechanical equipment, process piping, electrical, and instrumentation work; equipment selection, configuration, productivity, and safety issues; preassembly, modularization, and work planning in the industrial environment; and field studies.

**C E 395U. General Topics in Construction Engineering and Project Management.**

Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of instructor.

**Topic 1: Front-End and Contractor Planning.** Principles and applications of advanced project planning techniques for capital facility owners and contractors. Effective owner front-end planning of capital facilities, including team alignment, and preproject planning processes and tools. Contractor preconstruction planning, including team selection, scope and budget review, procurement, strategic sequencing, and planning assessment tools.

**Topic 3: Advanced Legal Concepts.** Same as Architectural Engineering 395U (Topic 3: Advanced Legal Concepts). Contracts, documentation requirements, claims avoidance, and settlement of claims by alternative dispute resolution. Students conduct and present in-depth studies of the most frequent causes of claims (delay, disruption, acceleration, soil conditions, and changes) and consider the way the court establishes causation and determines damages.
C E 395V. Seminar/Conference Course in Construction Engineering and Project Management.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of instructor.

Topic 1: Doctoral Research Methods Seminar. Construction research methods seminar, including concepts and practice of research in construction engineering and management. Research methodologies and steps in the research process, including review and framing research questions. Students develop and critique a research proposal.

Topic 2: Conference Course.

Topic 3: Construction Industry Seminar. Construction industry issues and best practices, such as front-end planning and zero accident techniques, developed by the Construction Industry Institute (CII). Guest lecturers include CII management staff and visiting industry leaders. Emphasis on implementation of proven practices on projects.

C E 396L. Air Resources Engineering.
Sources, transport, fate, impacts, characteristics, and control of air contaminants; source control and prevention; urban air quality; occupational and residential indoor air quality. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of instructor.

Topic 1: Air Pollution Chemistry. Classification, transport, transformation, deposition, sampling, and analysis of particulate and gaseous air pollutants in urban, regional, and global-scale systems. Emphasis on sustainable engineering.

Topic 3: Air Pollution Control. Design of air pollution control systems for stationary sources. Technical, regulatory, and economic fundamentals related to the control of gaseous and particulate emissions.

Topic 5: Atmospheric Transport and Dispersion Modeling. Mathematical models of contaminant transport in the atmosphere; atmospheric turbulence and air pollution meteorology; Gaussian plume, gradient transport, and higher-order closure models; theoretical development and practical applications to engineering problems.

Topic 6: Human Exposure to Indoor Air Pollution. Human exposure to air pollution in the built environment, including the effects of sustainable building design on human exposure to toxic air pollutants. Subjects may include inhalation intake fractions for risk calculations and comparisons of sources of air pollution, transmission of airborne infectious disease, pharmacokinetic modeling, and case studies involving several important air pollutants. Civil Engineering 396L (Topic 6) and 397 (Topic: Human Exposure to Toxins) may not both be counted.

C E 396M. Advanced Topics in Atmospheric Science.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing in a natural science or engineering.

Topic 1: General Topics.
**Topic 54: Water Pollution Control.** The application and evaluation of new concepts in water pollution abatement and advanced water and wastewater treatment.

**Topic 56: Air Pollution Control.** Evaluation of new theoretical approaches to air pollution control.

**Topic 78: Design of Offshore Structures.** Selection of design storms; wave forces on structures; preliminary analysis of steel jacket platforms; joint design; fatigue considerations; foundation design; dynamic effects and responses.

**C E 197C, 297C, 397C, 697C. Master's Research.**
Independent research. May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Graduate standing and consent of adviser.

**C E 197D, 297D, 397D, 697D. Dissertation Research.**
Independent research. May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Graduate standing and consent of adviser.

**C E 397F. Forensic Engineering: Materials and Structures.**
Same as Architectural Engineering 383 (Topic 4: Forensic Engineering: Materials and Structures). Methods of forensic analysis; role of the expert witness; methods of dispute resolution; case studies; term project. Two lecture hours a week for one semester, with three laboratory hours a week for presentation of case studies. Prerequisite: Graduate standing and consent of instructor.

**C E 397K. Stability of Structures.**
Stability as it relates to actual behavior and design; elastic and inelastic theories; evaluation of specifications; columns, beams, and frames. Three lecture hours a week for one semester. Prerequisite: Graduate standing and consent of instructor.

**C E 397L. Advanced Structural Metals.**
Elastic and inelastic design methods for steel members, connections, and structures; torsion of open and closed sections, welding, plate buckling, and column stability; bracing design. Three lecture hours a week for one semester. Prerequisite: Graduate standing, Civil Engineering 335, and consent of instructor.

**C E 397N. Nondestructive Testing Techniques.**
Basic signal processing knowledge; introduction to wave propagation theory; nondestructive testing (NDT) principles and applications to steel structures; evaluation of concrete structures and foundations; NDT methods selection; emerging technologies. Three lecture hours a week for one semester. Civil Engineering 397N and 397 (Topic: Nondestructive Testing Techniques in Civil Engineering) may not both be counted. Prerequisite: Graduate standing.

**C E 197Q, 297Q, 397Q, 697Q. Special Independent Studies in Civil Engineering.**
Independent study. May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Graduate standing and consent of adviser.

**C E 698. Thesis.**
The equivalent of three lecture hours a week for two semesters. Offered on the credit/no credit basis only. Prerequisite: For 698A, graduate standing in civil engineering and consent of the graduate adviser; for 698B, Civil Engineering 698A.

**C E 398D. Departmental Report.**
Preparation of a report to fulfill the requirement for the master's degree under the departmental report option. Individual instruction. Offered on the credit/no credit basis only. Prerequisite: Graduate standing in civil engineering and consent of the supervising professor and the graduate adviser.

**C E 398R. Master's Report.**
Preparation of a report to fulfill the requirement for the Master of Science in Engineering degree under the Graduate School report option. The equivalent of three lecture hours a week for one semester. Offered on the credit/no credit basis only. Prerequisite: Graduate standing in civil engineering and consent of the supervising professor and the graduate adviser.

**C E 398T. Supervised Teaching in Civil Engineering.**
Special training in teaching methods and procedures for civil engineering courses, including laboratory courses; the development of new material and methods to update present courses. Three lecture hours a week for one semester. Prerequisite: Graduate standing in civil engineering and appointment as a teaching assistant.

**C E 399W, 699W, 999W. Dissertation.**
May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Admission to candidacy for the doctoral degree.

**Professional Courses**

**C L - Comparative Literature**

**Comparative Literature: C L**

**Lower-Division Courses**

**C L 301. Introduction to Comparative Literature.**
Reading and interpretation of literary texts in translation drawn from cultures around the world, focusing on methods of criticism and analysis. Three lecture hours a week for one semester.

**C L 305. Topics in Comparative Literature.**
Study of masterpieces of world literature; of different literary genres; and the relationship between literature and other disciplines such as psychology, philosophy, and film. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Varies with the topic.

**Topic 1: Forbidden Romance in Modern Chinese Literature.** Same as Asian Studies 301M (Topic 13). Introduction to modern Chinese literature from the late Qing Dynasty (latter half of the nineteenth century) to the present. Only one of the following may be counted: Asian Studies 301M (Topic: Forbidden Romance in Modern Chinese Literature), 301M (Topic 13), Comparative Literature 305 (Topic: Forbidden Romance in Modern Chinese Literature), 305 (Topic 1).

**Topic 2: The Vampire in Slavic Cultures.** Same as European Studies 307 (Topic 1) and Russian, East European, and Eurasian Studies 302 (Topic 1). Examines the vampire in the cultures of Russia and Eastern Europe, including manifestations in literature, religion, art, film, and common practices from its origins to present. Only one of the following may be counted: Comparative Literature 305 (Topic: The Vampire in Slavic Cultures), 305 (Topic 2), European Studies 307 (Topic: The Vampire in Slavic Cultures), 307 (Topic 1), Russian, East European, and Eurasian Studies 302 (Topic: The Vampire in Slavic Cultures), 302 (Topic 1), Slavic 301 (Topic: The Vampire in Slavic Cultures), 301 (Topic 1).

**Topic 3: Movies Go To War.** Same as American Studies 315C, European Studies 307 (Topic 4), and German, Scandinavian, and Dutch Studies 311C. A comparison of films from various nations about major twentieth century wars to the historical facts of the conflicts as practicums in critical comparative analysis of histories as representations. Only one of the following may be counted: American
Studies 315 (Topic: Movies Go to War, World War I to Vietnam), 315C, Comparative Literature 305 (Topic: Movies Go to War, World War I to Vietnam), 305 (Topic 3), European Studies 307 (Topic: Movies Go to War, World War I to Vietnam), 307 (Topic 4), German, Scandinavian, and Dutch Studies 311C, Germanic Civilization 311 (Topic 2: Movies Go to War, World War I to Vietnam).

**Topic 4: Grims' Fairy Tales.** Same as European Studies 307 (Topic 5) and German, Scandinavian, and Dutch Studies 311E. Reading and discussion of tales from the Grims’ collection, as well as some of the relevant secondary literature. Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 305 (Topic: Grims' Fairy Tales), 305 (Topic 4), European Studies 307 (Topic: Grims’ Fairy Tales), 307 (Topic 5), German, Scandinavian, and Dutch Studies 310 (Topic: Grims' Fairy Tales), 311E.

**C L 305C. Dissent in Twentieth-Century Ukraine.**

Same as European Studies 307 (Topic 10) and Russian, East European, and Eurasian Studies 302F. Survey Ukrainian authors from the 1920s to the present, examining writings from "Executed Renaissance," underground literature, and postmodernism. Focus specifically on works that challenge the paradigm of socialist realism by discussing forbidden subjects (famine, religion, Gulag) or accentuating themes that are not considered "major" (personal life). Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 305 (Topic: Dissent 20th-Cent Ukraine), 305C, European Studies 307 (Topic: Dissent 20th-Cent Ukraine), 307 (Topic 10), Russian, East European, and Eurasian Studies 302 (Topic: Dissent 20th-Cent Ukraine), 302F.

**C L 305D. Afro-Brazilian Diaspora.**

Same as African and African Diaspora Studies 315 and Latin American Studies 310C. Three lecture hours a week for one semester. Only one of the following may be counted: African and African Diaspora Studies 315, 317E (Topic: Afro-Brazilian Diaspora), Comparative Literature 305 (Topic: Afro-Brazilian Diaspora), 305D, Latin American Studies 310 (Topic: Afro-Brazilian Diaspora), 310C.

**C L 305S. The Soviet Hero in Literature and Culture.**

Same as Russian, East European, and Eurasian Studies 302G. Consider Soviet Culture by examining "heroes" from both real life and works of literature, cinema, and folklore. Explore the period from the Russian 19th century throughout the Soviet Era. Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 305 (Topic: Soviet Hero in Lit/Culture), 305S, Russian, East European, and Eurasian Studies 302 (Topic: Soviet Hero in Lit/Culture), 302G.

**C L 315. World Literature.**

Same as English 316N. Introduction to masterpieces of world literature, emphasizing historical, generic, and thematic connections. Three lecture hours a week for one semester. Some sections require an additional discussion hour a week. Only one of the following may be counted: Comparative Literature 315, English 303D, 316N, Tutorial Course 303D. Prerequisite: One of the following: English 303C, Rhetoric and Writing 306, 306Q, 309J (or 309K), or Tutorial Course 303C.

**C L 318Q. Supervised Research.**

Individual instruction.

**Upper-Division Courses**

**C L 320. Conference Course in Comparative Literature.**

Independent study of literary projects under supervision of professors in comparative literature. Conference course. Prerequisite: Six semester hours of upper-division coursework in literature, of which three hours must be in a classical or foreign language.

**C L 323. Topics in Comparative Literature.**

Study of masterpieces of world literature; of different literary genres; of the relationship between literature and other disciplines, such as psychology, philosophy, and film; and of special topics of a comparative nature. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Varies with the topic.

**Topic 4: Self-Revelation in Women’s Writing.** Same as African and African Diaspora Studies 330N, Middle Eastern Studies 342 (Topic 19), and Women’s and Gender Studies 340 (Topic 14). Three lecture hours a week for one semester. Only one of the following may be counted: African and African Diaspora Studies 330N, 372E (Topic 8), Comparative Literature 323 (Topic 4), Middle Eastern Studies 342 (Topic 19), Women’s and Gender Studies 340 (Topic 14).

**Topic 6: Caribbean Literature.** Same as African and African Diaspora Studies 330Q and English 343C. Three lecture hours a week for one semester. Only one of the following may be counted: African and African Diaspora Studies 330Q, 374F (Topic 7), Comparative Literature 323 (Topic 6), English 343C, 360L (Topic 2). Additional prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

**Topic 8: Bulgakov’s Master and Margarita.** Same as Russian, East European, and Eurasian Studies 325 (Topic 29). Explores the novel in the context of other literary works by Bulgakov and its varied sources in world literature, music, and the visual arts. Only one of the following may be counted: Comparative Literature 323 (Topic: Bulgakov’s Master and Margarita), 323 (Topic 8), Russian 360 (Topic: Bulgakov’s Master and Margarita), 360 (Topic 3), Russian, East European, and Eurasian Studies 325 (Topic: Bulgakov’s Master and Margarita), 325 (Topic 29). Additional prerequisite: Upper-division standing.

**Topic 10: Contemporary Scandinavian Stories.** Same as European Studies 347 (Topic 16) and German, Scandinavian, and Dutch Studies 341J. An analysis of contemporary Scandinavian literature and films, how they reflect Scandinavian reality, and how Scandinavian identity is created through sports, food, and politics. Only one of the following may be counted: Comparative Literature 323 (Topic: Contemporary Scandinavian Stories), 323 (Topic 10), European Studies 347 (Topic: Contemporary Scandinavian Stories), 347 (Topic 16), German, Scandinavian, and Dutch Studies 341J, Germanic Civilization 323E (Topic: Contemporary Scandinavian Stories), Scandinavian 373 (Topic: Contemporary Scandinavian Stories). Additional prerequisite: Upper-division standing.

**Topic 11: Films of Ingmar Bergman.** Same as European Studies 347 (Topic 13) and German, Scandinavian, and Dutch Studies 331C. An introduction to the films of Ingmar Bergman. Only one of the following may be counted: Comparative Literature 323 (Topic: Films of Ingmar Bergman), 323 (Topic 11), English 322 (Topic 18), European Studies 347 (Topic: Films of Ingmar Bergman), 347 (Topic 13), German, Scandinavian, and Dutch Studies 331C, Scandinavian 327 (Topic 9). Additional prerequisite: Upper-division standing.

**Topic 12: Hans Christian Andersen.** Same as European Studies 347 (Topic 14) and German, Scandinavian, and Dutch Studies 341E. Introduction to such Hans Christian Andersen tales as "The Little Mermaid," "The Ugly Duckling," and "The Emperor's New Clothes." Examination of their author and the romantic period in which they were written, as well as their historical, philosophical, and literary perspectives. Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic: Andersen), European Studies 347 (Topic 12), Women’s and Gender Studies 340 (Topic: Andersen). Additional prerequisite: Upper-division standing.
context. Only one of the following may be counted: Comparative Literature 323 (Topic: Hans Christian Andersen), 323 (Topic 12), English 322 (Topic 19), European Studies 347 (Topic: Hans Christian Andersen), 347 (Topic 14), German, Scandinavian, and Dutch Studies 341E, Germanic Civilization 323E (Topic 4), Scandinavian 373 (Topic 4). Additional prerequisite: Upper-division standing.

**Topic 13: Introduction to Arabic Literature.** Same as Middle Eastern Languages and Cultures 321 (Topic 1) and Middle Eastern Studies 342 (Topic 1). General survey of major themes, genres, and artists in the Arabic literary tradition from the sixth century to the modern era. Only one of the following may be counted: Comparative Literature 323 (Topic 13), Islamic Studies 373 (Topic 1), Middle Eastern Languages and Cultures 321 (Topic 1), Middle Eastern Studies 342 (Topic 1). Additional prerequisite: Upper-division standing.

**Topic 14: Isak Dinesen/Karen Blixen.** Same as European Studies 347 (Topic 15), German, Scandinavian, and Dutch Studies 341G, and Women's and Gender Studies 345 (Topic 13). An introduction to the twentieth-century Danish author Karen Blixen, focusing on her major themes such as gender and destiny, and examining her role as a literary figure. Only one of the following may be counted: Comparative Literature 323 (Topic: Isak Dinesen/Karen Blixen), 323 (Topic 14), European Studies 347 (Topic: Isak Dinesen/Karen Blixen), 347 (Topic 15), German, Scandinavian, and Dutch Studies 341G, Women's and Gender Studies 345 (Topic 13). Additional prerequisite: Upper-division standing.

**Topic 15: Israel Through Its Literature.** Same as Jewish Studies 363 (Topic 17), Middle Eastern Languages and Cultures 321 (Topic 5), and Middle Eastern Studies 342 (Topic 5). Only one of the following may be counted: Comparative Literature 323 (Topic: Introduction to Israeli Literature), Comparative Literature 323 (Topic 15), English 322 (Topic: Introduction to Israeli Literature), Jewish Studies 363 (Topic 17), Middle Eastern Languages and Cultures 321 (Topic 5), Middle Eastern Studies 342 (Topic 5). Additional prerequisite: Upper-division standing.

**Topic 16: The Scandinavian Contribution to World Literature.** Same as European Studies 347 (Topic 17) and German, Scandinavian, and Dutch Studies 341K. Close readings of the most influential Scandinavian texts, including works by Nobel Prize-winning authors such as Knut Hamsun and Selma Lagerlof, as well as the playwrights August Strindberg and Henrik Ibsen while addressing important themes caused by the revolutionary transition to modernity in Scandinavia around 1900, including emancipation of women and sexuality. Only one of the following may be counted: Comparative Literature 323 (Topic: The Scandinavian Contribution to World Literature), 323 (Topic 16), European Studies 347 (Topic: The Scandinavian Contribution to World Literature), 347 (Topic 17), German, Scandinavian, and Dutch Studies 341K, Germanic Civilization 323E (Topic: The Scandinavian Contribution to World Literature), Scandinavian 373 (Topic: The Scandinavian Contribution to World Literature). Additional prerequisite: Upper-division standing.

**Topic 17: Social Dramas of Henrik Ibsen.** Same as European Studies 347 (Topic 12), German, Scandinavian, and Dutch Studies 341D, and Women's and Gender Studies 345 (Topic 14). A detailed introduction to Ibsen's social dramas (1877-1899), emphasizing their unity as a prolonged commentary on the society of his era and the variety of its human problems. Special emphasis on subjects such as: the family and the home; the public world of reputation, work, and citizenship; the predicaments of men and women in a male-dominated society; and the motives of our interventions into the lives of others. Only one of the following may be counted: Comparative Literature 323 (Topic: Social Dramas of Henrik Ibsen), 323 (Topic 17), English 322 (Topic 17), European Studies 347 (Topic: Social Dramas of Henrik Ibsen), 347 (Topic 12), German, Scandinavian, and Dutch Studies 341D, Women's and Gender Studies 345 (Topic 14). Additional prerequisite: Upper-division standing.

**Topic 18: Squaring the Vienna Circle.** Same as European Studies 347 (Topic 20), German, Scandinavian, and Dutch Studies 361F, and Philosophy 329F. Traces the origin of the Vienna Circle of Logical Empiricism in nineteenth-century Europe, and introduces central texts and problems of intellectual history and historical epistemology at the roots of today's analytic philosophy. Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic: Squaring the Vienna Circle), 323 (Topic 18), European Studies 347 (Topic: Squaring the Vienna Circle), 347 (Topic 20), German, Scandinavian, and Dutch Studies 361F, Germanic Civilization 362E (Topic: Squaring the Vienna Circle), Philosophy 327 (Topic: Squaring the Vienna Circle), 329F, 354 (Topic: Squaring the Vienna Circle). Additional prerequisite: Upper-division standing.

**Topic 19: Women and the Holocaust.** Same as European Studies 346 (Topic 10), German, Scandinavian, and Dutch Studies 341F, Jewish Studies 363 (Topic 11), and Women's and Gender Studies 340 (Topic 50). Introduction to both the history of Jewish and German women during World War II and the Holocaust, and to women's narratives and self-representations of this period. Historical sources, memoirs, films, and interviews will be used as source material. Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic: Women's Narratives of the Holocaust and World War II), 323 (Topic 19), European Studies 346 (Topic: Women's Narratives of the Holocaust and World War II), 346 (Topic 10), German, Scandinavian, and Dutch Studies 341F, Germanic Civilization 323E (Topic: Women's Narratives of the Holocaust and World War II), Jewish Studies 363 (Topic 11), Women's and Gender Studies 340 (Topic: Women's Narratives of the Holocaust and World War II), 340 (Topic 50). Additional prerequisite: Upper-division standing.

**Topic 20: Rebels and Revolutionaries in Russian History and Literature.** Same as History 361E and Russian, East European, and Eurasian Studies 325 (Topic 24). Study of fictional and real rebels and revolutionaries across almost a century of Russian literature. Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic 20), History 361E, 362G (Topic 15), Russian 356 (Topic 4), Russian, East European, and Eurasian Studies 325 (Topic 24). Additional prerequisite: Upper-division standing.

**Topic 27: The Major Works of Tolstoy.** Same as Russian, East European, and Eurasian Studies 325 (Topic 16). Explores Russian writer Lev Nikolaevich Tolstoy, particularly his progression from idealizing family life and the Russian state to renouncing sexual love and national allegiances. Only one of the following may be counted: Comparative Literature 323 (Topic: The Major Works of Tolstoy), 323 (Topic 27), Russian 360 (Topic: Majors Works of Tolstoy), 360 (Topic 2), Russian, East European, and Eurasian Studies 325 (Topic: The Major Works of Tolstoy), 325 (Topic 16). Additional prerequisite: Upper-division standing.

**Topic 29: The Russian Novel.** Same as Core Texts and Ideas 347 and Russian, East European, and Eurasian Studies 325 (Topic 9). A survey of classic Russian authors as well as experimental works from the nineteenth through the twenty-first century. Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic 29), Core Texts and Ideas 345 (Topic 6), 347, English 322 (Topic 37), European Studies 347 (Topic 22), Russian 356 (Topic 1), Russian, East European, and Eurasian Studies 325 (Topic 9). Additional prerequisite: Upper-division standing.

**Topic 30: The Major Works of Dostoevsky.** Same as Core Texts and Ideas 346 and Russian, East European, and Eurasian Studies 325 (Topic 10). Explores the dilemmas of homicide, suicide, patricide, and redemption in the novels of Fyodor Dostoevsky. Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic 30), Core Texts and Ideas
Topic 31: War and Revolution in Russian Literature and Culture. Same as Core Texts and Ideas 348 and Russian, East European, and Eurasian Studies 325 (Topic 18). Examines Russian narratives of war and revolution as represented in fiction, cinema, and journalism. Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic 31), Core Texts and Ideas 345 (Topic 8), 348, Russian 356 (Topic 3), Russian, East European, and Eurasian Studies 325 (Topic 18). Additional prerequisite: Upper-division standing.

Topic 33: Feminism and Film: Women Filmmakers in Northern and Central Europe. Same as European Studies 347 (Topic 24), German, Scandinavian, and Dutch Studies 331D, and Women's and Gender Studies 340 (Topic 65). An introduction to the work of women filmmakers from Scandinavia, Germany, as well as to the viewing and interpretation of films in general. Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic: Women Filmmakers in Northern and Central Europe), 323 (Topic 33), European Studies 347 (Topic: Women Filmmakers in Northern and Central Europe), 347 (Topic 24), German, Scandinavian, and Dutch Studies 330 (Topic: Women Filmmakers in Northern and Central Europe), 331D, Women's and Gender Studies 340 (Topic: Women Filmmakers in Northern and Central Europe), 340 (Topic 65). Additional prerequisite: Upper-division standing.

Topic 34: Russian Myths and Folktales. Same as Anthropology 322T and Russian, East European, and Eurasian Studies 325 (Topic 22). Examination of the Russian folktale, its roots in ancient, pre-Christian Slavic religious tradition, its connections with other forms of folklore such as myth and legend, and its transformation in modern Russian literature. Subjects include the continuing influence of folklore explored through various aspects of Russian culture, including literature, music, ballet, film, and popular culture. Three lecture hours a week for one semester. Only one of the following may be counted: Anthropology 322T, 325L (Topic 12), Comparative Literature 323 (Topic 34), Russian 330 (Topic 9), Russian, East European and Eurasian Studies 325 (Topic 22). Additional prerequisite: Upper-division standing.

Topic 36: Love in the East and West. Same as Core Texts and Ideas 343, Middle Eastern Languages and Cultures 321 (Topic 25), and Middle Eastern Studies 342 (Topic 33). Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic 36), Core Texts and Ideas 343, 345 (Topic 10), Middle Eastern Languages and Cultures 321 (Topic 25), Middle Eastern Studies 342 (Topic 33). Additional prerequisite: Upper-division standing.

Topic 37: The Qur’an. Same as Core Texts and Ideas 375 (Topic 1), Middle Eastern Languages and Cultures 321 (Topic 9), Middle Eastern Studies 342 (Topic 16), Religious Studies 325G, and Women's and Gender Studies 340 (Topic 54). The history, language, style, and themes of the Qur’an. Only one of the following may be counted: Comparative Literature 323 (Topic 37), Core Texts and Ideas 375 (Topic 1), Islamic Studies 340 (Topic 2), Middle Eastern Languages and Cultures 321 (Topic 9), Middle Eastern Studies 342 (Topic 16), Religious Studies 325G, Women's and Gender Studies 340 (Topic 54). Additional prerequisite: Upper-division standing.

Topic 40: Holocaust Aftereffects. Same as European Studies 346 (Topic 23), German, Scandinavian, and Dutch Studies 360 (Topic 1), Jewish Studies 365 (Topic 14), Religious Studies 357V, and Women’s and Gender Studies 340 (Topic 66). Explores the historical, political, psychological, theological, and cultural fallout of the Holocaust, as well as literary and cinematic responses in Europe and the United States. Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic 40), European Studies 346 (Topic 23), German, Scandinavian, and Dutch Studies 360 (Topic 1), Jewish Studies 365 (Topic 14), Liberal Arts Honors 350 (Topic: Holocaust Aftereffects), 351Q, Religious Studies 357 (Topic 18), 357V, Women's and Gender Studies 340 (Topic: Holocaust Aftereffects), 340 (Topic 66). Additional prerequisite: Upper-division standing.

Topic 41: Decoding Classical Chinese Poetry. Same as Asian Studies 373C. Introduction to the classical Chinese poetic tradition from the seventh century B.C.E. through the ninth century C.E., focusing on the literary, cultural, historical, social, political, philosophical, and religious background against which representative works arose. Conducted in English and all readings will be in English translation. Knowledge of the Chinese language is not required. Three lecture hours a week for one semester. Only one of the following may be counted: Asian Studies 372 (Topic 10), 373C, Comparative Literature 323 (Topic 41). Additional prerequisite: Upper-division standing.

Topic 42: Anti-Semitism in History and Literature. Same as European Studies 346 (Topic 29), German, Scandinavian, and Dutch Studies 361L, and Jewish Studies 364 (Topic 1). Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 346 (Topic: Anti-Semitism in History and Literature), 346 (Topic 29), Comparative Literature 323 (Topic: Anti-Semitism in History and Literature), 323 (Topic 42), German, Scandinavian, and Dutch Studies 360 (Topic: Anti-Semitism in History and Literature), 361L, Jewish Studies 361 (Topic: Anti-Semitism in History and Literature), 364 (Topic 1). Additional prerequisite: Upper-division standing.

Topic 43: Vikings and Their Literature. Same as European Studies 347 (Topic 35) and German, Scandinavian, and Dutch Studies 341L. Three lecture hours a week for one semester. Only one of the following may be counted: Anthropology 324L (Topic: Vikings and Their Literature), Comparative Literature 323 (Topic: Vikings and Their Literature), 323 (Topic 43), English 322 (Topic: Vikings and Their Literature), European Studies 347 (Topic: Vikings and Their Literature), 347 (Topic 35), German, Scandinavian, and Dutch Studies 340 (Topic: Vikings and Their Literature), 341L. Additional prerequisite: Upper-division standing.

Topic 45: Arendt and de Beauvoir. Same as European Studies 347 (Topic 37), German, Scandinavian, and Dutch Studies 341M, and Women's and Gender Studies 340 (Topic 61). Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic: Arendt And De Beauvoir), 323 (Topic 45), European Studies 347 (Topic: Arendt And De Beauvoir), 347 (Topic 37), German, Scandinavian, and Dutch Studies 340 (Topic: Arendt And De Beauvoir), 341M, Women’s and Gender Studies 340 (Topic: Arendt And De Beauvoir), 340 (Topic 61). Additional prerequisite: Upper division standing.

Topic 46: Exhibitions and Public Spectacle. Same as European Studies 347 (Topic 41), Geography 320N, and German, Scandinavian, and Dutch Studies 361N. Investigate exhibits, world’s fairs, museum, monuments, theme parks, and historical reconstructions from Europe and the US, with attention to images of how their sponsoring nations or other entities want to be seen. Examine evidence for both the good and bad sides of national pride and identity. Explore examples of how large-scale culture projects and the public interact. Consider the lasting marks left on the cities and countries sponsoring them.
Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic: Exhibitionism and Public Spectacle), 323 (Topic 46), European Studies 347 (Topic: Exhibitionism and Public Spectacle), 347 (Topic 41), Geography 320N, 356T (Topic: Exhibitionism and Public Spectacle), German, Scandinavian, and Dutch Studies 360 (Topic: Exhibitionism and Public Spectacle), 361N. Additional prerequisite: Upper division standing.

**Topic 47: Northern European Children's Literature.** Same as European Studies 347 (Topic 39) and German, Scandinavian, and Dutch Studies 341P. Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic: Northern European Children's Literature), 323 (Topic 47), European Studies 347 (Topic: Northern European Children's Literature), 347 (Topic 39), German, Scandinavian, and Dutch Studies 340 (Topic: Northern European Children's Literature), 341P. Additional prerequisite: Upper division standing.

**Topic 48: Nobel Prizes: Literature and Politics.** Same as European Studies 347 (Topic 38) and German, Scandinavian, and Dutch Studies 341N. An introduction to Nobel Prize winning authors from northern Europe in the context of literary prizes and the politics of literary reputation. Analyze and compare literary works, set novels into historical context, investigate what popular and scholarly reviews do, and research in both popular and scholarly sources. Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic: Nobel Prizes: Literature and Politics), 323 (Topic 48), European Studies 347 (Topic: Nobel Prizes: Literature and Politics), 347 (Topic 38), German, Scandinavian, and Dutch Studies 340 (Topic: Nobel Prizes: Literature and Politics), 341N. Additional prerequisite: Upper division standing.

**Topic 49: Northern European Comics.** Same as European Studies 347 (Topic 40) and German, Scandinavian, and Dutch Studies 341Q. A study of graphic novels from Scandinavia, Germany, and Holland to understand the art form of comics and the influence of the cultures in which they were produced. Readings, all in English, cover various genres and time periods. Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic: Northern European Comics), 323 (Topic 49), European Studies 347 (Topic: Northern European Comics), 347 (Topic 40), German, Scandinavian, and Dutch Studies 340 (Topic: Northern European Comics), 340 (Topic 1), 341Q. Additional prerequisite: Upper division standing.

**Topic 50: Scandinavian Cinema Since 1980.** Same as European Studies 347 (Topic 36) and German, Scandinavian, and Dutch Studies 331E. Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic: Scandinavian Cinema Since 1980), 323 (Topic 50), European Studies 347 (Topic: Scandinavian Cinema Since 1980), 347 (Topic 36), German, Scandinavian, and Dutch Studies 330 (Topic: Scandinavian Cinema Since 1980), 331E. Additional prerequisite: Upper division standing.

**Topic 51: Viking Language: Runes and Sagas.** Same as European Studies 347 (Topic 42) and German, Scandinavian, and Dutch Studies 361R. Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic: Viking Language: Runes and Sagas), 323 (Topic 51), European Studies 347 (Topic: Viking Language: Runes and Sagas), 347 (Topic 42), German, Scandinavian, and Dutch Studies 360 (Topic: Viking Language: Runes and Sagas), 361R. Additional prerequisite: Upper division standing.

**Topic 52: Bad Language: Race, Class, and Gender.** Same as Mexican American Studies 389R, Russian, East European, and Eurasian Studies 325 (Topic 32), and Women's and Gender Studies 340 (Topic 74). Three lecture hours a week for one semester. Only one of the following may be counted: American Studies 321 (Topic: Bad Language: Race, Class, and Gender), Comparative Literature 323 (Topic: Bad Language: Race, Class, and Gender), 323 (Topic 52), Linguistics 350 (Topic: Bad Language: Race, Class, and Gender), American American Studies 363R, 374 (Topic: Bad Language: Race, Class, and Gender), Russian 369 (Topic: Bad Language: Race, Class, and Gender), Russian, East European, and Eurasian Studies 325 (Topic: Bad Language: Race, Class, and Gender), 325 (Topic 32), Women's and Gender Studies 340 (Topic: Bad Language: Race, Class, and Gender), 340 (Topic 74). Additional prerequisite: Upper division standing.

**Topic 54: Russian Cinema From Potemkin to Putin.** Same as Russian, East European, and Eurasian Studies 325 (Topic 34). Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic: Russian Cinema From Potemkin to Putin), 323 (Topic 54), Russian, East European, and Eurasian Studies 325 (Topic: Russian Cinema From Potemkin to Putin), 325 (Topic 34). Additional prerequisite: Upper division standing.

**Topic 55: Russian Fairytales.** Same as Russian, East European, and Eurasian Studies 325 (Topic 35). Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic: Russian Fairytales), 323 (Topic 55), Slavic 324 (Topic: Russian Fairytales), Russian, East European, and Eurasian Studies 325 (Topic: Russian Fairytales), 325 (Topic 35). Additional prerequisite: Upper-division standing.

**Topic 57: Cultural Memory and the Classic Chinese Novel.** Same as Asian Studies 379 (Topic 13). Examine the metaphors and mythology from Chinese cultural memory that are present in classic novels, within literary and socio-historical contexts. Explore a cross-section of influential works from classical literature and the major founding schools of Chinese thought. Only one of the following may be counted: Asian Studies 379 (Topic: Cul Mem/Classic Chinese Nov), 379 (Topic 13), Comparative Literature 323 (Topic: Cul Mem/Classic Chinese Nov), 323 (Topic 57), Liberal Arts Honors 350 (Topic: Cul Mem/Classic Chinese Nov). Additional prerequisite: For Asian studies majors, twelve semester hours of upper-division coursework in Asian studies; for others, upper-division standing.

**Topic 58: Russian and Mexican Men in Popular Culture.** Same as Mexican American Studies 337D and Russian, East European, and Eurasian Studies 325 (Topic 40). Study representations of masculinity in products of Mexican and Russian popular culture at the end of the twentieth and the beginning of the twenty-first centuries. Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic: Russian/Mexican Men in Pop Cul), 323 (Topic 58), Mexican American Studies 337D, 374 (Topic: Russian/Mexican Men in Pop Cul), Russian, East European, and Eurasian Studies 325 (Topic: Russian/Mexican Men in Pop Cul), 325 (Topic 40), Women's and Gender Studies 340 (Topic: Russian/ Mexican Men in Pop Cul). Additional prerequisite: Upper-division standing.

**Topic 59: The Ancient Historians.** Same as Ancient History and Classical Civilization 325 (Topic 13), Classical Civilization 322D, and Core Texts and Ideas 329. Examines the main works of ancient historiography, and provides grounding in the central issues with which these works engage. Three lecture hours a week for one semester. Only one of the following may be counted: Ancient History and Classical Civilization 325 (Topic 13), Classical Civilization 322 (Topic 13), 322D, Comparative Literature 323 (Topic 59), Core Texts and Ideas 329. Additional prerequisite: Upper-division standing.

**Topic 60: Danticat and Diaz.** Same as African and African Diaspora Studies 330S and English 349D. Three lecture hours a week for one semester. Only one of the following may be counted: African and African Diaspora Studies 330S, 372E (Topic: Danticat and Diaz), Comparative Literature 323 (Topic: Danticat and Diaz), 323 (Topic 60), English 349D, 349S (Topic: Danticat and Diaz). Additional prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

**Topic 61: Classic Lyric Poems.** Same as Middle Eastern Studies 342 (Topic 59). Only one of the following may be counted: Comparative

**Topic 62: Forugh Farrokhzad and Her Poetry.** Same as Middle Eastern Studies 342 (Topic 61) and Women's and Gender Studies 340 (Topic 79). Only one of the following may be counted: Comparative Literature 323 (Topic: Forugh Farrokhzad/Her Ptry), 323 (Topic 62), Middle Eastern Languages and Cultures 321 (Topic: Forugh Farrokhzad/Her Ptry), Middle Eastern Studies 342 (Topic: Forugh Farrokhzad/Her Ptry), 342 (Topic 61), Women's and Gender Studies 340 (Topic: Forugh Farrokhzad/Her Ptry), 340 (Topic 79). Additional prerequisite: Upper-division standing.

**Topic 63: Iranian and Iranian-American Identity.** Same as Middle Eastern Languages and Cultures 321C, Middle Eastern Studies 342 (Topic 62), and Women's and Gender Studies 340 (Topic 81). Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic: Iran/Iranian-Amer Ident), 323 (Topic 63), Middle Eastern Languages and Cultures 321 (Topic: Iran/Iranian-Amer Ident), 321C, Middle Eastern Studies 342 (Topic: Iran/Iranian-Amer Ident), 342 (Topic 62), Women's and Gender Studies 340 (Topic: Iran/Iranian-Amer Ident), 340 (Topic 81). Additional prerequisite: Upper-division standing.

**Topic 64: Israel and Palestine: A Cultural Perspective.** Same as Jewish Studies 363 (Topic 23), Middle Eastern Languages and Cultures 321 (Topic 40), and Middle Eastern Studies 342 (Topic 56). Only one of the following may be counted: Comparative Literature 323 (Topic: Israel/Palestine: Cultrl Persp), 323 (Topic 64), Jewish Studies 363 (Topic: Israel/Palestine: Cultrl Persp), 363 (Topic 23), Middle Eastern Languages and Cultures 321 (Topic: Israel/Palestine: Cultrl Persp), 321 (Topic 40), Middle Eastern Studies 342 (Topic: Israel/Palestine: Cultrl Persp), 342 (Topic 56). Additional prerequisite: Upper-division standing.

**Topic 65: Youth and Violence in the Middle East and Eurasia.** Same as Middle Eastern Studies 342 (Topic 64) and Russian, East European, and Eurasian Studies 325 (Topic 42). Only one of the following may be counted: Comparative Literature 323 (Topic: Youth/Violence Mid East/Eur), 323 (Topic 65), Middle Eastern Languages and Cultures 321 (Topic: Youth/Violence Mid East/Eur), Middle Eastern Studies 342 (Topic: Youth/Violence Mid East/Eur), 342 (Topic 64), Russian, East European, and Eurasian Studies 325 (Topic: Youth/Violence Mid East/Eur), 325 (Topic 42). Additional prerequisite: Upper-division standing.

**Topic 66: Twentieth-Century Persian Literature.** Same as Middle Eastern Studies 342 (Topic 63). Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic: 20th Cen Persian Literature), 323 (Topic 66), Middle Eastern Studies 342 (Topic: 20th Cen Persian Literature), 342 (Topic 63). Additional prerequisite: Upper-division standing.

**Topic 71: Russia Through American Eyes.** Same as American Studies 325M, History 326D, and Russian, East European, and Eurasian Studies 325 (Topic 45). Examine a wide array of American attitudes towards Russia and Russians. Using a variety of political, social, and cultural events and encounters, analyze the ways in which nationalism, imperialism, and geopolitics informed American narratives about Russia and Russians, assessments that range from enthusiasm and curiosity to condemnation and outright hostility. Three lecture hours a week for one semester. Only one of the following may be counted: American Studies 325M, Comparative Literature 323 (Topic 71), History 326D, Russian, East European, and Eurasian Studies 325 (Topic: Russia Thru American Eyes), 325 (Topic 45). Additional prerequisite: Upper-division standing.

**Topic 72: Performing LGBTQ+.** Same as Theatre and Dance 357T (Topic 6) and Women's and Gender Studies 335 (Topic 23). Only one of the following may be counted: Comparative Literature 323 (Topic: Performing LGBTQ+), 323 (Topic 72), Theatre and Dance 357T (Topic: Performing LGBTQ+), 357T (Topic 6), Women's and Gender Studies 335 (Topic: Performing LGBTQ+), 335 (Topic 23). Additional prerequisite: Upper-division standing.

**Topic 73: Greek Tragedies and Postcolonial Dramas.** Same as African and African Diaspora Studies 330V and Theatre and Dance 357T (Topic 9). Study the adaptation of great dramatic literature of the Greek civilizations to their phenomenal evolution into popular African performances. Putting classical writings from Ancient Greek in dialogue with texts that formed the background of African anti-colonial revolutions, analyze how Africans have used these works to re-shape literary canon and given their world and their histories universal purchase. Three lecture hours a week for one semester. Only one of the following may be counted: African and African Diaspora Studies 330V, 374F (Topic: Greek Tragedy/Postcol Drama), Comparative Literature 323 (Topic: Greek Tragedy/Postcol Drama), 323 (Topic 73), Theatre and Dance 357T (Topic: Greek Tragedy/ Postcol Drama), 357T (Topic 9). Additional prerequisite: For theatre and dance majors, consent of instructor; for all others, upper-division standing.

**Topic 74: Queer Eastern Europe.** Same as European Studies 347 (Topic 55), Russian, East European, and Eurasian Studies 325 (Topic 46), and Women's and Gender Studies 335 (Topic 26). Explore LGBTQI stories and political struggles in Eastern Europe with a focus on the region's queer culture: literature, cinema, and the arts. Only one of the following may be counted: Comparative Literature 323 (Topic 74), European Studies 347 (Topic 55), Russian, East European, and Eurasian Studies 325 (Topic: Queer Narr Eastern Europe), 325 (Topic 46), Women's and Gender Studies 335 (Topic 26). Additional prerequisite: Upper-division standing.

**Topic 75: Identity, Codes, and Culture.** Same as German, Scandinavian, and Dutch Studies 351D and Russian, East European, and Eurasian Studies 325 (Topic 48). Explore how to read identities as patterns in literary texts, linguistic and cultural corpora with digital methods, and come to a deeper understanding of individual texts and textual phenomena. Examine digital research methods, tools, and use cases. Work hands-on with literary and linguistic sources. Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic 75), German, Scandinavian, and Dutch Studies 351D, Russian, East European, and Eurasian Studies 325 (Topic 48). Additional prerequisite: Upper-division standing.

**Topic 76: Humor and Hardship in Arabic Literature.** Same as Middle Eastern Studies 342 (Topic 71). Examine Arabic literary works (nine through twentieth centuries) that display humor and its
unspoken counterpart, hardship. Consult modern theories of humor and premodern Arabic-Islamic ideas of the jocular. Only one of the following may be counted: Comparative Literature 323 (Topic 76), Middle Eastern Studies 342 (Topic: Humor/Humor in Arabic Lit), 342 (Topic 71). Additional prerequisite: Upper-division standing.

**Topic 77: Cultural Translation.** Same as European Studies 347 (Topic 53), Middle Eastern Studies 342 (Topic 69), and Russian, East European, and Eurasian Studies 325 (Topic 47). Examine theoretical readings and concrete examples of how translation politics, translation-induced reconstruction of literary systems, censorship, manipulation, and market dynamics affect the production, distribution, and reception of translated products in the realm of arts and entertainment, news media and politics, and various academic disciplines in the Middle East, United States, and beyond. Only one of the following may be counted: Comparative Literature 323 (Topic 77), European Studies 347 (Topic 53), Middle Eastern Studies 342 (Topic: Cultural Translation), 342 (Topic 69), Russian, East European, and Eurasian Studies 325 (Topic 47). Additional prerequisite: Upper-division standing.

**Topic 78: Geography in Eastern Europe and Eurasia.** Same as Geography 328E, History 361U, and Russian, East European, and Eurasian Studies 335 (Topic 37). Explore alternatives to nation-state imaginaries across Eastern Europe and Eurasia. Examine spatial thinking, utopia, dystopia, the history of geosciences, counter-mapping, and the decolonial geopolitics of space. Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic 78), Geography 328E, History 361U, Russian, East European, and Eurasian Studies 335 (Topic 37). Additional prerequisite: Upper-division standing.

**Topic 79: Russia's Soul: Spiritual Traditions.** Same as History 3610, Religious Studies 325C, and Russian, East European, and Eurasian Studies 325 (Topic 33). Explore complex history of Orthodox Christianity, Judaism, Islam, and Buddhism in Russia. Examine important worship sites, including monasteries and pilgrimage destinations. Have discussions with Russian scholars of religion and practitioners of different faiths. Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic 79), History 3610, Religious Studies 325C, Russian, East European, and Eurasian Studies 325 (Topic 33). Additional prerequisite: Upper-division standing.

**C L 323C. Soviet Romance in Film.**

Same as Russian, East European, and Eurasian Studies 325 (Topic 37). Examine the construction of the ideology of love, intimate relations, and gender roles, deemed appropriate for a Soviet citizen, as it is demonstrated in a selection of films. Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323C, Russian, East European, and Eurasian Studies 325 (Topic: Soviet Romance in Film), 325 (Topic 37). Prerequisite: Upper-division standing.

**C L 323D. Representing Disaster in Japan.**

Same as Asian Studies 321C. Explore a range of human-made conflicts and natural disasters in Japan from earliest times to the present through literature, film, and new media to consider questions of history, representation, and mourning and memorialization. Three lecture hours a week for one semester. Only one of the following may be counted: Asian Studies 321C, 361 (Topic: Representing Disaster in Jpn), Comparative Literature 323D. Prerequisite: Upper-division standing.

**C L 323E. The Environment and East Asia.**

Same as Asian Studies 321D. Examine the relationship between humans and the environment through the literature, film, and media of East Asia. Three lecture hours a week for one semester. Only one of the following may be counted: Asian Studies 321D, 361 (Topic: Environment in East Asia), Comparative Literature 323E. Prerequisite: Upper-division standing.

**C L 323F. Animals in Asia.**

Same as Asian Studies 335. Focus on how historical and modern-day philosophy, religious texts, and legal systems in South and East Asia provide the framework for probing the human-animal encounter and the tensions that arise due to human-animal interdependence. Three lecture hours a week for one semester. Only one of the following may be counted: Asian Studies 335, 361 (Topic: Animals in Asia), Comparative Literature 323F. Prerequisite: Upper-division standing.

**C L 358Q. Supervised Research.**

Individual instruction. Prerequisite: Upper-division standing.

**Graduate Courses**

**C L 380F. Foundations of Literary Theory and Criticism.**

Explore a comparative study of theories of literary criticism in a broad historical perspective, including representative classic texts in critical theory. Three lecture hours a week for one semester. Comparative Literature 380F and 385 (Topic: Found Literary Thry & Critsm) may not both be counted. Prerequisite: Graduate standing and consent of instructor.

**C L 180K. Introduction to Comparative Literature.**

One-credit-hour proseminar in methods of study and research in comparative literature. One lecture hour a week for one semester. Required of first-semester graduate students in comparative literature. Offered on the credit/no credit basis only. Prerequisite: Graduate standing in comparative literature and consent of the graduate adviser in comparative literature.

**C L 380M. Problems in Translation.**

Detailed study of literary translations and of the translation process, and completion of one substantial translation. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of the graduate advisor.

**C L 380P. Literary and Cultural Theory since 1900.**

Explore a comparative study of major modern critical schools and figures in literary and cultural theory and criticism. Three lecture hours a week for one semester. Comparative Literature 380P and 390 (Topic: Contemporary Literary Theory) may not both be counted. Prerequisite: Graduate standing and consent of the instructor.

**C L 381. The Comparative Study of Literary Periods and Movements.**

The study of literary periods, aspects of periods, or movements from a comparative point of view; topics include mystical literature of the Middle Ages and Renaissance humanism. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of the graduate adviser.

**Topic 1: Modernisms and Modernity.** Only one of the following may be counted: Comparative Literature 381 (Topic: Modernisms and Modernity), 381 (Topic 1), French 390M (Topic: Modernisms and Modernity), German 382M (Topic: Modernisms and Modernity), Women's and Gender Studies 393 (Topic: Modernisms and Modernity).

**C L 382. Topics in Comparative Literature.**

Study of genres, literary forms, the relationships of literature and other disciplines from a comparative point of view; topics include comedy, sensibility, and the East and the West. Three lecture hours a week for one
semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of the graduate adviser.

**Topic 1: World Literature and Globalism: Theory and Practice.** Same as English 383L (Topic 1). Only one of the following may be counted: Comparative Literature 382 (Topic: World Lit/Globalism: Thy/Prac), 382 (Topic 1), English 383L (Topic: World Lit/Globalism: Thy/Prac), 383L (Topic: World Lit/Globalism: Thy/Prac), 383L (Topic 1).

**Topic 2: Women Writers and Intellectuals.** Only one of the following may be counted: Comparative Literature 382 (Topic: Women Writers/Intellectuals), 382 (Topic 2), French 390M (Topic: Women Writers/Intellectuals), German 386 (Topic: Women Writers/Intellectuals), Women's and Gender Studies 393 (Topic: Women Writers/Intellectuals).

C L 386. Literature in a Comparative Context.
A study of topics with a single primary language focus, using a strongly comparative approach. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of the graduate adviser.

C L 391L. Conference Course in Comparative Literature.
Tutorial courses on individually designed basis available through the home departments of members of the comparative literature faculty. Three lecture hours a week for one semester. Prerequisite: Graduate standing and consent of the graduate adviser in comparative literature.

The equivalent of three lecture hours a week for two semesters. Offered on the credit/no credit basis only. Prerequisite: For 698A, graduate standing in comparative literature and consent of the graduate adviser; for 698B, Comparative Literature 698A and consent of the graduate adviser.

C L 398R. Master’s Report.
Preparation of a report to fulfill the requirement for the master’s degree under the report option. The equivalent of three lecture hours a week for one semester. Offered on the credit/no credit basis only. Prerequisite: Graduate standing in comparative literature and consent of the graduate adviser.

May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Admission to candidacy for the doctoral degree.

**Professional Courses**

**C S - Computer Science**

**Computer Science: C S**

**Lower-Division Courses**

C S 301K. Foundations of Logical Thought.
Introductory logic in the context of computing; introduction to formal notations; basic proof techniques; sets, relations, and functions. Three lecture hours a week for one semester. Some sections also require one discussion hour a week.

An introduction to the fundamental concepts of computing: how computers work, what they can do, and how they can be used effectively. Some programming is required. Three lecture hours or two lecture hours and one discussion hour a week for one semester. Credit for Computer Science 302 may not be earned after a student has received credit for Computer Science 303E, 312, 312H, 314, or 314H. May not be counted toward a degree in computer science.

C S 303E. Elements of Computers and Programming.
Problem solving and fundamental algorithms for various applications in science, business, and on the World Wide Web, and introductory programming in a modern object-oriented programming language. The equivalent of three lecture hours a week for one semester. Only one of the following may be counted: Computer Science 303E, 312, 312H. Credit for Computer Science 303E may not be earned after a student has received credit for Computer Science 314, or 314H. May not be counted toward a degree in computer science.

C S 103F. Ethical Foundations of Computer Science.
An introduction to reasoning about the effects of the technology created by computer scientists and understanding the ethical and real-world consequences of that technology. Emphasizes direct participation and discussion using case studies to illustrate ethical topics. One lecture hour a week for one semester. Computer Science 103F and 109 (Topic: Ethical Foundations of Computer Science) may not both be counted.

C S 104C. Competitive Programming.
Explores the algorithms needed to solve a given problem, reason about corner cases, and write correct implementations under time pressure. Focuses on skills useful for international programming competitions, whiteboard job interviews, and programming tasks that require quickly solving challenging problems with creative use of algorithms. One lecture hour a week for one semester. Computer Science 104 and 109 (Topic: Competitive Programming) may not both be counted. Prerequisite: Computer Science 311 or 311H with a grade of at least C-, and registration or credit in Computer Science 314 or 314H with a grade of at least C-.

C S 105C. Computer Programming: C++.
Explores the syntax and concepts needed to program in C++. One lecture hour a week for one semester. Prerequisite: Computer Science 313E, 314, 314H, or Electrical Engineering 422C, with a grade of at least C-.

C S 105P. Topics In Computer Programming Languages.
An introduction to programming in a particular computer language. Includes designing and implementing programs. One lecture hour a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Computer Science 313E, 314, 314H, or Electrical Engineering 422C, with a grade of at least C-, and consent of instructor.

Introduction to the use of a particular software system. Students build applications that exploit the system being studied. One lecture hour a week for one semester. May be repeated for credit when the topics vary. Offered on the pass/fail basis only. Prerequisite: Computer Science 313E, 314, 314H, or Electrical Engineering 422C, with a grade of at least C-.

C S 109, 209, 309. Topics in Computer Science.
For each semester hour of credit earned, one lecture hour a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Varies with the topic.

**Topology:** Quantum Computing I. Introduction to quantum information and communication. Computer Science 309 (Topic: Quantum Computing-FRI) and 309 (Topic 1) may not both be counted.

Restricted to computer science majors. A focus on discrete mathematical tools of fundamental importance to the working computer scientist. An emphasis is placed on using logical notation to express
rigorous mathematical arguments. Subjects include proof by induction, introduction to graph theory, recurrences, sets, functions, and an introduction to program correctness. Three lecture hours a week for one semester. Computer Science 311 and 311H may not both be counted. Prerequisite: The following coursework with a grade of at least C- in each: Computer Science 312 or 312H; and Mathematics 408C, 408K, or 408N, or registration for Mathematics 408C.

C S 311H. Discrete Mathematics for Computer Science: Honors.
Restricted to honors computer science majors. A focus on discrete mathematical tools of fundamental importance to the working computer scientist. An emphasis is placed on using logical notation to express rigorous mathematical arguments. Subjects include proof by induction, graph theory, number theory, combinatorics, recurrences, sets, functions, an introduction to program correctness, and discrete probability. Three lecture hours a week for one semester. Computer Science 311 and 311H may not both be counted. Prerequisite: Mathematics 408K or 408N with a grade of at least C-; or registration or credit with at least C- in M 408C.

C S 312. Introduction to Programming.
First part of a two-part sequence in programming. Fundamental concepts of structured programming; procedures and data structures with a focus on problem solving strategies and implementation; introduction to concepts of informal specification, informal reasoning about program behavior, debugging, and ad hoc testing. Three lecture hours and one discussion hour a week for one semester. Only one of the following courses may be counted: Computer Science 303E, 312, 312H. Credit for Computer Science 312 may not be earned after a student has received credit for Computer Science 314 or 314H. Prerequisite: Credit with a grade of at least C- or registration for Mathematics 408C, 408K, or 408N.

C S 312H. Introduction to Programming: Honors.
Restricted to computer science majors. First part of a two-part sequence in programming. Fundamental concepts of structured programming; procedures and data structures with a focus on problem solving strategies and implementation; introduction to concepts of informal specification, informal reasoning about program behavior, debugging, and ad hoc testing. Three lecture hours and one discussion hour a week for one semester. Only one of the following courses may be counted: Computer Science 303E, 312, 312H. Credit for Computer Science 312H may not be earned after a student has received credit for Computer Science 314 or 314H. Prerequisite: Credit with a grade of at least C- or registration for Mathematics 303G, or a passing score on the College of Natural Sciences mathematics placement examination; and consent of the honors director.

C S 313E. Elements of Software Design.
Object-oriented design of software using Python, a modern high-level language. Introduction to abstract data types, fundamental algorithms, and basics of complexity analysis. Three lecture hours a week for one semester. May not be counted toward a degree in computer science. Prerequisite: Computer Science 303E, 312, or 312H with a grade of at least C-.

C S 314. Data Structures.
Second part of a two-part sequence in programming. Introduction to specifications, simple unit testing, and debugging; building and using canonical data structures; algorithm analysis and reasoning techniques such as assertions and invariants. Three lecture hours and one discussion hour a week for one semester. Computer Science 314 and 314H may not both be counted. Prerequisite: Computer Science 312 or 312H with a grade of at least C-.

C S 314H. Data Structures: Honors.
Second part of a two-part sequence in programming. Introduction to specifications, simple unit testing, and debugging; building and using canonical data structures; algorithm analysis and reasoning techniques such as assertions and invariants. Three lecture hours and one discussion hour a week for one semester. Computer Science 314 and 314H may not both be counted. Prerequisite: Consent of honors faculty advisor.

This course is used to record credit the student earns while enrolled at another institution in a program administered by the University's Study Abroad Office. Credit is recorded as assigned by the study abroad adviser in the Department of Computer Science. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

Upper-Division Courses
C S 120N, 220N, 320N. Topics in Computer Science for Nonmajors.
For each semester hour of credit earned, one lecture hour a week for one semester. May not be counted toward a degree in computer science. May be repeated for credit when the topics vary. Prerequisite: Varies with the topic.

Explore the fundamentals of software issues related to scientific computing. Discuss subjects including floating-point computations, numerical computation errors, interpolation, integration, solution of linear systems of equations, optimization, and initial value problems of ordinary differential equations. Examine implementation of algorithms that are investigated using Python for all scientific computations. Three lecture hours a week for one semester. Computer Science 323E and 323H may not both be counted. Prerequisite: Computer Science 313E, 314, or 314H with a grade of at least C-.

Fundamentals of software issues related to scientific computing. Subjects include floating-point computations, numerical computation errors, interpolation, integration, solution of linear systems of equations, optimization, and initial value problems of ordinary differential equations. Implementation of algorithms are investigated using MATLAB for matrix and vector computations. Examples are drawn from a variety of science and mathematics areas. Three lecture hours a week for one semester. May not be counted toward a degree in computer science. Computer Science 323E and 323H may not both be counted. Prerequisite: Computer Science 303E, 312, or 312H with a grade of at least C-; credit with a grade of at least C- or registration for Mathematics 340L, or 341; and consent of the honors director.

C S 324E. Elements of Graphics and Visualization.
Basics of two- and three-dimensional computer graphics systems, modeling and rendering, and selected graphics software APIs. Other topics may include interactive graphics, animation, graphical user interfaces, and the graphical presentation of information. Three lecture hours a week for one semester. May not be counted toward a degree in computer science. Prerequisite: Computer Science 313E, 314, or 314H with a grade of at least C-.

C S 326E. Elements of Networking.
Introduction to the principles and basic concepts of the Internet, networking applications and protocols, and simple client/server
applicanies. Other topics may include network technologies and
topologies, packet and circuit switching, LANS and WANS, Internet
security, and network management. Three lecture hours a week for one
semester. May not be counted toward a degree in computer science.
Prerequisite: Computer Science 313E, 314, or 314H with a grade of at
least C-.

C S 327E. Elements of Databases.
A practical introduction to database management systems, with
discussion of database administration and management. Survey of
logical modeling, database design with a focus on relational databases,
SQL query language, and current applications. Subjects may include data
integrity, performance, concurrency, transaction processing, recovery,
security, and Web applications. Three lecture hours a week for one
semester. May not be counted toward a degree in computer science.
Prerequisite: Computer Science 313E, 314, or 314H with a grade of at
least C-.

C S 328E. Topics in Elements of Computing.
Three lecture hours a week for one semester. May not be counted toward
a degree in computer science. May be repeated for credit when the
topics vary. Prerequisite: Computer Science 303E, 312, or 312H with
a grade of at least C-.

Restricted to computer science majors. An introduction to low-level
computer design ranging from the basics of digital design to the
hardware/software interface for application programs. Includes basic
systems principles of pipelining and caching, and requires writing and
understanding programs at multiple levels. Four lecture hours and two
discussion hours a week for one semester. Computer Science 429 and
429H may not both be counted. Prerequisite: The following courses with a
grade of at least C-: Computer Science 311 or 311H; and Computer
Science 314 or 314H.

C S 329C. Cooperative Education.
This course covers the work period of computer science students in
the Cooperative Education program, which provides supervised work
experience by arrangement with the employer and the supervising
instructor. Forty laboratory hours a week for one semester. The student
must repeat the course each work period and must take it twice to
receive credit toward the degree; at least one of these registrations
must be during a long-session semester. However, no more than three
semester hours may be counted toward the major requirement. The
student’s first registration must be on the pass/fail basis; the second
must be on the letter-grade basis. Prerequisite: The following coursework
with a grade of at least C- in each: Computer Science 311 or 311H, 314 or
314H; 429, or 429H; and consent of the undergraduate adviser.

C S 330E. Elements of Software Engineering I.
Explore software engineering using various programming languages.
Use tools to improve the quality of software development. Three lecture
hours a week for one semester. Computer Science 329E (Topic: Elements
of Software Engineering) and 330E may not both be counted. Prerequisite:
Computer Science 313E, 314, or 314H with a grade of at least C-.

An investigation of algorithmic paradigms: divide and conquer, dynamic
programming, greedy algorithms, graph algorithms, randomized
algorithms, undecidability, NP-completeness, and approximation
algorithms. Three lecture hours and one discussion hour a week for one
semester. Only one of the following may be counted: Computer Science
331, 331H, 378 (Topic: Algorithms and Complexity). Prerequisite: The
following coursework with a grade of at least C-: Computer Science 429 or
429H; Mathematics 362K or Statistics and Data Sciences 321; and
credit with a grade of at least C- or registration for: Mathematics 340L,
341, or Statistics and Data Sciences 329C.

C S 331E. Elements of Software Engineering II.
Explore advanced aspects of software engineering using various
programming languages. Use tools to improve the quality of software
development. Three lecture hours a week for one semester. Prerequisite:
Computer Science 330E with a grade of at least C-.

An investigation of algorithmic paradigms: divide and conquer, dynamic
programming, greedy algorithms, graph algorithms, randomized
algorithms, undecidability, NP-completeness, approximation algorithm,
sorting lower bound, selected topics from amortized analysis, network
flow, and linear programming. Three lecture hours and one hour of
discussion a week for one semester. Only one of the following may be
counted: Computer Science 331, 331H, 378 (Topic: Algorithms
and Complexity). Prerequisite: The following coursework with a grade
of at least C-: Computer Science 429 or 429H; Mathematics 362K or
Statistics and Data Sciences 321; and credit with a grade of at least C-
or registration for: Mathematics 340L, 341, or Statistics and Data Sciences
329C.

C S 234. Technical Writing.
Application of techniques and strategies of effective technical writing,
and of conventions used in documents such as letters, memos,
proposals, abstracts, and reports. Two lecture hours a week for one
semester. Computer Science 234 and 178 (Topic: Technical Writing) may
not both be counted. May not be counted toward the number of hours
in computer science required for the Bachelor of Science in Computer
Science degree. Prerequisite: Computer Science 429, or 429H with a
grade of at least C-.

C S 337. Theory in Programming Practice.
Application of program-analysis theory to program design.
Methodologies for large-scale program design. Designed to help
students bring together theoretical and programming skills. Three lecture
hours and one discussion hour a week for one semester. Computer
C S 337H. Theory in Programming Practice: Honors.
Application of program-analysis theory to program design. Methodologies for large-scale program design. Designed to help students bring together theoretical and programming skills. Three lecture hours and one discussion hour a week for one semester. Computer Science 337 and 337H may not both be counted. Prerequisite: The following coursework with a grade of at least C-: Computer Science 429 or 429H; and 331, 331H, 341, or 341H.

Restricted to computer science majors. An introduction to computer systems software abstractions with an emphasis on the connection of these abstractions to underlying computer hardware. Key abstractions include threads, virtual memory, protection, and I/O. Requires writing of synchronized multithreaded programs and pieces of an operating system. Four lecture hours and two discussion hours a week for one semester. Computer Science 439 and 439H may not both be counted. Prerequisite: Computer Science 429, or 429H with a grade of at least C-.

Restricted to computer science majors. An introduction to computer systems software abstractions with an emphasis on the connection of these abstractions to underlying computer hardware. Key abstractions include threads, virtual memory, protection, and I/O. Requires writing of synchronized multithreaded programs and pieces of an operating system. Four lecture hours and two discussion hours a week for one semester. Computer Science 439 and 439H may not both be counted. Prerequisite: Computer Science 429 or 429H with a grade of at least C-.

C S 340D. Debugging Verifying Programs.
Basic concepts of formal methods with emphasis on using and applying mathematical logic plus finite state systems theory to program verification and debugging. Three lecture hours a week for one semester. Computer Science 340D and 378 (Topic: Debugging and Verifying Programs) may not both be counted. Prerequisite: Computer Science 429 or 429H with a grade of at least C-.

C S 341. Automata Theory.
An introduction to the formal study of automata and of related formal languages with applications in computer science. Three lecture hours a week for one semester. Computer Science 341 and 341H may not both be counted. Prerequisite: Computer Science 429 or 429H with a grade of at least C-.

C S 341H. Automata Theory: Honors.
An introduction to the formal study of automata and of related formal languages with applications in computer science. Three lecture hours a week for one semester. Computer Science 341 and 341H may not both be counted. Prerequisite: Computer Science 429 or 429H with a grade of at least C-, and consent of the honors director.

C S 342. Neural Networks.
An introduction to deep learning covering basic building blocks and intuitions behind designing, training, and tuning of deep networks. Explore application areas including computer vision, sequence modeling in natural language processing, deep reinforcement learning, generative modeling, and adversarial learning. Three lecture hours a week for one semester. Prerequisite: Computer Science 429 or 429H with a grade of at least C-.

C S 342C. Computational Brain.
An examination of the brain as a computational system composed of different layers of abstraction. Focus on scientific writing, with weekly reviews of relevant scientific papers. Three lecture hours a week for one semester. Computer Science 342C and 378 (Topic: Computational Brain) may not both be counted. Prerequisite: The following coursework with a grade of at least C- in each: Computer Science 429 or 429H; and Mathematics 362K or Statistics and Data Sciences 321.

C S 342S. Introduction to Speech and Audio Processing.
Explore the theory and practice that underlies modern automatic speech recognition (ASR) systems and related technologies. Analyze the acoustic theory of speech production, digital signal processing for speech signals, Hidden Markov Models, Gaussian Mixture Models, language models, finite state transducers, decoding algorithms, and deep neural networks. Three lecture hours a week for one semester. Computer Science 342S and 378 (Topic: Intro to Speech and Audio Proces) may not both be counted. Prerequisite: The following coursework with a grade of at least C-: Computer Science 429 or 429H; Mathematics 362K or Statistics and Data Sciences 321; and Mathematics 340L, 341, or Statistics and Data Sciences 329C.

C S 343. Artificial Intelligence.
An introduction to the field of artificial intelligence (AI), starting from foundations in search and knowledge representation, and then sampling from major AI topics such as probabilistic reasoning, intelligent agents (including for games), machine learning, planning, natural language processing, robotics, computer vision, and philosophical foundations. Programming projects are required. Three lecture hours a week for one semester. Only one of the following may be counted: Computer Science 343, 343H, 378H (Topic: Artificial Intelligence: Honors). Prerequisite: The following coursework with a grade of at least C- in each: Computer Science 429 or 429H; and Mathematics 362K or Statistics and Data Sciences 321.

C S 343H. Artificial Intelligence: Honors.
An introduction to the field of artificial intelligence (AI), starting from foundations in search and knowledge representation, and then sampling from major AI topics such as probabilistic reasoning, intelligent agents (including for games), machine learning, planning, natural language processing, robotics, computer vision, and philosophical foundations. Programming projects are required. Three lecture hours a week for one semester. Only one of the following may be counted: Computer Science 343, 343H, 378H (Topic: Artificial Intelligence: Honors). Prerequisite: The following coursework with a grade of at least C- in each: Computer Science 429 or 429H; and Mathematics 362K or Statistics and Data Sciences 321.

C S 344M. Autonomous Multiagent Systems.
An introduction to autonomous agents, with an emphasis on multiagent systems. Students use a robotics simulator. Emphasis on computer science research activities, including speaking, writing, programming, and working in groups. Three lecture hours a week for one semester. Computer Science 344M and 378 (Topic: Autonomous Multiagent Systems) may not both be counted. Prerequisite: The following coursework with a grade of at least C- in each: Computer Science 429 or 429H; and Mathematics 362K or Statistics and Data Sciences 321.

C S 344R. Robotics.
A survey of methods and techniques important for intelligent robotics. Students work in teams, applying these methods to get intelligent behavior from physical robots. Three lecture hours a week for one semester. Computer Science 344R and 378 (Topic: Robotics) may not both be counted. Prerequisite: The following coursework with a grade
of at least C- in each: Computer Science 429 or 429H; and Mathematics 362K or Statistics and Data Sciences 321.

C S 345. Programming Languages.
Survey of significant concepts underlying modern programming languages, including syntax, functions, expressions, types, polymorphism, assignment, procedures, pointers, encapsulation, classes, and inheritance, with some discussion of implementation issues. Prominent programming paradigms, such as sequential, concurrent, object-oriented, functional, and logic programming. Illustrative examples drawn from a variety of current languages. Three lecture hours a week for one semester. Computer Science 345 and 345H may not both be counted. Prerequisite: Computer Science 429 or 429H with a grade of at least C-.

C S 345H. Programming Languages: Honors.
A survey of significant concepts underlying modern programming languages, including syntax, functions, expressions, types, polymorphism, assignment, procedures, pointers, encapsulation, classes, and inheritance, with some discussion of implementation issues. Prominent programming paradigms, such as sequential, concurrent, object-oriented, functional, and logic programming. Illustrative examples drawn from a variety of current languages. Three lecture hours a week for one semester. Computer Science 345 and 345H may not both be counted. Prerequisite: Computer Science 429 or 429H with a grade of at least C-.

C S 346. Cryptography.
A theoretical introduction to cryptography. Subjects include private key cryptosystems, public key cryptosystems, digital signatures, secret sharing schemes, and the necessary mathematical background. Three lecture hours a week for one semester. Prerequisite: The following coursework with a grade of at least C-: Computer Science 429 or 429H; 331, 331H, 341, or 341H; and credit with a grade of at least C- or registration for: Mathematics 340L, 341, or Statistics and Data Sciences 329C.

C S 347. Data Management.
Concepts of database design and database system implementation. Data models, query processing, database design theory, crash recovery, concurrent control, and distributed databases. Three lecture hours a week for one semester. Prerequisite: Computer Science 429 or 429H with a grade of at least C-.

An examination of social, professional, and ethical issues involved in the use of computer technology. Subjects may include software engineering ethics, computer safety and reliability, constitutional issues, intellectual property, computer crime, societal impact, emerging technologies, and philosophical issues. Three lecture hours a week for one semester. Computer Science 349 and 378 (Topic: Contemporary Issues in Computer Science) may not both be counted. Prerequisite: Computer Science 429 or 429H with a grade of at least C-.

C S 350C. Advanced Computer Architecture.
Relationships between programming and hardware design, high performance and low power microarchitectures, memory system design, technology and workload constraints on design, special techniques for coding, addressing, and control, and evaluation of design alternatives will be explored. Three lecture hours a week for one semester. Prerequisite: Computer Science 429 or 429H with a grade of at least C-.

C S 350F. Operating Systems.
Advanced coverage of core operating systems (virtual memory, file systems, scheduling), and intermediate and advanced operating systems concepts: multiprocessing, multi-core computing, linking, kernel design, virtual machines, and security. Three lecture hours a week for one semester. Prerequisite: Computer Science 439 or 439H with a grade of at least C-.

An introduction to computability theory and computational complexity, focusing on the limits of computation. Subjects include undecidability, NP-completeness, time and space complexity, circuit complexity, and randomized complexity. Three lecture hours a week for one semester. Prerequisite: One of the following with a grade of at least C-: Computer Science 331, 331H, 341, or 341H.

Introduction to techniques for human-machine communication through imagery. Subjects include display hardware, transformations, interactive techniques, geometric modeling, two- and three-dimensional display algorithms, graphics software systems architecture, and hidden-line and surface elimination. Projects are assigned and in-depth exploration is encouraged. Three lecture hours a week for one semester. Only one of the following may be counted: Computer Science 354, 354H, 378H (Topic: Computer Graphics Honors). Prerequisite: The following courses with a grade of at least C-: Computer Science 429 or 429H and Mathematics 340L or Statistics and Data Sciences 329C or Mathematics 341.

Introduction to techniques for human-machine communication through imagery. Explore display hardware, transformations, interactive techniques, geometric modeling, two- and three-dimensional display algorithms, graphics software systems architecture, and hidden-line and surface elimination. Three lecture hours a week for one semester. Only one of the following may be counted: Computer Science 354, 354H, 378H (Topic: Computer Graphics Honors). Prerequisite: The following courses with a grade of at least C-: Computer Science 429 or 429H and Mathematics 340L or Statistics and Data Sciences 329C or Mathematics 341.

C S 354P. Game Programming Paradigms.
Explore game programming paradigms in C++ using the Unreal Engine. Examine event-driven, component-oriented and object-oriented programming, as well as collaborative software development using source control, bug-tracking, and code documentation. Develop and apply skills towards building a game on the Unreal Engine. Three lecture hours a week for one semester. Computer Science 354P and 378 (Topic: Game Programming Paradigms) may not both be counted. Prerequisite: Computer Science 429 or 429H with a grade of at least C-.

C S 354R. Game Technology.
An examination of major technological components of computer games and their integration, modeling and animation, physics simulation, networking for games, interface and interaction techniques, and special effects. Three lecture hours a week for one semester. Computer Science 354R and 378 (Topic: Game Technology) may not both be counted. Prerequisite: The following coursework with a grade of at least C-: Computer Science 105C, 371G or 371P; and Computer Science 429 or 429H.

C S 354S. Game Development Capstone: Two-Dimensional Games.
Same as Music 354S and Theatre and Dance 354T (Topic 17). Participation in an interdisciplinary team to gain a thorough understanding of the two-dimensional game development process, through modeling of the environment and practices that are used in game studios. Three lecture hours a week for one semester. Only one of
the following may be counted: Arts and Entertainment Technologies 376, Computer Science 354S, 378 (Topic: Game Devel Capstone: 2D Games), Music 354S, 376J (Topic: Game Devel Capstone: 2D Games), Theatre and Dance 354T (Topic 17), Radio-Television-Film 344N (Topic 6), 344T (Topic 1). Prerequisite: For computer science majors, Computer Science 354, 354H, 354P, or 354R with a grade of at least C-; for others, consent of instructor.

**C S 354T. Game Development Capstone: Three-Dimensional Games.**

Same as Music 354T and Theatre and Dance 354T (Topic 18). Participation in interdisciplinary teams to gain a thorough understanding of the three-dimensional game development process, through modeling of the environment and practices that are used in game studios. Three lecture hours a week for one semester. Only one of the following may be counted: Computer Science 354T, Music 354T, 376J (Topic: Game Development Capstone: 3D Games), Theatre and Dance 354T (Topic 18). Prerequisite: For computer science majors, Computer Science 354, 354H, 354P, or 354R with a grade of at least C-; for others, consent of instructor.

**C S 356. Computer Networks.**

Introduction to computer networks with emphasis on the Internet. Three lecture hours a week for one semester. Prerequisite: The following coursework with a grade of at least C- in each: Computer Science 439 or 439H; and Mathematics 362K or Statistics and Data Sciences 321.

**C S 356R. Introduction to Wireless Networks.**

An introduction to basic knowledge in wireless networks ranging from the physical layer to the application layer, and across different types of wireless networks such as WiFi, cellular, and multihop networks. Three lecture hours a week for one semester. Computer Science 356R and 378 (Topic: Introduction to Wireless Networks) may not both be counted. Prerequisite: Computer Science 429 or 429H with a grade of at least C-.

**C S 358H. Introduction to Quantum Information Science: Honors.**

Introduction to the theory of quantum computing and information. Explore the rules of quantum mechanics (qubits, unitary transformations, measurements, density matrices); quantum gates and circuits; entanglement; the Bell inequality; protocols for teleportation, quantum key distribution, and other tasks; basic quantum algorithms such as Shor’s and Grover’s; basic quantum complexity theory; basic quantum error correction; decoherence and the measurement problem; and the challenges of building scalable quantum computers. Previous exposure to quantum mechanics is not required. Three lecture hours a week for one semester. Computer Science 358H and 378H (Topic: Intro to Quantum Info Sci: Hon) may not both be counted. Prerequisite: Computer Science 331 or 331H with a grade of at least C-.

**C S 360V. Virtualization.**

Examine the latest in virtualization technologies such as virtual machines, containers and serverless computing. Three lecture hours a week for one semester. Computer Science 360V and 378 (Topic: Virtualization) may not both be counted. Prerequisite: Computer Science 439 or 439H with a grade of at least C-.

**C S 361. Introduction to Computer Security.**

An introduction to computer security, both in the abstract and in the context of real systems, including recognizing potential threats to confidentiality, integrity and availability, and developing familiarity with current security-related issues in computer science. Three lecture hours a week for one semester. Computer Science 361 and 378 (Topic: Introduction to Security) may not both be counted. Prerequisite: Computer Science 429 or 429H with a grade of at least C-.

**C S 361C. Information Assurance and Security.**

Selected subjects from the broad area of information assurance, including computer security, communications security, operations security, and risk assessment. Three lecture hours a week for one semester. Computer Science 361C and 378 (Topic: Information Assurance and Security) may not both be counted. Prerequisite: Computer Science 429 or 429H with a grade of at least C-.

**C S 361S. Network Security and Privacy.**

An examination of common computer security threats; fundamental techniques for implementing secure software systems and networks; practical experience in attacking and defending networked systems. Three lecture hours a week for one semester. Only one of the following may be counted: Computer Science 361S, 378 (Topic: Network Security and Privacy), 378H (Topic: Network Security/Privacy: Hon). Prerequisite: Computer Science 439 or 439H with a grade of at least C-.

**C S 363H. Principles of Machine Learning I: Honors.**

Introduction to machine learning: data processing, regression, classification, clustering, dimensionality reduction, and neural networks. Three lecture hours a week for one semester. Only one of the following may be counted: Computer Science 363D, 363H, 363M, 378 (Topic: Introduction to Data Mining), 378H (Topic: Intro to Data Mining: Honors). Prerequisite: The following coursework with a grade of at least C-: Computer Science 429 or 429H; Mathematics 362K or Statistics and Data Sciences 321; and Mathematics 340L, 341, or Statistics and Data Sciences 329C.

**C S 363M. Principles of Machine Learning I.**

Introduction to machine learning: data processing, regression, classification, clustering, dimensionality reduction, and neural networks. Three lecture hours a week for one semester. Only one of the following may be counted: Computer Science 363D, 363H, 363M, 378 (Topic: Introduction to Data Mining), 378H (Topic: Intro to Data Mining: Honors). Prerequisite: The following coursework with a grade of at least C-: Computer Science 429 or 429H; Mathematics 362K or Statistics and Data Sciences 321; and Mathematics 340L, 341, or Statistics and Data Sciences 329C.

**C S 364M. Principles of Machine Learning II.**

Introduction to advanced machine learning: optimization methods, statistical inference and probabilistic modeling, generalization, and uncertainty quantification. Three lecture hours a week for one semester. Computer Science 364D and 364M may not both be counted. Prerequisite: Upper-division standing and Computer Science 363D, 363M or 363H with a grade of at least C-.

**C S 367. Numerical Methods.**

Subjects include systems of linear equations, numerical integration, ordinary differential equations, and nonlinear equations. Construction and use of large numerical systems. Influence of data representation and computer architecture on algorithm choice and development. Three lecture hours a week for one semester. Only one of the following may be counted: Computer Science 367, Mathematics 368K, Physics 329. Prerequisite: The following coursework with a grade of at least C-: Computer Science 429 or 429H; Mathematics 408D, 408M, or 427L; and Mathematics 340L, 341, or Statistics and Data Sciences 329C.

**C S 369. Systems Modeling.**

Introduction to performance modeling, with emphasis on computer systems. Modeling methodology, queuing network models, simulation, analysis of results. Three lecture hours a week for one semester. Prerequisite: The following coursework with a grade of at least C-:
Computer Science 429 or 429H; and Mathematics 362K or Statistics and Data Sciences 321.

C S 370. Undergraduate Reading and Research.
Supervised study of selected problems in computer science, by individual arrangement with supervising instructor. The equivalent of three lecture hours a week for one semester. Computer Science 370 and 370F may not both be counted. No more than three semester hours may be counted toward a degree in computer science. Prerequisite: Computer Science 429 or 429H with a grade of at least C-, and consent of the undergraduate adviser.

C S 370F. Undergraduate Reading and Research: Writing.
Supervised study of selected problems in computer science, by individual arrangement with supervising instructor. The equivalent of three lecture hours a week for one semester. Computer Science 370 and 370F may not both be counted. No more than three semester hours may be counted toward a degree in computer science. Prerequisite: Computer Science 429 or 429H with a grade of at least C-, and consent of the undergraduate adviser.

C S 371D. Distributed Computing.
Investigation of models, principles, and fundamental protocols, including event ordering and global predicate detection, atomic commit, state-machine replication, rollback recovery, primary backup, consensus for synchronous and asynchronous systems, and byzantine fault-tolerance. Three lecture hours a week for one semester. Prerequisite: Computer Science 439 or 439H with a grade of at least C.

C S 371G. Generic Programming and the STL.
Three lecture hours a week for one semester. Computer Science 371G and 378 (Topic: Generic Programming and the STL) may not both be counted. Prerequisite: Computer Science 429 or 429H with a grade of at least C.

C S 371L. iOS Mobile Computing.
Overview of mobile computing with an emphasis on developing applications for the iOS operating system. Three lecture hours a week for one semester. Computer Science 371L and 378 (Topic: iOS Mobile Computing) may not both be counted. Prerequisite: Credit with a grade of at least C- or registration in Computer Science 439 or 439H.

C S 371M. Mobile Computing.
Overview of mobile computing. Emphasis on mobile application development. Use of mobile capabilities: sensors, location, telephony, and multimedia. Three lecture hours a week for one semester Computer Science 371M and 378 (Topic: Mobile Computing) may not both be counted. Prerequisite: Computer Science 429 or 429H with a grade of at least C; and credit with a grade of at least C- or registration for Computer Science 439 or 439H.

C S 371N. Natural Language Processing.
Explore modern natural language processing using machine learning and deep learning approaches. Examine linguistics fundamentals (syntax, semantics, distributional properties of language), machine learning models (classifiers, sequence taggers, deep neural networks), key algorithms for inference, and a range of applications. Build systems to do tasks including sentiment classification, text generation, and more. Three lecture hours a week for one semester. Computer Science 371N and 378 (Topic: Natural Language Processing) may not both be counted. Prerequisite: Computer Science 331 or 331H with a grade of at least C-.

C S 371P. Object-Oriented Programming.
Programming using class derivation, inheritance, and dynamic polymorphism. Application of a simple object-oriented design methodology to several software development problems. Three lecture hours a week for one semester. Prerequisite: Computer Science 429 or 429H with a grade of at least C-.

C S 371R. Information Retrieval and Web Search.
Introduction to traditional and recent methodologies for indexing, processing, querying, and classifying unstructured and semi-structured textual data, including hypertext and World Wide Web documents. Three lecture hours a week for one semester. Prerequisite: Computer Science 371R and 378 (Topic: Intelligent Information Retrieval and Web Search) may not both be counted. Prerequisite: Computer Science 429 or 429H with a grade of at least C-.

C S 371S. Object-Oriented Software Engineering.
Object-oriented formulations of software systems as executable specifications, object-oriented analysis, design of software architectures, translation of high-level specification systems. Three lecture hours a week for one semester. Prerequisite: Computer Science 429 or 429H with a grade of at least C-.

C S 373. Software Engineering.
Introduction to current knowledge, techniques, and theories in large software system design and development. Three lecture hours a week for one semester. Prerequisite: Computer Science 429 or 429H with a grade of at least C-.

C S 373S. Software Design.
Model-driven engineering, UML metamodels and constraints, model transformations, object-oriented refactorings, design patterns, object-oriented frameworks and plug-ins, layered and dataflow architectural styles, map-reduce parallel software architectures, and service-oriented architectures. Three lecture hours a week for one semester. Prerequisite: Computer Science 373S and 378 (Topic: Software Design) may not both be counted. Prerequisite: Computer Science 429 or 429H with a grade of at least C-.

C S 374L. Longhorn Startup.
Focus on skill development and mentoring in startup formation, technology development, market validation, marketing, sales, operations, human resources, program management, and finance. Emphasis on written and oral presentation of startup activities. Three lecture hours a week for one semester. Only one of the following may be counted: Computer Science 374L, 378 (Topic: Longhorn Startup), Electrical Engineering 377E, Engineering Studies 377E, Management 337 (Topic: Interdisciplinary Entrepreneurship), 337 (Topic 2). Prerequisite: Upper-division standing, Computer Science 429 or 429H with a grade of at least C, and consent of instructor.

C S 174S. Longhorn Startup Seminar.
An introduction to the world of startups through the experiences of people who have built successes and learned from failures. Two lecture hours a week for one semester. Only one of the following may be counted: Biomedical Engineering 177T, 277T, 377T (Topic: Longhorn Startup Seminar), Computer Science 178, 174S, 378 (Topic: Longhorn Startup Seminar), Engineering Studies 177, 277, 377 (Topic: Longhorn Startup Seminar), 177, 277, 377 (Topic 1), Fine Arts 160, 260, 360 (Topic: Longhorn Startup Seminar), 170, 270, 370, Management 137, 237, 337 (Topic: Longhorn Startup Seminar), Communication 125, 225, 325 (Topic: Longhorn Startup Seminar). Prerequisite: Upper-division standing, Computer Science 429 or 429H with a grade of at least C, and consent of instructor.

C S 375. Compilers.
An examination of formal description of languages, lexical analysis, syntax analysis, syntax-directed translation, run-time system
management, code generation, code optimization, compiler-building tools. Three lecture hours a week for one semester. Prerequisite: Computer Science 429 or 429H with a grade of at least C-.

C S 376. Computer Vision.
Explores computer vision, a discipline that develops methods that enable machines to interpret or analyze images and videos. Includes the study of image formation, feature detection, segmentation, multiple-view geometry, recognition and learning, and motion and tracking. Three lecture hours a week for one semester. Computer Science 376 and 378 (Topic: Computer Vision) may not both be counted. Prerequisite: The following coursework with a grade of at least C-: Computer Science 429 or 429H; Mathematics 340L, 341, or Statistics and Data Sciences 329C; and Mathematics 362K or Statistics and Data Sciences 321.

Models of parallel computation, fundamental concepts for representation of parallel computation structures, study of representative parallel programming systems, and programming of parallel algorithms and computations. Three lecture hours a week for one semester. Prerequisite: Computer Science 439 or 439H with a grade of at least C-.

C S 377P. Programming for Performance.
Investigation on the performance-critical features of modern computer architectures and how applications can take advantage of them to obtain high performance. Three lecture hours a week for one semester. Computer Science 377P and 378 (Topic: Programming for Performance) may not both be counted. Prerequisite: Computer Science 429 or 429H with a grade of at least C-.

C S 178, 378. Undergraduate Topics in Computer Science.
One or three lecture hours a week for one semester. Only one of the following may be counted unless the topics vary: Computer Science 178, 378, 178H, 378H. May be repeated for credit when the topics vary. Prerequisite: Upper-division standing; additional prerequisites vary with the topic.

Topic 1: Quantum Computing II. Introduction to quantum algorithms and programming. Computer Science 378 (Topic: Quantum Computing-FRI) and 378 (Topic 1) may not both be counted.

C S 178H, 378H. Undergraduate Topics in Computer Science: Honors.
For each semester hour of credit earned, one lecture hour a week for one semester. Only one of the following may be counted unless the topics vary: Computer Science 178, 378, 178H, 378H. May be repeated for credit when the topics vary. Prerequisite: Computer Science 429 (or 310) or 429H (or 310H) with a grade of at least C-.

Directed reading, research, and/or projects in areas of computer science, under supervision of a faculty member, leading to an honors thesis. The thesis must be approved by a committee of three readers. The equivalent of three lecture hours a week for one semester, by arrangement with a faculty member. Prerequisite: The following coursework with a grade of at least C- in each: Computer Science 311, or 311H; Computer Science 314, or 314H; Computer Science 429, or 429H; Mathematics 408C, 409K, or 409N; nine additional semester hours of upper-division coursework in computer science; and consent of the student’s research supervisor and the departmental honors adviser.

Graduate Courses
C S 380C. Compilers.
Basics of static analysis and transformation techniques; exploration in depth of one aspect of compilation and optimization. Three lecture hours a week for one semester. Computer Science 380C and 395T (Topic: Compilers) may not both be counted. Prerequisite: Graduate standing; Computer Science 375 are recommended.

C S 380D. Distributed Computing I.
Models of distributed systems; language issues, proving properties of distributed systems; time, clocks, partial ordering of events; deadlock and termination detection; diffusing computations; computing in hostile environments; distributed resource management. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

Seminar about how operating systems work. Readings and discussion about classic and recent research papers. Intensive programming assignments in the construction of a prototype operating system. Three lecture hours a week for one semester. Computer Science 380J and 395T (Topic: Operating Systems Implementation) may not both be counted. Prerequisite: Graduate standing; and an undergraduate course in operating systems, networking, or distributed systems, or consent of instructor.

C S 380L. Advanced Operating Systems.
Study of the formal structure, design principles, organization, implementation, and performance analysis of multiprogramming and/or multiprocessor computer systems. Three lecture hours a week for one semester. Prerequisite: Graduate standing, and consent of instructor.

C S 380N. Systems Modeling.
Theory and applications of Markovian models: birth-death models, queueing models, and networks of queues. Numerical methods: computational algorithms, approximation techniques, discrete-event simulation. Performance of scheduling disciplines: priority, time-sharing, multiple access. Three lecture hours a week for one semester. Prerequisite: Graduate standing and an undergraduate course in probability theory.

C S 380P. Parallel Systems.
Explores parallel systems, from languages to hardware, from large-scale parallel computers to multicore chips, and from traditional parallel scientific computing to modern uses of parallelism. Includes discussion of and research methods in graphics, languages, compilers, architecture, and scientific computing. Three lecture hours a week for one semester. Computer Science 380P and 395T (Topic: Parallel Systems) may not both be counted. Prerequisite: Graduate standing.

C S 380S. Theory and Practice of Secure Systems.
Survey of modern security, designed to introduce the basic techniques used in the design and analysis of secure systems. Three lecture hours a week for one semester. Prerequisite: Graduate standing and prior undergraduate coursework in computer architecture and operating systems.

C S 381K. Artificial Intelligence.
Use of computers in problem solving, game playing, theorem proving, natural language understanding, and related tasks; methods of search, knowledge representation, learning, and other topics. Three lecture hours a week for one semester. Prerequisite: Graduate standing, and Computer Science 351 or consent of instructor.
C S 381V. Visual Recognition.
Subjects include fundamental representations, learning approaches, matching-based algorithms, human activity models for video, and large-scale recognition. Three lecture hours a week for one semester. Computer Science 381V and 395T (Topic: Visual Recognition) may not both be counted. Prerequisite: Graduate standing; a background in basic computer vision and machine learning is recommended.

C S 382M. Advanced Computer Architecture.
Algorithms and their realizations, special techniques for coding, addressing, and control; integration of computer units; relations between programming and design considerations. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

Same as Computational Science, Engineering, and Mathematics 383C, Mathematics 383E, and Statistics and Data Sciences 393C. Survey of numerical methods in linear algebra: floating-point computation, solution of linear equations, least squares problems, algebraic eigenvalue problems. Three lecture hours a week for one semester. Only one of the following may be counted: Computational Science, Engineering, and Mathematics 383C, Computer Science 383C, Mathematics 383E, Statistics and Data Sciences 393C. Prerequisite: Graduate standing; Computer Science 367 or Mathematics 368K; and Mathematics 340L, 341, or consent of instructor.

Same as Computational Science, Engineering, and Mathematics 383D, Mathematics 383F, and Statistics and Data Sciences 393D. Survey of numerical methods for interpolation, functional approximation, integration, and solution of differential equations. Three lecture hours a week for one semester. Only one of the following may be counted: Computational Science, Engineering, and Mathematics 383D, Computer Science 383D, Mathematics 383F, Statistics and Data Sciences 393D. Prerequisite: Graduate standing; Computational Science, Engineering, and Mathematics 383C, Computer Science 383C, Mathematics 383E, or Statistics and Data Sciences 393C; and Mathematics 427K and 365C, or consent of instructor.

Same as Computational Science, Engineering, and Mathematics 382G. Advanced material in computer graphics, including in-depth treatments of techniques for realistic image synthesis, advanced geometric modeling methods, animation and dynamic simulation, scientific visualization, and high-performance graphics architectures. Three lecture hours a week for one semester. Computational Science, Engineering, and Mathematics 382G and Computer Science 384G may not both be counted. Prerequisite: Graduate standing; and Computer Science 354 or another introductory course in computer graphics, or equivalent background and consent of instructor.

C S 384M. Multimedia Systems.
Theoretical and practical issues in advanced systems, including multimedia systems, digital audio and video compression techniques, operating system and network support for digital audio and video, and multi-media conferencing systems. Three lecture hours a week for one semester. Prerequisite: Graduate standing; and either Computer Science 356 or 3800 and 380L.

Explore the key concepts and algorithms for simulating physical systems; starting from the ground up with particle systems and mass-spring networks, rigid and elastic bodies, collisions, cloth, and fluids. Three lecture hours a week for one semester. Computer Science 384P and 395T (Topic: Physical Simulation) may not both be counted. Prerequisite: Graduate standing; and an introductory course in computer graphics, or equivalent background and consent of instructor.

C S 384R. Geometric Modeling and Visualization.
Computational image processing, computational geometry and geometric modeling algorithms with an emphasis on spatial realism, and the programmatic use of physiological simulation and visualization to quantitatively depict how things work at the molecular, cellular, tissue, organ, and system levels. Three lecture hours a week for one semester. Computer Science 384R and 395T (Topic: Graphics, Modeling, and Visualization) may not both be counted; Computer Science 384R and 395T (Topic: Multiscale Bio-Modeling and Visualization) may not both be counted; Computer Science 384R and 395T (Topic: Physically Based Geometric Modeling) may not both be counted. Prerequisite: Graduate standing, and Computer Science 354 or consent of instructor.

C S 384V. Introduction to VLSI Design.
Basic techniques required to design custom negative metal oxide semiconductor digital integrated circuits. Three lecture hours a week for one semester. Prerequisite: Graduate standing, and consent of instructor.

C S 386C. Dependable Computing Systems.
System models from synchronous to asynchronous, with emphasis on in-between models such as the timed asynchronous model. Control structures such as timed state-transition systems, and constraints in temporal and real-time logics. Analysis techniques such as model checking of timed systems, and extended Presburger arithmetic. Basic building blocks such as clock synchronization, synchronous atomic broadcast, time-bounded membership protocols, real-time scheduling theory, and state recovery methods. Practical implementation issues such as special operating system data structures and algorithms, open system design, and security concerns. Three lecture hours a week for one semester. Computer Science 386C and 395T (Topic: Dependable Computing Systems) may not both be counted. Prerequisite: Graduate standing, and an undergraduate course in operating systems or consent of instructor.

C S 386D. Database Systems.
Introduction to the principles of database systems, including fundamental ideas and algorithms used in the construction of centralized database management systems, distributed database management systems, and database machines and their roles in Internet infrastructure. Topics include data storage and indexing algorithms, query processing and optimization, concurrency control, recovery, XML and object-oriented databases, database evaluation and tuning, and recent directions in database research. Three lecture hours a week for one semester. Prerequisite: Graduate standing and Computer Science 347 and 375.

The analysis of numerical methods for solving ordinary and partial differential equations. Three lecture hours a week for one semester. Prerequisite: Graduate standing; and Computer Science 383D, Mathematics 368K, 383F, or consent of instructor.

C S 386L. Programming Languages.
Topics include formal syntax representations, program correctness, typing, and data abstraction. Features and problems in languages that allow parallelism. Exploration of different programming styles, such as imperative, functional, logic, data flow, and object-oriented programming. Three lecture hours a week for one semester. Prerequisite: Graduate standing, and Computer Science 345 or consent of instructor.
C S 386M. Communication Networks.
Switching techniques, network and protocol architectures, communication protocols, resource allocation problems, internetworking, design and analysis methods. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

C S 386P. Android Programming.
Study Android APIs and learn to build significant Android applications. Explore general principles of software engineering and mobile app development. Three lecture hours a week for one semester. Computer Science 386P and 395T (Topic: Android Programming) may not both be counted. Prerequisite: Graduate standing and knowledge of programming, object-oriented terminology, and Java.

Techniques and research in Internet and network security. Three lecture hours a week for one semester. Computer Science 386S and 395T (Topic: Secure Network Protocols) may not both be counted. Prerequisite: Graduate standing.

C S 386W. Wireless Networking.
Fundamental concepts and principles of wireless network technologies and protocol design, ranging from physical layer to application layer, and in-depth studies of current wireless research. Three lecture hours a week for one semester. Computer Science 386W and 395T (Topic: Wireless Networking) may not both be counted. Prerequisite: Graduate standing.

C S 388. Natural Language Processing.
Computational methods for syntactic and semantic analysis of structures representing meanings of natural language; study of current natural language processing systems; methods for computing outlines and discourse structures of descriptive text. Three lecture hours a week for one semester. Artificial Intelligence 388 and Computer Science 388 may not both be counted. Prerequisite: Graduate standing, and a course in artificial intelligence or consent of instructor.

C S 388C. Combinatorics and Graph Theory.
Counting, matching theory, extremal set theory, Ramsey theory, probabilistic method, linear algebra method, coding theory. Applications to computer science, including randomized algorithms. Three lecture hours a week for one semester. Prerequisite: Graduate standing, and consent of instructor. An understanding of elementary proof and counting techniques is assumed.

C S 388D. Data-Driven Algorithm Design.
Analyze recent developments on the role of machine learning in designing algorithms from the dual viewpoints of tailoring algorithm design to exploit the availability of data as well as tailoring learning to optimize for algorithm performance. Three hours a week for one semester Computer Science 388D and 395T (Topic: Data-Driven Algorithm Design) may not both be counted. Prerequisite: Graduate standing and knowledge of undergraduate algorithms and complexity, and at least one graduate course in theoretical computer science. Prior knowledge in randomized algorithms and machine learning.

C S 388E. Approximation Algorithms and Complexity.
Explore approximation algorithms for NP-hard problems, online algorithms, approximation in P and other subjects related to approximation algorithms and their limitations. Examine combinatorial algorithms, as well as algorithms based on linear programming and semidefinite programming. Identify the Probabilistically Checkable Proofs (PCP) Theorem, discuss its applications, and prove a weak version of it. Three lecture hours a week for one semester. Computer Science 388E and 395T (Topic: Approximation Algorithms/Complexity) may not both be counted. Prerequisite: Graduate standing and knowledge of undergraduate-level algorithms and complexity.

C S 388F. Automata and Formal Languages.
Covers the most important models of communication complexity and their applications, including recent research results and various open problems. Three lecture hours a week for one semester. Computer Science 388M and 395T (Topic: Communication Complexity) may not both be counted. Prerequisite: Graduate standing.

Explore advanced subjects in algorithm design and analysis including algorithmic paradigms, data structures, maximum flow, randomized algorithms, NP-completeness, and approximation algorithms. Three lecture hours a week for one semester. Data Science 388G and Computer Science 388G may not both be counted. Prerequisite: Graduate standing and knowledge of algorithmic paradigms and discrete mathematics.

C S 388J. Optimization.
Explore the background on convex sets and functions, linear programming, convex programming, and iterative first-order and second-order methods. Three lecture hours a week for one semester. Computer Science 388J and 395T (Topic: Optimization) may not both be counted. Prerequisite: Graduate standing.

C S 388K. Online Learning and Optimization.
Explore algorithms for convex optimization and algorithms for online learning. Focus on algorithms for large scale convex optimization. Discuss problems in machine learning. Apply these ideas to online learning. Three lecture hours a week for one semester. Computer Science 388K and 395T (Topic: Online Lng/Optimization) may not both be counted Prerequisite: Graduate standing.

C S 388L. Introduction to Mathematical Logic.
Introduction to some of the principal topics of mathematical logic: propositional and predicate calculus; Goedel's completeness theorem; first-order theories; formalizing mathematical reasoning; first-order arithmetic; recursive functions; Goedel's incompleteness theorems; axiomatic set theory. Three lecture hours a week for one semester. Prerequisite: Graduate standing and experience in abstract mathematical thinking.

C S 388M. Communication Complexity.
Theory of parallel computation: Parallel algorithm design and analysis on shared memory machines; parallel complexity; other models of parallel computation; lower bounds. Three lecture hours a week for one semester. Prerequisite: Graduate standing; and Computer Science 388G, or consent of instructor.
C S 388R. Randomized Algorithms.
The design and analysis of efficient randomized algorithms. Three lecture hours a week for one semester. Computer Science 388R and 395T (Topic: Randomized Algorithms) may not both be counted. Prerequisite: Graduate standing.

C S 388S. Formal Semantics and Verification.
Sequential execution: partial and total correctness; deductive, operational, and denotational semantics; formal derivation of programs; parallel execution: partial correctness, deadlock, and starvation; methodology, parallel versus distributed execution. Three lecture hours a week for one semester. Prerequisite: Graduate standing and consent of instructor.

C S 388T. Theory of Computation.
Examine polynomial hierarchy, circuit lower bounds, randomized computation, approximability, communication complexity, pseudorandom generators, and probabilistically checkable proofs. Three lecture hours a week for one semester. Prerequisite: Graduate standing, and a course in computational complexity or theory of computation, or equivalent background and consent of instructor.

Introduction to three key foundational problems in AI: planning, search, and reasoning under uncertainty. Investigate how to define planning domains, including representations for world states and actions, covering both symbolic and path planning. Study algorithms to efficiently find valid plans with or without optimality, and partially ordered, or fully specified solutions. Three hours a week for one semester. Only one of the following may be counted: Artificial Intelligence 388U, Computer Science 388U, 395T (Topic: Planning Search and Reasoning). Prerequisite: Graduate standing; and knowledge of undergraduate data structures, algorithms, and complexity; and prior knowledge in probability theory or statistics.

C S 389L. Automated Logical Reasoning.
Subjects include automated reasoning techniques for propositional logic, first-order logic, linear arithmetic over reals and integers, theory of uninterpreted functions, and combinations of these theories. Examines automated logical reasoning both from a theoretical and practical perspective, giving a hands-on experience building useful tools, such as SAT and SMT solvers. Three lecture hours a week for one semester. Only one of the following may be counted: Computer Science 389L, 395T (Topic: Automated Logical Reasoning), Artificial Intelligence 389L. Prerequisite: Graduate standing.

C S 389M. Principles of Object-Oriented Software Technology.
Fundamental principles of object-oriented software engineering, including design and implementation of object-oriented analysis methods, software architectures, translators of high-level programming language representations, translations to multiple software architectures. Three lecture hours a week for one semester. Prerequisite: Graduate standing, Computer Science 371S or the equivalent, and consent of instructor.

C S 389R. Recursion and Induction I.
The development of a formal theory for reasoning about computer programs, with emphasis on recursively defined functions in the LISP style and proof by mathematical induction. Heavy emphasis on student discovery and presentation of proofs. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

C S 390D. Distributed Computing II.
Synchronous and asynchronous algorithms, with particular emphasis on notations for expressing the algorithms and logics for reasoning about them. Algorithms from a variety of application areas and for a variety of architectures. Three lecture hours a week for one semester. Prerequisite: Graduate standing and Computer Science 380D.

C S 390S. Sublinear Algorithms.
Study algorithms that can process very large data sets, with a focus on streaming algorithms, compressed sensing, and property testing. Three lecture hours a week for one semester. Computer Science 390S and 395T (Topic: Sublinear Algorithms) may not both be counted. Prerequisite: Graduate standing and knowledge of algorithms, probability, and linear algebra.

C S 391D. Data Mining: A Mathematical Perspective.
Mathematical and statistical aspects of data mining. Topics include supervised learning (regression, classification, support vector machines) and unsupervised learning (clustering, principal components analysis, dimensionality reduction). Uses technical tools that draw from linear algebra, multivariate statistics, and optimization. Three lecture hours a week for one semester. Computer Science 391D and 395T (Topic: Data Mining: A Statistical Learning Perspective) may not both be counted. Prerequisite: Graduate standing, and Mathematics 341 or the equivalent.

C S 391K. Artificial Intelligence II.
Advanced course in artificial intelligence. Topics include planning, probabilistic reasoning, truth maintenance, abduction, model-based diagnosis, and speech recognition. Three lecture hours a week for one semester. Prerequisite: Graduate standing, and Computer Science 381K or equivalent knowledge of artificial intelligence and LISP.

C S 391L. Machine Learning.
Computing systems that automatically improve their performance with experience, including various approaches to inductive classification such as version space, decision tree, rule-based, neural network, Bayesian, and instance-based methods; as well as computational learning theory, explanation-based learning, and knowledge refinement. Three lecture hours a week for one semester. Only one of the following may be counted: Artificial Intelligence 391L, Computer Science 391L, Data Science 391L. Prerequisite: Graduate standing, and Computer Science 381K or equivalent knowledge of artificial intelligence and LISP.

C S 391R. Robot Learning.
Survey a wide range of modern techniques in robotics that learn from data, largely focusing on robot perception and decision making. Explore 3D vision, representation learning, active perception, reinforcement learning, imitation learning, and applications in robot manipulation. Three lecture hours a week for one semester. Computer Science 391R and 395T (Topic: Robot Learning) may not both be counted. Prerequisite: Graduate standing, and experience in machine learning and computer vision.

C S 392C. Methods and Techniques for Parallel Programming.
Models of parallel fundamental concepts for representation of parallel computation structures, study of representative parallel programming languages, formulation of languages and translation methods, translation of parallel programs to multiple targets, laboratory exercises in parallel programming. Three lecture hours a week for one semester. Prerequisite: Graduate standing and consent of instructor.

C S 392F. Automated Software Design.
Model-driven engineering; UML metamodels and constraints, model transformations, software product lines, feature models, feature modularity, feature algebras, feature interactions, multi-dimensional
separation of concerns, design-by-transformation, parallel software architectures, correct-by-construction, architecture refinement, optimization, and extension, program refactoring, design patterns, refactoring scripts, category theory, functors, commuting diagrams. Three lecture hours a week for one semester. Computer Science 392F and 395T (Topic: Feature-Oriented Programming) may not both be counted. Prerequisite: Graduate standing, and a basic knowledge of Java, compilers and grammars, and object-oriented design methods.

C S 393C. Agent-Based Electronic Commerce.
Focuses on the intersection of computer science (including multiagent systems and machine learning), economics, and game theory. Explores economic mechanisms of exchange suitable for use by automated intelligent agents, including auctions and auction theory, game theory and mechanism design, and autonomous bidding agents. Students demonstrate programming proficiency in a trading agent competition. Three lecture hours a week for one semester. Computer Science 393C and 395T (Topic: Agent-Based Electronic Commerce) may not both be counted. Prerequisite: Graduate standing.

C S 393D. Topics in Numerical Analysis.
Recent topics have included numerical methods in ordinary differential equations, numerical methods in partial differential equations, computational problems in linear algebra, numerical solution of systems of equations, numerical methods in functional approximation, numerical integration. Three lecture hours a week for one semester. Computational Science, Engineering and Mathematics 393N and Mathematics 393N may not both be counted. Prerequisite: Graduate standing and consent of instructor.

Same as Mathematics 393N. The numerical solution of large systems of linear algebraic equations arising in the solution of elliptic partial differential equations by discretization methods. Three lecture hours a week for one semester. Computational Science, Engineering and Mathematics 393N and Mathematics 393N may not both be counted. Prerequisite: Graduate standing and consent of instructor.

C S 393P. Program Synthesis.
Study the methods for automatically discovering programs that implement given high-level specifications, which can take many forms, including formal constraints, input-output examples, demonstrations, and natural language. Examine contemporary algorithms for program synthesis to bring together symbolic techniques for pruning and search, numerical techniques for finding optimal parameters, and statistical techniques for interpreting ambiguous specifications and learning to search. Three lecture hours a week for one semester. Computer Science 393P and 395T (Topic: Program Synthesis) may not both be counted. Prerequisite: Graduate standing, and undergrad-level expertise in algorithms and discrete mathematics and the ability to program.

C S 393R. Autonomous Robots.
Explore an advanced overview of autonomous mobile robotics, including control, perception, and planning. Examine algorithms and data structures related to these, cover widely adopted and state of the art techniques. Implement and extend such algorithms on real robots. Three lecture hours a week for one semester. Computer Science 393R and 395T (Topic: Autonomous Robots) may not both be counted. Prerequisite: Graduate standing.

C S 394C. Algorithms for Computational Biology.
Algorithm design in computational molecular biology, with a focus on multiple sequence alignment and phylogeny (evolutionary history) reconstruction. Topics include the design and analysis of algorithms under probabilistic models of evolution, heuristics, and exact solutions for NP-hard optimization problems. Three lecture hours a week for one semester. Computer Science 394C and 395T (Topic: Algorithms for Computational Biology) may not both be counted. Prerequisite: Graduate standing.

C S 394D. Deep Learning.
Explore the basic building blocks and intuitions behind designing, training, tuning, and monitoring of deep networks. Examine both the theory of deep learning, as well as hands-on implementation sessions in pytorch. Explore a series of application areas of deep networks in: computer vision, sequence modeling in natural language processing, deep reinforcement learning, generative modeling, and adversarial learning. Three lecture hours a week for one semester. Only one of the following may be counted: Artificial Intelligence 394D, Computer Science 394D, Data Science 394D, 395T (Topic: Deep Learning). Prerequisite: Graduate standing, and experience in artificial intelligence and machine learning.

C S 394F. Knowledge Representation and Reasoning.
Surveys the research and practice of building knowledge systems, including knowledge representation, automated reasoning, knowledge acquisition, and explanation generation. Three lecture hours a week for one semester. Prerequisite: Graduate standing; and Computer Science 381K or the equivalent or consent of instructor.

C S 394N. Neural Networks.
Same as Neuroscience 394N. Biological information processing; architectures and algorithms for supervised learning, self-organization, reinforcement learning, and neuro-evolution; theoretical analysis; hardware implementations and simulators; applications in engineering, artificial intelligence, and cognitive science. Three lecture hours a week for one semester. Only one of the following may be counted: Computer Science 394N, Neuroscience 394N, 394P (Topic: Neural Networks). Prerequisite: Graduate standing.

C S 394P. Automatic Programming.
Automatic generation of computer programs from high-level specifications. Program analysis, optimization, and transformation; partial evaluation; object-oriented programming; transformation of formal specifications; specialization of generic procedures; views. Three lecture hours a week for one semester. Prerequisite: Graduate standing. Computer Science 375 and 381K are recommended.

Introduces the theory and practice of modern reinforcement learning, with emphasis on temporal difference learning algorithms. Three lecture hours a week for one semester. Artificial Intelligence 394R and Computer Science 394R may not both be counted. Prerequisite: Graduate standing.

For each semester hour of credit earned, one lecture hour a week for one semester. Offered on the credit/no credit basis only. May be repeated for credit when the topics vary. Offered on the credit/no credit basis only. Prerequisite: Graduate standing and consent of instructor.

For each semester hour of credit earned, one lecture hour a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of instructor.

C S 195T, 395T. Topics in Computer Science.
From eight to fifteen topics are offered each semester. One or three lecture hours a week for one semester. May be repeated for credit when
the topics vary. Prerequisite: Graduate standing; additional prerequisites vary with the topic.

**Topic 1: Parallel Computations.**
**Topic 9: Introduction to Ethical AI and Robotics.** Introduction to ethical issues and challenges that could and do arise when creating AI-based systems. Explore case studies anchored by readings illustrating the current and future possible uses of robots as well as the broad themes of ethical and responsible AI. Address how things have gone wrong in the past and open debates regarding how best to design, deploy, and regulate AI systems. Additional prerequisite: Graduate standing or consent of instructor.

**C S 396. Research Practice and Experience.**
Open only to those in their first two years as graduate students in computer science. Designed to provide an early research experience for new doctoral students in computer science. Students conduct an independent research project and present the results. Individual instruction. May not be counted toward a master's degree in computer science. Offered on the credit/no credit basis only. Prerequisite: Graduate standing.

**C S 396M. Advanced Networking Protocols.**
Topics include routing, multiple access, internetworking, security, performance models, and verification methods. Three lecture hours a week for one semester. Prerequisite: Graduate standing or consent of instructor.

**C S 698. Thesis.**
The equivalent of three lecture hours a week for two semesters. Offered on the credit/no credit basis only. Prerequisite: For 698A, graduate standing in computer science and consent of the graduate adviser; for 698B, Computer Science 698A.

**C S 398T. Supervised Teaching in Computer Science.**
Supervised teaching experience, and seminar focused on curriculum construction and teaching methods. Three lecture hours a week for one semester. Offered on the credit/no credit basis only. Prerequisite: Graduate standing and appointment as a teaching assistant.

**C S 399W, 699W, 999W. Dissertation.**
May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Admission to candidacy for the doctoral degree.

**Professional Courses**

**CDI - Critical Disability Studies**

**Critical Disability Studies: CDI**

**Lower-Division Courses**

**Upper-Division Courses**

**C D I 355. Topics in Critical Disability Studies.**
Three lecture hours a week for one semester. May be repeated for credit when the topics vary.

**Topic 1: Social Construction of Disability.** Focus on the social and cultural context of disability, with an emphasis on how disability is defined and understood at the micro and macro levels. Examine the longstanding social oppression of the disability community, as well as ways to initiate social change. Social Work 360K (Topic 19) and Critical Disability Studies 355 (Topic 1) may not both be counted.

**Topic 2: Making Systems Work for People with Disabilities.** Explore an overview of disability policy. Examine the history of the disability rights movement, relevant federal and state legislation, legal and ethical issues, services and supports through federal and state programs, the political economy of disability, and disability culture, advocacy, and leadership issues. Social Work 360K (Topic 24) and Critical Disability Studies 355 (Topic 2) may not both be counted.

**Topic 3: Aging and Disability.** Introduction to individuals who are either chronologically older or who may be experiencing functional changes typical of older persons. Identify strategies for support for families, friends, service providers, organizations, and members of the community to improve the lives of older persons. Social Work 360K (Topic 20) and Critical Disability Studies 355 (Topic 3) may not both be counted.

**Topic 4: Family Support, Self-Determination, and Disability.** Examine strategies for working with and supporting families who have a member with a disability. Explore the use of these strategies by teachers, professionals in the disability field, self-advocates, and families. Social Work 360K (Topic 27) and Critical Disability Studies 355 (Topic 4) may not both be counted.

**Topic 5: Developmental Disabilities and Self Advocacy.** Explore lifespan issues for individuals with developmental disabilities. Examine the impact of social and cultural values, including attitudes toward children and adults with developmental disabilities, institutionalization, service options, sexuality, forced sterilization, self-advocacy movements, and aging. Social Work 360K (Topic 28) and Critical Disability Studies 355 (Topic 5) may not both be counted.

**Topic 6: Women and Disability.** Examine the meaning and experience of being female and disabled. Explore the intersection of sex-roles stereotypes, disability stereotypes, and cultural stereotypes. Social Work 360K (Topic 25) and Critical Disability Studies 355 (Topic 6) may not both be counted.

**Topic 7: Sexuality and Disability.** Discuss the intersection of sexuality and disability and the complex historical influences that impact discussions of sexuality in relationship to disability. Explore the social justice issues surrounding disability and sexuality using the perspective of social work values and ethics to guide learning. Examine the concepts of diversity and inclusion in relation to disability and sexuality. Social Work 360K (Topic: Sexuality and Disability) and Critical Disability Studies 355 (Topic 7) may not both be counted.

**Topic 8: Leadership Training: Autism.** Explore interdisciplinary leadership training on Autism Spectrum Disorders (ASD) and other related disabilities in social work and other health professions. Advance knowledge and skills in improving health care delivery for all children with developmental disabilities. Examine the importance of understanding the integration of services, developing community partnerships, and promoting innovative practices to enhance cultural competency, family-centered care, and interdisciplinary partnerships.

**Graduate Courses**

**Professional Courses**

**CGS - Cognitive Science**

**Cognitive Science: CGS**

**Lower-Division Courses**

**Upper-Division Courses**

**C G S 360. Cognitive Science: The Study of Mind.**
An introduction to the study of mind known as cognitive science, focusing on key areas such as vision and language, cognition and problem solving, artificial intelligence. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Upper-division standing.

**Topic 1: Introduction to Cognitive Science.** Same as Linguistics 373P and Philosophy 365 (Topic 2). Three lecture hours a week for one semester. Only one of the following may be counted: Cognitive

CGS 365. Bias.
Same as Human Dimensions of Organizations 365 and Linguistics 365. An interdisciplinary introduction to bias from the perspectives of psychology, political science, business, philosophy, and linguistics. Three lecture hours a week for one semester. Only one of the following may be counted: Cognitive Science 365, 360 (Topic: Bias), Linguistics 365, 350 (Topic: Bias), Human Dimensions of Organizations 330 (Topic: Bias), 365. Prerequisite: Upper-division standing.

Graduate Courses
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of instructor.

Professional Courses
CH - Chemistry
Chemistry: CH

Lower-Division Courses
CH 301 (TCCN: CHEM 1309, CHEM 1311). Principles of Chemistry I.
Three lecture hours a week for one semester; some sections may also require one enrichment/discussion hour a week. Only one of the following may be counted: Chemistry 301, 301C, 301H, 301N, 304K. Prerequisite: An appropriate score on the Department of Chemistry placement examination.

CH 301C, 401C. Foundations of Chemistry I.
An introduction to chemistry for chemistry majors. Includes gases, atomic theory, bonding, and thermodynamics. For 301C, three lecture hours a week for one semester; for 401C three lecture and three laboratory hours a week for one semester. Only one of the following may be counted: Chemistry 301, 301C, 301H, 301N, 304K.

CH 301N. Chemistry in Our World I.
Designed for non-science and Textiles and Apparel majors. Examine the nature of matter, energy, chemical reactions, and chemical thermodynamics. Discuss how these fundamentals of chemistry relate to real-world applications. Not intended as preparation for Chemistry 301. Three lecture hours a week for one semester. Only one of the following may be counted: Chemistry 301, 301C, 301H, 301N, 304K.

CH 302 (TCCN: CHEM 1312). Principles of Chemistry II.
Development and application of concepts, theories, and laws underlying chemistry. Three lecture hours a week for one semester. Some sections also require one enrichment/discussion hour per week. Only one of the following may be counted: Chemistry 302, 302C, 302H, 302N, 305. Prerequisite: Chemistry 301 or 301H with a grade of at least C-.

CH 302C, 402C. Foundations of Chemistry II.
An introduction to chemistry for chemistry majors. Includes equilibria, kinetics, nuclear chemistry, inorganic chemistry, and electrochemistry. For 301C, three lecture hours a week for one semester; for 401C three lecture hours and three laboratory hours a week for one semester. Only one of the following may be counted: Chemistry 302, 302C, 302H, 302N, 305. Prerequisite: Chemistry 301C with a grade of C- or higher.

CH 302N. Chemistry in Our World II.
Designed for non-science and Textiles and Apparel majors. Survey organic chemistry including the nature of chemical bonding, molecular structure, nomenclature, and reaction types. Examine polymers and nutrition. Discuss how these fundamentals of chemistry relate to real-world applications. Three lecture hours a week for one semester. Only one of the following may be counted: Chemistry 302, 302C, 302H, 302N, or 305.

CH 303. Mathematical Introduction to Theories of Matter.
Introduction to the quantum theoretic description of atoms, molecules, solids, nuclei, elementary particles, and cosmology. Matrix mechanics and group theory. Three lecture hours a week for one semester.
Chemistry 303 may be used instead of either Chemistry 302 or Chemistry 301 and 302 in fulfilling the prerequisites of other chemistry courses, except by students seeking the Bachelor of Science in Chemistry degree.
Chemistry 303 may be counted in addition to Chemistry 301 and 302. Not recommended by the Health Professions Office for Medical College Admission Test preparation.

CH 204. Introduction to Chemical Practice.
Introduction to the techniques of modern experimental chemistry. Designed to provide basic laboratory and analytical skills. May include organic, analytical, and physical chemistry, as well as materials science. Four laboratory hours and one hour of discussion a week for one semester. Some sections may also require one hour of computer laboratory a week. Only one of the following may be counted: Chemistry 204, 317, or 104M and 104N. Prerequisite: Credit with a grade of at least C- or registration for Chemistry 302 or 302C.

CH 104M (TCCN: CHEM 1109, CHEM 1111). Introduction to Chemical Practice I.
Introduction to the techniques of modern experimental chemistry. Designed to provide basic laboratory and analytical skills. May include organic, analytical, and physical chemistry, as well as materials science. One lecture hour and three laboratory hours a week for one semester. Only one of the following may be counted: Chemistry 204, 317, or 104M and 104N. Prerequisite: Credit with a grade of at least C- or registration for Chemistry 301, 301C, or 301H.

CH 104N (TCCN: CHEM 1112). Introduction to Chemical Practice II.
Introduction to the techniques of modern experimental chemistry. Designed to provide basic laboratory and analytical skills. May include organic, analytical, and physical chemistry, as well as materials science. One lecture hour and three laboratory hours a week for one semester. Only one of the following may be counted: Chemistry 204, 317, or 104M and 104N. Prerequisite: Credit with a grade of at least C- or registration for Chemistry 302, 302C, or 302H; and credit with a grade of at least C- in the following coursework: Chemistry 104M, and Chemistry 301, 301C, or 301H.

CH 206K. Undergraduate Research.
Introduction to research practices; supervised individual undergraduate research in chemistry. Six to ten laboratory hours a week for one semester. May be repeated for credit, but no more than four semester hours may be counted toward a degree in chemistry. Hours beyond
four must be taken on the pass/fail basis. May be repeated for credit. 
Prerequisite: Consent of the undergraduate adviser in chemistry.

CH 107, 207. Conference Course.
Supervised study in chemistry. One discussion hour a week for one 
semester, with additional hours to be arranged. May not be counted 
toward a major or minor in chemistry. May be repeated for credit when 
the topics vary. Offered on the pass/fail basis only.

CH 207K. Introduction to Science Outreach in Elementary 
Schools.
Developing and presenting level-appropriate science laboratories to 
students in local elementary schools. A hands-on, discovery learning 
approach to science is emphasized. The equivalent of five lecture hours 
a week for one semester, with field hours to be arranged. May be counted 
as an elective only.

CH 207L. Peer Teaching.
Students act as peer teaching assistants in other University chemistry 
courses, mainly large general chemistry lecture sections. Two hours of 
lecture and training a week for one semester, and two to three hours a 
week leading student group discussions. May not be counted toward 
your degree in chemistry. Prerequisite: Chemistry 301 and consent of the 
coordinator of the Peer Teaching Assistant Program.

CH 108, 208, 308, 408. Topics in Chemistry.
For each semester hour of credit earned, one lecture hour a week for one 
semester; some topics may require additional discussion hours. May not 
be counted toward a major or minor in chemistry. May be repeated for 
credit when the topics vary. Offered on the pass/fail basis only.

CH 110K (TCCN: CHEM 2123). Organic Chemistry Laboratory.
Primarily for premedical, predental, life sciences, and pharmacy 
majors. One lecture hour and three laboratory hours a week for one 
semester. Prerequisite: Credit with a grade of at least C- in the following 
coursework: Chemistry 302, 302C, or 302H, 204, 317, or 104M and 104N; 
and credit or registration for one of the following: Chemistry 320M or 
328M.

CH 110L (TCCN: CHEM 2125). Organic Chemistry Laboratory.
Primarily for premedical, predental, life sciences, and pharmacy majors. 
One lecture hour and three laboratory hours a week for one semester. 
Prerequisite: Chemistry 110K.

CH 317. Descriptive Inorganic Chemistry.
Synthesis and properties of inorganic, bioinorganic, and organometallic 
compounds. One lecture hour and six laboratory hours a week for one 
semester. Only one of the following may be counted: Chemistry 204, 
317, or 104M and 104N. Prerequisite: Credit with a grade of at least C- 
for Chemistry 302, 302C, 402C, or 302H.

CH 119C. Professional Development for Chemists.
Restricted to chemistry majors. Explore professional development in 
chemistry, excellence in research, scientific communication, ethics, and 
career planning. One lecture hour a week for one semester. Offered on 
the pass/fail basis only.

This course is used to record credit the student earns while enrolled at 
another institution in a program administered by the University’s Study 
Abroad Office. Credit is recorded as assigned by the study abroad adviser 
in the Department of Chemistry. University credit is awarded for work 
in an exchange program; it may be counted as coursework taken in 
residence. Transfer credit is awarded for work in an affiliated studies 
program. May be repeated for credit when the topics vary.

Upper-Division Courses

CH 220C. Organic Chemistry Laboratory.
One lecture hour and five laboratory hours a week for one semester. 
Only one of the following may be counted: Chemistry 110L, 220C, 
128L. Prerequisite: Credit with a grade of at least C- or registration for 
Chemistry 320N, and the following coursework with a grade of at least C- 
in each: Chemistry 204, 317, or 104M and 104N; and 320M or 328M.

CH 320M. Organic Chemistry I.
Primarily for premedical, predental, life sciences, and pharmacy majors. 
Development of organic chemical structure, nomenclature, and reactivity. 
Three lecture hours a week for one semester. Only one of the following 
may be counted: Chemistry 320M, 328C, 328M. Prerequisite: Chemistry 
302, 302C, 402C, or 302H with a grade of at least C-.

CH 320N. Organic Chemistry II.
Primarily for premedical, predental, life sciences, and pharmacy majors. 
The development of organic chemical functional group reactivity, 
reaction mechanics, with analogous aqueous transformations in 
biochemical settings. Three lecture hours a week for one semester. 
Only one of the following may be counted: Chemistry 320N, 328N, 329C. 
Prerequisite: The following coursework with a grade of at least C-:
Chemistry 320M, or 328M.

CH 328C. Structure and Reactivity of Organic Molecules I.
Explore the development of organic chemical structure, nomenclature, 
and reactivity. Three lecture hours a week for one semester. Only 
one of the following may be counted: Chemistry 320M, 328C, 328M. 
Prerequisite: One of the following with a grade of at least C-:
Chemistry 302, 302C, 402C, or 302H.

CH 128K. Organic Chemistry Laboratory.
One lecture hour and three laboratory hours a week for one semester. 
May not be counted by students with credit for Chemistry 220C. 
Chemistry 110K and 128K may not both be counted. Prerequisite: 
Credit with a grade of at least C- or registration for Chemistry 328M or 
Chemistry 328C.

CH 128L. Organic Chemistry Laboratory.
One lecture hour and three laboratory hours a week for one semester. 
May not be counted by students with credit for Chemistry 210C or 
220C. Only one of the following may be counted: Chemistry 110L, 118L, 
128L. Prerequisite: Credit or registration for Chemistry 318N, or 328N, or 
Chemistry 329C, and the following coursework with a grade of at least C- 
in each: Chemistry 118K or 128K; and Chemistry 318M, 328M, or 328C.

CH 328M. Organic Chemistry I.
Primarily for chemistry and chemical engineering majors. The 
development of organic chemical structure, nomenclature, and reactivity. 
Three lecture hours a week for one semester. Only one of the following 
may be counted: Chemistry 320M, 328C, 328M. Prerequisite: Chemistry 
302, 302C, 402C, or 302H with a grade of at least C-.

CH 328N. Organic Chemistry II.
Primarily for chemistry and chemical engineering majors. The 
development of organic chemical reactivity, with an emphasis on 
synthesis and polymers. Three lecture hours a week for one semester. 
Only one of the following may be counted: Chemistry 320N, 328N, 329C. 
Prerequisite: The following coursework with a grade of at least C- in each:
Chemistry 328M and 128K.
**CH 329C. Structure and Reactivity of Organic Molecules II.**

Explore the development of organic chemical reactivity, with an emphasis on synthesis and polymers. Three lecture hours a week for one semester. Only one of the following may be counted: Chemistry 320N, 328N, 329C. Prerequisite: Chemistry 328C with a grade of at least C-.

**Topics in Chemistry.**

This course is used to record credit the student earns while enrolled at another institution in a program administered by the University’s Study Abroad Office. Credit is recorded as assigned by the study abroad adviser in the Department of Chemistry. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

**CH 329W. Cooperative Chemistry/Biochemistry.**

This course covers the work period of chemistry and biochemistry students in the Cooperative Education program, which provides supervised work experience by arrangement with the employer and the supervising instructor. Forty laboratory hours a week for one semester. The student must repeat the course each work period and must take it twice to receive credit toward the degree; at least one of these registrations must be during a long-segment semester. No more than three semester hours may be counted toward the major requirement; no more than six semester hours may be counted toward the degree. The student’s first registration must be on the pass/fail basis. Prerequisite: Application to become a member of the Cooperative Chemistry/Biochemistry Program, and consent of the Department of Chemistry and Biochemistry undergraduate adviser.

**CH 431. Inorganic Chemistry.**

Survey of the chemistry of the elements, incorporating both descriptive and theoretical aspects. Open-ended experiments designed to illustrate a variety of synthetic techniques. Three lecture hours and three laboratory hours a week for one semester. Prerequisite: The following coursework with a grade of at least C- in each: Chemistry 302, 302C, 402C or 302H; Chemistry 204, 317, or 104M and 104N; and Chemistry 320M, 328M or 328C.

**CH 341. Special Topics in Laboratory Chemistry.**

Examples of topics are physical measurements techniques; electronics for scientists; advanced synthetic chemistry (organic or inorganic); separation techniques. One lecture hour and six laboratory hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Eight semester hours of coursework in organic chemistry and consent of the undergraduate adviser.

**CH 644. Chemical Education: Secondary School.**

Issues and techniques in secondary school teaching of chemical sciences. Three lecture hours a week for two semesters. For students seeking the Bachelor of Science in Chemistry: Teaching Option degree. May not be counted toward any other degree in chemistry. Prerequisite: For 644A, eight semester hours of coursework in organic chemistry and credit or registration for Chemistry 144K; for 644B, Chemistry 644A, 144K, and credit or registration for Chemistry 144L.

**CH 144K. Chemical Education Laboratory I.**

Development of classroom demonstrations, laboratory experiments, and teaching aids for secondary school teaching of the chemical sciences. Two laboratory hours a week for one semester. For students seeking the Bachelor of Science in Chemistry: Teaching Option degree. May not be counted toward any other degree in chemistry. Prerequisite: Credit or registration for Chemistry 644A.

**CH 144L. Chemical Education Laboratory II.**

Development of classroom demonstrations, laboratory experiments, and teaching aids for secondary school teaching of the chemical sciences. Two laboratory hours a week for one semester. For students seeking the Bachelor of Science in Chemistry: Teaching Option degree. May not be counted toward any other degree in chemistry. Prerequisite: Credit or registration for Chemistry 644B.

**CH 352D. Chemical Data Analysis.**

An introduction to the analysis and interpretation of data gathered from chemical instrumentation. Three lecture hours a week for one semester. Prerequisite: Mathematics 408D or 408M. Credit with a grade of at least C- in Physics 316 and 116L, or Physics 303L and 103N.

**CH 353. Physical Chemistry I.**

For chemistry and chemical engineering majors. Equations of state, laws of thermodynamics, ideal and nonideal solutions, phase equilibria, thermodynamics of chemical reactions. Three lecture hours a week for one semester. Chemistry 353 and 353M may not both be counted. Prerequisite: Mathematics 408C and 408D, or two of the following: Mathematics 408K, 408L, 408M, 408N, 408S; Chemistry 302, 302C, 402C or 302H with a grade of at least C-; and Physics 316 and 116L, 303L and 103N or 105N, or 317L and 117N or 105N.

**CH 153K. Physical Chemistry Laboratory.**

Three laboratory hours a week for one semester. Prerequisite: Chemistry 353 or 353M with a grade of at least C-.

**CH 353M. Physical Chemistry I for Life Sciences.**

For biochemistry and biology majors. Thermochemistry and kinetics of reactions in cells, enzyme catalysis, electrical and transport properties of membranes. Three lecture hours a week for one semester. Chemistry 353 and 353M may not both be counted. Prerequisite: Chemistry 302, 302C, 402C or 302H with a grade of at least C-; credit with a grade of at least C- in one of the following: Mathematics 408C, 408K, 408N or 408R; Physics 316 and 116L, 303L and 103N or 105N, or 317L and 117N or 105N.

**CH 354. Quantum Chemistry and Spectroscopy.**

Fundamental principles of quantum mechanics, exactly soluble model problems, electronic structure of atoms and molecules, spectroscopy. Three lecture hours a week for one semester. Prerequisite: Chemistry 353 or 353M with a grade of at least C-.

**CH 354C. Statistical Mechanics.**

An introduction to statistical mechanics. Three lecture hours a week for one semester. Chemistry 354C and 354L may not both be counted. Prerequisite: Chemistry 354 with a grade of at least C-.

**CH 154K. Physical Chemistry Laboratory.**

Three laboratory hours a week for one semester. Prerequisite: Chemistry 153K, and 353 or 353M with a grade of at least C-; and credit or registration for Chemistry 354 or 354L.

**CH 354L. Physical Chemistry II.**

Molecular energy levels, statistical thermodynamics (macroscopic thermodynamic functions from molecular input), and physical and chemical kinetics, with emphasis on the molecular viewpoint. Three lecture hours a week for one semester. Chemistry 354C and 354L may not both be counted. Prerequisite: Chemistry 354 with a grade of at least C-. 

---

390 General Information 2023 - 2024 01/05/24
CH 354M. Introduction to Computational Methods in Chemistry.
Construction and implementation of numerical algorithms for solving differential equations which are common in chemistry. Subjects include chemical reaction rates, quantum mechanics, molecular dynamics, normal modes of vibration, and Monte Carlo methods. Three lecture hours a week for one semester. Only one of the following may be counted: Chemistry 354M, 368 (Topic: Applied Math and Computation in Chemistry), 368 (Topic: Computational Chemistry), 368 (Topic: Intro to Computational Methods in Chemistry). Prerequisite: The following coursework with a grade of at least C- in each: Chemistry 302, 302C, or 302H, and Chemistry 353 or 353M.

CH 354S. Elements of Spectroscopy.
Primarily for chemistry and biochemistry majors. Fundamentals of spectroscopy, with knowledge of elementary quantum mechanics. Separation of electronic, vibrational, rotational and spin quantum states; interaction of radiation and matter; theory and application of different types of spectroscopy including photoelectron, electronic absorption and emission, vibrational (infrared and Raman), rotational and magnetic resonance. Three lecture hours a week for one semester. Prerequisite: The following coursework with a grade of at least C- in each: Chemistry 302, 302C, 402C, or 302H; and Chemistry 204, 317, or 104M and 104N.

CH 455. Fundamentals of Analytical Chemistry.
For biochemistry, engineering, and clinical laboratory science majors. Chemical and instrumental methods in analytical chemistry. Three lecture hours and three laboratory hours a week for one semester. Chemistry 455 and 456 may not both be counted. Prerequisite: The following coursework with a grade of at least C- in each: Chemistry 302, 302C, 402C, or 302H; and Chemistry 204, 317, or 104M and 104N.

CH 456. Analytical Chemistry.
For chemistry majors. Three lecture hours and three laboratory hours a week for one semester. Chemistry 455 and 456 may not both be counted. Prerequisite: The following coursework with a grade of at least C- in each: Chemistry 302, 302C, 402C, or 302H; and Chemistry 204, 317, or 104M and 104N.

CH 366C. Advanced Inorganic Chemistry: Organometallics Catalysis.
An in-depth and mostly chronological study of the evolution of organometallic and inorganic coordination chemistry, and its continued critical importance in a range of industrial processes. Covers a range of topical catalytic processes, paying particular attention to how chemical bonding and kinetics can be exploited to affect the relative rates of reaction. Three lecture hours a week for one semester. Chemistry 366C and 368 (Topic: Advanced Inorganic Chemistry: Organometallic Chemistry and Catalysis) may not both be counted. Prerequisite: Credit with a grade of at least C- in Chemistry 431.

CH 366D. Bio-inorganic Chemistry and Spectroscopy.
Covers the roles of transition metals in biology, mostly with respect to protein structure, function, and catalysis. Also covers methods of spectroscopy that are used to probe the geometrical and electronic structure of metal ions in proteins. Exposure to modern areas of study in bio-inorganic chemistry. Explores the principles of transition metal chemistry in the context of biological systems. Three lecture hours a week for one semester Chemistry 366D and 368 (Topic: Bio-inorganic Chemistry) may not both be counted. Prerequisite: Chemistry 431 with a grade of at least C-.

CH 366E. Chemistry of the s-, p-, d-, and f-Block Elements.
Focuses on the electronic structure of molecules and complexes, and how such information can predict important properties such as chemical reactivity, spectroscopy, and magnetism. Intended for upper-division chemistry majors with a basic understanding of concepts in inorganic chemistry. Three lecture hours a week for one semester. Chemistry 366E and 368 (Topic: Inorganic Reactions and Structures) may not both be counted. Prerequisite: Credit with a grade of at least C- for Chemistry 431.

CH 367C. Materials Chemistry.
Restricted to chemistry majors. Introduction to structural and physical properties of materials and synthetic strategies for making new materials in the nanoscale and mesoscale regimes, in addition to covering instrumental methods used to probe materials properties. Some aspects of applications (semiconductor devices, solar and fuel cells, smart and responsive materials) will be covered to illustrate the kinds of material properties that need to be considered in designing novel materials of specific function. Three lecture hours a week for one semester. Prerequisite: Chemistry 431 with a grade of at least C-.

CH 367L. Macromolecular Chemistry.
Designed for chemistry and chemical engineering students. Occurrence, preparation, structure, and properties of macromolecular substances. Three lecture hours a week for one semester. Only one of the following may be counted: Chemical Engineering 355, Chemistry 367L, 367P. Prerequisite: Credit with a grade of at least C- in the following coursework: Chemistry 320M and 320N, or 328M and 328N; Chemistry 220C, or 128K and 128L; and Chemistry 353 or 353M.

CH 367P. Introduction to Polymer Science.
Explore an overview of macromolecular soft materials including the fundamentals of polymer chemistry, physics, and engineering. Three lecture hours a week for one semester. Only one of the following may be counted: Chemical Engineering 355, Chemistry 367L, 367P. Prerequisite: Chemistry 320N, 328N, or 329C with a grade of at least C-.

CH 368. Advanced Topics in Chemistry.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: The following coursework with a grade of at least C- in each: Chemistry 302, 302C, or 302H; and Chemistry 204, 317, or 104M and 104N.

CH 368L. Peer Teaching.
Equivalent of three lecture hours a week for one semester. Chemistry 368 (Topic: Peer Teaching) and 368L may not both be counted.

CH 168Q, 268Q, 368Q, 468Q, 568Q, 668Q, 768Q, 868Q, 968Q. Advanced Topics in Chemistry.
For each semester hour of credit earned, one lecture hour a week for one semester. May be repeated for credit when the topics vary.

CH 369K. Techniques of Research.
Advanced laboratory practice and introduction to research. One lecture hour and six laboratory hours a week for one semester. May be taken for a letter grade no more than twice. No more than six semester hours may be counted toward a degree in chemistry or biochemistry. May be repeated for credit. Prerequisite: Eight semester hours of coursework in organic chemistry; and six semester hours of upper-division chemistry
courses approved by the undergraduate adviser's office, or consent of the undergraduate adviser in chemistry.

CH 371K. Science Outreach in Elementary Schools.
Students develop and present level-appropriate science laboratories to students in local elementary schools. Students also plan and create the infrastructure needed to administer the science program in concert with the science curriculum at a specific elementary school. A hands-on, discovery learning approach to science is emphasized. One class hour and six hours of fieldwork a week for one semester. May be taken for a letter grade no more than twice. No more than six semester hours may be counted toward a degree in chemistry. May be repeated for credit. Prerequisite: Upper-division standing and at least 30 hours in residence.

CH 372C. Chemistry Peer Mentors in Research and Teaching.
Students work as peer mentors and assistants in the teaching of chemistry, with emphasis on developing instructional materials and laboratories that teach fundamental chemistry with real world data. Students mentor students for at least six hours a week in addition to other weekly meetings. Hours to be arranged. May be taken for a letter grade no more than twice. No more than six semester hours may be counted toward a degree in chemistry. Biology 372C and Chemistry 372C may not both be counted. May be repeated for credit. Prerequisite: Chemistry 301, 301C, or 301H, and 302, 302C, or 302H with a grade of at least B in each, and consent of the undergraduate adviser.

CH 372S. Study and Research Abroad: Austin International Framework.
Designed specifically for students participating in the AIF program. Facilitates student-led mini-seminars and video conference call discussions. Explores student research and wider learning and cultural experiences in Austin and abroad. Three lecture hours a week for one semester. May be repeated for credit. Prerequisite: Enrollment in the Austin International Framework (AIF) program and consent of the instructor.

CH 375K, 475K. Individual Study in Chemistry.
Supervised reading or individual tutorial sessions on advanced topics in chemistry. Three or four class hours a week for one semester. No more than six semester hours may be counted toward a degree in chemistry. May be repeated for credit. Prerequisite: Eight semester hours of coursework in organic chemistry, Chemistry 353, and consent of the undergraduate adviser.

CH 375P. Advanced Topics in Polymer Science.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Chemistry 367P with a grade of at least C-.

**Topic 1: Advanced Polymer Synthesis.** Explore a comprehensive overview of how to design and synthesize polymers found in everyday life. Discuss the everyday utility of synthetic polymers to put their significance into context.

**Topic 2: Polymer Physical Chemistry.** Examine the statistical, mechanical, and thermodynamic basis of polymer properties in melts, gels, and solutions. Explore the conformations and sizes of polymer molecules; the properties and structure of glassy, crystalline, and elastic (rubbery) polymers; the thermodynamics of polymer solutions, blends, and semi-crystalline materials; and the self-assembly of block polymers.

**Topic 3: Advanced Polymer Engineering.** Examine a multi-length scale (molecular, mesoscopic, and macroscopic) picture of mechanical and transport properties in polymeric materials, essential for rationally engineering polymers while addressing challenges in recycling, energy, healthcare, and sustainability.

CH 376K. Advanced Analytical Chemistry.
Two lecture hours and three laboratory hours a week for one semester. Prerequisite: Chemistry 353 and 456 with a grade of at least C- in each.

CH 378L. Capstone Research and Thesis.
Develop a capstone project with a faculty adviser, with a focus on advanced laboratory techniques and experimental design. One lecture hour and six laboratory hours a week for one semester. Prerequisite: Upper-division standing, completion of at least ninety semester hours of coursework, and consent of the undergraduate adviser.

CH 379H. Chemistry Honors Tutorial Course.
Laboratory research project in a specific field of chemistry under the supervision of one or more faculty members. Conference course. May be taken twice for credit. Must be taken in addition to the required hours for the Bachelor of Science in Chemistry degree. Students must enter no later than the first semester of the year of graduation. May be repeated for credit. Prerequisite: Consent of the student's research supervisor and the departmental honors adviser.

Graduate Courses

CH 380L. Inorganic Reactions and Structures.
Three lecture hours a week for one semester. Prerequisite: Graduate standing and consent of instructor.

CH 380M. Advanced Study in Chemistry.
For nonchemistry majors. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing, a bachelor's degree with a major in science or mathematics, and consent of the graduate adviser in chemistry.

Advanced inorganic chemistry, with emphasis on structure, spectroscopy, and ligand field theory. Three lecture hours a week for one semester. Prerequisite: Graduate standing and consent of instructor.

CH 080R. Dual MD/PhD Program with UT Medical Branch.
Preclinical medical study at the University of Texas Medical Branch at Galveston. May not be taken concurrently with another course at the University of Texas at Austin. Prerequisite: Graduate standing and admission to the MD/PhD dual degree program in chemistry.

CH 380T. Current Concepts in Chemistry and Biochemistry: UTeach.
Designed for beginning graduate students seeking a review of modern chemical concepts. Three lecture hours a week for one semester. May be repeated for credit with consent of instructor. Prerequisite: Graduate standing and consent of instructor and the graduate adviser.

CH 381M. Advanced Analytical Chemistry.
Theory and application of special methods and recent advances. Three lecture hours a week for one semester. Prerequisite: Graduate standing in chemistry and consent of instructor.

CH 382J. Survey of Physical Chemistry.
Surface chemistry and catalysis, transport properties, macromolecules, electrochemistry and electrolyte solutions, molecular thermodynamics, solution kinetics, and photochemistry. Three lecture hours a week for one semester. Prerequisite: Graduate standing and consent of instructor.
CH 382K. Advanced Physical Chemistry: Introduction to Quantum Mechanics.
Three lecture hours a week for one semester. Prerequisite: Graduate standing, and Chemistry 354 or the equivalent.

Three lecture hours a week for one semester. Prerequisite: Graduate standing and consent of instructor.

CH 382M. Advanced Physical Chemistry.
Quantum chemistry. Three lecture hours a week for one semester. Prerequisite: Graduate standing, and Chemistry 354, 382K, or consent of instructor.

CH 182T, 282T, 382T, 682T. Advanced Study and Research: UTeach.
Designed for beginning graduate students seeking review of modern chemical concepts. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. May be repeated for credit. Prerequisite: Graduate standing and consent of instructor and the graduate adviser.

CH 386J. Advanced Organic Chemistry.
Advanced organic chemistry, with emphasis on theory and reaction mechanisms. Three lecture hours a week for one semester. Prerequisite: Graduate standing, six semester hours of coursework in organic chemistry, and six semester hours of coursework in physical chemistry.

CH 386K. Advanced Organic Chemistry.
Advanced organic chemistry, with emphasis on synthetic methods. Three lecture hours a week for one semester. Prerequisite: Graduate standing, six semester hours of coursework in organic chemistry, and six semester hours of coursework in physical chemistry.

CH 387K. Biochemical Techniques.
Discussion of procedures and equipment used in modern biochemical investigation, with laboratory work to provide experience in techniques of general importance. Two lecture hours and seven laboratory hours a week for one semester. Prerequisite: Graduate standing, six semester hours of undergraduate coursework in biochemistry, and consent of instructor.

CH 190. Seminar in Chemistry.
The equivalent of one class hour a week for one semester. May be repeated for credit when the topics vary. Offered on the credit/no credit basis only. Prerequisite: Graduate standing in chemistry.

   Topic 1: Analytical-Physical Chemistry. Offered on the credit/no credit basis only.
   Topic 2: Organic Chemistry. Offered on the credit/no credit basis only.
   Topic 4: Inorganic Chemistry. Offered on the credit/no credit basis only.

CH 390K. Advanced Topics in Inorganic Chemistry.
Topics include magnetic resonance; organometallic, main-group, and transition metal chemistry; nonaqueous solvents; high-temperature superconductors; new developments in synthetic chemistry; and aspects of inorganic chemistry relevant to material science. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing in chemistry, Chemistry 380L, and consent of instructor.

   Topic 1: Advanced Inorganic Chemistry: Organometallics & Catalysis. Explores the evolution of organometallic and inorganic coordination chemistry, and its importance in a range of industrial processes; and covers a range of topical catalytic processes. Chemistry 390K (Topic 1) and 390K (Topic: Advanced Inorganic Chemistry: Organometallic Chemistry and Catalysis) may not both be counted.
   Topic 2: Advanced Inorganic Chemistry: Bio-Inorganic Chemistry. Explores the roles of transition metals in biology, mostly with respect to protein structure, function and catalysis. Examines established and developing methods of spectroscopy used to probe the geometrical and electronic structure of metal ions in proteins. Analyzes modern areas of study in bio-inorganic chemistry, especially relating to the roles of metals in metalloenzymes, but also including emerging topics such as metalloids, metal-based imaging agents, and molecular sensors. The principles of transition metal chemistry will be explored, expanded and demonstrated in the context of biological systems. Chemistry 390K (Topic: Bio-Inorganic Chemistry) and 390K (Topic 2) may not both be counted.

CH 390L. Advanced Topics in Analytical Chemistry.
Topics include electrochemistry, electronics, mathematical methods, mass spectrometry, and optical methods. For most topics, three lecture hours a week for one semester; for topics on electronics and optical methods, two lecture hours and three laboratory hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of instructor.

   Topic 1: Advanced Analytical Chemistry: Electrochemistry. Designed to introduce the fundamental principles of electrochemistry. An overview of the structure and properties of the electrode/solution interface is presented, and followed by a more detailed discussion of how thermodynamics, kinetics, and mass transfer affect electrochemical processes. Includes specific electrochemical methods, including potential step and sweep techniques, pulse voltammetry, impedance spectroscopy, and hydrodynamic methods. Focuses on specialized electrochemical phenomena, including: photoelectrochemistry, coupled electrochemical and homogeneous reactions, and bulk electrolysis. Introduces the use of digital simulations to solve electrochemical problems. Chemistry 390L (Topic: Advanced Analytical Chemistry: Electrochemistry) and 390L (Topic 1) may not both be counted.
   Topic 2: Advanced Analytical Chemistry: Mass Spectrometry. Overview of the instrumentation, methods, and theory of mass spectrometry and gas-phase ion chemistry. Subjects include ionization methods, mass analyzers, vacuum components and pressure measurement, ion activation methods, analytical figures of merit, and integration of mass spectrometry with separation methods. Other subjects include gas-phase thermochemistry, kinetic theory of ion fragmentation, interpretation of mass spectra, and special subjects that may include ion mobility, proteomics, imaging, and elemental analysis, among others. Chemistry 390L (Topic: Advanced Analytical Chemistry: Mass Spectrometry) and 390L (Topic 2) may not both be counted.

CH 391. Advanced Topics in Organic Chemistry.
Topics include organic photochemistry; molecular orbital theory; free radical chemistry; organometallic compounds; nuclear magnetic resonance and mass spectrometry; organic synthesis. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of instructor.

CH 391P. Introduction to Polymer Science.
Explore an overview of macromolecular soft materials including the fundamentals of polymer chemistry, physics, and engineering. Three
CH 392H. Biomolecular Structure by Nuclear Magnetic Resonance Spectroscopy.
Theory and application of modern nuclear magnetic resonance spectroscopy methods. Emphasis on applications to biological macromolecules, including protein and nucleic acid structure determination. Three lecture hours a week for one semester. Prerequisite: Graduate standing and consent of instructor.

CH 392J. Molecular Biology of the Yeast Saccharomyces.
The use of yeast as a tool for the study of important areas of eukaryotic biology; the use of classical and molecular genetic techniques in the study of gene expression, DNA replication and repair, development and growth control, protein targeting, and metabolism. Three lecture hours a week for one semester. Prerequisite: Graduate standing and consent of instructor.

CH 392K. Genomics.
A survey of the principles and techniques that drive modern genomics research from classical genetics to high-throughput sequencing methods. Three lecture hours a week for one semester. Prerequisite: Graduate standing and consent of instructor.

CH 392L. Advanced Topics in Physical Chemistry.
Theoretical and experimental techniques for characterizing macromolecular systems. Three lecture hours a week for one semester. Prerequisite: Graduate standing and consent of instructor.

CH 392M. Polymer Physical Chemistry.
Study of the mechanical and physical properties of polymers and their blends. Three lecture hours a week for one semester. Prerequisite: Graduate standing and consent of instructor.

CH 393P. Advanced Topics in Polymer Science.
Three lecture hours a week for one semester. Prerequisite: Graduate standing and Chemistry 391P with a grade of at least C-.

Topic 1: Advanced Polymer Synthesis. Explore a comprehensive overview of how to design and synthesize polymers found in everyday life. Discuss the everyday utility of synthetic polymers to put their significance into context.

Topic 2: Polymer Physical Chemistry. Examine the statistical, mechanical, and thermodynamic basis of polymer properties in melts, gels, and solutions. Explore the conformations and sizes of polymer molecules; the properties and structure of glassy, crystalline, and elastic (rubbery) polymers; the thermodynamics of polymer solutions, blends, and semi-crystalline materials; and the self-assembly of block polymers.

Topic 3: Advanced Polymer Engineering. Examine a multi-length scale (molecular, mesoscopic, and macroscopic) picture of mechanical and transport properties in polymeric materials, essential for rationally engineering polymers while addressing challenges in recycling, energy, healthcare, and sustainability.

CH 395F. Genetics.
Same as Biology 395F and Molecular Biology 395F. Basic principles of Mendelian and molecular genetics, and an exploration of the genetic toolbox using examples of analytic methods and modern genetic manipulations. Focus on the genetic analysis of model organisms. Use of genetic tools in dissecting complex biological pathways, developmental processes, and regulatory systems. Three lecture hours a week for one semester. Prerequisite: Graduate standing. An introductory course in genetics, such as Biology 325, is strongly recommended.

CH 395H. Cell Biology.
Same as Biology 395H and Molecular Biology 395H. Detailed consideration of mechanisms of growth control, cell cycle regulation, mitosis, cell signaling, protein targeting, and the integration of these processes. Three lecture hours a week for one semester. Prerequisite: Graduate standing and consent of instructor or Biology 395F and 395G, Chemistry 395F, Molecular Biology 395F and 395G.

CH 395K, 695K. Advanced Individual Study in Chemistry.
Supervised reading or individual tutorial sessions on advanced topics in chemistry. For each semester hour of credit earned, one class hour a week for one semester. May be repeated for credit when the topics vary. Offered on the letter-grade basis only. Prerequisite: Graduate standing and consent of the graduate adviser.

Conference course with laboratory work. May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Graduate standing in chemistry and consent of instructor and the graduate adviser.

Conference course with laboratory work. May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Graduate standing in chemistry and consent of instructor and the graduate adviser.

CH 698. Thesis.
The equivalent of three lecture hours a week for two semesters. Offered on the credit/no credit basis only. Prerequisite: For 698A, graduate standing in chemistry and consent of the graduate adviser; for 698B, Chemistry 698A.

CH 398T. Professional Development for Graduate Students in Chemistry.
Restricted to graduate students in chemistry. Provides professional development skills to graduate students in chemistry. Subjects include excellence in teaching, scientific communication, grantsmanship, ethics, and career planning. Three lecture hours a week for one semester. Offered on the credit/no credit basis only. Prerequisite: Graduate standing.

May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Admission to candidacy for the doctoral degree.

Professional Courses
CHE - Chemical Engineering

Chemical Engineering: CHE

Lower-Division Courses

CHE 102. Introduction to Chemical Engineering.
Restricted to freshmen. Introduction to chemical engineering, including problem solving and study skills. Opportunities and responsibilities of a career in chemical engineering. One lecture hour and one recitation hour a week for one semester. May not be counted toward any engineering degree. Offered on the pass/fail basis only.

CHE 210. Introduction to Computing.
Restricted to chemical engineering majors. Computer programming focusing on basics of computing, high-level programming environments, and spreadsheets, with application to chemical engineering. Two lecture hours and one laboratory hour for one semester. Chemical engineering majors must make a grade of at least C- in this course.

CHE 311. Engineering Sustainable Technologies.
Flows of materials and energy in engineering environments at local, regional, and global scales, and the interaction of those anthropogenic flows with natural cycles of materials and energy. Discusses biogeochemical flows (grand cycles) and anthropogenic material flows at the national level, in industrial sectors, and for consumer products. Three lecture hours a week for one semester. Prerequisite: A high school course in chemistry and experience with Internet searches.

CHE 317. Introduction to Chemical Engineering Analysis.
Principles and applications of material and energy balances in process analysis. Three lecture hours and one to two recitation hours a week for one semester. Chemical engineering majors must make a grade of at least C- in this course in order to take upper-division courses in chemical engineering. Prerequisite: Chemical Engineering 210, Chemistry 302, and Mathematics 408D with a grade of at least C- in each.

CHE 018C. Peer Mentorship.
Restricted enrollment; contact the department for permission to take this course. Best practices for delivery of tutoring and/or grading for undergraduate chemical engineering majors. May be repeated for credit. Offered on the pass/fail basis only.

CHE 319. Transport Phenomena.
Restricted to chemical engineering majors. Basic study of momentum, energy, and mass transport. Includes viscous and turbulent flow, heat transfer, and mass diffusion. Three lecture hours and one to two recitation hours a week for one semester. Chemical Engineering 319 and Chemical Engineering 353 may not both be counted. Prerequisite: Chemical Engineering 317 and Mathematics 427J with a grade of at least C- in each.

Used to record credit the student earns while enrolled at another institution in a program administered by the University's Study Abroad Office. Credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary. Offered on the letter-grade basis only.

Upper-Division Courses

CHE 322. Thermodynamics.
Introductory course in thermodynamics with special reference to chemical process applications: basic laws, thermodynamic properties of single component systems, expansion and compression of fluids, heat engines, multicomponent systems, physical equilibrium, chemical equilibrium. Three lecture hours and two recitation hours a week for one semester. Chemical engineering majors must make a grade of at least C- in this course. Prerequisite: Chemical Engineering 210, 317, Chemistry 353, and Mathematics 427J with a grade of at least C- in each.

CHE 322M. Molecular Thermodynamics.
Statistical and molecular concepts, especially the role of the microscopic chemical potential. Three lecture hours a week for one semester. Chemical Engineering 322M and 379 (Topic: Molecular Thermodynamics) may not both be counted. Prerequisite: Chemical Engineering 322.

CHE 323. Chemical Engineering for Micro- and Nanofabrication.
Definition and description of the terminology and processes of microelectronics, including semiconductor facilities and chemical processes for integrated circuit manufacture, with an emphasis on unit processes; the major unit process, including thin-film metals and dielectrics deposition and etching, silicon oxidation and etching, ion implantation, diffusion, lithography, planarization, and process control; and an overview of promising nanopatterning and nanofabrication techniques, such as particle-beam imaging, nanoimprint, and near-field probe imaging, implantation, diffusion, lithography, planarization, and process control. Three lecture hours a week for one semester. Prerequisite: Chemistry 328M and 328N.

Used to record credit the student earns while enrolled at another institution in a program administered by the University's Study Abroad Office. Credit is recorded as assigned by the study abroad adviser in the McKetta Department of Chemical Engineering. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary. Offered on the letter-grade basis only.

CHE 333T. Engineering Communication.
Advanced technical communication skills, with emphasis on writing strategies for technical documents, oral presentations, and visual aids. Three lecture hours a week for one semester. Only one of the following may be counted: Aerospace Engineering 333T, Biomedical Engineering 333T, Communication 333T, Civil Engineering 333T, Chemical Engineering 333T, Electrical and Computer Engineering 333T, Electrical Engineering 333T, Engineering Studies 333T, Mechanical Engineering 333T, Petroleum and Geosystems Engineering 333T. Prerequisite: Rhetoric and Writing 306 with a grade of at least C-.

CHE 337. Quantitative Analysis of Cellular and Molecular Biology.
Analyzes biological systems from stoichiometric, thermodynamic, and kinetic perspectives. Case studies will illustrate how these principles are used to understand disease, control cellular behavior, and design protein-based therapeutics. Three lecture hours a week for one semester. Only one of the following may be counted: Biochemistry 350, Chemical Engineering 337, 379 (Topic: Quantitative Analysis of Cellular and Molecular Biology). Offered on the letter-grade basis only. Prerequisite: Biology 311D and Chemical Engineering 317.
CHE 338. Biochemical Engineering.
Restricted to chemical engineering majors. Introduction to basic biological processes including transcription, translation, protein/enzyme function, cellular energetics, protein secretion and modifications. Application of quantitative engineering principles to the analysis of biological processes, including thermodynamics, kinetics and stoichiometry. Three lecture hours a week for one semester. Chemical Engineering 338 and 379 (Topic: Biochemical Engineering) may not both be counted. Offered on the letter-grade basis only. Prerequisite: Chemical Engineering 317 with a grade of at least C-.

CHE 339. Introduction to Biochemical Engineering.
Microorganisms in chemical and biochemical syntheses; genetic manipulation of cells by classical and recombinant DNA techniques. Enzyme technology; design of bioreactors and microbial fermentations; separations of biological products. Three lecture hours a week for one semester. Only one of the following may be counted: Biology 335, Biomedical Engineering 339, Chemical Engineering 339, 379 (Topic: Introduction to Biochemical Engineering). Prerequisite: Biology 311C or CHE 338 and Chemistry 353.

CHE 339P. Introduction to Biological Physics.
Diffusion, dissipation, and driving forces in cellular processes. Locomotion of bacteria, basic modeling of biomolecular folding and binding events, osmotic flows, and self-assembly in cells. Three lecture hours a week for one semester. Chemical Engineering 339P and 379 (Topic: Molecular Driving Force in Biology) may not both be counted. Prerequisite: Chemical Engineering 319 (or 353), 322, and 253K with a grade of at least C- in each, or consent of the department.

CHE 339T. Cell and Tissue Engineering.
Introduction to biomedical research in tissue engineering. Includes case studies of tissues and organs of the body, physiology and biology of tissue, pathologies of tissue, current clinical treatments, the role of engineers in development of new technologies to diagnose and treat pathologies, quantitative cellular and molecular techniques, and applications of synthetic and natural biomaterials. Three lecture hours a week for one semester. Only one of the following may be counted: Biomedical Engineering 379, Chemical Engineering 339T, 379 (Topic: Cell and Tissue Engineering). Prerequisite: Biology 311C and Chemical Engineering 350.

CHE 341. Design for Environment.
Overview of environmental assessment tools for chemical processes and products, including life cycle and risk assessments. Overview of design tools for improving environmental performance of chemical processes, including unit operations and flowsheet analysis methods. Three lecture hours a week for one semester.

CHE 342. Chemical Engineering Economics and Business Analysis.
Study of the economic decisions faced by chemical engineers. Discounted cash flow techniques. Personal finance, managerial economics, and other special topics. Three lecture hours a week for one semester. Only one of the following may be counted: Chemical Engineering 342, 384 (Topic: Chemical Engineering Economics and Business Analysis), 395G.

Introduction to basic molecular simulation techniques including molecular mechanics, molecular dynamics, and Monte Carlo method. Understanding of principles underlying these techniques, and how these techniques can be used to study the physical and chemical properties and behavior of materials at the molecular level. More advanced topics include molecular simulations in various ensembles (NVE, NVT, NPT, grand canonical), free energy computations, controlling dynamics, and association-bias Monte Carlo method. Elementary knowledge of physical chemistry, classical mechanics, and statistical thermodynamics is assumed. Three lecture hours a week for one semester. Chemical Engineering 343 and 379 (Topic: Simulation of Materials) may not both be counted. Offered on the letter-grade basis only. Prerequisite: Chemical Engineering 317 with a grade of at least C-.

CHE 346F. Atmospheric Chemistry and Physics.
Examine the sources of air pollutants and the chemical reactions and physical processes that affect them. Explore tropospheric chemistry and the microphysics, chemistry, and thermodynamics of atmospheric nanoparticles. Discuss aerosol transmission of viruses and mitigation of that transmission, as well as recent advances in understanding air pollution and its health effects. Three lecture hours a week for one semester. Chemical Engineering 346F and 379 (Topic: Atmospheric and Chem/Physics) may not both be counted. Offered on the letter-grade basis only. Prerequisite: Upper-division standing.

Numerical solutions to algebraic and differential equations; numerical methods to integration, interpolation, and regression analysis, with application to chemical engineering. Three lecture hours and one recitation hour a week for one semester. Chemical engineering majors must make a grade of at least C- in this course. Prerequisite: Chemical Engineering 210, 317, and Mathematics 427J with a grade of at least C- in each.

CHE 349D. Dynamics in Ecology and the Environment.
Examine the Earth’s natural processes, populations, and systems. Explore the Earth’s dynamic systems and how they change with time in response to a variety of disturbances. Use mathematical models to aid in understanding these dynamic systems and to estimate the impact of manmade disturbances. Discuss current environmental and ecological problems. Three lecture hours a week for one semester. Chemical Engineering 349D and 379 (Topic: Dynamics in Eco and Env) may not both be counted. Offered on the letter-grade basis only. Prerequisite: Upper-division standing and consent of instructor.

Metallic, ceramic, polymeric, and composite materials. Crystal structures, phase diagrams, diffusion, and mechanical properties. Emphasis on structure-property-processing relationships. Three lecture hours a week for one semester. Prerequisite: Chemistry 353 with a grade of at least C-.

Statistical methods such as data exploration and summary, least-squares fitting, probability and probability distributions, statistical inference and hypothesis testing, analysis of variance, design of experiments, statistical quality control, and use of professional statistical software. Two lecture hours a week and one recitation hour a week for one semester. Chemical engineering majors must make a grade of at least C- in this course. Prerequisite: Chemical Engineering 210, 317, and Mathematics 427J with a grade of at least C- in each.

CHE 253M. Measurement, Control, and Data Analysis Laboratory.
Laboratory safety; measurement and statistical analysis of transport process variables like temperature, pressure, and flow rate; computer data acquisition; feedback control; statistical process control and design of experiments; and production of professional-level lab reports. Five laboratory hours a week for one semester. Prerequisite: Chemical
CHE 354. Transport Processes.
Design and analysis of heat exchangers, fluid-flow systems and equipment, and interphase-contact devices. Three lecture hours and one recitation hour a week for one semester. Chemical engineering majors must make a grade of at least C- in this course. Prerequisite: Chemical Engineering 319 (or 353) with a grade of at least C-.

CHE 355. Introduction to Polymers.
Synthesis, structural characterization, physical properties, and applications of polymers. Three lecture hours a week for one semester. Only one of the following may be counted: Chemical Engineering 355, Chemistry 367L, 367P. Prerequisite: Chemistry 320N, 328N, or 329C with a grade of at least C-.

Techniques of optimization, including formulation of optimization problems, one-dimensional search techniques, analytical methods, and n-dimensional search techniques; application of methods to process-industry problems. Three lecture hours a week for one semester. Prerequisite: Chemical Engineering 319 (or 353) and 348.

Study of sources and fates of environmental pollutants; environmental quality standards—their measurement and regulation; and pollution control design procedures. Three lecture hours a week for one semester. Prerequisite: Upper-division standing within the major or consent of department.

CHE 359. Energy Technology and Policy.
Technology and policy related to energy supply and demand, oil and gas production, coal utilization, hydrogen production, fuel cells, transportation, nuclear power, solar and wind energy, biomass utilization, energy conservation, and climate change. Three lecture hours a week for one semester. Only one of the following may be counted: Chemical Engineering 359, 379 (Topic: Energy Technology and Policy), 384 (Topic: Energy Technology and Policy).

CHE 360. Process Control.
Analysis of process dynamics and methods for the design of automatic control systems for chemical process plants. Three lecture hours and one to two recitation hours a week for one semester. Prerequisite: Chemical Engineering 322, 253M, and 354 with a grade of at least C- in each.

CHE 363. Separation Processes and Mass Transfer.
Design and analysis of equilibrium and mass transfer based on separations such as absorption, chromatography, crystallization, distillation, extraction, and membrane-based processes. Three lecture hours and one to two recitation hours a week for one semester. Chemical engineering majors must make a grade of at least C- in this course. Prerequisite: Chemical Engineering 319 (or 353) and 322 with a grade of at least C- in each.

CHE 264. Chemical Engineering Process and Projects Laboratory.
Experimental studies of unit operations. Laboratory safety. Statistical data analysis. Written and oral reports. Six laboratory hours a week for one semester. Prerequisite: Chemical Engineering 253M and 363 with a grade in each of at least C-.

CHE 364S. Chemical Process Safety.
Emphasizes quantitative engineering analysis based on the application of mass and energy balances, fluid mechanics of incompressible, compressible and two-phase fluids, heat transfer and conservation of energy, diffusion and dispersion under highly variable conditions, reaction kinetics, and process control. Subjects include various probabilistic and statistical methods to characterize accident and loss performance, techniques for process hazard analysis, risk assessment, and accident investigations. Three lecture hours a week for one semester. Chemical Engineering 364S and 379 (Topic: Chemical Process Safety) may not both be counted. Offered on the letter-grade basis only. Prerequisite: Chemical Engineering 319 (or 353), 253K, and 354.

Planning and design of commercial chemical and biochemical reaction systems for producing fuels, polymers, specialty and consumer products, pharmaceuticals, solid-state devices, and other products. Three lecture hours and one recitation hour a week for one semester. Chemical engineering majors must make a grade of at least C- in this course. Prerequisite: Chemical Engineering 322, 348, and 354 with a grade of at least C- in each.

Process design, economics, and safety; design projects representing a variety of industries and products. Three lecture hours and two recitation hours a week for one semester. Prerequisite: Chemical Engineering 354, 363, and 372 with a grade of at least C- in each.

CHE 376K. Process Evaluation and Quality Control.
Use of statistical techniques to evaluate, compare, and optimize processes. Design of experiments for improved product quality control. Three lecture hours a week for one semester. Prerequisite: Upper-division standing, and admission to an appropriate major sequence in engineering or consent of the department.

CHE 177K, 277K, 377K. Undergraduate Research Project.
Recommended for students considering graduate study. Topic to be selected in conjunction with individual chemical engineering faculty member, with approval by the department chair. A final written report is required. Three, six, or nine laboratory hours a week for one semester. Prerequisite: A grade point average of at least 3.00 in chemical engineering courses; students must submit an application to the undergraduate advising office.

CHE 177L, 277L, 377L. Undergraduate Research Project.
Subject matter to be selected in conjunction with individual chemical engineering faculty member, with approval by the department chair. A final written report is required. For every credit hour earned, three laboratory hours a week for one semester. Prerequisite: Chemical Engineering 177K, 277K, or 377K and a grade point average of at least 3.00 in chemical engineering coursework; students must submit application to the undergraduate advising office.

CHE 179, 279, 379, 479. Topics in Chemical Engineering.
Special topics of current interest. The equivalent of one, two, three, or four lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Consent of the department.

Topic 2: Nanomaterials Chemistry and Engineering. Chemical Engineering 379 (Topic: Nanomaterials Chem and Engr) and 379 (Topic 2) may not both be counted.

Topic 3: Greenhouse Gas Control Technology. Chemical Engineering 379 (Topic: Greenhouse Gas Control Technol) and 379 (Topic 3) may not both be counted. Additional prerequisite: Chemical Engineering 363 with a grade of at least C-.
**CHE 679H. Undergraduate Honors Thesis.**
Research performed during two consecutive semesters under the supervision of a chemical engineering faculty member; topics are selected jointly by the student and the faculty member with approval by the department chair. The student makes two oral presentations and writes a thesis. Individual instruction for two semesters. Students pursuing both the Bachelor of Arts, Plan II, and the Bachelor of Science in Chemical Engineering may use this course to fulfill the thesis requirement for the Bachelor of Arts, Plan II. Prerequisite: For 679HA, enrollment in the Chemical Engineering Honors Program; for 679HB, enrollment in the Chemical Engineering Honors Program and credit for Chemical Engineering 679HA.

**Graduate Courses**

**CHE 180C. Laboratory Safety.**
Safe laboratory practice. Training in use of fire extinguishers and first aid. Case studies of laboratory accidents. One lecture hour a week for one semester. Prerequisite: Graduate standing in chemical engineering.

**CHE 080D. Research and Achievements Seminar.**
Restricted to chemical engineering majors. Seminar series covering recent research and technical achievements in Chemical Engineering. One lecture hour a week for one semester. May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Graduate Standing

**CHE 381N. Fluid Flow and Heat Transfer.**
Advanced treatment of fluid flow and heat transfer problems in chemical engineering. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

**CHE 381P. Advanced Analysis for Chemical Engineers.**
Applications of mathematical methods to chemical engineering problems, with emphasis on differential equations, linear analysis and matrices, and real analysis and complex variables. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

**CHE 381Q. Quantitative Analysis of Cellular and Molecular Biology.**
Analyzes biological systems from stoichiometric, thermodynamic, and kinetic perspectives. Case studies illustrate how these principles are used to understand disease, control cellular behavior, and design protein-based therapeutics. Three lecture hours a week for one semester. Chemical Engineering 381Q and 384 (Topic: Quantitative Analysis of Cellular and Molecular Biology) may not both be counted. Prerequisite: Graduate standing.

**CHE 384E. Electrochemistry and Electrochemical Engineering.**
Fundamental principles of electrochemistry combined with mass transfer including applications in analytical chemistry as well as industrial electrochemistry. Three lecture hours a week for one semester. Chemical Engineering 384T (Topic: Electrochemistry/Chemical Engineering) and 384E may not both be counted. Prerequisite: Graduate standing.

**CHE 384K. Chemical Kinetics and Surface Chemistry.**
Application of chemical reaction kinetics to the prediction and determination of reaction rates and reaction selectivity. Three lecture hours a week for one semester. Prerequisite: Graduate standing, and Chemical Engineering 387K or consent of instructor.

**CHE 384S. Current and Emerging Trends in Chemical Engineering Research.**
Overview of current and emerging trends in chemical engineering research with frequent guest presentations by leading scholarly and industrial researchers in the discipline. Three lecture hours a week for one semester. May be repeated for credit. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

**CHE 384T. Topics in Chemical Engineering.**
Three lecture hours a week for one semester. Chemical Engineering 384 and 384T may not both be counted unless the topics vary. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

**CHE 185, 285, 385, 685. Research.**
For each semester hour of credit earned, the equivalent of one class hour a week for one semester. May be repeated for credit. Prerequisite: Graduate standing in chemical engineering, or graduate standing and consent of instructor.

**CHE 085C. Research.**
Restricted to chemical engineering majors. One lecture hour a week for one semester. May be repeated for credit. Prerequisite: Graduate standing.

**CHE 385M. Surface Phenomena.**
Liquid/fluid interfaces including equilibrium and nonequilibrium phenomena. Topics covered include capillarity, thermodynamics, surface rheology, and streaming potentials. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

**CHE 385P. Optimization: Theory and Practice.**
Techniques of optimization, including formulation of optimization problems, one-dimensional search techniques, analytical methods, and n-dimensional search techniques; application of methods to process-industry problems. Three lecture hours a week for one semester. Chemical Engineering 384 (Topic: Optimization: Theory and Practice) and 385P may not both be counted. Prerequisite: Graduate standing.

**CHE 386K. Theory of X-Ray Diffraction.**
Application of basic diffraction theory to polycrystalline and single crystal materials. Three lecture hours a week for one semester. Prerequisite: Graduate standing and consent of instructor.

**CHE 386L. Laboratory Experiments in X-Ray Diffraction.**
Application of X-ray diffraction techniques to the examination of polycrystalline and single crystal materials. Two or three lecture hours and three or four laboratory hours a week for one semester. Prerequisite: Graduate standing and consent of instructor.

**CHE 387K. Advanced Thermodynamics.**
Applications of thermodynamics to chemical engineering processes. Three lecture hours a week for one semester. Prerequisite: Graduate standing in chemical engineering, or graduate standing and consent of instructor.

**CHE 387M. Mass Transfer.**
Advanced treatment of diffusional mass transfer operations in chemical engineering. Three lecture hours a week for one semester. Prerequisite: Graduate standing.
CHE 388K. Separations Processes.
Advanced treatment of modern chemical engineering separations processes. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

CHE 391. Elements of Modern Control Theory.
Introduction to fundamentals of dynamic optimization and system theory; applications to engineering processes. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

CHE 391J. Reaction Kinetics.
Three lecture hours a week for one semester. Chemical Engineering 384T (Topic: Reaction Kinetics) and 391J may not both be counted. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

Introduction to fundamentals of dynamic system modeling and associated numerical solution methods with applications to engineering systems. Three lecture hours a week for one semester. Prerequisite: Graduate standing and consent of instructor.

CHE 391S. Molecular Simulation of Materials.
Introduction to basic molecular simulation techniques including molecular mechanics, molecular dynamics, and Monte Carlo method. Understanding of principles underlying these techniques, and how these techniques can be used to study the physical and chemical properties and behavior of materials at the molecular level. More advanced subjects include molecular simulations in various ensembles (NVE, NVT, NPT, grand canonical), free energy computations, controlling dynamics, and association-bias Monte Carlo method. Elementary knowledge of physical chemistry, classical mechanics, and statistical thermodynamics is assumed. Three lecture hours a week for one semester. Chemical Engineering 384 (Topic: Simulation of Materials) and 391S may not both be counted. Prerequisite: Graduate standing.

CHE 392. Polymer Science.
Details of polymerization mechanisms; structure-property relationships, fundamentals of processing, and characterization of high polymers. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

CHE 392P. Introduction to Polymer Materials Science.
Synthesis, structural characterization, physical properties, and applications of polymers. Three lecture hours a week for one semester. Chemical Engineering 384 (Topic: Introduction to Polymer Material Science) and 392P may not both be counted. Prerequisite: Graduate standing.

CHE 395C. Chemical Processes for Microelectronics.
Introduction to the chemical processes and the manufacturing operations used in microelectronics device fabrication. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

CHE 395E. Polymer Science and Engineering Laboratory.
Training in the preparation and instrumental characterization of polymers, blends, and compounds. Twelve laboratory hours a week for one semester. Prerequisite: Graduate standing.

CHE 395G. Chemical Engineering Economics and Business Analysis.
Study of the economic decisions faced by chemical engineers. Discounted cash flow techniques. Personal finance, managerial economics, and other special topics. Three lecture hours a week for one semester. Only one of the following may be counted: Chemical Engineering 342, 379 (Topic: Chemical Engineering Economics and Business Analysis), 395G. Prerequisite: Graduate standing in chemical engineering, or graduate standing and consent of instructor.

Product and process innovation in the process industries; screening criteria; needs-requirements research, evaluation. Three lecture hours a week for one semester. Chemical Engineering 379 (Topic: Product and Process Development) and 395J may not both be counted. Prerequisite: Graduate standing in chemical engineering, or graduate standing and consent of instructor.

Overview of environmental assessment tools for chemical processes and products, including life cycle and risk assessments. Overview of design tools for improving environmental performance of chemical processes, including unit operations and flow sheet analysis methods. Three lecture hours a week for one semester. Chemical Engineering 384 (Topic 19: Design for Environment) and 395K may not both be counted. Prerequisite: Graduate standing in chemical engineering, or graduate standing and consent of instructor.

CHE 397M. Graduate Research Internship.
Research associated with enrollment in the Graduate Research Internship Program (GRIP). The equivalent of three lecture hours a week for one semester. Prerequisite: Graduate standing in chemical engineering and consent of instructor and the dean of the Cockrell School of Engineering.

CHE 698. Thesis.
The equivalent of three lecture hours a week for two semesters. Offered on the credit/no credit basis only. Prerequisite: For 698A, graduate standing in chemical engineering and consent of the graduate adviser; for 698B, Chemical Engineering 698A.

CHE 398R. Master's Report.
Preparation of a report to fulfill the requirement for the master's degree under the report option. The equivalent of three lecture hours a week for one semester. Offered on the credit/no credit basis only. Prerequisite: Graduate standing in chemical engineering and consent of the graduate adviser.

CHE 398T. Supervised Teaching in Chemical Engineering.
Teaching under the close supervision of the instructor for one to four semesters; weekly group meetings; individual consultation; reports. Three lecture hours a week for one semester. Prerequisite: Graduate standing and appointment as a teaching assistant.

May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Admission to candidacy for the doctoral degree.

Professional Courses

CHI - Chinese

Chinese: CHI

Lower-Division Courses

CHI 604. Accelerated First-Year Chinese.
Designed for students who understand or speak but do not read or write Mandarin Chinese. Six class hours a week for one semester. Chinese 604 and 506 may not both be counted; Chinese 604 and 507 may not both be counted. Prerequisite: Results on the placement examination in Chinese that indicate that the student is ineligible to receive credit for Chinese
507. If the student is eligible to receive credit by examination for Chinese 506, this credit must not appear on the student's record.

**CHI 506, 606. First-Year Chinese I.**
Modern Standard Chinese (Mandarin). Intended for students who do not understand or speak Mandarin Chinese. Six lecture hours a week for one semester. Chinese 604 and 506, 606 may not both be counted.

**CHI 507, 607. First-Year Chinese II.**
Continuation of Chinese 506, 606. Intended for non-native speakers of Chinese. Six lecture hours a week for one semester. Chinese 604 and 507, 607 may not both be counted. Prerequisite: Chinese 506, 606 with a grade of at least C.

**CHI 612. Accelerated Second-Year Chinese.**
Continuation of Chinese 604. Six class hours a week for one semester. Chinese 612 and 412K may not both be counted; Chinese 612 and 412L may not both be counted. Prerequisite: Chinese 604 with a grade of at least C.

**CHI 312K, 412K. Second-Year Chinese I.**
Modern Standard Chinese (Mandarin). Intended for non-native speakers of Chinese. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. Chinese 612 and 312K, 412K may not both be counted. Prerequisite: Chinese 507, 607 with a grade of at least C.

**CHI 312L, 412L. Second-Year Chinese II.**
Intended for non-native speakers of Chinese. Continuation of Chinese 312K, 412K. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. Chinese 612 and 312L, 412L may not both be counted. Prerequisite: Chinese 312K, 412K with a grade of at least C.

**Topics in Chinese.**
This course is used to record credit the student earns while enrolled at another institution in a program administered by the University's Study Abroad Office. Credit is recorded as assigned by the study abroad adviser in the Department of Asian Studies. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

**Upper-Division Courses**

**CHI 320K. Readings in Modern Chinese I.**
Readings in expository prose: selections from journals, newspapers, and other sources. Three lecture hours a week for one semester. Prerequisite: Chinese 612 or 412L with a grade of at least C.

**CHI 320L. Readings in Modern Chinese II.**
Readings in modern fiction, poetry, and drama. Three lecture hours a week for one semester. Prerequisite: Chinese 320K with a grade of at least C.

**CHI 322. Introduction to Classical Chinese.**
Beginning study of wen yen, the particles, and syntax of the Chinese classics. Three lecture hours a week for one semester. Prerequisite: Chinese 612 or 412L with a grade of at least C.

**CHI 325K. Advanced Conversation I.**
Not open to native speakers of Chinese. Drill in conversation on general topics. Three lecture hours a week for one semester. Prerequisite: Chinese 412L with a grade of at least C.

**CHI 325L. Advanced Conversation II.**
Not open to native speakers of Chinese. Practice in speaking Modern Standard Chinese. Three lecture hours a week for one semester. Prerequisite: Chinese 325K with a grade of at least C.

**CHI 326. Business Chinese.**
Advanced Chinese conversation, with emphasis on business vocabulary. Three lecture hours a week for one semester. Chinese 326 and 330 (Topic: Business Chinese) may not both be counted. Prerequisite: Chinese 612, 320K, or 325K with a grade of at least C.

**Topics in Chinese.**
This course is used to record credit the student earns while enrolled at another institution in a program administered by the University's Study Abroad Office. Credit is recorded as assigned by the study abroad adviser in the Department of Asian Studies. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

**CHI 130D. Chinese across Disciplines.**
Reading and discussion of Chinese language materials related to the subject matter of another designated course in Asian studies. Meetings with the instructor will be devoted to the discussion of linguistic problems, literary features, and crucial passages. Individual instruction. May not be counted toward fulfillment of the foreign language requirement for any bachelor's degree. May be repeated for credit. Offered on the pass/fail basis only. Prerequisite: Upper-division standing, concurrent enrollment in an appropriate Asian studies course, and written consent of instructor on form obtained from the undergraduate adviser.

**CHI 340. Topics in Chinese Literature.**
Study of Chinese literary texts in the original. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Chinese 320K with a grade of at least C.

- **Topic 1: Contemporary Chinese Literature.** Selected literary works from contemporary China (post 1949), in their original language. Focuses on translation and linguistic analysis, as well as discussion of the texts as works of literature. Chinese 340 (Topic: Contemporary Chinese Literature) and 340 (Topic 1) may not both be counted.
- **Topic 2: Prose Writings by Lu Xun.** Chinese 340 (Topic: Prose Writings by Lu Xun) and 340 (Topic 2) may not both be counted.
- **Topic 3: Modern Chinese Literature.** Selected literary works from modern China (pre 1949), focusing on translation, linguistic analysis, and discussion of these works as cultural and literary products within their socio-historical contexts. Chinese 340 (Topic: Modern Chinese Literature) and 340 (Topic 3) may not both be counted.
- **Topic 4: Chinese Fiction from Taiwan.** Readings of works of fiction produced in contemporary Taiwan (1949 to present day) in Chinese. Readings include mainstream literature, stories written by writers of the Modernist and Nativist schools, and urban fiction since the late twentieth century. Chinese 340 (Topic: Chinese Fiction from Taiwan) and 340 (Topic 4) may not both be counted.

**CHI 341. Classical Chinese Poetry.**
Study of Chinese poetry in the original. Three lecture hours a week for one semester. Chinese 340 (Topic: Classical Chinese Poetry) and 341 may not both be counted. Prerequisite: Chinese 320K with a grade of at least C.
Supervised individual study of selected problems in Chinese language or literature. Conference course. May be repeated for credit. Prerequisite: Upper-division standing and written consent of instructor on form obtained from the undergraduate adviser.

Graduate Courses

CHI 381. Conference Course in Chinese Language and Culture.
Supervised individual study in Chinese language or culture. The equivalent of three lecture hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing and written consent of instructor on form obtained from the graduate coordinator.

CHI 384. Topics in Chinese Language and Culture.
Study of various aspects and periods of Chinese language or culture. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing; additional prerequisites vary with the topic.

- Topic 1: Chinese Film and Literature. Chinese literature and film from the early twentieth century to the present within the sociohistorical context of modern China.
- Topic 3: Contemporary Chinese Literature.
- Topic 5: Modern Chinese Literature.

Professional Courses

CLD - Communication and Leadership

Communication and Leadership: CLD

Lower-Division Courses

CLD 301. Introduction to Communication and Leadership.
Introduces the study of leadership with an emphasis on communication dimensions and interdisciplinary understanding of social problems. Serves as a foundation for subsequent coursework in the areas of communication and leadership. Three lecture hours a week for one semester. Communication 301L and Communication and Leadership 301 may not both be counted.

CLD 102, 202, 302. Topics in Communication and Leadership.
Contemporary issues and practices in communication and leadership. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. May be repeated for credit when the topics vary.

CLD 304. Introduction to Philanthropy.
Offers an introduction to philanthropy, focusing on the process of private giving as well as the work of private foundations. Three lecture hours a week for one semester.

Builds on Introduction to Philanthropy, considering the process of creating and evaluating philanthropic initiatives. Three lecture hours a week for one semester. Prerequisite: Communication and Leadership 304.

Upper-Division Courses

CLD 120, 220, 320. Topics in Communication and Leadership.
Contemporary issues and practices in communication and leadership. For each semester hour of credit earned, one lecture hour a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Upper-division standing.

Restricted to students in the Moody College of Communication. Builds on the foundation introduced in Communication and Leadership 301 advancing student work in theories, processes, and practices of leadership and communication. Three lecture hours a week for one semester. Communication 320L and Communication and Leadership 321 may not both be counted. Prerequisite: Communication 301L or Communication and Leadership 301.

CLD 122, 222, 322. Independent Study.
Restricted to communication and leadership majors. Pursue special supervised individual research studies. For each semester hour of credit earned, one lecture hour a week for one semester. May be repeated for credit. Prerequisite: Consent of the director of the communication and leadership degree.

CLD 324. Communication and Leadership in Higher Education.
Investigate the ways in which leadership and communication intersect with a range of audiences from students and faculty to parents and legislators. The equivalent of three lecture hours a week for one semester. Communication and Leadership 320 (Topic: Comm/Leadership in Higher Ed) and 324 may not both be counted. Prerequisite: Upper-division standing.

Topics in Communication and Leadership.
This course is used to record credit the student earns while enrolled at another institution in a program administered by the University’s Study Abroad Office. Credit is recorded as assigned by the study abroad adviser in the Communication and Leadership degree. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. For each hour of credit earned, one lecture hour a week for one semester. May be repeated for credit when the topics vary.

Analyze the effectiveness of nonprofit organizations and how to think about and apply the ethics, strategy, and practice of philanthropic giving. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

CLD 332. Facilitative Leadership.
Explore facilitation and consensus-building into leadership in the private, nonprofit, and public sectors; how to engage stakeholders in powerful, productive, and prudent ways; and how to collaborate with team members to advance a leader’s vision. The equivalent of three lecture hours a week for one semester. Communication and Leadership 320 (Topic: Facilitative Leadership) and 332 may not both be counted. Prerequisite: Upper-division standing.

Examine theories and applied practices for impactful and effective civic education. The equivalent of three lecture hours per week for one semester. Communication and Leadership 320 (Topic: Comm for Civic...
Engagement) and 340 may not both be counted. Prerequisite: Upper-division standing.

CLD 145, 245, 345. Topics in Fundamentals and Skills.
Examine contemporary issues and practices in communication and leadership fundamentals and skills. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Upper-division standing.

CLD 351, 651. Internship in Communication and Leadership.
Restricted to Communication and Leadership majors. Practical work experience related to the practice of ethical leadership and communication with a non-profit community, or philanthropic organization. For 351, an average of 10 hours of work a week, for a total of at least 150 hours a semester or summer term; for 651, an average of 20 hours of work a week, for a total of at least 300 hours a semester or summer term. Communication 351L and Communication and Leadership 351 may not both be counted. Offered on the pass/fail basis only. Prerequisite: Upper-division standing; Communication 320L or Communication and Leadership 321.

Study communication and leadership in social issues. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Upper-division standing.

CLD 371. Capstone Course in Communication and Leadership.
Restricted to Communication and Leadership majors. Engagement in experiential learning. Development and presentation of ideas and plans for addressing a leadership challenge given by a partner organization. Three lecture hours a week for one semester. Communication 370L and Communication and Leadership 371 may not both be counted. Prerequisite: Upper-division standing and Communication 320L or Communication and Leadership 321.

Restricted to communication and leadership majors. Write and research two consecutive semesters under the supervision of a College of Communication faculty member; subjects are selected by the student with approval from the faculty member. The equivalent of three lecture hours a week for two semesters. Prerequisite: For 679A, upper-division standing and consent of instructor. For 679B, CLD 679A.

Graduate Courses
Professional Courses

CLS - Cultural Studies

Lower-Division Courses
This course is used to record credit the student earns while enrolled at another institution in a program administered by the University's Study Abroad Office. Credit is recorded as assigned by the study abroad adviser in cultural studies. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

Upper-Division Courses
This course is used to record credit the student earns while enrolled at another institution in a program administered by the University’s Study Abroad Office. Credit is recorded as assigned by the study abroad adviser in cultural studies. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

CMS - Communication Studies

Communication Studies: CMS
Lower-Division Courses
CMS 301. Topics in Communication Studies.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary.

Designed to help students develop skills in one-on-one interactions, small group communication, and presentation skills. Basic communication theories as they relate to skill development are explored. Three lecture hours a week for one semester. Only one of the following may be counted: Communication Studies 305, 306M, 319, Speech 305, 319.

CMS 307K. Internship.
Internship to be arranged by student and approved by instructor. Focuses on career goals of students in communication positions with public and private organizations. The equivalent of ten hours a week for one semester, for a minimum of 150 hours a semester or summer session. Communication Studies 301 (Topic: Internship) and 307K may not both be counted. Offered on the pass/fail basis only. Prerequisite: Consent of instructor.

Open to all University students. Training for participation in extracurricular speech activities, including intercollegiate debate. Two lecture hours and eight laboratory hours a week for one semester. May be taken three times for credit. May be repeated for credit.

CMS 310K (TCCN: SPCH 2333). Team-Based Communication.
Analysis of small-group communication: cohesiveness, social climate, role structure, leadership, conformity, dynamics of interaction; participation in small-group communication situations. Three lecture hours a week for one semester.

CMS 313M. Organizational Communication.
Communication processes within government, private, and volunteer organizations. Three lecture hours a week for one semester.
CMS 314L. Language, Communication, and Culture.
The role of language in communication. Analysis of the complexity of human languages, languages in contact, language modality, and communication interaction. Three lecture hours a week for one semester.

Introduction to the study of communication in relationships; topics include self-disclosure, conflict, long-distance relationships, stereotyping, and persuasion. Three lecture hours a week for one semester.

CMS 316L. Interviewing Principles and Practices.
Introduction to interviewing theory, emphasizing the acquisition and application of interviewing skills. Three lecture hours a week for one semester.

CMS 317C. Speech in American Culture.
The impact of public discourse on the ideas and issues of culture and history in the United States. Three lecture hours a week for one semester.

This course is used to record credit the student earns while enrolled at another institution in a program administered by the University's Study Abroad Office. Credit is recorded as assigned by the study abroad adviser in the appropriate College of Communication department. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

Upper-Division Courses

CMS 320. Advanced Presentation Skills.
Designed to help students develop skills in delivering informative and persuasive presentations and speeches. Study of major theories related to oral presentations. Focus on audience analysis and adaptation, building strong arguments, speech organization, and use of new technologies. Three lecture hours a week for one semester. Communication Studies 320 and 367 (Topic: Advanced Presentation Skills) may not both be counted. Prerequisite: Upper-division standing and Communication Studies 306M with a grade of at least C-.

An exploration of the special communicative dimensions of the development and philanthropy fields, including how to apply theories of building relationships and persuasion to the context of development and philanthropy for nonprofit organizations. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

CMS 322E. Communication Ethics.
Examination of the ethical issues involved in communication. Subjects addressed include our role in interactions we are party to; media coverage of issues of a sensitive or potentially harmful nature; and how our interactions with others reflect and shape who we are. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

CMS 323R. Rhetoric: East and West.
Examination of the ways people from different cultures communicate and argue, and how cultures use logic, stories, myth, images, and the spoken word to make their points. Three lecture hours a week for one semester. Communication Studies 323R and 367 (Topic: Rhetoric East and West) may not both be counted. Prerequisite: Upper-division standing.

CMS 327. Urban Communication.
Restricted to students admitted to the Semester in New York Program. Examines communication between and within cultures in urban communities, especially immigrants and marginalized groups. Special focus on understanding the role cross-cultural relations play in shaping the identity of community members. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

This course is used to record credit the student earns while enrolled at another institution in a program administered by the University's Study Abroad Office. Credit is recorded as assigned by the study abroad adviser in the Department of Communication Studies. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

The fundamental interpersonal communication processes that are involved in managing physical and mental health. Includes stigma and illness identity, social support, patient-provider communication, end-of-life care, and health education. Three lecture hours a week for one semester. Communication Studies 330 and 367 (Topic: Interpersonal Health Communication) may not both be counted. Prerequisite: Upper-division standing.

CMS 330D. Health Decision Making.
Explore the connection between evidence-based health communication practices and evidence-based health decision making. Practice making sense of complicated and ambiguous health information, and examine theoretical concepts that describe and explain how people interact with such health information. Three lecture hours a week for one semester. Communication Studies 330D and 367 (Topic: Health Decision Making) may not both be counted. Prerequisite: Upper-division standing.

CMS 330P. Communicating with Patients.
Analyze the communicative work done by healthcare providers. Examine the provider-patient encounter and the ecology of related communication processes. Three lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Upper-division standing.

CMS 331K. Speech Writing and Criticism.
Composition and analysis of oral messages; emphasis on creating and arranging ideas, style, delivery, critical method. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

CMS 332. Argumentation and Advocacy.
Nature of argumentative controversy; variables of form, method, and ethics; analysis of argumentative rhetorical works. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

CMS 332D. Digital Ethics.
Explores the ethical issues inherent in the use of digital and online media. Discusses a range of current issues and subjects through the application of important moral theories, attending to how new technologies often challenge knowledge of morality, virtue, and the good life. Analyze case studies to encourage reflection and discussion over contemporary issues in digital ethics. Subjects include the ethics of hacking, Anonymous operations, online privacy, blogging ethics, online shaming and activism, revenge pornography, online free speech, social media and virtue, as well as other contemporary topics. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.
CMS 332K. Theories of Persuasion.
A study of motivational factors involved in persuasive speaking to secure belief and action. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

Study of argumentation theories. Includes analysis of case studies taken from areas of law, public policy, popular culture, and history. Three lecture hours a week for one semester. Communication Studies 333 and 367 (Topic: Case Studies in Argumentation) may not both be counted. Prerequisite: Upper-division standing.

CMS 334F. Fake News.
Examine the interplay of journalism, satire, and propaganda in their current and historic forms - from comedians on late-night television to active measures in international espionage. Consider the social and political forces that draw us to this type of information, how to deal with it when we encounter it, and what its implications are for geopolitics in the twenty-first century and within our own participatory democracy. Three lecture hours a week for one semester. Communication Studies 334F and Communication Studies 367 (Topic: Fake News) may not both be counted. Prerequisite: Upper-division standing.

CMS 334K. Nonverbal Communication.
Survey of the effects of space, physical appearance, movement, eye behavior, and vocal behavior on interpersonal communication. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

CMS 335. Strategic Sales and Event Planning.
Theory and practice related to the preparation of large-scale sales events and conferences. Designed to develop communication skills and planning techniques. May include client research, investigation of potential venues, telephone-based information interviews, individual or group sales presentations, and event overviews. Three lecture hours a week for one semester. Communication Studies 335 and 367 (Topic: Strategic Sales and Event Planning) may not both be counted. Prerequisite: Upper-division standing and Communication Studies 306M.

CMS 337. Building Sales Relationships.
Explores the theoretical and practical role of communication in the development of long-term client relationships. Explores the consultative sales process, including prospecting, assessing needs, handling objections, presenting, closing, and following up with clients. Focuses on how technology can help or hinder communication. Three lecture hours a week for one semester. Communication Studies 337 and 367 (Topic: Communication to Build Sales Relationships) may not both be counted. Prerequisite: Upper-division standing.

CMS 337C. Selling in Healthcare Industries.
Examine opportunities related to professional sales and business development in the healthcare industry. Explore the theoretical and practical role of communication in the development of long-term client relationships. Investigate the consultative sales process, including prospecting, assessing needs, handling objections, presenting, closing, and following up with clients. One lecture hour a week for one semester.

CMS 338. Leadership Stories.
Uses fictional and nonfictional stories, as well as examples taken from virtual reality, to explore the meaning of leadership. Designed to help students develop a conceptual, practical, and personal understanding of the meaning of leadership. Three lecture hours a week for one semester. Communication Studies 338 and 367 (Topic: Stories of Leadership) may not both be counted. Prerequisite: Upper-division standing.

CMS 338L. Leadership and Public Memory.
Examines how public memory is created, shaped, and shared through processes and forms like commemorations, museum exhibits, historic sites, and monuments. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

CMS 339K. Working Virtually.
Explore the dynamics of new work arrangements and the factors that shape communication when working in dispersed work arrangements. Examine important skills for navigating these new ways of working. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

Examines fundamental principles connected to the uses and effects of new technologies. Covers social networking sites, online dating, and virtual group collaboration. Three lecture hours a week for one semester. Communication Studies 339L and Communication Studies 367 (Topic: Social Interaction in Virtual Environments) may not both be counted. Prerequisite: Upper-division standing.

Explore what it means to produce and/or possess knowledge in the digital era. Examine how the World Wide Web functions as an archive of information; how science enters public conversations in digital forums; how networked infrastructure facilitates the production of digital information; and how big data may be the future of expertise. Approach digital culture through the idea of the commons, assuming an interdisciplinary perspective, drawing insight from various literatures and methodologies. Three lecture hours a week for one semester. Communication Studies 340D and 367 (Topic: Digital Commons) may not both be counted. Prerequisite: Upper-division standing.

Analysis of how persuasion is used in mass movements: civil rights, consumerism, feminism, pacifism, religious sects. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

CMS 340M. Social Media and Social Movement: Then and Now.
Explores the role media plays in documenting and shaping the successes and failures of contemporary causes. Considers how these movements use social media to their advantage and the responses from government and other institutions. Three lecture hours a week for one semester. Communication Studies 340M and Communication Studies 367 (Topic: Social Media/Social Movement: Then/Now) may not both be counted. Prerequisite: Upper-division standing.

CMS 341. Digital Communications.
Uses communication and interdisciplinary perspectives to explore interactions involving technology. May include the study of impression formation, identity, surveillance, privacy, distributed teams, trust and deception, online gaming, social support, and uses and impacts of new information and communication technology. Three lecture hours a week for one semester. Communication Studies 341 and 367 (Topic: Computer-Mediated Communication) may not both be counted. Prerequisite: Upper-division standing.

CMS 342C. Communication and Civic Participation.
An exploration of the status of American democracy, particularly as it pertains to those born between 1960 and 1990. Subjects include the meaning of citizenship and democratic participation, and the strengths and limitations of marketing efforts targeted at getting youth involved in the democratic system. Three lecture hours a week for one semester. Communication Studies 342C and 367 (Topic: Communication and Civic
Participation) may not both be counted. Prerequisite: Upper-division standing.

**CMS 342K. Political Communication.**
A study of the role of symbols in political communication and the techniques and strategies employed by politicians; special attention is given to recent election campaigns. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

**CMS 344K. Lying and Deception.**
Examines lying and deception as civil, strategic, and manipulative behavior. Secrets, privacy, disclosures, and confidentiality are examined in a variety of familiar contexts. Three lecture hours a week for one semester. Communication Studies 344K and 367 (Topic: Lying and Deception) may not both be counted. Prerequisite: Forty-five semester hours of coursework.

**CMS 345. Media Effects and Politics.**
The theoretical models and research methods used to study media effects. Emphasis on the political implications of media-effects research and on how media-effects theories can help clarify political issues. May include television violence, the political impact of the news, and the use of media for educational purposes. Three lecture hours a week for one semester. Communication Studies 345 and 367 (Topic: Media Effects and Politics) may not both be counted. Prerequisite: Upper-division standing.

**CMS 345G. Communicating to Government.**
Analyze confident, effective, and ethical communication in regards to policy makers, elected officials, legislative and governmental agencies. Discussion of legal and ethical considerations introduced by governmental communications, as well as strategies and materials for effective communication. Includes guest speakers, and interactive opportunities around the Texas legislature and/or local governmental bodies. Three lecture hours a week for one semester. Communication Studies 345G and 367 (Topic: Communicating to Government) may not both be counted. Prerequisite: Upper-division standing.

**CMS 345K. Perspectives on Rhetoric.**
Four different meanings of rhetoric; how these meanings contribute to the current understanding of communication studies. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

**CMS 345N. Political Narratives.**
Examines stories and how they are told during political rituals, under campaign pressures, on the nightly news, and in the daily newspaper: visually, verbally, online, and in person. Three lecture hours a week for one semester Communication Studies 345N and 367 (Topic: Political Narratives) may not both be counted. Prerequisite: Upper-division standing.

**CMS 345P. Communication and Public Opinion.**
An investigation of the definition and measurement of public opinion. Explores the relationship between communication and public opinion, how changes to public opinion are affected, and the influence of perception of public opinion on personal opinion. Communication Studies 345P and 367 (Topic: Communication and Public Opinion) may not both be counted. Prerequisite: Upper-division standing.

**CMS 345V. American Voices.**
Examines what is most distinctive about American speech, American film, American advertising, American politics, the American press. Three lecture hours a week for one semester. Communication 370 (Topic: American Voices) and Communication Studies 345V may not both be counted. Prerequisite: Upper-division standing.

**CMS 346. Using Communication Technology at Work.**
Examines how communication technologies affect workplace communication. Considers case studies involving the use of social networking, handheld devices, and e-mail for for-profit and nonprofit organizations. Three lecture hours a week for one semester. Communication Studies 346 and 367 (Topic: Using Communication Technology at Work) may not both be counted. Prerequisite: Upper-division standing.

**CMS 346C. The Cultural Impact of Innovation.**
Examine the fundamentals of humanistic thought for both critiquing and creating innovation. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

**CMS 347E. Arguing the End of the World.**
Discussion of apocalyptic, millenarian, or millenialism way of thinking and how it affects religious, social, and other personal beliefs. The equivalent of three lecture hours a week for one semester. Communication Studies 347E and 367 (Topic: Arguing the End of the World) may not both be counted. Prerequisite: Upper-division standing.

**CMS 347K. Rhetoric of Popular Culture.**
The ways that film, television, music, fashion, the Internet, and other discourses of popular culture influence public attitudes, perceptions, and social relations. Three lecture hours a week for one semester. Communication Studies 347K and 367 (Topic: Rhetoric of Popular Culture) may not both be counted. Prerequisite: Upper-division standing.

**CMS 347S. Communicating with Stuff.**
Examine how we use material objects and actions as a means of communication, especially objects found in popular culture. Three lecture hours a week for one semester. Communication Studies 347S and 367 (Topic: Communicating with Stuff) may not both be counted. Prerequisite: Upper-division standing.

**CMS 348. Communication Research Methods.**
A practical introduction to research methods, focusing on designing a study, conducting research, analyzing data, and presenting results. Studies survey design, interviews, focus groups, and experiments. Three lecture hours a week for one semester. Communication Studies 348 and 367 (Topic: Communication Research Methods) may not both be counted. Prerequisite: Upper-division standing.

**CMS 348K. Visual Media and Interaction.**
The role of visual resources and symbols in social interaction and public life; the representation of interaction and human relationships in visual media (photography, advertising, fine arts, and film). Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

**CMS 349M. Advanced Analysis of Popular Culture.**
Advanced critique and analysis of rhetorical dimensions in texts of popular culture. Readings in theory and methods for understanding persuasive influence in television, film, music videos, and the Internet. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

**CMS 350C. Crowds, Clouds, and Community.**
Examines the use of social network theory and analysis to understand the connectivity and complexity of teams, families, organizations, and communities. Considers examples of network analytic approaches to theorize, visualize, analyze, and understand, for example, criminal networks, professional service firms, government contracting, social
media platforms, virtual worlds, interorganizational dynamics, post disaster recovery, and ad hoc organizational forms. Three lecture hours a week for one semester. Communication Studies 350C and 367 (Topic: Crowds/Clouds/Community) may not both be counted. Prerequisite: Upper-division standing.

**CMS 350M. Field Study in Organizational Communication.**

Students acquire information through interviews and observation, devise appropriate coding schemes, and compose synoptic reports of their findings and recommendations. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

**CMS 351. Communication for Cooperation and Competition.**

Theoretical perspectives and experiential learning on the ways people reconcile the need to be individualistic (competitive) with the need to be community members (cooperative). Individual aggression and submission; the rewards of competition and cooperation; and organizational structures that lead to cooperation and competition. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

**CMS 352. Organizational Leadership.**

Theories, styles, and components of organizational leadership; communication behaviors of leaders in organizations. History of the study of leadership; new theories and concepts related to leaders as managers of organizational culture and change. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

**CMS 352D. The Dark Side of Organizational Communication.**

Examine key organizational processes that often operate in the shadows through a communication-based approach. Assess how individuals and organizations respond ethically to these processes. Survey hidden organizations and the ethical response to dark collectives in society. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

**CMS 353C. Communication for Innovation.**

Examines the critical role that communication and communicative processes play in developing innovative ideas, products, and ways of approaching problems. Analyze behavioral theories and empirical studies to understand the challenges associated with facilitating innovation in organizations and learn strategies for improving work effectiveness. Subjects include motivation, decision making, organizational culture, information sharing, and idea generation. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

**CMS 353S. Social Media and Organizations.**

Explores the relationship between social media use and organizational communication. Subjects include how organizations use social media for communication with external stakeholders and to facilitate internal communications processes. Three lecture hours a week for one semester. Communication Studies 353S and 367 (Topic: Social Media and Organizations) may not both be counted. Prerequisite: Upper-division standing.

**CMS 354. Conflict Resolution.**

Systematic analysis of conflict and communication to examine some of the effects of communication on conflict and of conflict on communication. Readings, analysis of conflicts, and practice with and evaluation of communication behaviors thought to be effective in conflict talk. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

**CMS 355K. Intercultural Communication.**

Theories of speech and language that concern interaction between persons from different cultures who speak different languages or dialects. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

**CMS 355S. Communicating with Animals.**

Introduction to research and writing about communication among animals and between animals and their human caretakers. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

**CMS 355T. Communication and Thought.**

Integrates the emergence of collaborative thought from human communication. Analysis of language and communicative development, conversational pragmatics, perspective-taking, and social network analysis. Three lecture hours a week for one semester. Communication Studies 355T and 367 (Topic: Communication and Thought) may not both be counted. Prerequisite: Upper-division standing.

**CMS 356C. Collective Action.**

Examine how globalization and technology have impacted how people organize and communicate to achieve better collective outcomes about public good. Three lecture hours a week for one semester. Only one of the following may be counted: Communication 370H (Topic: Collective Action), Communication Studies 356C, 367 (Topic: Collective Action). Prerequisite: Upper-division standing.

**CMS 356T. Organizational Transparency.**

Examine fundamental dynamics of transparency as a form of communication. Explore a range of problems related to organizational transparency and critically assess organizational transparency as an ethical practice. Three lecture hours a week for one semester. Communication Studies 356T and 367 (Topic: Organizational Transparency) may not both be counted. Prerequisite: Upper-division standing.

**CMS 357. Family Communication.**

Some of the common issues that face those who live in, counsel, and conduct research with families. The development of traditional families in the United States, different family structures that make up modern society, current issues that affect families, and the impact of communication on family experiences. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

**CMS 358. Communication and Personal Relationships.**

The nature of human interaction in various types of relationships (friends, dates, spouses, roommates), the nature of communication at different stages in a relationship, and the nature of communication at different life stages. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

**CMS 358C. Identity In Relationships.**

Examine the influence of the unique combination of gender, ethnicity, age, sexual orientation, education, income, ability, and more as they relate to relationships with friends, families, partners, and selves. Three lecture hours a week for one semester. Communication Studies 358C and 367 (Topic: Identity in Relationships) may not both be counted. Prerequisite: Upper-division standing.

**CMS 359. Language, Culture, and Communication of Hip-Hop.**

Uses hip-hop music as a model for understanding a speech community. Focuses on language innovation and the creation of new social networks, forms of communication, and cultural meaning and values. Three lecture hours a week for one semester. Communication Studies
359 and 367 (Topic: Language, Culture, and Communication in the Hip-Hop Nation) may not both be counted. Prerequisite: Upper-division standing.

CMS 359C. Inside the American Conversation.
A look at a handful of conversations in America, from phone calls between family members and dating couples in the 1980s, contemporary 'hybrid' face-to-face/cell-phone conversations to interviews with Donald Trump and 'The Wire'. Explores what these conversations tell us about social life and how it changes, about people's concerns, cultural difference, and the diversity of ways of using language that is a hallmark of American society. Three lecture hours a week for one semester. Communication Studies 359C and 367 (Topic: Inside the American Conversation) may not both be counted. Prerequisite: Upper-division standing.

CMS 359H. Honors Tutorial Course: Reading.
Intensive reading and research as planned by the departmental honors committee. Individual instruction. Prerequisite: Upper-division standing and admission to the Communication Studies Honors Program.

CMS 359T. How People Talk.
Explore how people creatively use, manipulate, and re-invent language when they talk to each other. Examine qualitative research methods, including conversation and discourse analysis, interactional sociolinguistics, ethnography of speaking, and microethnography. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

Introduction to concepts and research methods related to the study of how verbal and nonverbal communication is used in everyday situations. Includes collecting and analyzing sound and video data. Designed to help students develop skills in interpreting human social interactions. Three lecture hours a week for one semester. Communication Studies 360 and 367 (Topic: Language and the Body in Social Interaction) may not both be counted. Prerequisite: Upper-division standing.

CMS 360P. Expertise and Public Culture.
Introduction to the various functions that scientists and other experts serve in public discourse. Explore how scientists and experts influence public opinion, policy, and cultural attitudes. Examine how new media habits and digital networks offer platforms for experts and laypersons to communicate. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

CMS 360R. Virtual Rhetoric.
Examine how the universal presence of visual imagery makes it difficult to critically evaluate the images we see. Practice evaluating visual arguments to become a more critical consumer of visual communication. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

CMS 362D. Decolonizing Communication Studies.
Examine the intersections of race, ethnicity, nationality, language, gender, and other aspects of identity marginalization related to communication theories and practices. Survey theories of decolonization and how to apply those in communication studies. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

CMS 362E. Environmental Communication.
Explore various environmental philosophies as they relate to communication contexts. Assess how communication plays a role in environmental issues such as journalism and news reporting, sustainability, consumerism, politics, environmental organizations, and ecotourism. Examine how environmental theories and communication contexts play out in local, national, and international debates and contexts. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

CMS 363C. Communication and Sports.
Explore interpersonal, mediated, organizational, and public communication in sports. Examine foundational myths and metaphors that demonstrate the various ways in which sport is used to communicate in public life. Three lecture hours a week for one semester. Communication Studies 363C and 367 (Topic: Communication and Sports) may not both be counted. Prerequisite: Upper-division standing.

CMS 363P. Politics and Protest in Sports.
Examine history to understand how and why sports can be powerful for contemporary political communication and symbolism. Three lecture hours a week for one semester. Communication Studies 363P and 367 (Topic: Politics/Protest in Sports) may not both be counted. Prerequisite: Upper-division standing.

CMS 364K. Gender and Communication.
Focuses on how communication influences ideas about sex, gender, and identity, from interpersonal relationships to the mass media, and from legislative debates to social movements. Three lecture hours a week for one semester. Communication Studies 364K and 367 (Topic: Gender and Communication) may not both be counted. Prerequisite: Upper-division standing.

CMS 164M, 264M, 364M. Pre-Graduate School Mentorship.
Introduction for undergraduates to graduate study in a discipline of their choosing. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. With consent of the department chair, may be repeated for credit, but no more than three hours may be taken. Prerequisite: Consent of instructor.

CMS 365K. Male-Female Communication.
Same as Women's and Gender Studies 345 (Topic 21: Male-Female Communication). Studies of speech patterns related to the concepts of male and female, including sexism in speaking, patterns of male and female speaking, patterns of listening to males and females, speech in courtship and family, speech and sexual discrimination in careers. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

CMS 365L. Communication, Controversy, and Citizenship.
Designed to help students develop the listening, speaking, and argumentation skills used to deliberate over controversial and sensitive subjects. Deliberations focus primarily on the meaning of citizenship. Three lecture hours a week for one semester. Communication Studies 365L and 367 (Topic: Communication, Controversy, and Citizenship) may not both be counted. Prerequisite: Upper-division standing.

Covers ideas about human symbolism and discourse; focuses on the effects of rhetorical perspectives on how people make meaning of the world. Three lecture hours a week for one semester. Communication Studies 366 and 367 (Topic: Love, Democracy, and Rhetoric) may not both be counted. Prerequisite: Upper-division standing.

CMS 366C. Celebrity Culture.
Examines the importance of fame and celebrity throughout the nineteenth, twentieth, and twenty-first centuries, in relation to education, entertainment, and politics. Three lecture hours a week for one semester.
Communication Studies 366C and 367 (Topic: Celebrity Culture) may not both be counted. Prerequisite: Upper-division standing.

CMS 366D. Rhetoric of Horror.
A survey of horror studies keyed specifically to rhetorical issues, or the ways in which horror literature, cinema, and television influence people by rehearsing social problems in disguise. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

CMS 366F. Rhetoric of Film.
Film theory and history taught from a rhetorical perspective. Covers the film industry, technology, and the elements of narrative, image, and sound. Emphasis on theory about film and film criticism. Three lecture hours a week for one semester. Communication Studies 366F and 367 (Topic: Rhetoric of Film) may not both be counted. Prerequisite: Upper-division standing.

Explores music and its relation to identity; how gender, race, and sexual identity are constructed with and within musical texts; meanings and importance of authenticity; and the effectiveness of music as a political tool. Three lecture hours a week for one semester. Communication Studies 366M and 367 (Topic: Rhetoric and Popular Music) may not both be counted. Prerequisite: Upper-division standing.

CMS 366S. Science Fiction and Communication.
Examine major concepts in science fiction, with an emphasis on science fiction film adaptation (from novel to screen). Explore theories of communication implied by science fiction. Three lecture hours a week for one semester. Communication Studies 366S and 367 (Topic: Comm & Science Fiction) may not both be counted. Prerequisite: Upper-division standing.

CMS 367. Topics in Communication Studies.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Upper-division standing; additional prerequisites vary with the topic.

Topic 1: Applied Interpersonal Communication.
Topic 2: Campaign Communication.
Topic 3: Communication and Thought. Investigates the emergence of collaborative thought from human communication.
Topic 5: Ethnography of Live Music in Austin. Explores music and musicians in Austin, with a focus on ethnographic research through observation, interviews, analysis, and writing.
Topic 6: Pragmatism and Group Dynamics. Explores how individual beliefs and expectations determine the quality of group communication.
Topic 10: Global Communication. Explore a broad history of global connections, global policies, and legal frameworks. Develop global communication strategies and tactics. Examine intercultural communication, cultural humility, and cultural competence.

CMS 367C. Topics in Corporate Communication.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Upper-division standing.

Topic 1: Corporate Identity, Image, and Reputation. Examine the fundamental role that communication plays in corporate identity development, image creation, and reputation management, and how those interrelated constructs relate to various other organizational processes. Communication Studies 367C (Topic: Corp Identity/Image/Reputation) and 367C (Topic 1) may not both be counted.

Topic 2: Crafting Corporate Communication Messages. Practice crafting a variety of professional messages that are clear, concise, audience-specific, and that effectively achieve their goal.

CMS 367I. Topics in Interpersonal Communication.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Upper-division standing.

Topic 1: Immigration and Communication. Explore a range of immigration subjects and analyze literature from a social ecological framework to uncover the theoretical and practical implications of research on communication and immigration.
Topic 2: Risk Communication. Analyze areas such as risk assessment, risk perception, message design, media options, and barriers to effective risk communication. Consider how access to risk information, perceptions of risk, and reactions to risk messages vary depending on the audience. Communication Studies 367I (Topic 2) and 367I (Topic: Risk Communication) may not both be counted.

Topic 3: Dark Side of Interpersonal Communication. Examine recent and noteworthy scholarship in the social scientific literature regarding the often-stigmatized processes of interpersonal/relational communication. Distinguish aspects of communication that are typically seen as dysfunctional, problematic, and destructive; aspects of communication that appear to be negative but also serve a function or produce desirable outcomes; and aspects of communication that are poorly understood or hidden in the shadows of other scholarly work. Communication Studies 367I (Topic: Dark Side of Interpersonal) and 367I (Topic 3) may not both be counted.

CMS 367P. Topics in Political Communication.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Upper-division standing.

Topic 1: Social Media and Politics. Explore how ordinary citizens, politicians, and activists engage with politics on social media platforms. Trace the effects such political engagement has on both the political landscape and the platforms themselves. Analyze how communication theories around self presentation, imagined audience, affordances, and identity shape political communication on social media. Communication Studies 367P (Topic 1) and 367P (Topic: Social Media and Politics) may not both be counted.

Topic 2: Social Media Analysis. Analyze content on social media platforms using computational methods. Use the Python programming language to understand how individuals, companies, political campaigns, and social movements communicate using social media to advance their goals. Combine data collection, analysis, and visualization to develop insights using social media data.

Restricted to communication studies majors. Internships to be arranged by student and approved by instructor. Focuses on career goals of students in communication positions with public and private organizations. For 370K, an average of 10 hours of work a week, for a total of at least 150 hours a semester or summer session; for 670K, an average of 20 hours of work a week, for a total of at least 300 hours a semester or summer session. Offered on the pass/fail basis only. Prerequisite: Upper-division standing; twelve semester hours of communication studies with a grade of at least C; and a University grade point average of at least 2.25.

CMS 371D. Difficult Conversations.
Explores the interpersonal, social, and language factors that impact difficult conversations. Three lecture hours a week for one semester.
Communication Studies 367 (Topic: Difficult Conversations) and 371D may not both be counted. Prerequisite: Upper-division standing.

CMS 371K. Practicum in Conflict Mediation.
Provides hands-on training and practice in conflict intervention techniques, including various forms of mediation, facilitation, and dialogue. Two lecture hours and three discussion hours a week for one semester. Prerequisite: Upper-division standing.

CMS 171M. Communication Studies Internship.
Internship and discussion hours to be arranged. Offered on the pass/fail basis only. Prerequisite: Communication Studies 370K; consent of departmental internship coordinator; and completion of departmental requirements for enrollment in an internship course.

Explores issues of power in our nation's capital. Students study Washington, DC via visits to sites around the city. One three-hour field trip a week for one semester. Taught in Washington, DC. Communication Studies 372D and 374D may not both be counted. Prerequisite: Consent of the department.

CMS 372K. Advanced Organizational Communication.
In-depth discussion and treatment of advanced organizational communication topics, including socialization and role development, workplace attachments, organizational culture, ethics, structure, conflict, power, decision making and empowerment, technology, and various forms of external communication with relevant organizational stakeholders. Three lecture hours a week for one semester. Prerequisite: Consent of the department and Communication Studies 313M with a grade of at least C-.

CMS 372T. Time Matters.
An exploration of twentieth and twenty-first century time management issues resulting from the development of communication technologies. Subjects include the concept of twenty-four-hour, seven-day-a-week availability; information overload; increased work hours; sleep deprivation; hurry sickness; multitasking; the human experience of time across diverse social, cultural, and historical contexts; and other time-related issues that shape, and are shaped by, communication behaviors. Three lecture hours a week for one semester. Communication Studies 367 (Topic: Time Matters) and 372T may not both be counted. Prerequisite: Upper-division standing.

CMS 373D. Advocacy and Politics.
An introduction to the issues faced when advocating for an issue, idea, or one's self. The course aims to have students grasp concepts they will see and experience during their internship in Washington, DC. Eight conference hours a day for six days, for the equivalent of three lecture hours a week for one semester. Taught in Washington, DC. Prerequisite: Consent of the department.

CMS 177K, 377K, 477K. Faculty-Initiated Research.
Supervised research on a project designed by a faculty member. Individual instruction. No more than six semester hours in the following courses may be counted: Communication Studies 177K, 377K, 477K, 178K, 278K, 378K, 478K, 578K, 678K. Prerequisite: Upper-division standing, twelve semester hours of coursework in communication studies, a University grade point average of at least 2.50, and consent of instructor and the department.

Supervised independent research on a project initiated, designed, and implemented by the student. Student secures consent of a faculty member willing to supervise the project prior to registering. Individual instruction. No more than six semester hours in the following courses may be counted: Communication Studies 177K, 377K, 477K, 178K, 278K, 378K, 478K, 578K, 678K. Prerequisite: Upper-division standing, twelve semester hours of coursework in communication studies, a University grade point average of at least 2.50, and consent of instructor and the department; Communication Studies 177K, 377K, 477K is recommended.

CMS 379H. Honors Tutorial Course: Special Project.
The writing of a thesis or the presentation of a creative project; final comprehensive examination. Individual instruction. Prerequisite: Communication Studies 359H.

Graduate Courses

Readings in the literature of communication studies designed to expand the graduate student's opportunity for individual consultation both in research and in informational aspects of the work. One, two, three, or four conference hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing.

CMS 081M. Introduction to Graduate Studies in Human Communication.
Discussion of communication research, theory, and professional development. One lecture hour a week for one semester. Prerequisite: Admission to the graduate program in communication studies.

CMS 383K. Communication Theory.
Survey of philosophical and language-based approaches to communication; theory construction, research practices, scholarly writing. Three lecture hours a week for one semester. Prerequisite: Graduate standing. Some sections also require consent of instructor or the graduate adviser; these are identified in the Course Schedule.

CMS 384K. Communication and Ethnography.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

Topic 3: Microethnography of Interaction. Introduction to the study of details of human interaction: the moment-by-moment organization of speech and embodied communication; the roles of different media of communication, such as language, gesture, and space; the construction of context; uses of the material environment; and the distribution of information in collaborative work settings.

Topic 4: Communication and Ethnography. Studies the use of language and communication in ethnographic methods, data collected, and in final reports in a broad range of approaches such as observation and participant-observation, field notes, surveys, interviews of various kinds, textual analysis, and experimental interventions.

CMS 386H. Seminar in Health Communication.
Theory and research in health communication. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing. Some sections also require consent of instructor or the graduate adviser.

Topic 1: Managing Health Information. Introduction to research and theories that examine why and how people exchange, conceal, and otherwise interact with health-related information. Explores the antecedents, processes, and outcomes of communicating about matters of health and illness, with a focus on implications for personal well-being, relational quality, and public health.
Communication Studies 386H (Topic 1) and 386P (Topic: Managing Health Information) may not both be counted.

**Topic 2: Interdisciplinary Seminar in Health Communication.**
Exploration of the interdisciplinary nature of health communication from an ecological perspective, ranging from intra-personal and interpersonal factors through the roles of populations and policies. Examination of the contributions to health communication from diverse disciplines including healthcare, public health, communication, and psychology. Explores issues related to research, practice, leadership, and partnerships. Additional prerequisite: For masters students, consent of instructor.

**Topic 3: Communicating with Patients.** Examine communication research, theory, and skill development relevant to health provider and patient encounters of all kinds. Additional prerequisite: Graduate standing.

**CMS 386K. Theories of Interpersonal Communication.**
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing. Some sections also require consent of instructor or the graduate adviser; these are identified in the Course Schedule.

**Topic 1: Interpersonal Communication Theory.** Exploration of theoretical perspectives such as general systems theory; symbolic interactionism; rules theory; theories of language and nonverbal coding; theories of meaning; theories of information processing; and theories of persuasion. Theories pertinent to interpersonal, group, and mass interaction.

**Topic 4: Discourse Analysis.** Examines similarities and differences in the main kinds of discourse analysis and their basic assumptions and typical questions. Designed to develop skills at examining a piece of text or lecture to produce persuasive scholarly analysis.

**CMS 386L. Group Communication.**
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing. Some sections also require consent of instructor or the graduate adviser; these are identified in the Course Schedule.

**Topic 1: Group Communication Processes.** Study of theory and research in the dynamics of small groups, with emphasis on the interaction of message variables with other variables such as leadership, affiliation, cohesiveness, and social power.

**Topic 3: Communicating in Groups and Teams.** Focuses on the concepts and theories of communicative processes in task-oriented groups and work teams. Readings cover theory and research related to communication problems, dynamics, and practices in group and team settings. May also include the study of team development, decision making, and trends in group communication research.

**CMS 386N. Research in Communication Studies.**
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

**Topic 1: Quantitative Research Methods.** Broad coverage of social scientific techniques for collecting and analyzing communication data; includes measurement, design, and other areas. Some sections focus on organizational research.

**Topic 2: Qualitative Research Methods.** The use of observational and interviewing research techniques for studying human communication.

**CMS 386P. Issues in Interpersonal Communication.**
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing. Some sections also require consent of instructor or the graduate adviser.

**Topic 1: Nonverbal Communication.** Current theory and research in such areas as involvement and intimacy, gender, touch, space, environment, nonverbal behavior in children, appearance, and lying. Various methods and measurement techniques for assessing eye gaze, body motion, facial actions, vocal signals, and multichannel events.

**Topic 5: Negative Interpersonal Communication.** An overview of negative features of communication in interpersonal relationships. Examines avoidance, secrets, conflict, relational transgressions, negative emotions, and aggression and abuse.

**Topic 6: Dark Side of Interpersonal Communication.** Provides an overview of issues related to the "dark side" of communication in interpersonal relationships. Subjects include undesired features of interpersonal relationships, seemingly productive communication patterns that are dysfunctional, as well as seemingly destructive patterns that are functional. Communication Studies 386P (Topic: Dark Side of Interpersonal Communication) and 386P (Topic 6) may not both be counted.

**Topic 7: Stereotyping and Prejudice in Interpersonal Communication.** Examines problems posed by stereotyping and prejudice in interpersonal communication, and the research and theory aimed at reducing their impact. Designed to provide opportunities to seek constructive ways of defining and addressing stereotyping and prejudice; emphasis on recent research in the formation, maintenance, and application of stereotypes.

**Topic 8: Metaphor in Communication.** Examines the conceptual structure and expressive forms of the metaphor. Includes the study of classical and contemporary treatment of metaphor in linguistics, philosophy, and rhetoric. Also includes recent social scientific research on the use of figurative devices, such as metaphor, analogy, idiom, hyperbole, and euphemism, in strategic communication, specifically in managerial communication, political speeches, and religious discourse.

**Topic 9: Perspective Taking.** Examines social scientific research and theories that illuminate human ability to understand or adopt the perspective of others.

**Topic 10: Stress and Coping.** Exploration of how people interact with each other and with their environments during times of change and stress, including the emotions, cognitions, and behaviors that occur when people talk about upsetting or traumatic events and circumstances. Communication Studies 386P (Topic: Stress & Coping) and 386P (Topic 10) may not both be counted.

**Topic 11: Advocacy.** Communication Studies 386P (Topic: Advocacy) and 386P (Topic 11) may not both be counted.

**Topic 12: Language, Persuasion, and Social Influence.** Examine how people employ and exploit linguistic precision, flexibility, and creativity in the service of influencing the beliefs and attitudes of others. Communication Studies 386P (Topic: Lang Persuasion/Soc Influence) and 386P (Topic 12) may not both be counted.

**CMS 386R. Issues in Relational Communication.**
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

**Topic 1: Communication in Relationships.** Theories of development and change; research methods; relationship types; gender and roles; emotion; self-disclosure; secrets; lying; compliments; conflict; complaints; persuasion; dissolution processes; rejuvenating, repairing, and maintaining relationships.

**Topic 2: Family Communication.** Communication and attraction, courtship, marriage, the role of children in the marital relationship, sibling relationships, the effect of spouses’ occupations on the family, and dysfunctional families.
CMS 386S. Communication, Cognition, and Emotion.
The cognitive elements involved in social interaction, such as memory, comprehension, plans, decision making, and schemas. Three lecture hours a week for one semester. Prerequisite: Graduate standing. Some sections also require consent of instructor or the graduate adviser; these are identified in the Course Schedule.

CMS 388C, 688C, 988C. Doctoral Comprehensive Examination Preparation.
Restricted enrollment; contact the department for permission to register. Research and reading in preparation for doctoral comprehensive examinations in communication studies. May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Graduate standing.

CMS 389C. Seminar in Peace and Conflict.
A survey of the literature and research in the communication of peace and conflict. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing. Some topics also require consent of instructor or the graduate adviser.

Topic 1: Conflict and Communication. Focus on the relationships between social structures and communication as they relate to conflict. Explores research on interpersonal conflict, theory and research on intercultural/socio-cultural communication, identity, and language. Analyze how gender, race, culture, region, age, class & sexual orientation, national identities, and so on are developed & reflected in communication. Only one of the following may be counted: Communication Studies 386P (Topic: Conflict and Communication), 389C (Topic: Communication & Conflict), 389C (Topic 1).

CMS 090F. Research Internship.
Participation in faculty-supervised research during the second full year of doctoral study. The equivalent of one lecture hour a week for one semester. Prerequisite: Graduate standing and eighteen semester hours of graduate credit at the doctoral level.

CMS 390M. Seminar in Language, Culture, and Interaction.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing; some sections also require consent of instructor or the graduate adviser.

Topic 2: Intercultural Communication. A selective and critical overview of current approaches to intercultural communication in disciplines such as communication studies, sociology, sociolinguistics, conversation analysis, and anthropology. Only one of the following may be counted: Communication Studies 383L (Topic: Intercultural Communication), 390M (Topic: Intercultural Communication), 390M (Topic 2).

Topic 3: The Body in Communication. Exploration of embodied interaction as 'intercorporeality' and provides students with a methodology for research on bodily practices of communication and social action. Communication Studies 390M (Topic: Body in Communication) and 390M (Topic 3) may not both be counted.

Topic 4: Conversation Analysis. The foundations of an interaction-based understanding of language. Texts reflect the evolution of the conversation-analytic paradigm of interaction and language study, and students explore the core organizations that conversation analysts have investigated: turn-taking, repair, turn-construction/action-design, recipient-design, and others. Only one of the following may be counted: Communication Studies 390M (Topic: Conversation Analysis), 390M (Topic 1), 390M (Topic 4).

Topic 5: Language. Introduction to the evolution, structure, and cultural foundations of human language, grounded in advanced contemporary work in anthropology, communication studies, and linguistics.

Topic 6: Analyzing Embodied Communication. Exploration of embodied interaction as 'intercorporeality' and provides students with a methodology for research on bodily practices of communication and social action. Communication Studies 390M (Topic: Analyzing Embodied Communication) and 390M (Topic 6) may not both be counted.

CMS 390N. Political Discourse.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

Topic 2: Rhetoric of Social Movements. Philosophies, strategies, and effects of modern sociopolitical and religious movements designed to produce change.

Topic 3: Campaign Communication. An introduction to research surrounding the actors and texts of political campaigns. Covers voters, candidates, consultants, new constituencies, advertisements, debates, speeches, news coverage, party conventions, and new media environments. Focuses on how political discourse affects political life in the United States.

Topic 5: Politics, Media, and the Individual. Current research and theory in the area of media and politics with particular emphasis on individual-level effects.

Topic 6: Communication and Public Opinion. Explores questions concerning communication, the media, and public opinion. Theoretical and empirical research from sociology, political science, social psychology, and mass communication may be discussed. Communication Studies 390N (Topic: Communication & Public Opinion) and 390N (Topic 6) may not both be counted.

Topic 7: Political Language. Explore an overview of political language, including questions such as: What makes political language “political?” Has such language changed in character over time? Do political styles differ from culture to culture? Do the mass media change how politicians talk? How are social media affecting citizens’ patterns of political engagement? Communication Studies 390N (Topic: Political Language) and 390N (Topic 7) may not both be counted.

Topic 8: Social Media Effects. Examine the effects of social media on society, with a particular emphasis on social media’s political effects, the empirical evidence, newer methodologies, and what we know and do not know.

CMS 390P. Rhetorical Theory.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

Topic 1: Contemporary Rhetorical Theory. Investigation of recent definitions, issues, and trends in rhetorical theory, with emphasis on the philosophical bases of rhetoric and the relationship of rhetoric to other disciplines.

Topic 4: Burke and Symbolic Form. Covers a selection of books by rhetorical theorist Kenneth Burke, as well as books and articles by recent scholars that use his ideas.

Topic 5: Foundations of Rhetorical Theory. Examines historical writings about rhetoric in the Western tradition, up through the Enlightenment. Covers various important figures in the history of rhetoric, including Plato, the sophists, Aristotle, Cicero, Quintilian, Augustine, Christine de Pizan, Vico, and Ramus.

Topic 6: Rhetoric of Style. A consideration of social style, including dress, entertainment, vehicles, and living arrangements as a system of communication. Special emphasis on the expressive and practical functions of such symbolic displays.
Topic 7: Rhetoric and Ideology. Explores Marxist contributions to rhetorical theory and criticism, with emphasis on ideology and hegemony.

Topic 8: Rhetoric of Publics and Counterpublics. Investigation of the role of rhetoric in public life in capitalism in history and today. Covers the roles of rhetoric and rhetorical criticism in the production and maintenance of publics, and discusses the formation and activities of social movements.

Topic 9: Narrative, Myth, and Rhetoric. Engages two important and interrelated areas of study in rhetoric: narrative and myth. Explores the psychological foundations of myths, how mythic criticism might proceed, as well as critiques of mythic criticism from a variety of disciplines.

Topic 10: History of Communicative Inquiry. Explore the conceptual and disciplinary history of “the object” of a given academic field and the various ways in which subjects have conceived of the object, from the “reason” of philosophers to what counts as knowledge in the humanities and social sciences. Communication Studies 390P (Topic: History of Comm Inquiry) and 390P (Topic 10) may not both be counted.

CMS 390R. Seminar in Rhetorical Criticism.

Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

Topic 1: Basic Rhetorical Criticism. Elementary methods of analyzing public discourse, including the ways and the reasons that rhetorical analysis is attempted.

Topic 2: Advanced Rhetorical Criticism. Survey of six popular schools of thought, including dramatism, Marxism, and structuralism, and their implications for textual analysis.

Topic 3: Feminist Theory and Rhetorical Criticism. In-depth consideration of the premises underlying American and European feminism and the effects of such premises on critical experience. Special attention to the ways contemporary texts become gendered.

Topic 4: Rhetoric and Popular Culture. Survey of the ways film, television, popular literature, and consumer culture influence our attitudes and values. Consideration of a wide variety of contemporary theorists as well as experience in analyzing contemporary textual artifacts.

Topic 6: The Object. Investigation of conceptual and disciplinary anxieties about the object of speech in relation to the history of communication studies, and the deliberate jettisoning of the object in relationship to the history of cultural studies.

Topic 7: The Subject. Survey of contemporary theory with attention to subjectivity. Authors may include Alain Badiou, Judith Butler, Jodi Dean, Gilles Deleuze, Rene Descartes, Michel Foucault, Immanuel Levinas, Karl Marx, Friedrich Nietzsche, and Slavoj Zizek.

Topic 8: Idiom of Haunting. Examines haunting as a central experience of modern subjectivity rooted in the ontological concept of communication. Explores, through the idiom of haunting and ghosts, how the arrival of postmodernity (particularly in respect to mass media technology) has altered how we think about communication and subjectivity in both popular and scholarly ways.

Topic 9: Rhetoric and Psychoanalysis. A survey of the various schools of psychoanalysis, and the ways scholars have related psychoanalysis to the object of rhetoric.

Topic 10: Theories of Subjectivity. Survey of contemporary theory with attention to subjectivity. Authors may include Alain Badiou, Judith Butler, Jodi Dean, Gilles Deleuze, Rene Descartes, Michel Foucault, Immanuel Levinas, Karl Marx, Friedrich Nietzsche, and Slavoj Zizek. Only one of the following may be counted: Communication Studies 390R (Topic: The Subject), 390R (Topic 7), 390R (Topic 10).

CMS 390S. Seminar in Organizational Communication.

Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing; additional prerequisites vary with the topic.

Topic 1: Narrative Communication in Organizations. Current theories of narrative and their applications to organizations. Topics include gossip, day-to-day news, and dramatic enactments of organizational communication.

Topic 2: Power and Politics in Organizational Communication. The communication implications of sociological and managerial approaches to the study of power and politics, with emphasis on ideas about structure, culture, ideology, information, conformity, voice, and dissent.

Topic 6: Social Network Analysis. Focus on quantitatively and qualitatively mapping and measuring the connections, relationships, and flows between entities, such as individuals, teams, groups, organizations, and other information sources. Communication Studies 390S (Topic: Social Network Analysis) and 390S (Topic 6) may not both be counted.

Topic 7: On Time. Introduction to the field of chronemics, the study of time as it is bound with communication, via a broad survey of literature across several disciplines. A range of contemporary communication challenges, as well as opportunities for positive communication and organizational scholarship will be interrogated. Communication Studies 390S (Topic: Time Matters) and 390S (Topic 7) may not both be counted.

Topic 8: Communicating Knowledge. A broad range of theoretical approaches and empirical research related to the communication of knowledge, including the study of both organizations and processes of organizing among workers. Subjects include: communities of practice, boundary objects, innovation, knowledge management, transactive memory, expertise, and ICT use. Communication Studies 390S (Topic: Communicating Knowledge) and 390S (Topic 8) may not both be counted.

Topic 9: Health, Safety, and Technology in Organizations. Examination of the theoretical and empirical research that bridges between organizational, health, and emergency communication with a focus on the role technology plays in these contexts. Communication Studies 390S (Topic 9) and 392P (Topic: Health, Safety, and Technology in Organizations) may not both be counted.

Topic 10: Survey of Organizational Communication. Explores contemporary issues and processes in organizational communication. Graduate students summarize research and conduct original research in an organization. Communication Studies 390S (Topic: Survey of Organizational Communication) and 390S (Topic 10) may not both be counted.

Topic 11: Measurement Workshop: Scale Development and Instrument Design. Provides in-depth instruction on issues related to scale development and questionnaire design, ranging from establishing validity to increasing response rate.

Topic 12: Engaged Communication Scholarship. Explore the theories and methods helpful during engaged research projects. Includes practical theory (e.g., action research, communication design, grounded practical theory) and research methods common to consulting and engaged scholarship (e.g., ethnographic interviewing, survey design, organizational shadowing, and natural experiments). Communication Studies 390S (Topic: Engaged Communication Scholarship) and 390S (Topic 12) may not both be counted.

CMS 390T. Organizational Communication Theory.

Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing; some topics may require consent of instructor or the graduate adviser.
Topic 2: Organizational Communication: Macro. An introduction to selected macro-level or systemic variables in organizations, such as structure, technology, and environments, and to the ways these variables relate to organizational communication processes.

Topic 3: Postmodern Organizational Communication Theory. An attempt to integrate the concern in cultural studies for structure with the stream of organizational theory that focuses on chaos. Readings include Clifford and Markus, Clifford, Deleuze and Guattari, March and Olsen, Weick.

Topic 4: Foundations of Organizational Communication Theory. Introduction to the major approaches of understanding organizational communication. Examines the theoretical background and analytic skills to navigate tensions among varied approaches at micro-and-macro-levels; explores contemporary scholarship in organizational communication research in a historical context. Communication Studies 390T (Topic: Foundations of Organizational Communication Theory) and 390T (Topic 4) may not both be counted.

Topic 5: Careers: Theory and Practice. Examination of the current interdisciplinary definitions, theories, and practices regarding careers and work in contemporary society. Addresses subjects such as employability and/or entrepreneurship, the effect of contemporary technologies, internal/subjective v external/objective success, and work/life balance. Communication Studies 390T (Topic: Careers: Theory and Practice) and 390T (Topic 5) may not both be counted.

CMS 390U. Consultation in Organizations.
A review of social science literature and its application to problem solving and organizational development in field settings. Three lecture hours a week for one semester. Prerequisite: Graduate standing. Some sections also require consent of instructor or the graduate adviser; these are identified in the Course Schedule.

CMS 392P. Seminar in Communication Technology.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing. Some sections also require consent of instructor or the graduate adviser; these are identified in the Course Schedule.

CMS 395C. Topics in Strategic Communication.
Analyze strategic communication issues. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

Topic 1: Persuasion, Advocacy, and Social Influence. Examine research and theory on interpersonal influence—what it takes to successfully persuade others in personal and organizational environments. Offered on the letter-grade basis only. Additional prerequisite: Graduate standing.

CMS 395M. Capstone in Strategic Communication.
Pursue the research interests and skills developed in other communication classes in-depth. Three lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Graduate standing and at least 15 hours of graduate coursework.

CMS 395S. Topics in Sport Communication.
Analyze issues in sports communication. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

Topic 1: Sports Audio and Video Storytelling. Examine the skills needed to produce audio and video packages used on radio, long-form podcasting, and broadcast and digital sports journalism. Explore techniques used to tell a story with an audio or video narrative. Offered on the letter-grade basis only.

Topic 2: Political and Crisis Communication in Sports Media. Examine frameworks through which crises may be addressed by athletes, coaches, teams, and leagues by using past crises as case studies.
Explore the role of athlete activism. Offered on the letter-grade basis only.

**Topic 3: Negotiation in Sports.** Explore negotiation and mediation with respect to sports media, personnel contracts, and intergroup conflict. Offered on the letter-grade basis only.

**CMS 698. Thesis.**
The equivalent of three lecture hours a week for two semesters. Offered on the credit/no credit basis only. Prerequisite: For 698A, graduate standing in communication studies and consent of the graduate adviser; for 698B, Communication Studies 698A.

**CMS 398R. Master's Report.**
Preparation of a report to fulfill the requirement for the master's degree under the report option. The equivalent of three lecture hours a week for one semester. Offered on the credit/no credit basis only. Prerequisite: Graduate standing in communication studies and consent of the graduate adviser.

**CMS 398T. Supervised Teaching in Communication Studies.**
Teaching communication studies under supervision. Three lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

**CMS 399W, 699W, 999W. Dissertation.**
May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Admission to candidacy for the doctoral degree.

**Professional Courses**

**COE - Computational Engineering**

**Computational Engineering: COE**

**Lower-Division Courses**

**COE 301. Introduction to Computer Programming.**
Basic computer programming concepts applied to engineering computations. Development of structured solutions to engineering and mathematical problems and an understanding of coding practices. Programming in MATLAB and C++. Three lecture hours a week for one semester. Aerospace Engineering 301 and Computational Engineering 301 may not both be counted.

**COE 311K. Engineering Computation.**
Fundamental numerical methods and software tools used in engineering computation. Subjects include linear systems of equations, matrix computations, nonlinear equations, least squares approximations, interpolation, numerical integration and numerical solution of differential equations. Three lecture hours a week for one semester. Only one of the following may be counted: Aerospace Engineering 211K, 311, Biomedical Engineering 313L, Computational Engineering 211K, 311K. Prerequisite: Aerospace Engineering 301 (or 201) or Computational Engineering 301 with a grade of at least C-; and credit with a grade of at least C- or registration for Mathematics 427J or 427K.

**COE 111L. Engineering Computation Laboratory.**
Restricted to computational engineering majors. Programming exercises and applications of numerical methods. One and one-half laboratory hours a week for one semester. Prerequisite: Credit with a grade of at least C- or registration for Aerospace Engineering 211K or Computational Engineering 211K.

**Upper-Division Courses**

**COE 321K. Computational Methods for Structural Analysis.**
Same as Aerospace Engineering 321K. Matrix structural analysis of systems that can be idealized as being comprised of axial bar elements, beam elements, and frame elements. Notion of element-by-element assembly of the governing system of algebraic equations. A systematic introduction to (and use of) the fundamental idea of a weak statement of a boundary value problem, particularly as concerns the numerical treatment/approximation of such problems. Interpretation of the weak-statement in terms of the principle of virtual work. Galerkin's method as applied to structural analysis. An introduction to the classical Galerkin finite element method with application to structures and plane elasticity. Energy principles and their utility in solving problems in solid mechanics, as well as their connection to the finite element method. Three lecture hours a week for one semester, with discussion hours to be arranged. Aerospace Engineering 321K and Computational Engineering 321K may not both be counted. Prerequisite: Computational Engineering 311K (or Aerospace Engineering 211K or Computational Engineering 211K); and Engineering Mechanics 319 with a grade of at least C- in each.

**COE 322. Scientific Computation.**
Restricted to Computational Engineering majors. Explores the basic tools needed for developing scientific computing software. These include advanced programming languages (e.g. C, C++, python), object oriented programming and data structures. Subjects may include abstract data types; creation, initialization, and destruction of objects; class hierarchies; polymorphism, inheritance and dynamic binding; generic programming using templates, linked lists, queues, stacks, trees and algorithms such as searching, sorting, and hashing. Three lecture hours a week for one semester. Computational Engineering 322 and Statistics and Data Sciences 322 may not both be counted. Prerequisite: Aerospace Engineering 301 (or 201) or Computational Engineering 301 with a grade of at least C-.

Used to record credit the student earns while enrolled at another institution in a program administered by the University's Study Abroad Office or the school's International Engineering Education Programs. Credit is recorded as assigned by the study abroad adviser in the Department of Aerospace Engineering and Engineering Mechanics. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. May be repeated for credit when the topics vary.

**COE 332. Software Engineering and Design.**
Restricted to computational engineering majors. Covers methods and tools for planning, designing, implementing, validating and maintaining large software systems. May include project work to build a software system as a team, using appropriate software engineering tools and techniques. Three lecture hours a week for one semester. Prerequisite: Computational Engineering 322 with a grade of at least C-.

**COE 347. Introduction to Computational Fluid Dynamics.**
Development and implementation of finite-difference schemes for numerical solution of subsonic, transonic, and supersonic flows. Emphasis on convection and diffusion equations of fluid dynamics. Evaluation of accuracy, stability, and efficiency. Three lecture hours a week for one semester. Only one of the following may be counted: Aerospace Engineering 347, Computational Engineering 347, Mechanical Engineering 369L. Prerequisite: Computational Engineering 311K (or Aerospace Engineering 211K or Computational Engineering 211K), and Aerospace Engineering 320 with a grade of at least C- in each.
Restricted to computational engineering majors. Topics in advanced numerical methods and scientific computation. Subject matter may vary. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Mathematics 427J or 427K, and Computational Engineering 322 (or Statistics and Data Sciences 322) with a grade of at least C- in each, and Computational Engineering 311K (or Computational Engineering 211K) with a grade of at least C-.

Introduction to mathematical representations and computations to qualitatively and quantitatively describe data, compare data, ascribe distributions to apparent patterns and structure in data via inference methods. Describe and model discrete and continuous random variables. Three lecture hours a week for one semester. Aerospace Engineering 379L (Topic: Engr Probability and Stats) and Computational Engineering 362 may not both be counted. Prerequisite: Mathematics 408D and Computational Engineering 311K with a grade of at least C- in each.

COE 371. Applied Mathematics I.
Restricted to computational engineering majors. Subjects include real analysis of functions of one variable, linear operator theory, and ordinary differential equations. Three lecture hours a week for one semester. Prerequisite: Upper-division standing; Mathematics 427J, 427L, and 362K with a grade of at least C- in each.

COE 372. Applied Mathematics II.
Restricted to computational engineering majors. Subjects include elements of complex analysis, Fourier and Laplace transforms, partial differential equations, perturbation methods, analysis of functions of several variables. Three lecture hours per week for one semester. Prerequisite: Upper-division standing and Computational Engineering 371 with a grade of at least C-.

COE 373. Systems Engineering Design.
Restricted to computational engineering majors. Introduction to systems engineering: the systems engineering process, requirements, design fundamentals, trade studies, cost and risk analyses, integration, technical reviews, case studies, and ethics. Includes written reports. Three lecture hours a week for one semester. Aerospace Engineering 374K and Computational Engineering 373 may not both be counted. Prerequisite: Upper-division standing; Statistics and Data Sciences 222 or 322 with a grade of at least C- and registration or credit with a grade of at least C- for Computational Engineering 352.

COE 374. Senior Design Project.
Restricted to computational engineering majors. Design projects from multiple engineering disciplines done with teams of students, using computational methods for analysis and experimental data for validation; ethics of design for safety and reliability; emphasis on written and oral reporting of engineering projects. Three lecture hours a week for one semester. Prerequisite: Computational Engineering 352 with a grade of at least C-; Computational Engineering 321K or Computational Engineering 347 with a grade of at least C-; and upper-division standing.

COE 679H. Undergraduate Honors Thesis.
Restricted to computational engineering majors. Research performed during two consecutive semesters under the supervision of an engineering faculty member; topics are selected jointly by the student and the faculty member with approval by the director of the Engineering Honors Program. Entails an oral presentation and a written thesis. Individual instruction for two semesters. Prerequisite: For 679HA, enrollment in the Engineering Honors Program; for 679HB, Computational Engineering 679HA and enrollment in the Engineering Honors Program.

Restricted to computational engineering majors. Directed study or research in a selected area of computational engineering. For each semester hour of credit earned, one lecture hour a week for one semester. May be repeated for credit. Prerequisite: Upper-division standing, a University grade point average of at least 3.00, selection of project, and consent of the faculty member directing project and the undergraduate adviser.

COE 179L, 279L, 379L, 479L. Topics in Computational Engineering.
Current topics in computational engineering. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Varies with the topic.

Topic 1: Introduction to Machine Learning and Data Sciences. Focus on algorithms, mathematics, implementations (on Scikit-learn), and real-life applications of machine learning and data sciences including machine learning algorithms such as supervised learnings (linear models, support vector machines, kernel methods, tree-based algorithms), unsupervised learnings (Density estimation, clustering, dimensionality reduction, PCA), and deep neural networks. Explore the foundations of machine learning including optimization, probability, advanced linear algebra, statistics, and methods to evaluate machine learning methods. Computational Engineering 379L (Topic: Intro to Machine Learning) and 379L (Topic 1) may not both be counted. Additional prerequisite: Computational Engineering 322, and Mathematics 427J or 340L with a grade of at least C- in each.

Graduate Courses
Professional Courses
COM - Communication

Communication: COM

Lower-Division Courses
COM 301C. Freshman Seminar.
Restricted to first-semester freshmen. Small-group seminar involving reading, discussion, writing, and oral reports. Introduction to University resources, including libraries, computer and research facilities, and museums. Several sections are offered each semester, with various topics and instructors. Two lecture hours and one discussion hour a week for one semester.

COM 301E. Introduction to Communication Foundations.
Restricted to students in the Moody College of Communication. Introduction to the various communication fields and their key concepts and axioms. Includes multicultural communication, global communication, media literacy, and social media. The equivalent of three lecture hours per week for one semester. Offered on the letter-grade basis only.

COM 301L. Introduction to Communication and Leadership.
Introduces the study of leadership with an emphasis on communication dimensions and interdisciplinary understanding of social problems. Serves as a foundation for subsequent coursework in the areas of communication and leadership. Three lecture hours a week for one
semester. Communication 301L and Communication and Leadership 301 may not both be counted.

Covers contemporary issues in health communication theory and practice with an emphasis on interdisciplinary perspectives. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester.

COM 102D, 202D, 302D. Connecting Internship Experience.
Supervised internship experience related to interdisciplin ary themes of a Bridging Disciplines Program. Internships may be on or off campus, be paid or unpaid, and may include work with nonprofit agencies, government offices, or private corporations. For 102D, three hours of fieldwork a week for one semester; for 202D, six hours of fieldwork a week for one semester; for 302D, ten hours of fieldwork a week for one semester. With consent of the Bridging Disciplines Program research coordinator, may be repeated once for credit. May not be counted toward any College of Communication degree. Prerequisite: Admission to the Bridging Disciplines Programs.

COM 302E. Interdisciplinary Communication Foundations.
Restricted to students in the Moody College of Communication. Explore in greater depth the concepts that connect and unite diverse areas of communication theory and practice. Three lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Communication 301E with a grade of at least C-.

Offers an introduction to media literacy, which enables us to create and critique contemporary media, and explores the expanding nature of literacy in a digital world with particular focus on its role in social and political contexts. Three lecture hours a week for one semester.

COM 304. Global Communication.
Introduces the subject of global media and communication as significant industries, texts, and technologies that contribute to our cultural identities, social worlds, political practices, and economic consequences. Three lecture hours a week for one semester.

COM 105. Beyond the Bridge.
Restricted to students in the Moody College of Communication. Provides an overview of the concepts involved in career decision-making and the career planning process. One lecture hour per week for one semester.

COM 306. Introduction to Communication Research Methods.
An introduction to quantitative and qualitative designs, sampling, measurement, data collection, and analytic procedures in communication research. Three lecture hours a week for one semester. Communication 306 and 360 may not both be counted.

An introduction to the communication of social justice, especially through the lens of nonfictional and fictional media. The equivalent of three lecture hours a week for one semester.

Restricted to students in the Moody College of Communication Honors Program. A guided experience in critical thinking and discussion based on consideration of cross-disciplinary modes of inquiry to probe big questions about knowledge, meaning, and communication throughout history. Three lecture hours a week for one semester.

COM 308. Creative Communication of Scientific Research.
Same as Natural Sciences 303. Learn to communicate about science, technology, and medicine to broad audiences in order to increase understanding of the impact these fields have on human lives. Three lecture hours a week for one semester. Communication 308 and Natural Sciences 303 may not both be counted.

COM 308H. Life of Community: Honors.
Restricted to students in the Moody College of Communication Honors Program. Considers the social responsibilities of intellectual leadership and the role of communication in a world characterized by political divisions, varieties of inequality, and global challenges to health and sustainability. Three lecture hours a week for one semester. Prerequisite: Communication 307H.

Introduction to various contemporary and historical issues, emphasizing interdisciplinary perspectives and critical discourse. Three lecture hours a week for one semester. Communication 310 and Journalism 313S may not both be counted unless the topics vary. May be repeated for credit when the topics vary. Prerequisite: Varies with the topic.

**Topic 1: Soccer: The Culture and Politics of the World Cup.** As the world’s most popular sports event prepares to dominate television screens, social media timelines, and town squares around the globe, examine the cultural footprint of the quadrennial gathering and its impact on the sporting world and society as a whole. Review the cultural and political history of the World Cup and will follow the tournament toward its conclusion. Communication 310 (Topic 1) and 310 (Topic: Soccer/The Global Village) may not both be counted.

COM 010H. Honors Pathway.
Restricted to students in the Moody College Honors Program. Complete program criterion, including capstone or thesis information session attendance, required form submissions, and other criteria as assigned. May be repeated for credit. Offered on the pass/fail basis only.

COM 012. First-year Seminar.
Restricted to students in the Moody College of Communication. Introduction to campus an college resources for first-year students. Supports the Moody foundations courses. One lecture hour a week for one semester. May be repeated for credit. Offered on the pass/fail basis only.

COM 013. Success Scholars Seminar.
Restricted to students in the Moody College of Communication. Supports the Moody foundations courses. One lecture hour a week for one semester. May be repeated for credit. Offered on the pass/fail basis only.

COM 114, 214, 314. Special Topics in Communication.
Contemporary issues and practices in communication. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. Only one of the following may be counted unless topics vary: Communication 114, 214, 314, 117, 217, 317, or 118, 218, 318. May be repeated for credit when the topics vary.

COM 115, 215, 315. Topics in Leadership and Communication.
Restricted to students in the College of Communication. Contemporary issues, practices, and skills related to leadership and communication. For 115, two lecture hours a week for eight weeks; for 215, two lecture
hours a week for one semester; for 315, three lecture hours a week for one semester. May be repeated for credit when the topics vary.

**COM 316 (TCCN: COMM 1316). Photographic Communication.**

Introduction to photographic technique and recent trends, evaluation, visual design, and use of images in the media. Students must provide their own digital 35-mm format camera. Three lecture hours and one and one-half laboratory hours a week for one semester.

**COM 117, 217, 317. Special Topics in Communication.**

Contemporary issues and practices in communication. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. Only one of the following may be counted unless topics vary: Communication 114, 214, 314, 117, 217, 317, or 118, 218, 318. May be repeated for credit when the topics vary. Offered on the letter-grade basis only.

**COM 118, 218, 318. Special Topics in Communication.**

Contemporary issues and practices in communication. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. Only one of the following may be counted unless topics vary: Communication 114, 214, 314, 117, 217, 317, or 118, 218, 318. May be repeated for credit when the topics vary. Offered on the pass/fail basis only.

**COM 118C, 218C, 318C. Forum Seminar Series.**

Restricted to freshmen and sophomores. Lectures and discussions on various contemporary issues. Emphasis on multidisciplinary perspectives and critical discourse. For 118C, two lecture hours a week for eight weeks; for 218C, two lecture hours a week for one semester; for 318C, three lecture hours a week for one semester, or two lecture hours and one hour of supervised research a week for one semester. May be repeated for credit when the topics vary.

**COM 119, 219, 319. International Learning Seminars.**

Discussion of various issues related to the academic, cultural, and personal aspects of completing academic work in international locations. For each semester hour of credit earned, one lecture hour a week for one semester. Communication 119, 219, 319, and Undergraduate Studies 119 may not both be counted unless the topics vary. May be repeated for credit when the topics vary. Offered on the letter-grade basis only.

This course is used to record credit the student earns while enrolled at another institution in a program administered by the University’s Study Abroad Office. Credit is recorded as assigned by the study abroad adviser in the Department of Communication Studies. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

**Upper-Division Courses**

**COM 320. Advanced Topics in Texas Sports and Media.**

Critical assessment of various contemporary and historical issues, emphasizing interdisciplinary perspectives. Three lecture hours a week for one semester. Communication 320 and Journalism 326S may not both be counted unless the topics vary. May be repeated for credit when the topics vary. Prerequisite: Completion of at least sixty semester hours of coursework and a University grade point average of at least 2.25.

**COM 320L. Seminar on Communication and Leadership.**

Restricted to students in the Moody College of Communication. Builds on the foundation introduced in Communication 301L, advancing student work in theories, processes, and practices of leadership and communication. Three lecture hours a week for one semester. Communication 320L and Communication and Leadership 321 may not both be counted. Prerequisite: Communication 301L with a grade of at least C and a minimum University grade point average of 2.25.

**COM 321. Communicating Social Justice Capstone.**

Restricted to students pursuing the Communicating Social Issues Minor. Produce content incorporating practical and theoretical understandings of media’s role in promoting and/or obstructing social justice. The equivalent of three lecture hours a week for one semester. Prerequisite: At least 9 hours of coursework completed in the Communicating Social Issues Minor.

**COM 323. Communication Internship.**

Practical work experience, arranged by the student and approved by instructor. Internship hours to be arranged. May be repeated for credit when the topics vary. Offered on the pass/fail basis only. Prerequisite: Upper-division standing and consent of instructor.

**Topic 1: Sports Media Internship.** Restricted to students pursuing a minor in Sports Media. Offered on the pass/fail basis only.

**Topic 2: Social Change Internship.** Restricted to students pursuing a minor in Communication and Social Change. Offered on the pass/fail basis only.

**Topic 3: Global Experience.** Restricted to students pursuing a minor in Global Communication. Offered on the pass/fail basis only.

**Topic 4: Science Communication Internship.** Restricted to students pursuing a minor in Science Communication. Offered on the pass/fail basis only.

**COM 324. Topics and Skills in Communication.**

Restricted to students admitted to the Semester in Los Angeles Program. Contemporary issues, practices, and skills related to communication and the entertainment industries, including studies in the business of entertainment, the creative process, and contemporary Hollywood cinema. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Upper-division standing, three hours of lower-division coursework in radio-television-film, and a University grade point average of at least 2.25.

**Topic 1: Semester in Los Angeles: How Hollywood Works.** Same as Radio-Television-Film 347C (Topic 1). Restricted to students admitted to the Semester in Los Angeles Program. Explores the commercial challenges that face producers and network and studio executives, and addresses the continual struggle between creativity and the bottom line. May be repeated for credit when the topics vary.
Same as Journalism 339S. Restricted to journalism majors. Supervised research with a faculty member; research may consist of an individual project or assisting a faculty research project. Hours to be arranged. May be repeated for credit. Prerequisite: Upper-division standing and a University grade point average of at least 2.25 and Journalism 310F (or 320D) and 311F (or 321C) with a grade of at least B- in each.

COM 330H. Honors Capstone.
Restricted to students in the College of Communication Honors Program. Independent project agreed upon by the student and instructor, includes a variety of approaches in a variety of media, from creative work, to campaign planning and implementation, research papers, long-form journalism, community engagement, and service learning initiatives. Three lecture hours a week for one semester. Prerequisite: Upper-division standing, Communication 307H and 308H.

COM 333T. Communication and Engineering Careers.
Restricted to students in the Cockrell School of Engineering. Study foundational communication skills associated with a successful engineering career, aiding in preparation for career fairs and interviews, communicating with non-technical audiences, diversity and inclusion, and teamwork. The equivalent of three lecture hours a week for one semester. Only one of the following may be counted: Aerospace Engineering 333T, Biomedical Engineering 333T, Communication 333T, Civil Engineering 333T, Chemical Engineering 333T, Electrical and Computer Engineering 333T, Electrical Engineering 333T, Engineering Studies 333T, Mechanical Engineering 333T, Petroleum and Geosystems Engineering 333T. Prerequisite: Rhetoric and Writing 306, or the equivalent, with a grade of at least C-.

COM 134, 234, 334. Special Topics in Communication.
Contemporary issues and practices in communication. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. Only one of the following may be counted unless topics vary: Communication 134, 234, 334, 135, 235, 335, or 136, 236, 336. May be repeated for credit when the topics vary.

COM 135, 235, 335. Special Topics in Communication.
Contemporary issues and practices in communication. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. Only one of the following may be counted unless topics vary: Communication 134, 234, 334, 135, 235, 335, or 136, 236, 336. May be repeated for credit when the topics vary. Offered on the letter-grade basis only.

COM 136, 236, 336. Special Topics in Communication.
Contemporary issues and practices in communication. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. Only one of the following may be counted unless topics vary: Communication 134, 234, 334, 135, 235, 335, or 136, 236, 336. May be repeated for credit when the topics vary. Offered on the pass/fail basis only.

Same as Fine Arts 345, Liberal Arts 340, and Management 340. Restricted to students accepted to the UT in New York Program. Explore leadership skills and goals in the urban context. Read and discuss leadership challenges that arise when stakeholders come together to plan, make decisions, and take action in organizational and community settings. Three lecture hours a week for one semester. Only one of the following may be counted: Communication 340, Fine Arts 345, Liberal Arts 325 (Topic: Leadership/Urban Engagement), 340, Management 340.

COM 040H. Honors Reflection.
Restricted to students in the Moody College Honors Program. Reflect on the honors experience. Hours to be arranged. Offered on the pass/fail basis only.

Internships to be arranged by student and approved by instructor. For 350, an average of 10 hours of work a week, for a total of at least 150 hours a semester or summer term; for 650, an average of 20 hours of work a week, for a total of at least 300 hours a semester or summer term. Offered on the pass/fail basis only. Prerequisite: Upper-division standing.

COM 350L, 650L. Semester in Los Angeles Internship.
Restricted to students in the Semester in Los Angeles Program. Practical work experience in the entertainment industry in Los Angeles. Students must make their own arrangements to secure relevant internships. For 350L, an average of 10 hours of work a week, for a total of at least 150 hours a semester or summer term; for 650L, an average of 20 hours of work a week, for a total of at least 300 hours a semester or summer term. Communication 350L, 650L and Radio-Television-Film 350L, 650L may not both be counted. Offered on the pass/fail basis only. Prerequisite: Upper-division standing.

COM 351L. Internship in Communication and Leadership.
Restricted to communication and leadership majors. Practical work experience related to the practice of ethical leadership and communication with a non-profit community, or philanthropic organization. An average of 10 hours of work a week, for a total of at least 150 hours a semester or summer term. May not be taken by students who have credit for any three semester-hour communication college internship course. Communication 351L and Communication and Leadership 351 may not both be counted. Offered on the pass/fail basis only. Prerequisite: Upper-division standing, Communication 320L with grade of at least C, and a 2.25 overall GPA, and consent of instructor.

Restricted to students in the Moody College of Communication Honors Program. Pursue special supervised individual research studies. For each semester hour of credit earned, one lecture hour a week for one semester. May be repeated for credit. Prerequisite: Communication 307H, 308H, and consent of instructor.

COM 361. Advanced Communication Research Design.
Advanced studies in quantitative and qualitative designs, sampling, measurement, data collection, and analytic procedures in communication research. Three lecture hours a week for one semester. Prerequisite: Communication 306 or consent of instructor.

COM 370. Advanced Study in Communication.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Upper-division standing, admission to the College of Communication Honors Program, and consent of instructor.

Restricted to students in the Moody College of Communication Honors Program. Special topics for students in the Moody College of Communication Honors Program. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Communication 307H, 308H, and consent of instructor.
COM 370L. Capstone Course in Communication and Leadership.
Restricted to communication and leadership majors. Engagement in experiential learning. Development and presentation of ideas and plans for addressing a leadership challenge given by a partner organization. Three lecture hours a week for one semester. Communication 370L and Communication and Leadership 371 may not both be counted. Prerequisite: Upper-division standing, Communication 320L with a grade of at least C, and a minimum University grade point average of 2.25.

COM 179. Advanced Communication Internship.
Restricted to students in the Moody College of Communication. Practical work experience related to the student's area of interest in the communication field. An average of 10 hours of work a week, for a total of at least 150 hours a semester or summer term. May be repeated for credit. Offered on the pass/fail basis only. Prerequisite: Consent of instructor.

COM 679C. Undergraduate Thesis.
Write and research two consecutive semesters under the supervision of a College of Communication faculty member; subjects are selected by the student with approval from the faculty member. The equivalent of three lecture hours a week for two semesters. Prerequisite: For 679CA, upper-division standing and consent of instructor. For 679CB, COM 679CA.

COM 679H. Honors Thesis.
Restricted to students in the Moody College of Communication Honors Program. Write and research two consecutive semesters under the supervision of a College of Communication faculty member; subjects are selected jointly by the student and the faculty member with approval by the director of the Honors Program. Three lecture hours a week for two semesters. Prerequisite: For 679HA, upper-division standing, Communication 307H, and 309H; for 679HB, upper-division standing, and Communication 679HA.

Graduate Courses

COM 281, 381. Seminar in Communication.
Communication in a pluralistic society; nature of theory development; state of communication theory; conceptual models; sources of communication theory; semantic, linguistic, perceptual, sociological; information theory. Two or three lecture hours a week for one semester. Communication 281 is offered on the credit/no credit basis only. May be repeated for credit when the topics vary. Offered on the credit/no credit basis only. Prerequisite: For 281, graduate standing; for 381, graduate standing and at least twelve semester hours of upper-division coursework in the major.

COM 385. Topics and Skills in Communication.
Contemporary issues, practices, and skills related to communication. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

COM 088C. Science Communications Seminar.
Same as Natural Sciences 088C. Restricted to students in the Moody College of Communication and the College of Natural Sciences. Professional development supplemental to primary studies. Designed to develop skills in the effective communication of scientific concepts. Hours to be arranged. Communication 088C and Natural Sciences 088C may not both be counted. Offered on the credit/no credit basis only. Prerequisite: Graduate standing.

COM 088D. Science Communications Practicum.
Same as Natural Sciences 088D. Restricted to students in the Moody College of Communication and the College of Natural Sciences. Professional development supplemental to primary studies. May be taking concurrently with the Science Communication Seminar. Opportunities to focus on skill development while receiving constructive assessment and evaluation. Hours to be arranged. Communication 088D and Natural Sciences 088D may not both be counted. Offered on the credit/no credit basis only. Prerequisite: Graduate standing.

COM 398T. Supervised Teaching in Communication.
Required for assistant instructors. Three lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

Professional Courses

CON - Conducting

Conducting: CON

Lower-Division Courses

Upper-Division Courses

Graduate Courses

Restricted to graduate music majors. For 280K, two lecture hours and two laboratory hours a week for one semester; for 380K, three lecture hours and two laboratory hours a week for one semester; for 480K, four lecture hours and two laboratory hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing and intermediate-level conducting experience, or consent of instructor.

CON 280S, 380S, 480S. Master’s Conducting: Orchestra.
Restricted to graduate music majors. For 280S, two lecture hours and two laboratory hours a week for one semester; for 380S, three lecture hours and two laboratory hours a week for one semester; for 480S, four lecture hours and two laboratory hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing and intermediate-level conducting experience, or consent of instructor.

Restricted to graduate music majors. For 280W, two lecture hours and two laboratory hours a week for one semester; for 380W, three lecture hours and two laboratory hours a week for one semester; for 480W, four lecture hours and two laboratory hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing and intermediate-level conducting experience, or consent of instructor.

Restricted to students pursuing a Doctor of Musical Arts in choral conducting. For 290K, two lecture hours and at least twelve practice hours a week for one semester; for 490K, two lecture hours and at least twelve practice hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing.

Restricted to students pursuing a Doctor of Musical Arts in orchestral conducting. For 290S, two lecture hours and at least twelve practice hours a week for one semester; for 490S, two lecture hours and at least twelve practice hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing.
Restricted to students pursuing the Doctor of Musical Arts in band conducting. For 290W, two lecture hours and at least twelve practice hours a week for one semester; for 490W, four lecture hours and at least twelve practice hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing.

Professional Courses
CRP - Community and Regional Planning

Community and Regional Planning: CRP

Lower-Division Courses

Upper-Division Courses
CRP 369K. Principles of Physical Planning.
Same as Urban Studies 328C. Introductory course in the physical dimension of urban planning. Three lecture hours a week for one semester. Only one of the following may be counted: Architecture 369J, Community Regional Planning 369K, Urban Studies 328C, 335F, 352 (Topic 6). Prerequisite: For students in the School of Architecture: Architecture 333 with a grade of at least C and upper-division standing; for others, upper-division standing.

Graduate Courses
CRP 380F. Foundations of Planning.
Conceptional foundations of community and regional planning. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of graduate adviser.

Topic 1: Planning History, Theory, and Ethics.

Topic 3: Design for Planners II.
Topic 4: Urban Land Institute Workshop.
Topic 5: Garden City to New Community.
Topic 7: Spatial Analysis and Design.
Topic 12: Geodesign.

CRP 383. Environment and Natural Resources.
Seminars and workshops on subjects including environmental and ecological analysis and planning topics. Workshops are based on active research or cooperation with public or private clients. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

Topic 1: Techniques in Environmental Analysis.
Topic 2: Coastal Zone Planning.
Topic 4: Disasters and Resilience: Planning and Response. Only one of the following may be counted: Community Regional Planning 383 (Topic 4), Urban Design (UD) 386M (Topic 6), Urban Design (UDN) 383M (Topic 6).
Topic 12: Environmental Law and Public Health. Community and Regional Planning 381 (Topic 9) and 383 (Topic 12) may not both be counted.
Topic 13: Land Use and Environmental Dispute Resolution. Only one of the following may be counted: Community Regional Planning 381 (Topic 5), 383 (Topic: Land Use & Envir Conf Resolutn), and 383 (Topic 13). Additional prerequisite: Consents of the graduate adviser.
Topic 14: Bioregional Planning. Community Regional Planning 383 (Topic: Bioregional Planning) and 383 (Topic 14) may not both be counted. Additional prerequisite: Consent of the graduate adviser.
Topic 15: Brownfields. Community and Regional Planning 383 (Topic: Brownfield Redevelopment) and 383 (Topic 15) may not both be counted. Additional prerequisite: Graduate Standing.
Topic 16: Green and Gray Infrastructure. Community and Regional Planning 383 (Topic: INFRASTRUCTURE GREEN/GREY) and 383 (Topic 16) may not both be counted. Additional prerequisite: Graduate Standing.

CRP 384. Transportation.
Neighborhood, city, and regional transportation policy and practice. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of graduate adviser.

Topic 1: Urban Transportation Planning.
Topic 3: Planning for Accessibility.
Topic 4: Land Use and Transportation Planning. Community and Regional Planning 384 (Topic 4) and Urban Design (UD) 385M (Topic 1) may not both be counted.
Topic 5: International Transportation Issues.
Topic 6: Metropolitan Transportation Studies with Geographic Information Systems.
Topic 7: Transit-Oriented Development.
Topic 9: Transportation Planning and Policy. Community Regional Planning 384 (Topic 9) and Urban Design (UD) 385M (Topic 4) may not both be counted.

Topic 10: Bicycle and Pedestrian Transit Planning. Only one of the following may be counted: Community and Regional Planning 384 (Topic: Bicycle/Ped Trans Plan) 384 (Topic 10), Urban Design (UD) 385M (Topic 2).

Topic 11: Megaregional Planning. Community and Regional Planning 384 (Topic: MEGAREGION: PLAN/POL TRANSPORT) and 384 (Topic 11) may not both be counted. Additional prerequisite: Graduate Standing.

Topic 12: Transportation Equity Analysis. Three lecture hours a week for one semester. Community Regional Planning 384 (Topic: Transportation Equity Analy) and 384 (Topic 12) may not both be counted.

Topic 13: Women and Transportation. Only one of the following may be counted: Community Regional Planning 383 (Topic: Women's Transportation Issues), 384 (Topic: Women and Transportation), 384 (Topic 13).

CRP 385C. Economic and Community Development.
Seminars and workshops on subjects including theory and analysis of social and economic sustainability of communities and regions and community led responses and initiatives. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

Topic 1: Urban and Regional Theory.
Topic 4: Community Development.
Topic 5: Development and Planning in Latin America.
Topic 6: International Sustainable Social Development.
Topic 7: Social, Spatial, and Environmental Justice.
Topic 8: Built Environment and Public Health.
Topic 9: Sustainable Cities.
Topic 10: Right to the City. Community Regional Planning 390 (Topic: Right to the City) and 385C (Topic 10) may not both be counted.

Topic 11: City and Regional Planning in Texas.
Topic 12: Building a Sustainable Region.
Topic 15: Migratory Urbanism. Only one of the following may be counted: Architecture 386M (Topic: Migratory Urbanism), 388R (Topic 20), Community Regional Planning 385C (Topic 15), 388 (Topic: Migratory Urbanism), Urban Design (UD) 386M (Topic 4), Urban Design (UDN) 383M (Topic 4).

CRP 685D. Planning Studio.
An integrative and comprehensive planning studio project course, involving application of theory, research, fieldwork, and oral, graphic, and written communication. Six lecture hours and four laboratory hours a week for one semester. With consent of the graduate adviser, may be repeated for credit. Prerequisite: Graduate standing.

Quantitative and qualitative methods of planning analysis, spatial analysis and mapping, and visual communication techniques. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of graduate adviser.

Topic 1: Quantitative Methods. Restricted to students admitted to the community and regional planning program.
Topic 2: Applied Methods. Restricted to students admitted to the community and regional planning program. Additional prerequisite: Community and Regional Planning 386 (Topic 1).
Topic 4: Qualitative Research Methods.

CRP 386K. Introduction to Visual Communications and Geographic Information Systems for Planners.
Restricted to students admitted to the community and regional planning program. Three lecture hours and one laboratory hour a week for one semester. Community and Regional Planning 386 (Topic 6) and 386K may not both be counted. Prerequisite: Graduate standing and consent of the graduate advisor.

CRP 387C. Infrastructure Planning.
Policy and techniques for providing soft and hard urban infrastructure; infrastructure planning and analysis. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

Topic 1: Infrastructure Planning and Development.
Topic 2: Water Resources Planning.
Topic 3: Urban Parks and Open Space Planning.
Topic 7: Race and the Built Environment. Only one of the following may be counted: Community and Regional Planning 387C (Topic: Race and the Built Environment), 387C (Topic 7), Urban Design (UD) 386M (Topic 1), Urban Design (UDN) 386M (Topic 1).

CRP 388. Housing.
Planning and housing policies and programs related to production and access to housing; community strategies for meeting housing needs. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

Topic 1: Housing Demand and Production.
Topic 2: Housing and Culture.
Topic 3: Affordable Housing Planning and Policy. Only one of the following may be counted: Community Regional Planning 388 (Topic 3), Urban Design 384M (Topic 3), 386M (Topic: Affordable Housing Planning).
Topic 4: Affordable Housing Development and Design.
Topic 5: Housing Practice and Public Policy in Latin America.

CRP 389C. Land Use and Land Development.
Analysis of land use patterns, planning principles, and strategies for achieving sustainability goals, and private land development principles and practices. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

Topic 1: Planning for Land Development.
Topic 2: Research in Land Development.
Topic 3: Landscape and Culture.
Topic 4: Images of the City.
CRP 390. Conference Course in Community and Regional Planning.
Readings and case studies in current topical issues in planning and planning education. Conference course. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

**Topic 1: Readings in International Planning.** Community Regional Planning 389C (Topic: Readings in Intl Planning) and 390 (Topic 1) may not both be counted.

CRP 391D. Doctoral Seminar.
Advanced theory and research methodology. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Offered on the letter-grade basis only. Prerequisite: Graduate standing and admission to the community and regional planning doctoral program.

**Topic 1: Colloquium on Planning Issues.** Offered on the letter-grade basis only.
**Topic 2: Planning Theory Seminar.** Offered on the letter-grade basis only.
**Topic 3: Research Methodology Seminar.** Offered on the letter-grade basis only.

CRP 392C. Historic Preservation.
Includes topics in architectural history, with a focus on the twentieth century and Modernism; architectural conservation; preservation planning and cultural resource management; and design. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

**Topic 1: History of American City Building.** Only one of the following may be counted: Architecture 388R (Topic: Hist of Amer City Building), 388R (Topic 27), Community and Regional Planning 389C (Topic: Hist of Amer City-Building), 392C (Topic: Hist of Amer City-Building), 392C (Topic 1), Urban Design (U D) 389R (Topic 1), Urban Design (UDN) 389R (Topic: Hist of Amer City Building), 389R (Topic 1).

**Topic 2: Preservation History and Theory.**
**Topic 3: National Registry of Historic Places Documentation.**
**Topic 4: Research Seminar in Sustainable Preservation.**
**Topic 5: Historic Preservation: Planning and Practice.**
**Topic 6: Historic Preservation: Preservation Law.** Community and Regional Planning 381 (Topic 3: Preservation Law) and 392C (Topic 6) may not both be counted. Additional prerequisite: Consent of the graduate adviser.

CRP 395C. Planning Studio.
An integrative and comprehensive planning studio project course, involving application of theory, research, fieldwork, and oral, graphic, and written communication. Three lecture hours and two laboratory hours a week for one semester. With consent of the graduate adviser, may be repeated for credit. Prerequisite: Graduate standing and consent of the graduate adviser.

CRP 395D. Planning Studio.
Continuation of Community and Regional Planning 395C. Three lecture hours and two laboratory hours a week for one semester. With consent of the graduate adviser, may be repeated for credit. Prerequisite: Graduate standing, Community and Regional Planning 395C, and consent of the graduate adviser.

CRP 396. Independent Research in Community and Regional Planning.
For each semester hour of credit earned, one lecture hour a week for one semester. Prerequisite: Graduate standing and consent of the graduate adviser.

CRP 197, 297, 397. Planning Internship.
Includes placement with a public or private planning agency, faculty supervision, and presentation of report. For each semester hour of credit earned, one lecture hour a week for one semester. Offered on the credit/no credit basis only. Prerequisite: Graduate standing and consent of the graduate adviser.

CRP 698. Thesis.
The equivalent of three lecture hours a week for two semesters. Offered on the credit/no credit basis only. Prerequisite: For 698A, graduate standing in community and regional planning and consent of the graduate adviser; for 698B, Community and Regional Planning 698A.

CRP 399R. Master’s Professional Report.
Preparation of a report to fulfill the requirement for the master’s degree under the report option. The equivalent of three lecture hours a week for one semester. Offered on the credit/no credit basis only. Prerequisite: Graduate standing in community and regional planning and consent of the graduate adviser.

May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Admission to candidacy for the doctoral degree.

**Professional Courses**

**CRW - Creative Writing**

**Creative Writing: CRW**

**Lower-Division Courses**

CRW 315D. Playwriting I.
Same as Theatre and Dance 315. The study and practice of writing plays. Three lecture hours a week for one semester. Creative Writing 315D and Theatre and Dance 315 may not both be counted.

CRW 315F. Introduction to Writing Fiction.
Intended for students with minimal prior experience in creative writing. Three lecture hours or one lecture hour and three workshop hours a week for one semester. Prerequisite: English 303C (or 603A), Rhetoric and Writing 306, 306Q, or Tutorial Course 303C (or 603A).

CRW 315P. Introduction to Writing Poetry.
Intended for students with minimal prior experience in creative writing. Three lecture hours or one lecture hour and three workshop hours a week for one semester. Prerequisite: English 303C (or 603A), Rhetoric and Writing 306, 306Q, or Tutorial Course 303C (or 603A).

**Upper-Division Courses**

CRW 325. Topics in Creative Writing.
Detailed study and practice of the techniques of biography, creative nonfiction, or other special topics of creative writing; includes reading and analysis of contemporary models. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

**Topic 1: Writing Border Narratives.** Same as Mexican American Studies 374 (Topic 34). Examines the United States and Mexico...
border through the use of the personal essay in its various forms. Students write personal essays that focus on their relationships to the border. Creative Writing 325 (Topic 1) and Mexican American Studies 374 (Topic 34) may not both be counted. Additional prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P; or Tutorial Course 303D.

CRW 325C. Writing Climate Fiction.
Study and practice the techniques of writing climate fiction. Read and analyze contemporary models. Three lecture hours a week for one semester. Creative Writing 325 (Topic: Writing Climate Fiction) and 325C may not both be counted. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P; or Tutorial Course 303D.

CRW 325E. Personal Essay.
Three lecture hours a week for one semester. Creative Writing 325 (Topic: Personal Essay) and 325E may not both be counted. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P; or Tutorial Course 303D.

CRW 325F. Fiction Writing.
Detailed study and practice of the techniques of fiction writing; includes reading and analysis of contemporary models. Three lecture hours a week for one semester. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P; or Tutorial Course 303D.

CRW 325M. Creative Writing.
Detailed study and practice of the techniques of fiction, poetry, and other genres of creative writing; includes reading and analysis of contemporary models. Three lecture hours or one lecture hour and three workshop hours a week for one semester. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P; or Tutorial Course 303D.

CRW 325S. Screenwriting.
Study and practice the techniques of screenwriting. Read and analyze contemporary models. Three lecture hours and one discussion hour a week for one semester. Creative Writing 325S and Radio-Television-Film 333 may not both be counted. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P; or Tutorial Course 303D.

CRW 325T. Writing for Black Performance.

CRW 330. Literature for Writers.
Readings in fiction, poetry, drama, literary criticism, biography, and autobiography from the point of view of a creative writer. Three lecture hours a week for one semester. Prerequisite: One of the following: Creative Writing 325, 325F, 325M, or 325P.

CRW 335. Business of Writing.
Same as English 335P. Study the book publishing landscape including traditional and non-traditional career paths available to writers and those interested in the publishing industry. Analyze the publishing process, from concept to finished book: the acquisition, editorial, publicity, marketing, and sales stages of a book's life. Three lecture hours a week for one semester. Only one of the following may be counted: Creative Writing 335, English 324 (Topic: Business of Writing), 335P. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P; or Tutorial Course 303D.

CRW 340D. Playwriting II.
Same as Theatre and Dance 325. Emphasis on the form and writing of the full-length play or equivalent. Three lecture hours a week for one semester. Creative Writing 340D and Theatre and Dance 325 may not both be counted. Prerequisite: Upper-division standing, Creative Writing 315D or Theatre and Dance 315, and consent of instructor.

CRW 340F. Short Story Workshop.
Practice in writing the short story, with study of contemporary models. The equivalent of three lecture hours a week for one semester. Only one of the following may be counted: Creative Writing 340F and 355F; or 660. Prerequisite: Creative Writing 325F or 325M.

CRW 340P. Poetry Workshop.
Practice in writing poetry, with study of contemporary models. The equivalent of three lecture hours a week for one semester. Prerequisite: Creative Writing 325M or 325P.

CRW 355D. Playwriting III.
Same as Theatre and Dance 355. Focus on experiments in revising dramatic text in order to create a common vocabulary around narrative structure. Revision often includes the creation of multiple new drafts, digging through past drafts for abandoned themes, lost focus, and new inspiration as well as exploring character, narrative, and/or language. Three lecture hours a week for one semester, with laboratory hours as required. Only one of the following may be counted: Creative Writing 355D, Theatre and Dance 355T (Topic: Playwriting III), 355. Prerequisite: Upper-division standing, Creative Writing 340D or Theatre and Dance 325, and consent of instructor.

CRW 355F. Advanced Fiction Workshop.
A three semester seminar-style workshop in fiction for experienced creative writers. The equivalent of three lecture hours a week for one semester. Only one of the following may be counted: Creative Writing 340F and 355F; or 660. Prerequisite: Creative Writing 340F.

CRW 355P. Advanced Poetry Workshop.
A three semester seminar-style workshop in poetry for experienced creative writers. The equivalent of three lecture hours a week for one semester. Prerequisite: Creative Writing 340P.

CRW 660. Intensive Creative Writing.
An accelerated seminar-style workshop for highly motivated students. Designed to be taken over two consecutive summer sessions; offered only during the summer semester. Three lecture-workshop hours a week for two semesters. Completion of this course is equivalent to completion of both Creative Writing 340F and 355F. Only one of the following may be counted: Creative Writing 340F and 355F; or 660. Prerequisite: For 660A, credit or registration for Creative Writing 325F; for 660B, Creative Writing 660A.
CRW 370H. Honors Creative Writing Project.
For advanced students already proficient in writing who wish to work under supervision on specific and substantial projects. The equivalent of three lecture hours a week for one semester. Prerequisite: Consent of the honors adviser.

CRW 375. Conference Course in Creative Writing.
Continue independent work in a creative project with a faculty advisor. The equivalent of three lecture hours a week for one semester. May be repeated for credit twice. May be repeated for credit. Prerequisite: Creative Writing 370H; approval of written application by supervising instructor and the director of undergraduate creative writing.

Graduate Courses
Professional Courses
CSE - Computational Science, Engineering, and Mathematics
Computational Science, Engineering, and Mathematics: CSE
Lower-Division Courses
Upper-Division Courses
CSE 370. Individual Reading and Research.
Supervised study or research in a selected area of computational science, engineering, and mathematics by individual arrangement with a supervising instructor. The equivalent of three lecture hours a week for one semester. May be repeated for credit. Offered on the pass/fail basis only. Prerequisite: Upper-division standing, a University grade point average of at least 3.00, selection of project, and consent of both the faculty member directing the project and the undergraduate adviser.

Graduate Courses
Advanced introduction to the practical use of high performance computing hardware and software engineering principles for scientific technical computing. Topics include computer architectures, operating systems, programming languages, data structures, interoperability, and software development, management, and performance. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

CSE 382G. Computer Graphics.
Same as Computer Science 384G. Advanced material in computer graphics, including in-depth treatments of techniques for realistic image synthesis, advanced geometric modeling methods, animation and dynamic simulation, scientific visualization, and high-performance graphics architectures. Three lecture hours a week for one semester. Computational Science, Engineering, and Mathematics 382G and Computer Science 384G may not both be counted. Prerequisite: Graduate standing; and Computer Science 354 or another introductory course in computer graphics, or equivalent background and consent of instructor.

CSE 382M. Foundational Techniques of Machine Learning and Data Sciences.
Introduction to computational and mathematical tools of data science. Cover statistical estimation and optimization algorithms, neural networks, geometry of high dimensional spaces, randomized methods, sparse approximation, and dimension reduction techniques. Three lecture hours a week for one semester. Computational Science, Engineering, and Mathematics 382M and 383M may not both be counted. Prerequisite: Graduate standing.

Same as Computer Science 383C, Mathematics 383E, and Statistics and Data Sciences 393C. Survey of numerical methods in linear algebra: floating-point computation, solution of linear equations, least squares problems, algebraic eigenvalue problems. Three lecture hours a week for one semester. Only one of the following may be counted: Computational Science, Engineering, and Mathematics 383C, Computer Science 383C, Mathematics 383E, Statistics and Data Sciences 393C. Prerequisite: Graduate standing; Computer Science 367 or Mathematics 368K, and Mathematics 340L, 341, or consent of instructor.

Same as Computer Science 383D, Mathematics 383F, and Statistics and Data Sciences 393D. Survey of numerical methods for interpolation, functional approximation, integration, and solution of differential equations. Three lecture hours a week for one semester. Only one of the following may be counted: Computational Science, Engineering, and Mathematics 383D, Computer Science 383D, Mathematics 383F, Statistics and Data Sciences 393D. Prerequisite: Graduate standing; Computational Science, Engineering, and Mathematics 383C, Computer Science 383C, Mathematics 383E, or Statistics and Data Sciences 393C; and Mathematics 427K and 365C, or consent of instructor.

CSE 383K. Numerical Analysis: Algebra and Approximation.
Same as Mathematics 387C. Advanced introduction to scientific computing, theory and application of numerical linear algebra, solution of nonlinear equations, and numerical approximation of functions. Three lecture hours a week for one semester. Computational Science, Engineering, and Mathematics 383K and Mathematics 387C may not both be counted. Prerequisite: Graduate standing; and Computer Science 383C, Mathematics 387C, or consent of instructor.

Same as Mathematics 385C. Three lecture hours a week for one semester. Computational Science, Engineering, and Mathematics 384K and Mathematics 385C may not both be counted. Prerequisite: Graduate standing and consent of instructor.

Same as Mathematics 385C. Three lecture hours a week for one semester. Computational Science, Engineering, and Mathematics 384K and Mathematics 385C may not both be counted. Prerequisite: Graduate standing and consent of instructor.

CSE 384L. Theory of Probability.
Same as Mathematics 385D. Continuation of Computational Science, Engineering, and Mathematics 384K and Mathematics 385C. Three lecture hours a week for one semester. Only one of the following may be counted: Computational Science, Engineering, and Mathematics 384L, Mathematics 385D, 385D. Prerequisite: Graduate standing; Computational Science, Engineering, and Mathematics 384K or Mathematics 385C; and consent of instructor.

CSE 384R. Mathematical Statistics I.
Same as Mathematics 384C and Statistics and Data Sciences 384 (Topic 2). The general theory of mathematical statistics. Includes distributions of functions of random variables, properties of a random sample, principles of data reduction, an overview of hierarchical models, decision theory, Bayesian statistics, and theoretical results relevant to point estimation, interval estimation, and hypothesis testing. Three lecture hours a week for one semester. Only one of the following may be counted: Computational Science, Engineering, and Mathematics
CSE 384T. Regression Analysis.
Same as Mathematics 384G and Statistics and Data Sciences 384 (Topic 4). Simple and multiple linear regression, inference in regression, prediction of new observations, diagnosis and remedial measures, transformations, and model building. Emphasis on both understanding the theory and applying theory to analyze data. Three lecture hours a week for one semester. Only one of the following may be counted: Computational Science, Engineering, and Mathematics 384T, Mathematics 384G, Statistics and Data Sciences 384 (Topic 4). Prerequisite: Graduate standing; and Mathematics 362K and 378K, Statistics and Data Sciences 382, or consent of instructor.

CSE 384U. Design and Analysis of Experiments.
Same as Mathematics 384E and Statistics and Data Sciences 384 (Topic 6). Design and analysis of experiments, including one-way and two-way layouts; components of variance; factorial experiments; balanced incomplete block designs; crossed and nested classifications; fixed, random, and mixed models; and split plot designs. Three lecture hours a week for one semester. Only one of the following may be counted: Computational Science, Engineering, and Mathematics 384U, Mathematics 384E, Statistics and Data Sciences 384 (Topic 6). Prerequisite: Graduate standing; and Mathematics 362K and 378K, Statistics and Data Sciences 382, or consent of instructor.

CSE 385M. Methods of Mathematical Physics I.
Same as Physics 381M. Theory of analytic functions; linear algebra and vector spaces; orthogonal functions; ordinary differential equations; partial differential equations; Green's functions; complex variables. Three lecture hours a week for one semester. Computational Science, Engineering, and Mathematics 385M and Physics 381M may not both be counted. Prerequisite: Graduate standing.

CSE 385N. Methods of Mathematical Physics II.
Same as Physics 381N. Continuation of Computational Science, Engineering, and Mathematics 385M and Physics 381M. Topology, functional analysis, approximation methods, group theory, differential manifolds. Three lecture hours a week for one semester. Computational Science, Engineering, and Mathematics 385N and Physics 381N may not both be counted. Prerequisite: Graduate standing; and Computational Science, Engineering, and Mathematics 385M or Physics 381M.

CSE 385R. Real Analysis.
Same as Mathematics 381C. Measure and integration over abstract spaces; Lebesgue's theory of integration and differentiation on the real line. Three lecture hours a week for one semester. Computational Science, Engineering, and Mathematics 385R and Mathematics 381C may not both be counted. Prerequisite: Graduate standing and consent of instructor or the graduate adviser.

CSE 385S. Complex Analysis.
Same as Mathematics 381D. Introduction to complex analysis. Three lecture hours a week for one semester. Computational Science, Engineering, and Mathematics 385S and Mathematics 381D may not both be counted. Prerequisite: Graduate standing and consent of instructor or the graduate adviser.

CSE 386C. Methods of Applied Mathematics.
Same as Mathematics 383C. Topics include basic normed linear space theory; fixed-point theorems and applications to differential and integral equations; Hilbert spaces and the spectral theorem; applications to Sturm-Liouville problems; approximation and computational methods such as the Galerkin, Rayleigh-Ritz, and Newton procedures. Three lecture hours a week for one semester. Computational Science, Engineering, and Mathematics 386C and Mathematics 383C may not both be counted. Prerequisite: Graduate standing.

CSE 386D. Methods of Applied Mathematics.
Same as Mathematics 383D. Topics include distributions, fundamental solutions of partial differential equations, the Schwartz space and tempered distributions, Fourier transform, Plancherel theorem, Green's functions, Sobolev spaces, weak solutions, differential calculus in normed spaces, implicit function theorems, applications to nonlinear equations, smooth variational problems, applications to classical mechanics, constrained variational problems. Three lecture hours a week for one semester. Computational Science, Engineering, and Mathematics 386D and Mathematics 383D may not both be counted. Prerequisite: Graduate standing; and Computational Science, Engineering, and Mathematics 386C or Mathematics 383C.

CSE 386L. Mathematical Methods in Science and Engineering.
Explore mathematical frameworks for understanding and solving practical problems. Examine basic concepts in multidimensional real analysis, ordinary differential equations and dynamical systems, elementary calculus of variations, Hilbert space theory and duality, Sturm-Liouville theory, Lax-Milgram and Babuska-Necas Theorems, and applications to partial differential equations. Three lecture hours a week for one semester. Only one of the following may be counted: Aerospace Engineering 380P (Topic 2), Computational Science, Engineering, and Mathematics 386L, Engineering Mechanics 386L. Prerequisite: Graduate standing.

CSE 386M. Functional Analysis in Theoretical Mechanics.
Same as Engineering Mechanics 386M. An introduction to modern concepts in functional analysis and linear operator theory, with emphasis on their application to problems in theoretical mechanics; topological and metric spaces, norm linear spaces, theory of linear operators on Hilbert spaces, applications to boundary value problems in elasticity and dynamical systems. Three lecture hours a week for one semester. Computational Science, Engineering, and Mathematics 386M and Engineering Mechanics 386M may not both be counted. Prerequisite: Graduate standing, Engineering Mechanics 386L, and Mathematics 365C.

CSE 389C. Introduction to Mathematical Modeling in Science and Engineering I.
First part of a two-part introduction to the elements of classical mechanics, physics, chemistry, and biology needed to begin work in computational engineering and sciences. Develops from first principles the classical mathematical theories underlying many of the models of physical phenomena important in modern applications. Three lecture hours a week for one semester. Prerequisite: Graduate standing.
CSE 389D. Introduction to Mathematical Modeling in Science and Engineering II.
Second part of a two-part introduction to elements of classical mechanics, physics, chemistry, and biology needed to work in computational engineering and sciences. Develops from first principles the classical mathematical theories underlying many of the models of physical phenomena important in modern applications. Three lecture hours a week for one semester. Prerequisite: Graduate standing; and Computational Science, Engineering, and Mathematics 389C or the equivalent.

CSE 190, 390. Individual Research.
Individual study or research in computational science, engineering, and mathematics arranged by mutual agreement between student and supervising faculty member. Individual instruction. May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Graduate standing and consent of instructor.

The equivalent of three lecture hours a week for one semester, arranged by mutual agreement between student and faculty member. May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Graduate standing and consent of instructor.

CSE 392. Topics in Computer Science.
Advanced topics in the theory and application of computer science. Recent topics include geometric modeling and visualization, and high-performance and parallel computing. Three lecture hours a week for one semester. Computational and Applied Mathematics 395T and Computational Science, Engineering, and Mathematics 392 may not both be counted unless the topics vary. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

CSE 393. Topics in Numerical Analysis.
Advanced topics in the theory and application of numerical analysis. Recent topics include numerical methods for partial differential equations, computational problems in linear algebra, iterative methods and fast algorithms, numerical methods in functional approximation, and computational and variational methods for inverse problems. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of instructor.

Topic 1: The Finite Element Method. Examine introductory concepts such as weighted residual methods; strong and weak forms; boundary conditions; global v. local basis functions; error estimates; smooth and nonsmooth problems; one-dimensional second- and fourth-order problems; two-dimensional potential and plate problems; two-dimensional and three-dimensional elasticity; dynamic and eigenvalue problems; numerical, computational, and meshing issues; applications using commercial software. Computational Science, Engineering, and Mathematics 393 (Topic: The Finite Element Method) and 393 (Topic 1) may not both be counted.

CSE 393F. Finite Element Methods.
Same as Aerospace Engineering 384P (Topic 4) and Engineering Mechanics 394F. Derivation and implementation of the finite element method; basic coding techniques; application to problems of stress and diffusion. Three lecture hours a week for one semester. Only one of the following may be counted: Aerospace Engineering 384P (Topic 4), Computational Science, Engineering, and Mathematics 393F, Engineering Mechanics 394F. Prerequisite: Graduate standing and consent of instructor.

Contemporary topics in the theory and application of finite element methods. Three lecture hours a week for one semester. Prerequisite: Graduate standing; Computational Science, Engineering, and Mathematics 393F or the equivalent; and Engineering Mechanics 386L or the equivalent.

Approximate solution methods for flow and transport problems in engineering and applied science. Finite element, finite difference, and residual methods for linear and nonlinear problems. Three lecture hours a week for one semester. Computational Science, Engineering and Mathematics 393N and Mathematics 393N may not both be counted. Prerequisite: Graduate standing.

CSE 393P. Computational and Variational Methods for Inverse Problems.
Examine computational and variational methods for inverse problems governed by partial differential equations, including variational formulations, ill-posedness, regularization, adjoint methods for sensitivity analysis, variational discretization, and efficient large-scale optimization algorithms. Explore a brief introduction to the Bayesian formulation and relationship to the deterministic setting. Discuss examples drawn from different areas of science and engineering, including continuum fluid and solid mechanics, geophysics, and image processing. Three lecture hours a week for one semester. Computational Science, Engineering, and Mathematics 397 (Topic: Comp/Var Meths Inverse Probs) and 393P may not both be counted. Prerequisite: Graduate standing; Numerical linear algebra and differential equations, or consent of instructor.

CSE 394. Topics in Probability and Statistics.
Advanced topics in the theory and application of probability and statistics. Recent topics include nonparametric statistics and advanced probability. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of instructor.

Topic 1: Stochastic Processes I. Study Ito-diffusion processes, stochastic calculus, and stochastic integration. Explore stochastic differential equations and their connection to classical analysis. Discuss an introduction to optimal stochastic control of diffusion processes, the Hamilton-Jacobi-Bellman equation (classical and viscosity solutions), singular stochastic control, and linear filtering. Present applications, mainly from mathematical finance, inventory theory, decision analysis, and insurance. Examine brief overview of multi-scale problems in stochastic analysis. Computational Science, Engineering, and Mathematics 394 (Topic: Stochastic Processes I) and 394 (Topic 1) may not both be counted.

CSE 396. Topics in Applied Mathematics.
Advanced topics in the theory and application of applied mathematics. Recent topics have included partial differential equations, dynamical systems, kinetic theory, quantum mechanics, ergodic theory, statistical mechanics, Hamiltonian dynamics, nonlinear functional analysis,
Euler and Navier-Stokes equations, microlocal calculus and spectral asymptotics, calculus of variations, and nonlinear partial differential equations. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of instructor.

**Topic 1: Partial Differential Equations I.** Analyze nonlinear partial differential equations, emphasizing elliptic and parabolic equations. Computational Science, Engineering, and Mathematics 396 (Topic: Partial Differential Equations I) and 396 (Topic 1) may not both be counted.

**CSE 397. Topics in Computational Science and Engineering.**
Advanced topics in the theory and application of computational science and engineering. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of instructor.

**Topic 1: Multiscale Methods in Computational Fluid Dynamics.** Explore stabilized and variational multiscale methods in computational fluid dynamics with a focus on advective-diffusive equations, the Boltzmann equation, and the compressible and incompressible Navier-Stokes equations. Computational Science, Engineering, and Mathematics 397 (Topic: Stabil/Multiscale Meths in CFD) and 397 (Topic 1) may not both be counted.

**Topic 2: Nonlinear Static and Dynamic Finite Element Analysis.** Explore code architecture and fundamental analytical technologies used in the nonlinear finite element and isogeometric analysis of solids and structures. Computational Science, Engineering, and Mathematics 397 (Topic: Nonlin Stat/Dyn Fin Elem Anly) and 397 (Topic 2) may not both be counted.

**Topic 3: Validation and Uncertainty Quantification in Computational Models.** Assess reliability of computational models of physical systems through validation and uncertainty quantification. Develop uncertainty analysis in terms of Bayesian probability and inference, and techniques for probabilistic model validation. Computational Science, Engineering, and Mathematics 397 (Topic: Validatn & Uq in Comptl Models) and 397 (Topic 3) may not both be counted.

**Topic 4: Computational Modeling of the Cardiovascular System.** Explore mathematical models and simulation of the cardiovascular system, with an emphasis on the biomechanical function of the heart, heart valves, and the vasculature. Analyze mathematical models at the level of single cells, tissues, and whole organs. Discuss image-to-model software basics to allow creation of a model of choice from any available imaging data for a project of interest. Computational Science, Engineering, and Mathematics 397 (Topic: Comptl Modlg Cardiovasc Sys) and 397 (Topic 4) may not both be counted.

**Topic 5: Biomechanics of Tissues, Scaffolds, and Cells.** Discuss biosolid mechanics, covering the complex mechanical behaviors of living tissues and related biomaterials, with a focus on modeling how they respond under loading. Examine major application areas to provide context to the theory and applications. Explore necessary mathematical, mechanics, and biological fundamentals in the context of applications and problems in biomedical research and medical devices. Computational Science, Engineering, and Mathematics 397 (Topic: Tissue/Scaffold BiomechNew) and 397 (Topic 5) may not both be counted.

**Topic 6: Introduction to Computational Oncology.** Develop a familiarity with the common computational techniques used in modeling various aspects of cancer at multiple spatial and temporal scales. Investigate how computational modeling offers unique and complementary information to traditional methods of cancer research. Examine the integration of theory and experiment while identifying the current barriers preventing computational modeling from having a broader impact on both cancer biology and clinical oncology. Computational Science, Engineering, and Mathematics 397 (Topic: Intro to Comptatnl Oncology) and 397 (Topic 6) may not both be counted.

**Topic 7: Introduction to Mathematical and Physical Biology.** Discuss the common mathematical and physical techniques used in modeling various aspects of biology at multiple spatial and temporal scales. With emphasis placed on the integration of theory and experiment, identify the current barriers preventing computational modeling from having a broader impact in biology. Computational Science, Engineering, and Mathematics 397 (Topic: Intro Mathematical/Phys Bio) and 397 (Topic 7) may not both be counted.

**Topic 8: Biomedical Imaging: Signals and Systems.** Explore the physical principles and signal processing techniques used in thermographic, ultrasonic, and radiographic imaging, including image reconstruction from projections such as CT scanning, MRI, and millimeter wave determination of temperature profiles. Computational Science, Engineering, and Mathematics 397 (Topic: Biomed Imaging: Signals/Sys) and 397 (Topic 8) may not both be counted.

**Topic 9: Mathematical Physiology.** Same as Biomedical Engineering 383J (Topic 14). Explore mathematical modeling in physiology, how physiological problems can be formulated and modeled, and how such models give rise to interesting and challenging functional features. Examine several exemplar physiological systems. Discuss the mathematical aspects of growth and remodeling in living systems, an area unique to living systems. Only one of the following may be counted: Biomedical Engineering 383J (Topic: Mathematical Physiology), 383J (Topic 14), Computational Science, Engineering, and Mathematics 397 (Topic: Mathematical Physiology), 397 (Topic 9).

**CSE 397H. Graduate Research Internship.**
Restricted to computational science, engineering, and mathematics majors Practical work experience in a research/industrial setting. Internship to be arranged by student and approved by instructor. The equivalent of three lecture hours a week for one semester. May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Graduate standing and consent of supervising faculty member.

**CSE 698. Thesis.**
The equivalent of three lecture hours a week for two semesters. Offered on the credit/no credit basis only. Prerequisite: For 698A, graduate standing in computational science, engineering, and mathematics consent of the graduate adviser; for 698B, Computational Science, Engineering, and Mathematics 698A.

**CSE 398R. Master's Report.**
Preparation of a report to fulfill the requirement for the master's degree under the report option. Independent study. Offered on the credit/no credit basis only. Prerequisite: Graduate standing in computational science, engineering, and mathematics and consent of the graduate adviser.

**CSE 399W, 699W, 999W. Dissertation.**
Independent study. May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Admission to candidacy for the doctoral degree.

**Professional Courses**
CTI - Core Texts and Ideas

Core Texts and Ideas: CTI

Lower-Division Courses

CTI 301G. Introduction to Ancient Greece.
Same as Classical Civilization 301. Greatness of Greece as reflected in Greek history, literature, philosophy, art, religion, and politics. No knowledge of Greek is required. Three lecture hours a week for one semester. Only one of the following may be counted: Classical Civilization 301, Core Texts and Ideas 310 (Topic: Introduction to Ancient Greece), 301G.

Same as Government 314E. Explores the origins of social scientific thought in the history of political philosophy and traces the development of one or more of the social sciences in modern times. Focuses on fundamental ideas about human nature, civil society, and politics, explored through reading such authors as Aristotle, Aquinas, Locke, Rousseau, Marx, Weber, Durkheim, and Freud. Three lecture hours or two lecture hours and one discussion hour a week for one semester. Only one of the following may be counted: Core Texts and Ideas 302, Government 314 (Topic: Classics of Social and Political Thought), 314 (Topic 10), 314E.

CTI 303. Competing Visions of the Good Life.
Same as Government 314C. Introduces the great rival conceptions of the moral basis and goals of political life as elaborated by revolutionary thinkers throughout the history of political philosophy, including Aristotle, Aquinas, Locke, late modern critics of the Enlightenment, and others. Three lecture hours a week for one semester. Only one of the following may be counted: Core Texts and Ideas 303, Government 314 (Topic 6), 314C.

CTI 304. World Religions: Traditions and Texts.
A study of basic religious texts, including both the Hebrew Bible and New Testament, examined from various perspectives (including comparative, historical, philosophical, and literary), with emphasis on the fundamental questions and ideas raised in those texts. Three lecture hours or two lecture hours and one discussion hour a week for one semester. May be repeated for credit when the topics vary.

Topic 1: The Bible and Its Interpreters. Same as Religious Studies 315C. Seeks to develop a wide-ranging familiarity with the Jewish and Christian Bibles and with the dominant modes of ancient, medieval, and early modern biblical interpretation. Readings include an extensive range of primary sources, including both the Scriptures themselves and some of their most influential exegetes. Three lecture hours a week for one semester. Only one of the following may be counted: Core Texts and Ideas 304 (Topic 1), Religious Studies 315 (Topic 1), 315C.

CTI 305G. Introduction to the Old Testament.
Same as Jewish Studies 311 (Topic 4), Middle Eastern Studies 310C, and Religious Studies 313C. Introduction to the many interpretations of the Hebrew Bible (the Old Testament) and its meaning in the context of its historical and cultural setting in the ancient Near East. Three lecture hours a week for one semester. Only one of the following may be counted: Core Texts and Ideas 305G, Jewish Studies 311 (Topic 4), Middle Eastern Studies 310 (Topic 3), 310C, Religious Studies 313C.

Same as Classical Civilization 304E and Religious Studies 315N. Examines representative examples of the texts found in the Christian New Testament and selected noncanonical writings. Focuses on historical setting and systematic methods of interpretation. Three lecture hours a week for one semester. Only one of the following may be counted: Classical Civilization 304C (Topic: Introduction to the New Testament), 304E, Core Texts and Ideas 305N, 310 (Topic: Introduction to the New Testament), Religious Studies 315N.

CTI 306D. History of the Religions of Asia.
Same as Asian Studies 301R and Religious Studies 302. Eastern religions: an introduction to the basic forms and the historical development of the religious traditions of India, China, and Japan. Three lecture hours a week for one semester. Only one of the following may be counted: Asian Studies 301R, Core Texts and Ideas 304 (Topic: History of Religions of Asia), 306D, 310 (Topic: History of Religions of Asia), Religious Studies 302.

CTI 307E. Western Civilization in Medieval Times.
Same as Ancient History and Classical Civilization 310 (Topic 2) and History 309K. Survey of medieval Europe from late antiquity to the fifteenth century. Three lecture hours a week for one semester. Only one of the following may be counted: Ancient History and Classical Civilization 310 (Topic: Western Civ in Medieval Times), 310 (Topic 2), Core Texts and Ideas 307E, 310 (Topic: Western Civ in Medieval Times), History 309K.

CTI 307M. Western Civilization in Modern Times.
Same as History 309L. Survey of European civilization since the fifteenth century. Three lecture hours a week for one semester. Only one of the following may be counted: Core Texts and Ideas 307M, 310 (Topic: Western Civ in Modern Times), History 309L.

CTI 310. Topics in Core Texts and Ideas.
Introduction to fundamental texts and questions that have helped shape the world. Three lecture hours or two lecture hours and one discussion hour a week for one semester. Core Texts and Ideas 310 and Western Civilization 303 may not both be counted unless the topics vary. May be repeated for credit when the topics vary.

Topic 3: Introduction to the Philosophy of Religion. Same as Philosophy 305 and Religious Studies 305. A critical examination of various conceptions of God and of the relationship of the human and the divine. Three lecture hours or two lecture hours and one laboratory/discussion hour a week for one semester. Only one of the following may be counted: Core Texts and Ideas 310 (Topic: Introduction to the Philosophy of Religion), 310 (Topic 3), Philosophy 305, Religious Studies 305.

Upper-Division Courses

CTI 320. The Classical Quest for Justice.
Same as Government 351C. Introduces students to classical political thought through a study of seminal works of antiquity, focusing on those of Plato and Aristotle. Three lecture hours a week for one semester. Only one of the following may be counted: Core Texts and Ideas 320, 335 (Topic: Classical Quest for Justice), Government 335M (Topic: Classical Quest for Justice), 351C. Prerequisite: Completion of at least thirty semester hours of coursework.

CTI 321. The Theoretical Foundations of Modern Politics.
Same as Government 351D. Examines competing foundations of the ongoing development of political and social modernity. Examines a selection of major authors from Machiavelli to Nietzsche. Three lecture hours a week for one semester. Only one of the following may be counted: Core Texts and Ideas 321, 335 (Topic: The Theoretical Foundations of Modern Politics), Government 335M (Topic: The Theoretical Foundations of Modern Politics), 351D Western Civilization.
320 (Topic: The Theoretical Foundations of Modern Politics). Prerequisite: Completion of at least thirty semester hours of coursework.

**CTI 321F. Spinoza and Modernity.**
Same as European Studies 346 (Topic 21), History 362P, Jewish Studies 364 (Topic 9), and Religious Studies 357M. Introduction to the core of Spinoza’s writings and the diverse reactions they have elicited. Examines Spinoza’s refusal of mind-body dualism, as well as a transcendent god or ideal as a way of understanding Spinoza’s concepts and ideas. Three lecture hours a week for one semester. Only one of the following may be counted: Core Texts and Ideas 321F, European Studies 346 (Topic 21), 347 (Topic: Spinoza and Modernity), History 362P, Jewish Studies 364 (Topic 9), Philosophy 354 (Topic 7), Religious Studies 357 (Topic 8), 357M. Prerequisite: Upper-division standing.

**CTI 322. Critics of Modern Liberalism.**
Same as Government 351G. Selected critics of the philosophy of the Enlightenment from both the Left and the Right, and from the time of Rousseau to the present. Three lecture hours or two lecture hours and one discussion hour a week for one semester. Only one of the following may be counted: Core Texts and Ideas 322, Government 335M (Topic: Liberalism and its Critics), 351G. Prerequisite: Upper-division standing.

**CTI 323. Might and Right among Nations.**
Same as Government 351J. Major alternative approaches to the question of the moral character of international relations, as elaborated by some of the greatest political thinkers. Three lecture hours or two lecture hours and one discussion hour a week for one semester. Only one of the following may be counted: Core Texts and Ideas 323, 335 (Topic: Might and Right among Nations), Government 335M (Topic: Might and Right among Nations), 351J, Western Civilization 320 (Topic: Might and Right among Nations). Prerequisite: Upper-division standing and six semester hours of lower-division coursework in government.

**CTI 324. Politics and Literature.**
Same as Government 335O. Explores the “old battle between the poets and philosophers,” in which the two sides battle for recognition as the deepest source of wisdom about politics and ethics. Includes readings from great works of political philosophy and literature. Three lecture hours or two lecture hours and one discussion hour a week for one semester. Only one of the following may be counted: Core Texts and Ideas 324, Government 335M (Topic: Politics and Literature), 335O (Topic 15), 3350. Prerequisite: Upper-division standing and six semester hours of lower-division coursework in government.

**CTI 325. Morality and Politics.**
Same as Government 351L. Interdisciplinary readings from major works exploring issues of ethics and leadership. Three lecture hours or two lecture hours and one discussion hour a week for one semester. Only one of the following may be counted: Core Texts and Ideas 325, Government 335M (Topic: Morality and Politics), 351L. Prerequisite: Upper-division standing.

**CTI 326C. Constitutional Interpretation.**
Same as Government 357C. Designed to improve reasoning and communication skills through constitutional interpretation. Determining what the Constitution means, how to determine what it means, and who should determine what it means. Three lecture hours a week for one semester. Only one of the following may be counted: Core Texts and Ideas 326 (Topic: Constitutional Interpretation), 326 (Topic 1), 326C, Government 357C, 357M (Topic 5). Prerequisite: Upper-division standing and six semester hours of lower-division coursework in government.

**CTI 326J. African American Social and Political Thought.**
Same as African and African Diaspora Studies 351M, American Studies 321J, and Government 335G. Examines the speeches and writings by major theorists and critics of the prophetic tradition of black political thought. Three lecture hours a week for one semester. Only one of the following may be counted: African and African Diaspora Studies 351M, 374D (Topic 21), American Studies 321J, Core Texts and Ideas 326 (Topic 3), 326J, Government 335G, 335M (Topic 10). Prerequisite: Upper-division standing and six semester hours of lower-division coursework in government.

**CTI 326L. Civil Liberties.**
Same as Government 357D. Explore the United States constitution and Supreme Court with a focus on civil rights and liberties. Three lecture hours a week for one semester. Only one of the following may be counted: Core Texts and Ideas 326 (Topic: Civil Liberties), 326L, Government 357D, 357M (Topic 4). Prerequisite: Six semester hours of lower-division coursework in Government.

**CTI 326R. Regime Perspectives on American Politics.**
Same as Government 379C and Liberal Arts Honors 351J. Explore American politics and culture and examine how the parts of America fit together as a whole. Three lecture hours a week for one semester. Only one of the following may be counted: Core Texts and Ideas 326R, 335 (Topic: Regime Persp Amer Polt-Honors), Government 379C, 379S (Topic 3), Liberal Arts Honors 350 (Topic: Regime Persp on Amer Politics). 351J. Prerequisite: Upper-division standing, six semester hours of government coursework, and a grade point average of at least 3.50.

**CTI 326S. Structure of Individual Liberties.**
Same as Government 357G. Explore the ways in which the Constitution protects individual rights while accommodating the often competing claims of state, groups, and communities. Three lecture hours a week for one semester. Only one of the following may be counted: Core Texts and Ideas 326 (Topic: Structure of Indiv Liberties), 326S, Government 357G, 357M (Topic 8). Prerequisite: Six semester hours of lower-division coursework in Government.

**CTI 326T. The Tragicomedy of American Democracy.**
Same as African and African Diaspora Studies 351D and American Studies 370 (Topic 44). Examines the foundational ideas and practices essential to the unfolding of American democracy by focusing on founding documents, public speeches, major political conflicts, and canonical texts of political philosophy. Three lecture hours a week for one semester. Only one of the following may be counted: African and African Diaspora Studies 351D, 372F (Topic 15), American Studies 370 (Topic 44), Core Texts and Ideas 326 (Topic 2), 326T. Prerequisite: Upper-division standing.

**CTI 327C. Archaic Greece: Society and Culture.**
Same as Classical Civilization 348K. Three lecture hours a week for one semester. Only one of the following may be counted: Classical Civilization 348 (Topic: Archaic Greece: Soc/Culture), 348K, Core Texts and Ideas 327C. Prerequisite: Upper-division standing.

**CTI 327D. The History of Rome: The Republic.**
Same as Ancient History and Classical Civilization 325 (Topic 1) and History 321M. A survey of Roman history from the founding of Rome to the death of Julius Caesar. The equivalent of three lecture hours a week for one semester. Only one of the following may be counted: Ancient History and Classical Civilization 325 (Topic 1), Core Texts and Ideas 327D, 375 (Topic: Hist of Rome: The Republic), History 321M. Prerequisite: Upper-division standing.
CTI 328D. Death and the Afterlife in Graeco-Roman Antiquity.
Same as Classical Civilization 348G and Religious Studies 365G. Explore the afterlife from Near Eastern myths and Homer through Greek and Roman antiquity to the early Church Fathers. Three lecture hours a week for one semester. Only one of the following may be counted: Classical Civilization 348 (Topic: Death/Afterlife Graeco-Roman), 348G, Core Texts and Ideas 328D, Religious Studies 365G. Prerequisite: Upper-division standing.

CTI 329. The Ancient Historians.
Same as Ancient History and Classical Civilization 325 (Topic 13), Classical Civilization 322D, and Comparative Literature 323 (Topic 59). Examines the main works of ancient historiography, and provides grounding in the central issues with which these works engage. Three lecture hours a week for one semester. Only one of the following may be counted: Ancient History and Classical Civilization 325 (Topic 13), Classical Civilization 322 (Topic 13), 322D, Comparative Literature 323 (Topic 59), Core Texts and Ideas 329. Prerequisite: Upper-division standing.

CTI 330J. Jerusalem and Athens.
Same as Government 379G and Liberal Arts Honors 351M. Examine the age-old confrontation between the teaching of the Bible and the politics and philosophy of the ancient Greeks. Three lecture hours a week for one semester. Only one of the following may be counted: Core Texts and Ideas 330J, 335 (Topic: Jerusalem and Athens-Honors), 375 (Topic: Jerusalem and Athens-Honors), Government 379G, 379S (Topic: Jerusalem and Athens-Honors), 379S (Topic 4), Liberal Arts Honors 350 (Topic: Jerusalem and Athens). Prerequisite: Upper-division standing, six semester hours of coursework in government, and a grade point average of at least 3.50.

Same as Ancient History and Classical Civilization 330 (Topic 6), History 344R, and Religious Studies 357C. Through Niccolo Machiavelli's chief writings, consider the local, regional, Mediterranean, European, and global aspects of his work. Three lecture hours a week for one semester. Only one of the following may be counted: Ancient History and Classical Civilization 330 (Topic: Machiavelli), 330 (Topic 6), Core Texts and Ideas 330M, 375 (Topic: Machiavelli), European Studies 346 (Topic: Machiavelli), History 344R, 350L (Topic: Machiavelli), Liberal Arts Honors 350 (Topic: Machiavelli), 351R Religious Studies 357 (Topic: Machiavelli), 357C. Prerequisite: Upper-division standing.

CTI 330R. The Political Thought of the Reformation.
Examine the thought of the Reformation, especially of Martin Luther and John Calvin, including both their chief theological ideas and the implications of these ideas for politics and ethics. Explore the themes of justification; free will and predestination; original sin; the doctrine of the two kingdoms; the roots and nature of political authority; the question of toleration; the relationship between divine, natural, and civil law; and the status of the papacy. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

Same as Philosophy 342L. Examine the theory of liberal democracy through a study of its development in historical, religious, and political contexts. Three lecture hours or two lecture hours and one discussion hour a week for one semester. Only one of the following may be counted: Core Texts and Ideas 331, 335 (Topic: Origins of Liberalism), 335 (Topic 4), European Studies 346 (Topic: Origins of Liberalism), Philosophy 342L, 354 (Topic: Origins of Liberalism), 354 (Topic 5). Prerequisite: Upper-division standing.

CTI 332. The Sacred and the Secular in Modern European Thought.
Same as European Studies 346 (Topic 32), History 361G, and Religious Studies 357S. Introduces key themes and methodologies of intellectual history and social theory by exploring the dueling approaches to secularization and sacralization in modern European thought. Three lecture hours a week for one semester. Only one of the following may be counted: Core Texts and Ideas 332, 335 (Topic: Sacred and Secular in Modern European Thought), 335 (Topic 7), European Studies 346 (Topic: Sacred and Secular in Modern European Thought), 362G (Topic 19), Religious Studies 357 (Topic: Sacred and Secular in Modern European Thought), 357 (Topic 20), 357S. Prerequisite: Upper-division standing.

CTI 333. Rousseau and His Legacy.
Examine Rousseau's complex legacy through the reading of his essential political texts and reading contemporary responses to his thought. Three lecture hours a week for one semester. Core Texts and Ideas 333 and 375 (Topic: Rousseau and His Legacy) may not both be counted. Prerequisite: Upper-division standing.

CTI 335C. History of Christian Philosophy.
Same as Philosophy 356D. Examines the history of Christian philosophy through classic Christian thought, concerning what can be known and how people should live. Three lecture hours or two lecture hours and one discussion hour a week for one semester. Only one of the following may be counted: Core Texts and Ideas 335 (Topic: History of Christian Philosophy), 335 (Topic 2), 335C, Philosophy 354 (Topic: History of Christian Philosophy), 354 (Topic 2), 356D. Prerequisite: Upper-division standing.

CTI 335E. Hegel and the Formation of Modern European Identity.
Same as European Studies 348 (Topic 6) and Government 335E. An in-depth study of how Hegel identifies the social conditions necessary for personal self-realization but also for freedom by means of political community. Three lecture hours a week for one semester. Only one of the following may be counted: Core Texts and Ideas 335 (Topic: Hegel and the Formation of Modern European Identity), 335 (Topic 3), 335E, European Studies 348 (Topic: Hegel and the Formation of Modern European Identity), 348 (Topic 6), Government 335E, 335M (Topic: Hegel and the Formation of Modern European Identity), 335M (Topic 13). Prerequisite: Upper-division standing and six semester hours of lower-division coursework in government.

CTI 335M. Marx and Marxist Theory.
Same as European Studies 346 (Topic 30), History 332R, and Philosophy 342M. Introduction to the writings of Karl Marx as well as to those of his intellectual successors in Europe and around the globe in the nineteenth and twentieth centuries. Three lecture hours a week for one semester. Only one of the following may be counted: Core Texts and Ideas 335 (Topic: Marx and Western Marxism), 335M, European Studies 346 (Topic: Marx and Western Marxism), 346 (Topic 30), History 332R, 362G (Topic: Marx and Western Marxism), Philosophy 334K (Topic: Marx and Western Marxism), 342M. Prerequisite: Upper-division standing.

CTI 335W. Women in the History of Political Thought.
Same as Government 335F and Women's and Gender Studies 345 (Topic 32). Examines the themes of women, the family, and the private sphere in the history of political thought. Three lecture hours a week for one semester. Only one of the following may be counted: Core Texts and Ideas 335 (Topic: Women in Hist of Polit Thought), 335 (Topic 5), 335W, Government 335F, 335M (Topic: Women in History of Political Thought), 335M (Topic 17), Women's and Gender Studies 345 (Topic: Women...
in History of Political Thought), 345 (Topic 32). Prerequisite: Upper-division standing and six semester hours of lower-division coursework in government.

**CTI 338. The Question of Relativism.**
Examine the idea of relativism: what relativism is, what the fact and value distinction is, how the idea of moral relativism has shaped modern political thought, and what the arguments for and against relativism are. Explore the philosophic roots of the position in authors like Max Weber and Friedrich Nietzsche, as well as critics of relativism like Leo Strauss. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

**CTI 340. Ancient Epic.**
Same as Classical Civilization 322C. Explore epic poems of Greece and Rome in translation. Three lecture hours a week for one semester. Only one of the following may be counted: Classical Civilization 322 (Topic 4), 322C, Core Texts and Ideas 340, 345 (Topic: Ancient Epic), 345 (Topic 9). Prerequisite: Upper-division standing.

**CTI 341. Moral Agency In Greek Tragedy.**
Same as Classical Civilization 348 (Topic 16). Subjects include the masterpieces of Greek tragedy, the social and cultural background of the texts, and questions posed by the texts. Three lecture hours a week for one semester. Only one of the following may be counted: Classical Civilization 348 (Topic 16), Core Texts and Ideas 341, 345 (Topic 3). Prerequisite: Upper-division standing.

**CTI 342. Satan and the Idea of Evil.**
Same as Religious Studies 356D. Explore the history and breadth of Satan's role as a character (or background presence) in literature while developing close-reading techniques for literary analysis that can be applied across diverse eras, forms, and genres. Three lecture hours a week for one semester. Only one of the following may be counted: Core Texts and Ideas 342, 345 (Topic: Satan and the Idea of Evil), 345 (Topic 2), Religious Studies 356D, 357 (Topic: Satan and the Idea of Evil). Prerequisite: Upper-division standing.

**CTI 343. Love in the East and West.**
Same as Comparative Literature 323 (Topic 36), Middle Eastern Languages and Cultures 321 (Topic 25), and Middle Eastern Studies 342 (Topic 33). Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic 36), Core Texts and Ideas 343, 345 (Topic 10), Middle Eastern Languages and Cultures 321 (Topic 25), Middle Eastern Studies 342 (Topic 33). Prerequisite: Upper-division standing.

**CTI 344. Epics and Heroes of India.**
Same as Ancient History and Classical Civilization 330 (Topic 2), Asian Studies 373G, and History 350L (Topic 54). Focus on India's classical epics, the Mahabharata and the Ramayana, with emphasis placed on understanding the epic characters in relation to the heroic traditions of premodern India, as well as on the role of the epics in contemporary Indian political and religious culture. Three lecture hours a week for one semester. Only one of the following may be counted: Ancient History and Classical Civilization 330 (Topic 2), Asian Studies 372 (Topic 40), 373G, Core Texts and Ideas 345 (Topic 11), 344, History 350L (Topic 54). Prerequisite: Upper-division standing.

**CTI 344D. Dante.**
Same as English 366D, European Studies 347 (Topic 23), and Italian Civilization 348. Three lecture hours a week for one semester. Only one of the following may be counted: Core Texts and Ideas 344D, 345 (Topic: Dante), English 322 (Topic 23), 366D, European Studies 347 (Topic: Dante), 347 (Topic 23), Italian Civilization 348, 349 (Topic 2). Prerequisite: Upper-division standing.

**CTI 344E. War and Epic Literature.**
Examine the genre of epic literature through its evolving representation of war and conflict, with specific attention paid to political, social, historical, and artistic contexts, as well as to its historical reception in art, literature, film, and music. Three lecture hours a week for one semester. Core Texts and Ideas 344E and 375 (Topic: War and Epic Literature) may not both be counted. Prerequisite: Upper-division standing.

**CTI 344M. Italian Masterpieces.**
Same as European Studies 347 (Topic 52) and Italian Civilization 337. Study of representative texts in visual arts, film, literature, and opera, from the Renaissance to the present, in their historical context. Three lecture hours a week for one semester. Only one of the following may be counted: Core Texts and Ideas 344M, 375 (Topic: Italy Masters: Lit/Film/Art), European Studies 347 (Topic: Italy Masters: Lit/Film/Art), 347 (Topic 52), Italian Civilization 337, 349 (Topic: Italy Masters: Lit/Film/Art). Prerequisite: Upper-division standing.

**CTI 345L. Leadership: King Arthur to Queen Elizabeth.**
Explores major works of English literature, poetry, and drama from the 14th-16th century and European philosophy, with special attention to the universal question: what makes a good leader? Historical and current analysis of how authors model the duties of good citizens in idealized and critical depictions of fictional leaders—like King Arthur and his knights—and real leaders—like Richard II, Henry V, and Elizabeth I, as well as works written to advise rulers on good governance. Three lecture hours a week for one semester. Core Texts and Ideas 345 (Topic: Arthur-Elizabeth: Leadership) and 345L may not both be counted. Prerequisite: Upper-division standing.

**CTI 346. The Major Works of Dostoevsky.**
Same as Comparative Literature 323 (Topic 30) and Russian, East European, and Eurasian Studies 325 (Topic 10). Explores the dilemmas of homicide, suicide, patricide, and redemption in the novels of Fyodor Dostoevsky. Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic 30), Core Texts and Ideas 345 (Topic 5), 346, European Studies 347 (Topic 10), Russian 360 (Topic 1), Russian, East European and Eurasian Studies 325 (Topic 10). Prerequisite: Upper-division standing.

**CTI 347. The Russian Novel.**
Same as Comparative Literature 323 (Topic 29) and Russian, East European, and Eurasian Studies 325 (Topic 9). A survey of classic Russian authors as well as experimental works from the nineteenth through the twenty-first century. Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic 29), Core Texts and Ideas 345 (Topic 6), 347, English 322 (Topic 37), European Studies 347 (Topic 22), Russian 356 (Topic 1), Russian, East European, and Eurasian Studies 325 (Topic 9). Prerequisite: Upper-division standing.

**CTI 348. War and Revolution in Russian Literature and Culture.**
Same as Comparative Literature 323 (Topic 31) and Russian, East European, and Eurasian Studies 325 (Topic 18). Examines Russian narratives of war and revolution as represented in fiction, cinema, and journalism. Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic 31), Core Texts and Ideas 345 (Topic 8), 348, Russian 356 (Topic 3), Russian,
East European, and Eurasian Studies 325 (Topic 18). Prerequisite: Upper-division standing.

**CTI 350. Masterworks of World Drama.**

Studies major tragedies, comedies, and historical plays from various epochs, including at least one of Shakespeare’s plays. Explores themes related to ethics, politics, and human nature, as well as the craft of the playwright. Students attend and discuss at least one play performance. Three lecture hours or two lecture hours and one discussion hour a week for one semester. Prerequisite: Upper-division standing.

**CTI 351. The Idea of the Beautiful.**

Classical philosophical discussions of the idea of the beautiful (or noble or sublime), illustrated through selected works of art, drama, and literature. Explores the human perception of and response to beauty and its relation to such ideas as happiness and the promise of happiness, moral nobility or selflessness, and the divine. Philosophical works are studied in connection with examples drawn from the arts and are considered in their historical contexts. Three lecture hours or two lecture hours and one discussion hour a week for one semester. Prerequisite: Upper-division standing.

**CTI 352D. Early Italian Renaissance Art to 1470.**

Same as Art History 331K and European Studies 347 (Topic 29). Traces the beginnings of the "rebirhth" (renaissance) of the visual arts, from the end of the Middle Ages to the heyday of the Medici. Works of art are analyzed both in formal terms and in relation to contemporary society, religion, philosophy, economics, statecraft, gender, and other significant issues. Three lecture hours a week for one semester. Only one of the following may be counted: Art History 331K, Core Texts and Ideas 352D, 375 (Topic: Early Italian Renaissance Art to 1470), European Studies 347 (Topic: Early Italian Renaissance Art to 1470), 347 (Topic 29).

**CTI 354. Abraham and Abrahamic Religions.**

Same as Jewish Studies 363D, Middle Eastern Studies 342 (Topic 52), and Religious Studies 353G. Examines the figure of Abraham as portrayed in the Bible and the reception of that portrayal in Judaism, Christianity, and Islam. Three lecture hours a week for one semester. Only one of the following may be counted: Core Texts and Ideas 354, 375 (Topic: Abraham & Abrahamic Religions), Jewish Studies 363 (Topic: Abraham & Abrahamic Religions), 363D, Middle Eastern Studies 342 (Topic: Abraham & Abrahamic Religions), 342 (Topic: 52), Religious Studies 353 (Topic: Abraham & Abrahamic Religions), 353G. Prerequisite: Upper-division standing.

**CTI 354F. The Five Books of Moses.**

Same as Jewish Studies 364 (Topic 15), Middle Eastern Studies 342 (Topic 68), and Religious Studies 353R. Study the socio-historical circumstances that gave shape to the first five books of the Bible: Genesis, Exodus, Leviticus, Numbers, and Deuteronomy. Examine how these five books achieved the status of sacred literature. Three lecture hours a week for one semester. Only one of the following may be counted: Core Texts and Ideas 354F, 375 (Topic: The Five Books of Moses), Jewish Studies 364 (Topic: The Five Books of Moses), 364 (Topic 15), Middle Eastern Studies 342 (Topic: The Five Books of Moses), 342 (Topic 68), Religious Studies 353 (Topic: The Five Books of Moses), 353R, 361 (Topic: The Five Books of Moses). Prerequisite: Upper-division standing.

**CTI 354J. The Book of Job.**

Same as Jewish Studies 363 (Topic 29), Middle Eastern Studies 342 (Topic 67), and Religious Studies 365J. Three lecture hours a week for one semester. Only one of the following may be counted: Core Texts and Ideas 354J, 375 (Topic: The Book of Job), Jewish Studies 363 (Topic: The Book of Job), 363 (Topic 29), Middle Eastern Studies 342 (Topic: The Book of Job), 342 (Topic 67), Religious Studies 361 (Topic: The Book of Job), 365 (Topic: The Book of Job), 365J. Prerequisite: Upper-division standing.

**CTI 354L. Law and Justice in the Bible.**

Same as Jewish Studies 363 (Topic 30), Middle Eastern Studies 342 (Topic 66), and Religious Studies 353K. Examine the legal traditions of the Torah (Pentateuch) and what they reveal about the practice of law and justice in ancient Israel and the wider biblical world. Three lecture hours a week for one semester. Only one of the following may be counted: Core Texts and Ideas 354L, Jewish Studies 363 (Topic 30), Middle Eastern Studies 342 (Topic: Law/Justice in the Bible), 342 (Topic 66), Religious Studies 353 (Topic: Law/Justice in the Bible), 353K. Prerequisite: Upper-division standing.

**CTI 354P. Biblical Prophecy.**

Same as Jewish Studies 363 (Topic 28), Middle Eastern Studies 342 (Topic 37), and Religious Studies 353N. An introduction to the diversity of prophetic literature in the Old Testament, its historical development, social context, and Near Eastern parallels. Three lecture hours a week for one semester. Only one of the following may be counted: Core Texts and Ideas 354P, 375 (Topic: Biblical Prophecy), Jewish Studies 363 (Topic: Biblical Prophecy), 363 (Topic 28), Middle Eastern Languages and Cultures 321 (Topic 24), Middle Eastern Studies 342 (Topic 37), Religious Studies 353 (Topic: Biblical Prophecy), 353N, 361 (Topic: Biblical Prophecy). Prerequisite: Upper-division standing.

**CTI 355. The Bible in the Colonial Americas.**

Same as History 363F, Latin American Studies 366 (Topic 34), and Religious Studies 366C. Varied perspectives on the central role played by the Old Testament in the construction of colonial cultures in the Americas. Three lecture hours a week for one semester. Only one of the following may be counted: Core Texts and Ideas 355, 375 (Topic 6), History 363F, 363K (Topic 5), Latin American Studies 366 (Topic 34), Religious Studies 366 (Topic 3), 366C. Prerequisite: Upper-division standing.

**CTI 355C. Law, Liberty, and Faith.**

Consider medieval ideas about the proper relation between law, liberty, and faith, and the arguments against them made by modern philosophers and theologians. Three lecture hours a week for one semester. Core Texts and Ideas 355C and 375 (Topic: Law, Liberty, Faith) may not both be counted. Prerequisite: Upper-division standing.

**CTI 355R. The Age of Reformation.**

Same as History 343 and Religious Studies 344. Examines late medieval religion, the rise of Protestant movements, and the Catholic response in their cultural, political, and social contexts. Three lecture hours a week for one semester. Only one of the following may be counted: Core Texts and Ideas 355R, 375 (Topic: The Age of Reformation), History 343, Religious Studies 344. Prerequisite: Upper-division standing.

**CTI 355T. Debating the Bible in the Twenty-First Century.**

Same as American Studies 327J and Religious Studies 346S. Examine the ways in which individuals, primarily in the United States, have regarded the Bible as relevant or irrelevant to contemporary life. Discuss contemporary controversial issues in which the Bible has played a role in their cultural, political, and social contexts. Three lecture hours a week for one semester. Only one of the following may be counted: American Studies 327T (Topic: Debating the Bible in 21st Century), 327J, Core Texts and Ideas 355T, 375 (Topic: Debating the Bible in 21st Century), Religious Studies 346 (Topic: Debating the Bible in 21st Century), 346 (Topic 11), 346S. Prerequisite:
CTI 357. Islamic Theology.
Same as Middle Eastern Languages and Cultures 321 (Topic 27), Middle Eastern Studies 342 (Topic 35), and Religious Studies 358U. Three lecture hours a week for one semester. Only one of the following may be counted: Core Texts and Ideas 375 (Topic 2), 357, Islamic Studies 340 (Topic 7), Middle Eastern Languages and Cultures 321 (Topic 27), Middle Eastern Studies 342 (Topic 35), Religious Studies 358 (Topic 14), 358U. Prerequisite: Upper-division standing.

CTI 363. The French Revolution and Napoleon.
Same as European Studies 346 (Topic 25) and History 353. Analysis of the social, political, and economic origins and outcomes of the French Revolution and Napoleon's empire. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 346 (Topic: French Revolution and Napoleon), 346 (Topic 25), Core Texts and Ideas 363, 375 (Topic: French Revolution and Napoleon), History 353. Prerequisite: Upper-division standing.

CTI 365. Classics of Social Scientific Thought.
Same as Government 335P. Studies a selection of foundational modern classics in economics, psychology, sociology, political science, and anthropology, drawn mainly from the nineteenth and twentieth centuries. Three lecture hours or two lecture hours and one discussion hour a week for one semester. Only one of the following may be counted: Core Texts and Ideas 365, Government 335M (Topic: Classics of Social Scientific Thought), 335P Prerequisite: Upper-division standing.

CTI 371. Einstein in the Age of Conflict.
Same as History 350L (Topic 64: Einstein in the Age of Conflict). Following the life and work of Albert Einstein, course examines the rise of the theories of relativity and quantum mechanics upon the stage of international political upheaval. Three lecture hours a week for one semester. Only one of the following may be counted: Core Texts and Ideas 370 (Topic: Einstein in the Age of Conflicts), 371, History 350L (Topic 64). Prerequisite: Upper-division standing.

CTI 371D. Darwin on Origin of Species.
Explore Darwin's argument for evolution in its original context. Three lecture hours a week for one semester. Only one of the following may be counted: Core Texts and Ideas 370 (Topic: Darwin on Origin of Species), 371D, 375 (Topic: Darwin on Origin of Species), History 362G (Topic: Darwin on Origin of Species). Prerequisite: Upper-division standing.

CTI 371M. History of Mathematics.
Survey major mathematical developments beginning with the ancient Greeks and tracing those developments through Hindu-Indian mathematics, Arabic mathematics, and European mathematics up to the nineteenth century. Three lecture hours a week for one semester. Only one of the following may be counted: Core Texts and Ideas 371M, 375 (Topic: History of Mathematics), Mathematics 375T (Topic: History of Mathematics). Prerequisite: Upper-division standing.

CTI 371N. Newton's Principia.
Same as History 366Q. Examine key sections of Newton's Principia Mathematica Philosophiae Naturalis. Three lecture hours a week for one semester. Only one of the following may be counted: Core Texts and Ideas 371N, 375 (Topic: Newton's Principia), History 366Q, 366N (Topic: Newton's Principia). Prerequisite: Upper-division standing.

CTI 371S. Science and Religion to Newton.
Explore the complex relationship between science and religious faith in medieval and early modern Europe beginning with Galileo Galilei's trial before the Roman Inquisition. Examine themes including the understanding of God and nature, authority (classical and scriptural) versus observation, the wide range of knowledge-making practices, the persistence of magic, and the influence of power and patronage. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

Same as Government 353D. A careful reading of Darwin's influential Origin of the Species by Means of Natural Selection, together with an examination of the religious, political, and scientific controversies the book has inspired from its first publication to the present day. Three lecture hours or two lecture hours and one discussion hour a week for one semester. Only one of the following may be counted: Core Texts and Ideas 370 (Topic: The Politics of Evolution), 372, Government 335M (Topic: The Politics of Evolution), 353D. Prerequisite: Upper-division standing and six semester hours of lower-division coursework in government.

CTI 373. Great Works In Medicine.
Same as Ancient History and Classical Civilization 330 (Topic 7). Examine signature works in the history of medicine. Three lecture hours a week for one semester. Only one of the following may be counted: Ancient History and Classical Civilization 330 (Topic: Great Works In Medicine), 330 (Topic 7), Core Texts and Ideas 373, 375 (Topic: Great Works In Medicine). Prerequisite: Upper-division standing.

CTI 374. Biology, Behavior, and Injustice.
Same as History 322R. Explores questions about human behavior related to biological factors as compared with personal experiences and societal standards. Three lecture hours a week for one semester. Only one of the following may be counted: Core Texts and Ideas 370 (Topic 2), 374, History 322R, 366N (Topic 16). Prerequisite: Upper-division standing.

CTI 375. Topics in Core Texts and Ideas.
Study of classic texts, connected historically or thematically. Three lecture hours or two lecture hours and one discussion hour a week for one semester. Core Texts and Ideas 375 and Western Civilization 320 may not both be counted unless the topics vary. May be repeated for credit when the topics vary. Prerequisite: Varies with the topic.

Topic 1: The Qur’an. Same as Comparative Literature 323 (Topic 37), Middle Eastern Languages and Cultures 321 (Topic 9), Middle Eastern Studies 342 (Topic 16), Religious Studies 325G, and Women's and Gender Studies 340 (Topic 54). The history, language, style, and themes of the Qur’an. Only one of the following may be counted: Comparative Literature 323 (Topic 37), Core Texts and Ideas 375 (Topic 1), Islamic Studies 340 (Topic 2), Middle Eastern Languages and Cultures 321 (Topic 9), Middle Eastern Studies 342 (Topic 16), Religious Studies 325G, Women’s and Gender Studies 340 (Topic 54). Additional prerequisite: Upper-division standing.

Topic 3: Enlightenment and Revolution. Same as European Studies 346 (Topic 14) and History 350L (Topic 81). Examines the relationship between the intellectual project of the Enlightenment and the political and social transformations that unfolded in western Europe and North America from the beginnings of the Dutch Revolt in the 1560s to the decade following the Paris Commune of 1871. Only one of the following may be counted: Core Texts and Ideas 375 (Topic: Enlightenment and Revolution), 375 (Topic 3), European Studies 346 (Topic: Enlightenment and Revolution), 346 (Topic 14), History 350L (Topic: Enlightenment and Revolution), 350L (Topic 81). Additional prerequisite: Upper-division standing.

Topic 4: Art and the City in Renaissance Italy. Same as Art History 331P and European Studies 347 (Topic 33). Art, architecture, and emerging civic identity in Florence, Siena, Venice, and other Italian
Renaissance city-states. Three lecture hours a week for one semester. Only one of the following may be counted: Art History 331P, 364 (Topic: Art and the City in Renaissance Italy), Core Texts and Ideas 375 (Topic: Art and the City in Renaissance Italy), 375 (Topic 4), European Studies 347 (Topic: Art and the City in Renaissance Italy), 347 (Topic 33), Italian Civilization 349 (Topic: Art and the City in Renaissance Italy), Western Civilization 320 (Topic: Art and the City in Renaissance Italy).

**Topic 7: Archaic and Classical Greece.** Same as Ancient History and Classical Civilization 325 (Topic 7) and History 354E. Survey of Greek history from the emergence of the city-states to the rise of Macedonia. Two lecture hours and one discussion hour a week for one semester. Only one of the following may be counted: Ancient History and Classical Civilization 325 (Topic 4), 325 (Topic 7), Classical Civilizations 354C, Core Texts and Ideas 375 (Topic: Archaic and Classical Greece), 375 (Topic 7), History 354C, 354E. Additional prerequisite: Upper-division standing.

**Topic 8: Values and Leadership in Ancient World.** Same as Classical Civilization 348 (Topic 23). Only one of the following may be counted: Classical Civilization 348 (Topic: Values and Leadership in Ancient World), 348 (Topic 23), Core Texts and Ideas 375 (Topic: Values and Leadership in Ancient World), 375 (Topic 8), History 350L (Topic: Values and Leadership in Ancient World). Additional prerequisite: Upper-division standing.

CTI 379. Conference Course.
Intensive tutorial study of selected major texts. Individual instruction. May be repeated for credit. Prerequisite: Upper-division standing and consent of the director of the Jefferson Center and instructor.

**Graduate Courses**

**Professional Courses**

**CZ - Czech**

**Lower-Division Courses**

**CZ 601C. Intensive Czech I.**
Not open to native or heritage speakers of Czech. Emphasis on developing oral proficiency in Czech using intensive methods of instruction. Six lecture hours a week for one semester. Only one of the following may be counted: Czech 601C, 406, 506. Only one of the following may be counted: Czech 601C, 407, 507.

**CZ 406, 506. First-Year Czech I.**
Emphasis on four-skills proficiency: listening, speaking, reading, and writing. For each semester hour of credit earned, one lecture hour a week for one semester. Only one of the following may be counted: Czech 601C, 406, 506.

**CZ 407, 507. First-Year Czech II.**
Emphasis on four-skills proficiency: listening, speaking, reading, and writing. For each semester hour of credit earned, one lecture hour a week for one semester. Only one of the following may be counted: Czech 601C, 407, 507. Prerequisite: Czech 406 or 506.

**CZ 611C. Intensive Czech II.**
Not open to native or heritage speakers of Czech. Continuing intensive development of proficiency in Czech, with a focus on speaking and the reading of authentic texts. Six lecture hours a week for one semester. Czech 611C and 312K, 412K may not both be counted. Czech 611C and 312L, 412L may not both be counted. Prerequisite: Czech 601C or 507.

**CZ 312K, 412K. Second-Year Czech I.**
Listening, speaking, reading, and writing at the second-year level. For each semester hour of credit earned, one lecture hour a week for one semester. Czech 611C and 312K, 412K may not both be counted. Prerequisite: Czech 601C or 507.

**CZ 312L, 412L. Second-Year Czech II.**
Listening, speaking, reading, and writing at the advanced, second-year level. For each semester hour of credit earned, one lecture hour a week for one semester. Czech 611C and 312L, 412L may not both be counted. Prerequisite: Czech 312K or 412K.

This course is used to record credit the student earns while enrolled at another institution in a program administered by the University's Study Abroad Office. Credit is recorded as assigned by the study abroad adviser in the Department of Slavic and Eurasian Studies. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

**Upper-Division Courses**

**CZ 325. Third-Year Czech I.**
Oral expression, reading, and composition. Three lecture hours a week for one semester. Prerequisite: Czech 611C or 312L or 412L.

**CZ 326. Third-Year Czech II.**
Continuation of Czech 325: Oral expression, reading, and composition. Three lecture hours a week for one semester. Prerequisite: Czech 325.

**CZ 328. Topics in Advanced Czech.**
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Czech 326.

This course is used to record credit the student earns while enrolled at another institution in a program administered by the University's Study Abroad Office. Credit is recorded as assigned by the study abroad adviser in the Department of Slavic and Eurasian Studies. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

**CZ 379. Conference Course in Czech Language or Literature.**
Three lecture hours a week for one semester. May be repeated for credit. Prerequisite: Six semester hours of upper-division coursework in Czech, or upper-division standing and consent of instructor.

**CZ 679H. Honors Tutorial Course.**
Supervised individual research on a literary honors paper of some length. Conference course for two semesters. Must be taken for special honors in addition to the major requirement. Prerequisite: For 679HA, upper-division standing, a University grade point average of at least 3.00, and a grade point average in Czech of at least 3.50; for 679HB, Czech 679HA.

**Graduate Courses**

**CZ 392. Studies in Czech Language.**
Topics may include Czech linguistics, pedagogy, and comparative language study. Three lecture hours a week for one semester. May be

Decision Science: D S

Lower-Division Courses

This course is used to record credit the student earns while enrolled at another institution in a program administered by the University’s Study Abroad Office. Credit is awarded as assigned by the study abroad advisor in the academic unit. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

Upper-Division Courses

D S 235. Introduction to Decision Science.

Restricted to students in the McCombs School of Business. Examine modeling of business problems using methods from decision analysis, simulation and optimization. Two lecture hours a week for one semester. Decision Science 235 and 235H may not both be counted. Offered on the letter-grade basis only. Prerequisite: Statistics 301 or 301H; Mathematics 408Q or credit or registration for Mathematics 408D, 408L, or 408S.

D S 235H. Introduction to Decision Science: Honors.

Restricted to students in the McCombs School of Business Honors Program. Examine modeling of business problems using methods from decision analysis, simulation and optimization. Two lecture hours a week for one semester. Decision Science 235 and 235H may not both be counted. Offered on the letter-grade basis only. Prerequisite: Statistics 301 or 301H, Mathematics 408Q or credit or registration for Mathematics 408D, 408L, or 408S.

D S 372. Topics in Decision Science.

Restricted to students in a business major. The equivalent of three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Varies with the topic.

Topic 6: Optimization Method in Finance. Same as Business Analytics 372 (Topic 6). Explore quantitative methods and techniques in optimization and simulation, and their use in financial decision making. Discuss theory and application in portfolio selection, options and other derivative pricing, index tracking, risk measures, volatility estimating. Examine linear, quadratic, nonlinear, and integer programming; dynamic programming; robust optimization; Monte Carlo methods and variance reduction techniques. Emphasis will be placed on problem solving with advanced computational programming languages. Only one of the following may be counted: Finance 372 (Topic: Optimization Method in Finance), 372 (Topic 6), Statistics 372 (Topic 6), Business Analytics 372 (Topic 6), Decision Science 372 (Topic 6).

Topic 7: Computational Finance. A systematic introduction to the analysis and implementation of numerical methods used in finance. Explore numerical techniques in derivative pricing and optimal asset allocation, such as Monte Carlo and quasi-Monte Carlo simulation, methods for solving partial differential equations, and dynamic programming. Statistics 372 (Topic 7) and Decision Science 372 (Topic 7) may not both be counted.

Danish: DAN

Lower-Division Courses

DAN 604. Accelerated First-Year Danish.

Six lecture hours a week for one semester, with optional laboratory available.

DAN 612. Accelerated Second-Year Danish.

Six lecture hours a week for one semester, with optional laboratory available. Prerequisite: Danish 604.

This course is used to record credit the student earns while enrolled at another institution in a program administered by the University’s Study Abroad Office. Credit is recorded as assigned by the study abroad advisor in the Department of Germanic Studies. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded in an affiliated studies program. May be repeated for credit when the topics vary.

Upper-Division Courses

DAN 327. Advanced Danish I.

Three lecture hours a week for one semester. Prerequisite: Danish 612 with a grade of at least C.

DAN 328. Advanced Danish II.

Three lecture hours a week for one semester. Prerequisite: Danish 327 with a grade of at least C.

This course is used to record credit the student earns while enrolled at another institution in a program administered by the University’s Study Abroad Office. Credit is recorded as assigned by the study abroad advisor in the Department of Germanic Studies. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

DAN 130D. Danish across Disciplines.

Read and discuss Danish language materials related to the subject matter of another designated course. One lecture hour for one
semester. May be repeated for credit. Prerequisite: Three semester hours of upper-division coursework in Dutch with a grade of at least C.

DAN 379. Conference Course in Danish Language or Literature.
Supervised individual study of selected problems in Danish language or literature. Conference course. May be repeated for credit. Prerequisite: Upper-division standing and consent of instructor.

Graduate Courses
Professional Courses
DCH - Dutch

Lower-Division Courses
DCH 604. Accelerated First-Year Dutch.
Six lecture hours a week for one semester, with optional laboratory available.

DCH 612. Accelerated Second-Year Dutch.
Six lecture hours a week for one semester, with optional laboratory available. Prerequisite: Dutch 604.

Topics in Dutch.
This course is used to record credit the student earns while enrolled at another institution in a program administered by the University's Study Abroad Office. Credit is recorded as assigned by the study abroad adviser in the Department of Germanic Studies. University credit is awarded for work in an exchange program; may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

Upper-Division Courses
DCH 327. Advanced Dutch I.
Three lecture hours a week for one semester. Prerequisite: Dutch 612 with a grade of at least C.

DCH 328. Advanced Dutch II.
Three lecture hours a week for one semester. Prerequisite: Dutch 327 with a grade of at least C.

Topics in Dutch.
This course is used to record credit the student earns while enrolled at another institution in a program administered by the University's Study Abroad Office. Credit is recorded as assigned by the study abroad adviser in the Department of Germanic Studies. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

DCH 130D. Dutch across Disciplines.
Read and discuss Dutch language materials related to the subject matter of another designated course. One lecture hour per week for one semester. May be repeated for credit. Prerequisite: Three semester hours of upper-division coursework in Dutch with a grade of at least C.

DCH 375. Studies in Dutch Literature.
Selected topics in Dutch and Flemish literature. Conducted in Dutch. Three lecture hours a week for one semester. May be repeated for credit. Prerequisite: Dutch 612 or the equivalent, and consent of instructor.

DCH 379. Conference Course in Dutch Language or Literature.
Supervised individual study of selected problems in Dutch language or literature. Conference course. May be repeated for credit. Prerequisite: Upper-division standing and consent of instructor.

Graduate Courses
Professional Courses
DES - Design

Design: DES

Lower-Division Courses
DES 301. Introduction to Design Thinking.
Same as Integrated Design 301D. Introduces design thinking and design methods, with a focus on design process. Three lecture hours a week for one semester. Design 301 and Integrated Design 301D may not both be counted. Offered on the letter-grade basis only.

DES 102. Technologies in Design Practice.
Introduces a variety of technology and software used by design professionals. The equivalent of one lecture hour a week for one semester. May be repeated for credit when the topics vary.

DES 102C. Introduction to 2D Design.
Explore the fundamental principles and methods of 2D design making, including an introduction to software. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester, with additional studio hours to be arranged. Offered on the letter-grade basis only.

DES 102D. Introduction to 3D Design.
Introduction to theories, principles, methods, techniques, tools, and software for 3D design. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester, with additional studio hours to be arranged. Offered on the letter-grade basis only.

DES 102E. Introduction to Interaction Design.
Introduction to theories, methods, and techniques for designing time-based and interactive experiences, including video, motion graphics, and web and mobile applications. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester, with additional studio hours to be arranged. Offered on the letter-grade basis only.

DES 303. Introduction to Graphic Design.
Lecture/seminar/studio course. Introduces the fundamental principles, conventions, and techniques of graphic design. Three lecture hours a week for one semester. Offered on the letter-grade basis only.

DES 304. Design Studio I.
Restricted to design majors. Explore the vocabulary, principles and techniques of design across disciplines through project work in a studio setting. Six lecture hours a week for one semester, with additional studio hours to be arranged. Offered on the letter-grade basis only.
DES 305. Design Studio II.
Restricted to design majors. Build upon vocabulary, principles and techniques of design across disciplines through project work in a studio setting. Six lecture hours a week for one semester, with additional studio hours to be arranged. Offered on the letter-grade basis only. Prerequisite: Design 304.

DES 306. Design Studio III.
Restricted to design majors. Refine and apply vocabulary, principles and techniques of design across disciplines through project work in a studio setting. Six studio hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Design 304 and 305.

Explore the broad social, economic, technological, and political forces that shape design, and how design influences the human experience in today’s world. Examine the critical discourse surrounding the creation, production, consumption, and interpretation of design. Three lecture hours and one laboratory hour a week for one semester. Offered on the letter-grade basis only.

DES 308. Introduction to Design Theory and Criticism.
Lecture/seminar course. Introduces design theory and criticism, examining how people’s beliefs and values inform the way they make, understand, and evaluate works of design. The equivalent of three lecture hours a week for one semester. Offered on the letter-grade basis only.

DES 309. Introduction to Design.
Studio course. Introduction to the design process, including research, ideation, prototyping, critique, and iteration. Projects also introduce the vocabulary, principles, strategies, techniques, and conventions of drawing and rendering used by design professionals. Six studio hours a week for one semester. Design 309 and 310 may not both be counted. Offered on the letter-grade basis only.

DES 310C. Introduction to Design Research.
Examine the role of research in the design process, and explore a variety of research methods. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester, with additional studio hours to be arranged. Offered on the letter-grade basis only.

DES 310T, 310T. Topics in Innovative Design.
For each semester hour of credit earned, one lecture hour a week for one semester. May be repeated for credit when the topics vary. Offered on the letter-grade basis only.

DES 311C. Portfolio Critique.
Develop a portfolio of work to present for feedback. The equivalent of one lecture hour a week for one semester. May be repeated for credit. Offered on the letter-grade basis only.

DES 311J. Design Technologies I.
Studio course. Projects introduce the vocabulary, principles, strategies, techniques, and conventions of color, composition, rendering, photography, and typography used by design professionals. Six laboratory hours a week for one semester. Offered on the letter-grade basis only.

DES 311K. Design Technologies II.
Studio course. Projects introduce techniques and theories for designing time-based and interactive experiences, including video, motion graphics, and web/mobile applications. Six laboratory hours a week for one semester. Offered on the letter-grade basis only.

Introduction to fundamental typographic elements: visual composition and form-making, sequence and narrative, and contrast and hierarchy. Final project is a portfolio to be submitted for sophomore performance review. Six laboratory hours a week for one semester. Only one of the following may be counted: Design 312, 312G, 325. Offered on the letter-grade basis only.

DES 312G. Typography in Communication.
Studio course. Introduction to fundamental typographic elements: visual composition and form-making; sequence and narrative; and contrast and hierarchy. Six laboratory hours a week for one semester. Only one of the following may be counted: Design 312, 312G, 325. Offered on the letter-grade basis only.

DES 313, 313. Introduction to Design History.
Introduction to the history of design, with a focus on key themes and ideas. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester, with additional studio hours to be arranged. Design 313 and 336 may not both be counted. Offered on the letter-grade basis only.

DES 314. Introduction to Industrial Design.
Introduction to theories, principles, methods, and techniques for industrial design in a studio format. Six studio hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Design 304 or 309.

DES 315C. Sketching.
Introduction to elements, techniques, processes, and tools for sketching in design practice. Explore sketching as a way to convey ideas. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester, with additional studio hours to be arranged. Offered on the letter-grade basis only.

This course is used to record credit the student earns while enrolled at another institution in a program administered by the University’s Study Abroad office. Credit is recorded as assigned by the Design Assistant Chair of the Department of Art and Art History. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

Upper-Division Courses

DES 320. Design Theories and Methods.
Lecture/seminar/studio course. Introduces cultural and aesthetic theories pertinent to design, as well as research methods for generating and prototyping ideas. Three lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Design 304 and 305; or Design 309.

DES 321. Images in Communication.
Studio course. Explores the selection and creation of images appropriate to specific communication goals and contexts, such as promotional images, infographics, logos, instructions, and/or narratives. Six laboratory hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: The following with a grade of at least C: Design 304 and 305, or Design 309.
DES 121C. Portfolio Critique.
Develop a portfolio of work to present for feedback. The equivalent of one lecture hour a week for one semester. May be repeated for credit. Offered on the letter-grade basis only. Prerequisite: Upper-division standing.

DES 322. Design and the Social Environment.
Studio course. Involves researching a contemporary social issue; define an area of opportunity; and design graphics, objects, services, and/or systems that respond ethically to the issue. Six laboratory hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Design 321, 325, and 326 are recommended.

DES 323. Color in Theory and Practice.
Explore contemporary color notation systems and color management techniques. Survey economic, health and safety, environmental, cultural, legal, political, and other ethical considerations pertinent to using color. Three lecture hours a week for one semester. Offered on the letter-grade basis only.

DES 324. Design Research and Methods.
Lecture/studio course. Lectures and projects introduce problem-framing and problem-solving techniques and a variety of design research, ideation, prototyping, and iterative methods. Three lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: One of the following: Design 301, 304, 305, 309, or Integrated Design 301D.

DES 325. Typography I.
Studio course. Projects introduce the fundamental principles, conventions, and techniques of typography. Six laboratory hours a week for one semester. Only one of the following may be counted: Design 312, 312G, 325. Offered on the letter-grade basis only. Prerequisite: The following with a grade of at least C: Design 304 and 305, or Design 309.

DES 326. Objects and Spaces.
Studio course. Projects introduce rendering and prototyping techniques used for solving problems in three-dimensional media such as product design, packaging design, environmental graphics, and/or architectural/landscape design. Six laboratory hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: The following with a grade of at least C: Design 304 and 305, or Design 309.

DES 327. Prototyping Physical Space.
Restricted to design majors. Studio-based exploration of the iterative development of low-resolution immersive environments. Six studio hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: The following with a grade of at least C: Design 321, 325, and 326; and Design 304 and 305, or Design 309.

DES 328. Print and Packaging.
Restricted to design majors. Studio-based exploration of the print environment, and build technical skills and process management skills. Six studio hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: The following with a grade of at least C: Design 321, 325, and 326; and Design 304 and 305, or Design 309.

This course is used to record credit the student earns while enrolled at another institution in a program administered by the University’s Study Abroad office. Credit is recorded as assigned by the Design Assistant Chair of the Department of Art and Art History. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

DES 130T, 330T. Topics in Innovative Design.
Exploration of innovative topics in design. For each semester hour of credit earned, one lecture hour a week for one semester. May be repeated for credit when the topics vary. Offered on the letter-grade basis only. Prerequisite: Upper-division standing.

DES 131. Portfolio and Performance Review.
Develop and review a portfolio of work, guided by feedback from the instructor, group critiques, and reviews with visiting critics. The equivalent of one lecture hour a week for one semester. Offered on the letter-grade basis only. Prerequisite: Design 304 and 305.

DES 334. Introduction to Interaction Design.
Studio course. Projects introduce theories, methods, and techniques for designing time-based and interactive experiences, including video, motion graphics, and web/mobile applications. Six laboratory hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: The following with a grade of at least C: Design 304 and 305, or Design 309.

DES 334C. Interaction Design I.
Explore theories, methods, and techniques for designing time-based and interactive experiences, including video, motion graphics, and web and mobile applications. Six laboratory hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: The following with a grade of at least C: Design 304 and 305, or Design 309.

DES 335. Typography II.
Studio course. Students use typographic principles to design complex print and on-screen publications. Six studio hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: The following with a grade of at least C: Design 304 and 305, or Design 309.

Lecture/seminar course. Surveys the history of graphic and/or industrial design from c.1450 to the present, with an emphasis on the last 150 years. Three lecture hours a week for one semester. Design 313 and 336 may not both be counted. Offered on the letter-grade basis only.

DES 337. Topics in Design History.
Lectures and discussions focusing on specialized or advanced topics in the history of design. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Offered on the letter-grade basis only.

Topic 1: History of Graphic Design. Survey the history of graphic design from c.3000 BCE to the present, with an emphasis on the last 200 years. Offered on the letter-grade basis only.

Topic 2: History of Industrial Design. Survey the history of industrial design from c.1750 to the present, with an emphasis on the last 150 years. Offered on the letter-grade basis only.

Topic 3: Research Methods in Design History. Introduces a variety of research methods in design history. Offered on the letter-grade basis only.

DES 138, 338. Topics in Design.
Examine specialized or advanced topics in design. For each semester hour of credit earned, one lecture hour a week for one semester. May be repeated for credit when the topics vary. Offered on the letter-grade basis only. Prerequisite: Upper-division standing.
DES 339T. Topics In Design Theory.
Examine advanced topics in the study of cultural, aesthetic, and practice-based theories pertinent to design. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Offered on the letter-grade basis only. Prerequisite: Upper-division standing; Design 304 and 305, or Design 309, and Design 308

Development of flexible, integrated design systems such as identities, wayfinding, and service design. Six laboratory hours a week for one semester. Design 340 and 340G may not both be counted. Offered on the letter-grade basis only. Prerequisite: Credit with a grade of at least C in each or registration for Design 326, 334, and 335, and credit or registration for Design 336 or 337 (Topic 1).

DES 340C. Identity Systems.
Restricted to design majors. Examine the relationship between business and graphic design to simplify, unify, and amplify a brand's identity in a studio format. Six studio hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Upper-division standing and the following with a grade of at least C: Design 321, 325, and 326; and Design 304 and 305, or Design 309.

DES 340D. Brand Storytelling.
Restricted to design majors. Examine the relationships between research, strategy, identity, human-centered design, and storytelling to articulate and communicate a brand's purpose in a studio format. Six studio hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Upper-division standing and the following with a grade of at least C: Design 321, 325, and 326; and Design 304 and 305, or Design 309.

Studio course. Explores the purposes and constraints of branding and visual identity design, and creative systems that can be applied consistently across media and materials. Six laboratory hours a week for one semester. Design 340 and 340G may not both be counted. Offered on the letter-grade basis only. Prerequisite: Upper-division standing and the following with a grade of at least C: Design 321, 325, and 326; and Design 304 and 305, or Design 309.

Exploration of advanced issues in typography. Six laboratory hours a week for one semester. Design 341 and 341G may not both be counted. Offered on the letter-grade basis only. Prerequisite: Credit with a grade of at least C in each or registration for Design 326, 334 or 334C, and 335, and credit or registration for Design 336 or 337 (Topic 1).

DES 341G. Typography III.
Studio course. Advanced projects in typography; introduction to type design, material explorations, environmental type design, and expressive distortion Six laboratory hours a week for one semester. Design 341 and 341G may not both be counted. Offered on the letter-grade basis only. Prerequisite: Design 335 with a grade of at least C.

DES 342. Design and Persuasion.
Development and presentation of coherent informational and persuasive visual statements. Six laboratory hours a week for one semester. Design 342 and 342G may not both be counted. Offered on the letter-grade basis only. Prerequisite: Upper-division standing and the following with a grade of at least C: Design 321, 325, and 326; and Design 304 and 305, or Design 309.

DES 342G. Information and Persuasion.
Studio course. Explores ways to communicate information accurately, clearly, and persuasively through informational graphics and data visualization. Six laboratory hours a week for one semester Design 342 and 342G may not both be counted. Offered on the letter-grade basis only. Prerequisite: Upper-division standing and the following with a grade of at least C: Design 321, 325, and 326; and Design 304 and 305, or Design 309.

DES 343. Design Research and Methods II.
Studio course. Students use insights gleaned from comparison research, user testing, and/or product reviews to refine existing prototypes or products. Six laboratory hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Upper-division standing and the following with a grade of at least C: Design 321, 325, and 326; and Design 304 and 305, or Design 309.

DES 344. Objects and Spaces II.
Studio course. Advanced practice in problem-solving, rendering, and prototyping in three-dimensional media, such as product design, packaging design, environmental graphics, and architectural/landscape design. Six laboratory hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Upper-division standing and the following with a grade of at least C: Design 321, 325, and 326; and Design 304 and 305, or Design 309.

DES 345. Design Writing.
Lecture/seminar course. Students propose and carry out original research and writing projects with the aim of submitting their writing for publication. Three lecture hours a week for one semester. May be taken twice for credit. May be repeated for credit. Offered on the letter-grade basis only. Prerequisite: Consent of instructor.

DES 346. Project Studio.
Studio course. Professional experience solving real-world problems, including commissioned projects, student-initiated projects, and/or pro bono projects. Six laboratory hours a week for one semester. May be taken three times for credit. May be repeated for credit. Offered on the letter-grade basis only. Prerequisite: Consent of instructor.

DES 347. Publication Studio.
Studio course. Advanced publishing projects in print and/or digital media. Six laboratory hours a week for one semester. May be taken twice for credit. May be repeated for credit. Offered on the letter-grade basis only. Prerequisite: For design majors, Design 304 and 305; for others, consent of instructor.

DES 348. Information Visualization.
Studio course. Students devise ways to communicate information accurately, clearly, and memorably. Six laboratory hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Upper-division standing and the following with a grade of at least C: Design 321, 325, and 326; and Design 304 and 305, or Design 309.

DES 349. Interaction Design II.
Lecture/studio course. Students design visually pleasing, responsive, user-centered web and mobile interfaces. One lecture and three studio hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Design 334 or 334C with a grade of at least C.

DES 350. Special Topics in Design.
Studio course. Projects focusing on contemporary design practice, featuring approaches and subfields not represented elsewhere in the
DES 351. Design Perspectives.
Studio course. Workshops and projects led by industry professionals, visiting lecturers, and/or University faculty and graduate students, featuring design approaches, subfields, practices, and media. Two lecture and two laboratory hours a week for one semester. May be taken twice for credit. May be repeated for credit. Offered on the letter-grade basis only. Prerequisite: Design 131 with a grade of at least C.

DES 352. Service and Systems Design.
Studio course. Students design effective user-centered systems and services. One lecture and three studio hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Design 131 with a grade of at least C.

DES 353. Advanced Topics in Interaction Design.
Studio Course. Students undertake advanced projects in interaction design. Topics may include user research, user interface design, service design, usability, and accessibility. The equivalent of three lecture hours a week for one semester. May be repeated for credit when the topics vary. Offered on the letter-grade basis only. Prerequisite: Design 334, 334C, or 349 with a grade of at least C.

DES 354. Design Issues.
Lecture/seminar course. Students engage with contemporary issues in design through reading, discussion, and writing. Three lecture hours a week for one semester. May be taken twice for credit. May be repeated for credit. Offered on the letter-grade basis only. Prerequisite: Design 131 with a grade of at least C.

DES 355. Interaction Design III.
Studio course. Advanced projects in visually pleasing, responsive, user-centered web and mobile interfaces. Six studio hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Design 334; or 334C and 349 with a grade of at least C in each.

DES 356. Topics in Graphic Design.
Restricted to design majors. Topics in graphic design. Six studio hours a week for one semester. May be repeated for credit when the topics vary. Offered on the letter-grade basis only. Prerequisite: Upper-division standing and the following with a grade of at least C: Design 321, 325, and 326; and Design 304 and 305, or Design 309.

Topic 1: Spatial Graphic Design. Restricted to design majors. Examine the relationship between the built environment and typography, image, symbol, material, and visual storytelling in the context of artistic, social, and cultural movements in a studio format. Six studio hours a week for one semester. Offered on the letter-grade basis only. Additional prerequisite: Upper-division standing.

DES 357C. Interaction Design III: Experiential and Spaces.
Restricted to design majors. Examine communication through physical material and space. Explore topics such as experiential design, branded environments, and exhibition design in a studio format. Six studio hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Upper-division standing; and Design 334, or 334C and 349.

DES 357D. Interaction Design IV: Objects and Media.
Restricted to design majors. Studio-based exploration of the practical, theoretical, and speculative ability for products, objects, digital space, and media to communicate in context of the Internet of Things. Six studio hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Upper-division standing; and Design 334, or 334C and 349.

DES 358C. Industrial Design I.
Same as Engineering Studies 358C. Restricted to design majors. Explore methods and techniques for industrial design. Six studio hours a week for one semester. Design 358C and Engineering Studies 358C may not both be counted. Offered on the letter-grade basis only. Prerequisite: Design 314 or Engineering Studies 319.

DES 358D. Industrial Design II.
Restricted to design majors. Build upon methods and techniques for industrial design. Six studio hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Design 314 or Engineering Studies 319; or consent of the instructor.

DES 358E. Industrial Design III.
Restricted to design majors. Refine and apply methods and techniques for industrial design. Six studio hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Design 314 or Engineering Studies 319; or consent of the instructor.

DES 358G. Advanced Topics in Industrial Design.
Examine advanced theories, principles, methods, and techniques for industrial design in a studio format. Six studio hours a week for one semester. May be repeated for credit when the topics vary. Offered on the letter-grade basis only. Prerequisite: Upper-division standing; Design 314 or Engineering Studies 319; or consent of the instructor.

Lecture/studio course. Lectures introduce professional practices in design, intellectual property issues, contracts, pricing, accounting, tax preparation, business plans, promotion, etc. One lecture and three studio hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Credit with a grade of at least C in each or registration for Design 326 and 334, and credit or registration for Design 336 or 337 (Topic 1).

DES 360. Design Internship.
Restricted to design majors. Introduces students to ethical standards and professional practices in design; allows completion of an approved professional internship. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester, with internship hours to be arranged. Design 360 and 371 may not both be counted. Offered on the letter-grade basis only. Prerequisite: Design 304 and 305, or Design 309; credit with a grade of at least C or registration for Design 321, 325, 326, and 334C; and credit or registration for Design 336 or 337 (Topic 1).

DES 160I, 260I, 360I. Internship in Design.
Participate in a professional design internship in a field of interest. One lecture hour a week for one semester and, for each semester hour of credit earned, a minimum of 100 internship hours for one semester. May be repeated for credit. Offered on the letter-grade basis only. Prerequisite: Design 131 with a grade of at least C.

DES 370. Senior Project in Design.
Restricted to design majors. Studio course. Students define their own research problem and propose appropriate design solutions, guided by feedback from desk critiques with the instructor, group critiques, and reviews with visiting critics. Six laboratory hours a week for one semester. Design 370 and 374 may not both be counted. Offered on the
DES 371. Design Practicum Internship.
Restricted to design majors. Lecture/internship course. Resume and portfolio preparation; discussion of professional ethics and responsibilities; professional internship. For each semester hour or credit earned, the equivalent of one lecture hour a week for one semester. Design 360 and 371 may not both be counted. Offered on the letter-grade basis only. Prerequisite: Consent of instructor and consent of design assistant chair.

DES 374. Capstone Design Project.
Restricted to design majors. Studio course. Students define their own research problem and propose appropriate design solutions, guided by feedback from desk critiques with the instructor, group critiques, and reviews with a visiting critic. Six laboratory hours a week for one semester. Design 370 and 374 may not both be counted. Offered on the letter-grade basis only. Prerequisite: Senior standing, and credit with a grade of at least C for Design 309 or 304 and 305, 131, 321, 325, 326, 334C, and 336 or 337 (Topic 1).

DES 375. Capstone Design Exhibition.
Restricted to design majors. Studio course. Students collaboratively curate, design, and install a senior BFA exhibition, and publish collateral materials that publicly showcase their capstone projects. Six laboratory hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Design 370 or 374 with a grade of at least C.

DES 376. Independent Study: Design.
Student-defined projects completed under faculty supervision. The equivalent of six laboratory hours a week for one semester. May be repeated for credit. Offered on the letter-grade basis only. Prerequisite: Consent of instructor and consent of design assistant chair.

Graduate Courses
DES 380. Core Course in Design.
Introduction to design process, research, and methodologies. Three lecture hours a week for one semester, with additional laboratory hours to be arranged. May be repeated for credit when the topics vary. Prerequisite: Graduate standing, and consent of instructor and the graduate adviser.

DES 381. Core Laboratory 1.
Practice laboratory for a variety of design methodologies. Three lecture hours a week for one semester, with additional laboratory hours to be arranged. Prerequisite: Graduate standing, and consent of instructor and the graduate adviser.

DES 382, 382G, 482, 582, 682. Critique Studio.
Context and structured dialogue regarding areas of, and the student's own direction in, graduate research. For each semester hour of credit earned, the equivalent of one lecture hour a week, with additional studio hours to be arranged. May be repeated for credit. Prerequisite: Graduate standing, consent of instructor, and consent of the graduate adviser.

DES 383. Graduate Projects.
Independent study. May be repeated for credit. Prerequisite: Graduate standing, and consent of instructor and the graduate adviser.

Covers portfolio creation and other tools related to documenting and communicating design work. For each semester hour of credit earned, one lecture hour a week for one semester, with additional studio hours to be arranged. Offered on the letter-grade basis only. Prerequisite: Graduate standing, consent of the graduate adviser, and consent of instructor.

DES 384C. Design Criticism.
Thinking, writing and talking about design. Three lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Graduate standing; consent of the graduate adviser; consent of instructor.

DES 384D, 284D, 384D. Design Perspectives.
Explore design approaches, subfields, practices, and media through workshops, projects or lectures led by industry professionals, visiting instructors, and/or University faculty and graduate students. For each semester hour of credit earned, one lecture hour a week for one semester. May be repeated for credit. Offered on the letter-grade basis only. Prerequisite: Graduate standing, consent of the graduate adviser, and consent of instructor.

DES 384E, 384E. The Art of Critique.
Explore methods, frameworks, and practice in giving and receiving feedback in a design studio setting. For each semester hour of credit earned, one lecture hour a week for one semester. Offered on the letter-grade basis only. Prerequisite: Design 309 or 304 and 305, 131, 321, 325, 326, 334C, and 336 or 337 (Topic 1).

DES 384F, 384F. Materials Exploration.
Consider materials in design applications. For each semester hour of credit earned, one lecture hour a week for one semester. Offered on the letter-grade basis only. Prerequisite: Graduate standing, consent of instructor, and consent of the graduate adviser.

DES 384G, 384G. User Research.
Explore design approaches, subfields, practices, and media through workshops, projects or lectures led by industry professionals, visiting instructors, and/or University faculty and graduate students. For each semester hour of credit earned, one lecture hour a week for one semester. Offered on the letter-grade basis only. Prerequisite: Graduate standing, consent of instructor, and consent of the graduate adviser.

DES 384H. Design Theory and Method.
Examine theory and methods in design. Three lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Graduate standing, consent of instructor, and consent of the graduate adviser.

DES 384J. Design in Context.
Explore the social, political, historical, legal and economic contexts of design. Three lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Graduate standing; consent of the graduate adviser; consent of instructor.

DES 385K. Introduction to Campus Resources for Designers.
Introduction to design-related resources on campus including the Library, materials lab, fabrication lab, and publication studio. One lecture hour a week for one semester, with additional studio hours to be arranged. Offered on the letter-grade basis only. Prerequisite: Graduate standing, consent of instructor, and consent of the graduate adviser.

DES 385C, 685C. Studio I.
Explore principles and techniques of design across disciplines through project work in a studio setting. For each semester hour of credit earned, one lecture hour a week for one semester, with additional studio hours to be arranged. Offered on the letter-grade basis only. Prerequisite:
Graduate standing, consent of instructor, and consent of the graduate adviser.

DES 385D, 685D. Studio II.
Build upon principles and techniques of design across disciplines through project work in a studio setting. For each semester hour of credit earned, one lecture hour a week for one semester, with additional studio hours to be arranged. Offered on the letter-grade basis only. Prerequisite: Graduate standing, consent of instructor, and consent of the graduate adviser; Design 385C or 685C.

DES 385E, 685E. Studio III.
Refine and apply advanced principles and techniques of design across disciplines through project work in a studio setting. For each semester hour of credit earned, one lecture hour a week for one semester, with additional studio hours to be arranged. Offered on the letter-grade basis only. Prerequisite: Graduate standing, consent of instructor, and consent of the graduate adviser; Design 385D or 685D.

DES 385F, 685F. Studio IV.
Culminate previous knowledge of principles and techniques of design across disciplines through project work in a studio setting. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester, with additional studio hours to be arranged. Offered on the letter-grade basis only. Prerequisite: Graduate standing, consent of instructor, and consent of the graduate adviser; Design 385E or 685E.

DES 385G, 685G. Foundation Studio I.
Introduction to vocabulary, principles, strategies, techniques and conventions foundational to design in a studio format. For each semester hour of credit earned, one lecture hour a week for one semester, with additional studio hours to be arranged. Offered on the letter-grade basis only. Prerequisite: Graduate standing, consent of instructor, and consent of the graduate adviser; Design 385F or 685F.

DES 385H, 685H. Foundation Studio II.
Build upon vocabulary, principles, strategies, techniques and conventions foundational to design in a studio format. For each semester hour of credit earned, one lecture hour a week for one semester, with additional studio hours to be arranged. Offered on the letter-grade basis only. Prerequisite: Graduate standing, consent of instructor, and consent of the graduate adviser; Design 385G or 685G.

DES 385J, 685J. Foundation Studio III.
Refine vocabulary, principles, strategies, techniques and conventions foundational to design in a studio format. For each semester hour of credit earned, one lecture hour a week for one semester, with additional studio hours to be arranged. Offered on the letter-grade basis only. Prerequisite: Graduate standing, consent of instructor, and consent of the graduate adviser; Design 385H or 685H.

Studio-based exploration of techniques and concepts specific to visual design. For each semester hour of credit earned, one lecture hour a week for one semester, with additional studio hours to be arranged. May be repeated for credit when the topics vary. Offered on the letter-grade basis only. Prerequisite: Graduate standing, consent of instructor, and consent of the graduate adviser.

DES 185L, 385L, 685L. Topics in Interaction Design Studio.
Studio-based exploration of techniques and concepts specific to interaction design. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester, with additional studio hours to be arranged. May be repeated for credit when the topics vary. Offered on the letter-grade basis only. Prerequisite: Graduate standing, consent of instructor, and consent of the graduate adviser.

DES 185M, 385M, 685M. Topics in Industrial Design Studio.
Studio-based examination of techniques and concepts specific to industrial design. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester, with additional studio hours to be arranged. May be repeated for credit when the topics vary. Offered on the letter-grade basis only. Prerequisite: Graduate standing, consent of instructor, and consent of the graduate adviser.

DES 385N, 685N. Topics in Service Design Studio.
Studio-based exploration of techniques and concepts specific to service design. For each semester hour of credit earned, one lecture hour a week for one semester, with additional studio hours to be arranged. May be repeated for credit when the topics vary. Offered on the letter-grade basis only. Prerequisite: Graduate standing, consent of instructor, and consent of the graduate adviser.

DES 385T, 685T. Topics in Design Studio.
Develop studio projects focusing on specialized or advanced topics or methods. For each semester hour of credit earned, one lecture hour a week for one semester, with additional studio hours to be arranged. May be repeated for credit when the topics vary. Offered on the letter-grade basis only. Prerequisite: Graduate standing, consent of instructor, and consent of the graduate adviser.

DES 385V, 685V. Topics in Visiting Designer Studio.
Projects developed by visiting designer on technique and concepts related to their practice in a studio format. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester, with additional studio hours to be arranged. May be repeated for credit when the topics vary. Offered on the letter-grade basis only. Prerequisite: Graduate standing, consent of instructor, and consent of the graduate adviser.

DES 386. Design History.
Three lecture hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing, consent of the graduate adviser, and consent of instructor.

DES 387, 487, 587, 687. Graduate Internship in Design.
Professional design internship in a field of the student’s interest. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. Hours to be arranged with supervisor. May be repeated for credit. Prerequisite: Graduate standing, consent of the graduate adviser, and consent of the instructor.

For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. May be repeated for credit. Prerequisite: Graduate standing, consent of the graduate adviser, and consent of instructor.

DES 388. Introduction to Design Thinking.
Restricted to graduate students in design. A preliminary foundation in the emerging practice of human-centered design, the methodology driving design thinking as a way of achieving innovation across sectors. Three lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Graduate standing and consent of the graduate adviser.
DES 388C. Topics in Design Seminar.
Examine specialized or advanced topics in design. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Offered on the letter-grade basis only. Prerequisite: Graduate standing, consent of instructor, and consent of the graduate adviser.

DES 388D. Topics in Service Design Seminar.
Examine specialized or advanced topics in service design. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Offered on the letter-grade basis only. Prerequisite: Graduate standing, consent of instructor, and consent of the graduate adviser.

DES 388E. Topics in Industrial Design Seminar.
Examine specialized or advanced topics in industrial design. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Offered on the letter-grade basis only. Prerequisite: Graduate standing, consent of instructor, and consent of the graduate adviser.

DES 388F. Topics in Interaction Design Seminar.
Examine specialized or advanced topics in interaction design. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Offered on the letter-grade basis only. Prerequisite: Graduate standing, consent of instructor, and consent of the graduate adviser.

DES 388G. Topics in Visual Design Seminar.
Examine specialized or advanced topics in visual design. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Offered on the letter-grade basis only. Prerequisite: Graduate standing, consent of instructor, and consent of the graduate adviser.

DES 190, 290, 390, 490, 590, 690. Topics in Advanced Design Skills.
For each semester hour of credit earned, one lecture hour a week for one semester, with additional studio hours to be arranged. May be repeated for credit when the topics vary. Prerequisite: Graduate standing, and consent of the graduate adviser.

Topic 1: Design in Health Studio. Restricted to students pursuing a Master of Arts with a major in design. Collaborate with clients in teams, and apply design skills to immediate challenges in the health space. Design 190 (Topic 1) and 190 (Topic: Design in Health Studio) may not both be counted.

Topic 2: Storytelling for Presentation. Restricted to students pursuing a Master of Arts with a major in design. Explore the frameworks for good storytelling as applied to professional presentation and written work. Design 190 (Topic 2) and 190 (Topic: Storytelling for Presentation) may not both be counted.

Topic 3: Graphic Design Tools. Restricted to students pursuing a Master of Arts with a major in design. Explore 2D Visualizations tools for print and screen. Design 190 (Topic 3) and 190 (Topic: Graphic Design Tools) may not both be counted.

Topic 4: Eliciting and Inspiring Participant Data. Restricted to students pursuing a Master of Arts with a major in design. Explore tactics and techniques of several common primary research methodologies including contextual inquiry, intercept interviews, personal inventories, empathy modeling, and others. Design 190 (Topic 4) and 190 (Topic: Elicitg/Inspirg Prtpcnt Data) may not both be counted.

Topic 5: Sketching for Communication. Restricted to students pursuing a Master of Arts with a major in design. Examine the elements of sketching to visualize concepts. Design 190 (Topic 5) and 190 (Topic: Sketching for Communication) may not both be counted.

Topic 6: 3D Prototyping. Restricted to students pursuing a Master of Arts with a major in design. Use rapid prototyping methods to test ideas iteratively with an emphasis on products and the built environment. Design 190 (Topic 6) and 190 (Topic: 3D Prototyping) may not both be counted.

DES 391. Core Laboratory 2.
Designed to provide students with the opportunity to test and expand their design research through writing and various methods of dissemination. Three lecture hours a week for one semester, with additional laboratory hours to be arranged. Prerequisite: Graduate standing, and consent of instructor and the graduate adviser.

DES 392. Professional Communication of Research.
Seminar addressing strategies for communicating design research processes and results to a variety of audiences through vehicles such as exhibitions, scholarly reports, and video recordings. Three lecture hours a week for one semester, with additional laboratory hours to be arranged. May be repeated for credit. Prerequisite: Graduate standing, and consent of instructor and the graduate adviser.

DES 393. Issues in Design Theory and Research.
Investigates current discourse within design studies. Three lecture hours a week for one semester, with additional laboratory hours to be arranged. May be repeated for credit when the topics vary. Prerequisite: Graduate standing, and consent of instructor and the graduate adviser.

DES 194, 294, 394, 494, 594, 694. Topics in Advanced Design.
Examine design practices in all areas, and their relationship to research. For each semester hour of credit earned, one lecture hour a week for one semester, with additional studio hours to be arranged. May be repeated for credit when the topics vary. Prerequisite: Graduate standing, consent of instructor, and consent of the graduate adviser.

Topic 1: Health Systems Design. Restricted to students pursuing a Master of Arts with a major in design. Explore aspects of complex health ecosystems. Examine the principles and methods of interconnection. Design future systems that elicit new behaviors. Design 294 (Topic 1) and 294 (Topic: Health Systems Design) may not both be counted.

Topic 2: Anthropology and Design. Restricted to students pursuing a Master of Arts with a major in design. Explore anthropological and ethnographic tools that can attune practitioners to social and cultural differences and their implications. Design 394 (Topic 2) and 394 (Topic: Anthropology and Design) may not both be counted.

Topic 4: Design in Health: Introduction To Collaboration. Restricted to students pursuing a Master of Arts with a major in design. Examine nuanced and complex considerations for designing in the health space. Explore design practice and challenging legacy health notions.

Topic 5: Final Project In Design. Restricted to students pursuing a Master of Arts with a major in design. Design and lead a project with the guidance of a faculty member. Design 394 (Topic 5) and 394 (Topic: Final Project In Design) may not both be counted.

Topic 6: Health Care Law/Policy. Restricted to students pursuing a Master of Arts with a major in design. Examine current health law and policy. Design 394 (Topic 6) and 394 (Topic: Health Care Law/Policy) may not both be counted.

DES 395. Fieldwork in Design.
Students conduct fieldwork as part of a collaborative research team and/or under the direction of a project supervisor. Three lecture hours a week for one semester, with additional laboratory hours to be arranged. May be repeated for credit when the topics vary. Prerequisite: Graduate standing, and consent of instructor and the graduate adviser.
Explore the integration of design into business and business into design. Three lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Graduate standing and consent of the graduate adviser.

DES 397. Service Design.
Apply design thinking to service-based sectors such as hospitality, healthcare, food service and others. Three lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Graduate standing and consent of the graduate adviser.

DES 397C. Design Pedagogy and Instruction.
Covers theory and research related to the pedagogy of design. Explores creation of design learning experiences. Three lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Graduate standing, consent of instructor, and consent of the graduate adviser.

Applied teaching in design subjects. For each semester hour of credit earned, one lecture hour a week for one semester. May be repeated for credit. Prerequisite: Graduate standing, consent of instructor, and consent of the graduate adviser.

DES 398P. Capstone Project.
Utilize design methodologies and techniques on an applied project. Three lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Graduate standing in design and consent of instructor or the graduate adviser.

For each semester hour of credit earned, one lecture hour a week for one semester. Offered on the credit/no credit basis only. Prerequisite: Graduate standing in design and consent of instructor or the graduate adviser.

DES 398S. Master's Exhibition.
The equivalent of three lecture hours a week for one semester. Offered on the credit/no credit basis only. Prerequisite: Graduate standing in design and consent of instructor or the graduate adviser.

DES 398T. Supervised Teaching in Design.
Training and teaching under the close supervision of the course instructor for one semester; group meetings with the instructor, individual consultations, and reports throughout the teaching period. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. Prerequisite: Graduate standing in design and graduate standing and appointment as a teaching assistant.

Professional Courses

DEV - Developmental Studies

Developmental Studies: DEV

Lower-Division Courses

DEV 000M. Basic Mathematics and Algebra Skills.
Developmental mathematics instruction paired with a core math course. Emphasis is on mathematical concepts that support success in the core math course. One and one half lecture hours a week for one semester. Offered on the satisfactory/unsatisfactory basis only. May not be counted toward any degree. Prerequisite: Concurrent enrollment in a core math course approved by the Texas Success Initiative coordinator, and consent of the Texas Success Initiative coordinator.

DEV 000R, 300R. Basic Reading Skills.
Developmental reading and writing instruction paired with a credit reading intensive course. Emphasis is on strategies for improving reading comprehension across the disciplines, reading study skills, and elements of composition. For 000R, one and one half lecture hours a week for one semester. For 300R, three lecture hours a week for one semester. Offered on the satisfactory/unsatisfactory basis only. May not be counted toward any degree. Prerequisite: Concurrent enrollment in a reading intensive course approved by the Texas Success Initiative office, and consent of the Texas Success Initiative coordinator.

DEV 000W, 300W. Basic Writing Skills.
Developmental reading and writing instruction paired with a credit writing intensive course. Emphasis is on strategies for improving reading comprehension across the disciplines, reading study skills, and elements of composition. For 000W, one and one half lecture hours a week for one semester. For 300W, three lecture hours a week for one semester. Offered on the satisfactory/unsatisfactory basis only. May not be counted toward any degree. Prerequisite: Concurrent enrollment in a writing intensive course approved by the Texas Success Initiative office, and consent of the Texas Success Initiative coordinator.

DEV 301M. Developmental Mathematics I.
Developmental mathematics instruction paired with a core math course. Emphasis is on mathematical concepts that support success in the core math course. Three lecture hours a week for one semester. Offered on the satisfactory/unsatisfactory basis only. May not be counted toward any degree. Prerequisite: Concurrent enrollment in a core math course approved by the Texas Success Initiative office, and consent of the Texas Success Initiative coordinator.

DEV 302M. Developmental Mathematics II.
Continuation of Developmental Studies 301M. Includes linear equations, systems of equations, integers, exponents and scientific notation, factoring polynomials, rational expressions and equations, radical expressions, and geometric problems. Three lecture hours a week for one semester. Offered on the satisfactory/unsatisfactory basis only. May not be counted toward any degree.

DEV 303M. Basic Mathematics and Algebra Skills Review.
Three lecture hours a week for one semester. Offered on the satisfactory/unsatisfactory basis only. May not be counted toward any degree.

DEV 303S. Analytical Reading and Writing.
Examination of fundamental concepts in analytical reading from different disciplinary perspectives, with an emphasis on sociocultural influences on comprehension and writing styles. Three lecture hours a week for one semester. May not be counted toward any degree. Prerequisite: Consent of the Texas Success Initiative coordinator.

Upper-Division Courses
Graduate Courses
Professional Courses
DSC - Data Science

Data Science: DSC

Lower-Division Courses

Upper-Division Courses

Graduate Courses

DSC 381. Probability and Simulation-Based Inference for Data Science.
Introduction to inference, through the simulation process. Explore probability, exponential families, conditional probabilities and Bayes theorem, inference and Maximum Likelihood estimation, confidence intervals, and hypothesis testing (emphasis on simulation). The equivalent of three lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

Introduction to the basics of regression-based modeling. Explore simple and multiple regression, interpretation of models and coefficients, prediction and estimates, regularization processes, and generalized linear models. The equivalent of three lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Graduate standing and Data Science 381.

Explore advanced techniques used in practice for regression-based models. Examine time series and longitudinal data, repeated and mixed models, spatially correlated data, and Random Forest models. The equivalent of three lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Graduate standing; Data Science 382 and 388G.

DSC 384. Design Principles and Causal Inference.
Explore the field of "big data" and the rigors of determining applicable design structures from that data. Examine classic design structures, non-typical data structures and novel design processes, and causal inference, and explore data-based decision making. The equivalent of three lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Graduate standing and Data Science 381.

Examine visualization techniques used in practice to discover insights about data. Explore data quality and relevance, data ethics and providence, clustering, dimension reduction, and reproducibility. The equivalent of three lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Graduate standing and Data Science 388G.

DSC 387. Topics in Statistics for Data Sciences.
Explore topics in data science with a general overview of statistics theory and application. The equivalent of three lecture hours a week for one semester. May be repeated for credit when the topics vary. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

Explore algorithm design and analysis including algorithmic paradigms, maximum flow, randomized algorithms, data structures, NP-completeness and approximation algorithms. The equivalent of three lecture hours a week for one semester. Data Science 388G and Computer Science 388G may not both be counted. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

DSC 388J. Optimization.
Explore a background on convex sets and functions, linear programming, convex programming, and iterative first-order and second-order methods. The equivalent of three lecture hours a week for one semester. Data Science 388J and 395T (Topic: Optimization) may not both be counted. Offered on the letter-grade basis only. Prerequisite: Graduate standing and Data Science 388G.

Examine computing systems that automatically improve their performance with experience, including various approaches to inductive classification such as version space, decision tree, rule-based, neural network, Bayesian, and instance-based methods; as well as computational learning theory, explanation-based learning, and knowledge refinement. The equivalent of three lecture hours a week for one semester. Only one of the following may be counted: Artificial Intelligence 391L, Computer Science 391L, Data Science 391L. Offered on the letter-grade basis only. Prerequisite: Graduate standing and Data Science 382.

DSC 394D. Deep Learning.
Explore the basic building blocks and intuitions behind designing, training, tuning, and monitoring of deep networks. Examine both the theory of deep learning, as well as hands-on implementation sessions in pytorch. Explore a series of application areas of deep networks in: computer vision, sequence modeling in natural language processing, deep reinforcement learning, generative modeling, and adversarial learning. The equivalent of three lecture hours a week for one semester. Only one of the following may be counted: Artificial Intelligence 394D, Computer Science 394D, Data Science 394D, 395T (Topic: Deep Learning). Offered on the letter-grade basis only. Prerequisite: Data Science 381 and 382.

DSC 395T. Topics in Computer Science for Data Sciences.
Explore topics in data science with a general overview of computer science application. The equivalent of three lecture hours a week for one semester. May be repeated for credit when the topics vary. Offered on the letter-grade basis only. Prerequisite: Graduate standing and Data Science 381.

Professional Courses

E - English

English: E

Lower-Division Courses

E 303C. Plan II World Literature Part I.
Restricted to Plan II students. Reading of masterpieces of world literature and intensive training in writing and in critical analysis of literature. Three lecture hours a week for one semester. Only one of the following may be counted: English 303C, Rhetoric and Writing 306, 306Q, Tutorial Course 303C.

E 303D. Plan II World Literature Part II.
Restricted to Plan II students. Reading of masterpieces of world literature and intensive training in writing and in critical analysis of literature. Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 315, English 303D, 316N, Tutorial Course 303D. Prerequisite: English 303C or Tutorial Course 303C.

E 310C. Literature and Community Engagement.
The equivalent of three lecture hours a week for one semester.
E 310D. Introduction to Digital Studies.
Explore the critical application of exploratory techniques in digital scholarship in the humanities, including principles of exploratory data analysis programming language to perform both analysis and visualization. Critique how text, images, and audio are analyzed and represented from a humanistic perspective that considers intersectional power dynamics surrounding ability, class, gender, and race in culture. Three lecture hours a week for one semester. Only one of the following may be counted: English 310D, Information Studies 315E (Topic: Intro to Digital Humanities), 315E (Topic 1).

E 310F. Literature, Film, and Other Arts.
Survey of preeminent films of the twentieth century alongside a consideration of the literary works that most influenced them. Explores different modes of close reading and skills to critically analyze texts in a variety of literary and media formats. Focus on connections between different modes of modern expression and critical analysis. Three lecture hours a week for one semester. Some sections require an additional discussion hour a week.

E 310G. Introduction to Comics Studies.
Three lecture hours a week for one semester. English 310G and 314J (Topic: Intro to Comics Studies) may not both be counted.

E 310S. The Films of Alfred Hitchcock.
Survey the films of Alfred Hitchcock. Examine the question of film as a visual medium and Hitchcock as a visual artist, with close attention to his techniques of storytelling through moving pictures and the performances of the actors. Three lecture hours a week for one semester.

E 314J. Literature across the Curriculum.
Readings selected to highlight the connections between literary study and other fields of inquiry. Three lecture hours a week for one semester. May not be substituted for English 316L, 316M, 316N, or 316P. May be repeated for credit when the topics vary. Prerequisite: One of the following: English 303C, Rhetoric and Writing 306, 306Q, 309J (or 309K), or Tutorial Course 303C.

- Topic 1: Literature and Film.
- Topic 3: Literature and Theatre.
- Topic 4: Harry Potter's Secret Language.

E 314L (TCCN: ENGL 2341), Introduction to Literary Studies.
Emphasis on skills and methods used in upper-division English courses; intensive practice in writing; and an introduction to field-specific research. Three lecture hours a week for one semester. May not be substituted for English 316L, 316M, 316N, or 316P. May be repeated for credit when the topics vary. Prerequisite: One of the following: English 303C, Rhetoric and Writing 306, 306Q, 309J (or 309K), or Tutorial Course 303C.

- Topic 4: Texts and Contexts.
- Topic 5: Reading Poetry.
- Topic 8: The Pulitzer Prize. An introduction to literary analysis focusing on works that have been awarded the Pulitzer Prize for fiction, drama, and/or poetry.
- Topic 9: Cult Classics. An introduction to literary analysis focusing on works that have become cult classics.
- Topic 10: GoodReads. An introduction to literary analysis, focusing on building a literary community.

E 314T. Advanced Placement Credit in English.
Used to record coursework credit based upon an appropriate Advanced Placement Literature and Composition examination score. The equivalent of three lecture hours a week for one semester. Offered on the pass/fail basis only.

E 314V. Introduction to Literature and Culture.
Readings focus on minority and ethnic American literatures in their cultural contexts with an emphasis on skills and methods. Intensive practice in writing and an introduction to field-specific research. Three lecture hours a week for one semester. May not be substituted for English 316L, 316M, 316N, 316P. May be repeated for credit when the topics vary. Prerequisite: One of the following: English 303C, Rhetoric and Writing 306, 306Q, 309J (or 309K), or Tutorial Course 303C.

- Topic 1: African American Literature and Culture. Same as African and African Diaspora Studies 315T. Explores texts, drawn from a variety of genres and periods, that indicate the range of African American experiences and how those experiences are influenced by issues such as class, ethnicity, gender, sexuality, and race. Three lecture hours a week for one semester. Only one of the following may be counted: African and African Diaspora Studies 315T, 317F (Topic 1), English 314V (Topic 1). Additional prerequisite: One of the following: English 303C, Rhetoric and Writing 306, 306Q, 309J (or 309K), or Tutorial Course 303C.
- Topic 2: Asian American Literature and Culture. Same as Asian American Studies 314. Explores how authors and artists over the course of the past century have imagined what it means to be Asian American. Covers a diverse range of Asian immigrant histories and the formation of Asian American identities according to ethnicity, gender, sexuality, class, and citizenship. Additional prerequisite: One of the following: English 303C, Rhetoric and Writing 306, 306Q, 309J (or 309K), or Tutorial Course 303C.
- Topic 3 (TCCN: ENGL 2351): Mexican American Literature and Culture. Same as Mexican American Studies 314. Representative Chicano writers and genres, such as poetry, prose fiction, and theatre. Three lecture hours a week for one semester. English 314V (Topic 3) and Mexican American Studies 314 may not both be counted. Additional prerequisite: One of the following: English 303C, Rhetoric and Writing 306, 306Q, 309J (or 309K), or Tutorial Course 303C.
- Topic 4: Gay and Lesbian Literature and Culture. Same as Women’s and Gender Studies 301 (Topic 12). American writing by gay, lesbian, bisexual, transgender, or queer authors and/or with gay, lesbian, bisexual, transgender, or queer themes. English 314V (Topic 4) and Women’s and Gender Studies 301 (Topic 12) may not both be counted. Additional prerequisite: One of the following: English 303C, Rhetoric and Writing 306, 306Q, 309J (or 309K), or Tutorial Course 303C.
- Topic 5: Native American Literature and Culture. Same as American Studies 315F. Studies Native American literature from different regions and cultures and considers this literary tradition in tribal national and United States national contexts. American Studies 315F and English 314V (Topic 5) may not both be counted. Additional prerequisite: One of the following: English 303C, Rhetoric and Writing 306, 306Q, 309J (or 309K), or Tutorial Course 303C.
- Topic 6: Women, Gender, Literature, and Culture. Same as Women’s and Gender Studies 301 (Topic 27). An introduction to literary analysis focusing on women’s and gender studies. English 314V (Topic 6) and Women’s and Gender Studies 301 (Topic 27) may not both be counted. Additional prerequisite: One of the following: English 303C, Rhetoric and Writing 306, 306Q, 309J (or 309K), or Tutorial Course 303C.
- Topic 7: Jewish American Literature and Culture. Same as American Studies 310C and Jewish Studies 314C. Examine Jewish American literature in its cultural contexts with an emphasis on skills and methods. Explore texts, drawn from a variety of genres and periods, that indicate the range of Jewish American experiences and how those experiences are influenced by issues such as citizenship, class, ethnicity, gender, and sexuality. Only one of the following may be counted: American Studies 310C, English 314V (Topic: Jewish
American Lit and Cult), 314V (Topic 7), Jewish Studies 314C. Additional prerequisite: One of the following: English 303C, Rhetoric and Writing 306, 306Q, 309J (or 309K), or Tutorial Course 303C.

E 316L (TCCN: ENGL 2321, ENGL 2322, ENGL 2323). British Literature.
Introduction to masterpieces of the British literary tradition, emphasizing historical, generic, and thematic connections. Three lecture hours a week for one semester. Some sections require an additional discussion hour a week. Prerequisite: One of the following: English 303C, Rhetoric and Writing 306, 306Q, 309J (or 309K), or Tutorial Course 303C.

E 316M (TCCN: ENGL 2326, ENGL 2327, ENGL 2328). American Literature.
Introduction to masterpieces of the American literary tradition, emphasizing historical, generic, and thematic connections. Three lecture hours a week for one semester. Some sections require an additional discussion hour a week. Prerequisite: One of the following: English 303C, Rhetoric and Writing 306, 306Q, 309J (or 309K), or Tutorial Course 303C.

E 316N (TCCN: ENGL 2331, ENGL 2332, ENGL 2333). World Literature.
Same as Comparative Literature 315. Introduction to masterpieces of world literature, emphasizing historical, generic, and thematic connections. Three lecture hours a week for one semester. Some sections require an additional discussion hour a week. Only one of the following may be counted: Comparative Literature 315, English 303D, 316N, Tutorial Course 303D. Prerequisite: One of the following: English 303C, Rhetoric and Writing 306, 306Q, 309J (or 309K), or Tutorial Course 303C.

E 316P. Masterworks of Literature.
Introduction to masterpieces of literature, emphasizing historical, generic, and thematic connections. Three lecture hours a week for one semester. Some sections require an additional hour a week. Prerequisite: One of the following: English 303C, Rhetoric and Writing 306, 306Q, 309J (or 309K), or Tutorial Course 303C.

E 316Q. Supervised Research.
Student-initiated research conducted with instructor supervision. Three conference hours a week for one semester. May be taken twice for credit. May be repeated for credit. Prerequisite: Approval of written application by supervising instructor and the undergraduate faculty adviser.

E 319D. Blackness and Comics.
Same as African and African Diaspora Studies 316E and American Studies 312C. Examine the relationship between race and the sequential aesthetics of comic books and comic strips. Explore comics strips, underground comics, and superhero comics from the colonial period to the present day. Three lecture hours a week for one semester. Only one of the following may be counted: African and African Diaspora Studies 310 (Topic: Blackness and Comics), 316E, American Studies 312C, English 319D.

E 319L. Latinx Digital Worlds.
Same as American Studies 319, Latin American Studies 310I, and Mexican American Studies 318E. Explore how Latinx communities (traditionally figured as on the wrong side of the "digital divide") have embraced, mobilized, and sometimes usurped emerging digital tools and spaces to forge community and create new forms of culture, memory, and activism. Three lecture hours a week for one semester. Only one of the following may be counted: American Studies 319, English 319L, Latin American Studies 310I, Mexican American Studies 318E, 319 (Topic: Latinx Digital Worlds).

This course is used to record credit the student earns while enrolled at another institution in a program administered by the University's Study Abroad Office. Credit is recorded as assigned by the study abroad adviser in the Department of English. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

Upper-Division Courses
E 320L. Major Writers of the Restoration and Eighteenth Century.
A study of the principal writers: Dryden, Pope, Swift, Johnson, Boswell, Burns, and others. Three lecture hours a week for one semester. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 321. Shakespeare.
A selection from the works of William Shakespeare. Three lecture hours a week for one semester. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 321K. Introduction to Criticism.
Introduction to major terms, issues, and approaches in literary criticism, and their application to the reasoned discussion of poetry, fiction, and drama. Three lecture hours a week for one semester. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 321L. American English.
Same as Linguistics 321L. An overview of the historical development of English in the Americas. Attention to regional, social, and ethnic differences, and their implications for public education. Three lecture hours a week for one semester. English 321L and Linguistics 321L may not both be counted. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 321P. Shakespeare through Performance.
An intensive study of the plays of William Shakespeare, with emphasis on performance as a means of interpretation and an aid to comprehension. Three lecture hours a week for one semester, with additional laboratory hours as required. Prerequisite: Consent of instructor.

E 323C. Women in Captivity.
Three lecture hours a week for one semester. Only one of the following may be counted: English 323C, 370W (Topic: Women in Captivity), Women's and Gender Studies 345 (Topic: Women in Captivity). Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 323D. Topics in Diverse Perspectives.
Study literature and other forms within cultural and historical contexts, focusing on any one or more of the following: gender, race, ethnicity, culture, language, and/or globalization. Three lecture hours a week for
one semester. Only one of the following may be counted unless the topics vary: English 323D, 324, 360L, 360S, 364D, 370W, 376M. May be repeated for credit when the topics vary. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 323E. Writing Slavery.
Same as African and African Diaspora Studies 330P and Women's and Gender Studies 340 (Topic 31). Explores the controversial rewriting of slavery in a presentist context by contemporary authors. Addresses challenges that archival limitations and revisionist writings about slavery pose for academic disciplines, literary instruction, and/or pedagogy. Three lecture hours a week for one semester. Only one of the following may be counted: African and African Diaspora Studies 330P, 374F (Topic 6), English 323E, 376M (Topic 3), Women's and Gender Studies 340 (Topic 31). Prerequisite: For English majors, one of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D; for others, upper-division standing.

E 323F. African American Writers in France.
Three lecture hours a week for one semester. Only one of the following may be counted: English 323F, 376M (Topic: Afr Am Writers in France-Hon), Liberal Arts Honors 350 (Topic: Afr Am Writers in France). Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P or Tutorial Course 303D.

E 323G. American Literary Masculinities.
Same as Women's and Gender Studies 345K. Explores constructions of masculinity in American literature from a generally, but not exclusively, feminist perspective. Subjects include what masculinity has meant at different times in United States history, and how it has varied in meaning and significance according to broad categories of identity such as social class, race, region, and queerness. Three lecture hours a week for one semester. Only one of the following may be counted: English 323G, 370W (Topic 12), Women's and Gender Studies 345 (Topic 52), 345K. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P or Tutorial Course 303D.

E 323J. Jewish Stereotypes in American Literature and Culture.
Same as American Studies 331C and Jewish Studies 363 (Topic 31). Examine stereotypes that have come to define Jewishness in American culture by focusing both on the antisemitic tropes perpetuated by non-Jewish representations of the Jew in literary classics and on the archetypes employed as coping mechanisms in cultural representations created by Jews themselves. Analyze how stereotypes become enmeshed in cultural consciousness and investigate ways in which representations of ethnic, religious, and racial minorities are governed by these kinds of one-dimensional archetypes. Three lecture hours a week for one semester. Only one of the following may be counted: American Studies 331C, English 323D (Topic: Jewish Stereotypes Lit/Cul), 323J, Jewish Studies 363 (Topic 31). Prerequisite: Upper-division standing.

E 323L. English as a World Language.
Same as Linguistics 323L. An account of the spread of English around the world; national, social, and regional varieties. Three lecture hours a week for one semester. English 323L and Linguistics 323L may not both be counted. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P or Tutorial Course 303D.

E 323R. Migration Literature.
Three lecture hours a week for one semester. English 323D (Topic: Migration Literature) and 323R may not both be counted. Prerequisite:
Introduction to folklore methods as they relate to the study of literature. Three lecture hours and one laboratory hour a week for one semester. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316N, 316P or Tutorial Course 303D.

E 325S. Perversion and Self-interest.
Three lecture hours a week for one semester. English 325S and 379R (Topic: Perversion/Self-interest) may not both be counted. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316N, 316P or Tutorial Course 303D.

E 325T. Media Theory and Literary Criticism.
Three lecture hours a week for one semester. Only one of the following may be counted: English 324 (Topic: Media Thry and Litry Crit-Hon), 325T, 350V (Topic: Media Thry and Litry Crit), Liberal Arts Honors 350 (Topic: Media Thry and Litry Crit). Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316N, 316P or Tutorial Course 303D.

E 326K. The Literature of the Middle Ages in Translation.
Romances, chronicles, legends, tales, and plays by English, Celtic, and Continental writers. Three lecture hours a week for one semester. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316N, 316P or Tutorial Course 303D.

E 326L. Survey of Middle English Language and Literature.
Language and literature from 1100 to 1500. Three lecture hours a week for one semester. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P or Tutorial Course 303D.

Representative novels and novelists from 1700 to 1832, including typical works of Defoe, Richardson, Fielding, Sterne, Austen, and Scott. Three lecture hours a week for one semester. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P or Tutorial Course 303D.

E 328. The British Novel in the Nineteenth Century.
Representative works by such writers as Dickens, Thackery, the Brontes, Eliot, Meredith, and Hardy. Three lecture hours a week for one semester. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P or Tutorial Course 303D.

E 329R. The Romantic Period.
The prose and poetry of writers such as Blake, Wordsworth, Coleridge, Byron, Keats, Shelley, and others. Three lecture hours a week for one semester. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P or Tutorial Course 303D.

This course is used to record credit the student earns while enrolled at another institution in a program administered by the University's Study Abroad Office. Credit is recorded as assigned by the study abroad advisor in the Department of English. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

E 333P. Contemporary African Writing in English.
Same as African and African Diaspora Studies 331G. Three lecture hours a week for one semester. Only one of the following may be counted: African and African Diaspora Studies 331G, 370 (Topic: African Writing in English), English 323D (Topic: African Writing in English), 333P. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P or Tutorial Course 303D.

E 335P. Business of Writing.
Same as Creative Writing 335. Study the book publishing landscape including traditional and non-traditional career paths available to writers and those interested in the publishing industry. Analyze the publishing process, from concept to finished book: the acquisition, editorial, publicity, marketing, and sales stages of a book's life. Three lecture hours a week for one semester. Only one of the following may be counted: Creative Writing 335, English 324 (Topic: Business of Writing), 335P. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P or Tutorial Course 303D.

E 336E. British Literature: Beginnings through the Renaissance.
A survey of major writers, poetry, and prose. Three lecture hours a week for one semester. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P or Tutorial Course 303D.

E 337. American Literature: From the Beginnings to 1865.
A survey of major writers, poetry, and prose. Three lecture hours a week for one semester. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P or Tutorial Course 303D.

E 337E. British Literature: The Restoration through the Romantic Era.
A survey of major writers, poetry, and prose. Three lecture hours a week for one semester. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P or Tutorial Course 303D.

E 338. American Literature: From 1865 to the Present.
A survey of major writers, poetry, and prose. Three lecture hours a week for one semester. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P or Tutorial Course 303D.

E 338E. British Literature: The Victorian Era through World War II.
A survey of major writers, poetry, and prose. Three lecture hours a week for one semester. Prerequisite: One of the following: Comparative
Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

Representative novels by such writers as Brown, Melville, Fern, Hawthorne, Twain, Crane, James, Wharton, and Dreiser. Three lecture hours a week for one semester. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 340S. Literature and Culture of the 1960s.
Three lecture hours a week for one semester. English 340S and 379R (Topic 7) may not both be counted. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P or Tutorial Course 303D.

Examine and research the history of literature, popular music, and youth subcultures in England since 1945, and the development of cultural studies. Explore conventional notions of the hierarchy of high and mass culture, the issue of what avant-garde practice involves, and the forms it might take. Three lecture hours a week for one semester. English 341G and 379R (Topic 10) may not both be counted. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P or Tutorial Course 303D.

Three lecture hours a week for one semester. Only one of the following may be counted: English 341I, 379R (Iris: Irish Classics: 20th-C:Hon), Liberal Arts Honors 350 (Iris: Irish Classics: 20th-C). Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P or Tutorial Course 303D.

E 342C. Black Cops in African American Popular Culture.
Same as African and African Diaspora Studies 331E and American Studies 331E. Explore the history of black policing in America and representations of black police officers in popular literature and film of late Twentieth Century America. Three lecture hours a week for one semester. Only one of the following may be counted: African and African Diaspora Studies 331E, 370 (Topic: Black Cops Af Am Pop Cult), American Studies 331E, English 342C. Prerequisite: Upper-division standing.

E 342D. 21st Century Latinx Literature.
Same as Mexican American Studies 345J and Women's and Gender Studies 340 (Topic 4). Explore Latinx literature from the past two decades including both literary form and political engagement, with an emphasis on Latina, queer, and nonbinary writers. Three lecture hours a week for one semester. Only one of the following may be counted: English 342D, Mexican American Studies 345J, 374 (Topic: 21st Century Latinx Lit), Women's and Gender Studies 340 (Topic 4). Prerequisite: Upper-division standing.

E 342F. Life and Literature of the Southwest.
Examine literature reflecting the social inheritance of the Southwest through verse, fiction, travels, and memoirs. Three lecture hours a week for one semester. English 342 (Topic: Life and Lit of the Southwest) and 342F may not both be counted. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 342J. Latinx Young Adult Literatures.
Same as Mexican American Studies 345J. Three lecture hours a week for one semester. Only one of the following may be counted: English 323D (Topic: Latinx Young Adult Lits), 342J, Mexican American Studies 345J. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 342L. Latinx Legend Tripping.

E 342M. Life and Literature of the US-Mexico Borderlands.
Same as Mexican American Studies 345D. Examine the literature of the US-Mexico borderlands experience, with an emphasis on the historical and social conditions that characterize this unique region. Explore this in the context of prose fiction, as well as drama, film, and poetry. Three lecture hours a week for one semester. Only one of the following may be counted: English 342 (Topic 1), 342M, Mexican American Studies 345D, 374 (Topic 2). Prerequisite: One of the following: Comparative Literature 315, English 303D (or 603B), 316L, 316M, 316N, 316P, or Tutorial Course 303D (or 603B).

E 342P. Black Horror and Psychoanalysis.
Same as African and African Diaspora Studies 331F and American Studies 370 (Topic 76). Explore the intersection of race, horror aesthetics, and psychoanalytic theory. Three lecture hours a week for one semester. Only one of the following may be counted: African and African Diaspora Studies 331F, 370 (Topic: Black Horror/Psychoanalysis), American Studies 370 (Topic 76), English 342P. Prerequisite: Upper-division standing.

E 342S. Southern Literature.
Introduction to and survey of the literature of the United States South. Explores methods of literary and cultural interpretation with focus on critical thinking, reading, and writing skills. Three lecture hours a week for one semester. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 342T. Life and Literature of Texas.
Examines how Texas authors describe and explore the diversity and complexity of a state often seen in terms of myth and caricature. Works include literature from across the state by writers such as Katherine Anne Porter, Larry McMurtry, Cormac McCarthy, among others. Three lecture hours a week for one semester. Only one of the following may be counted: English 342 (Topic: Life and Literature of Texas), 342 (Topic 2), 342T. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 343C. Caribbean Literature.
Same as African and African Diaspora Studies 330Q and Comparative Literature 323 (Topic 6). Three lecture hours a week for one semester. Only one of the following may be counted: African and African Diaspora Studies 330Q, 374F (Topic 7), Comparative Literature 323 (Topic 6), English 343C, 360L (Topic 2). Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 343D. Disability, Race, and Sexuality in Literature and Culture.
Same as Mexican American Studies 337G and Women's and Gender Studies 335 (Topic 17). Three lecture hours a week for one semester.
Only one of the following may be counted: English 343D, Mexican American Studies 337G, Women's and Gender Studies 335 (Topic 17). Prerequisite: For English majors, one of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D, for others, upper-division standing.

E 343E. Latinx Short Story.
Same as Mexican American Studies 345E and Women's and Gender Studies 340 (Topic 90). Three lecture hours a week for one semester. Only one of the following may be counted: English 343E, 376M (Topic: Latinx Short Story), Mexican American Studies 345E, 374 (Topic: Latinx Short Story), Women's and Gender Studies 340 (Topic: Latinx Short Story), 340 (Topic 90). Prerequisite: For English majors, nine semester hours of coursework in English or rhetoric and writing; for other majors, upper-division standing.

E 343F. Black Film at the Oscars.
Same as African and African Diaspora Studies 3300. Three lecture hours a week for one semester. Only one of the following may be counted: African and African Diaspora Studies 3300, 374D (Topic: Black Film at the Oscars), English 343F, 376M (Topic: Black Film at the Oscars). Prerequisite: Of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 343G. Global Environmental Literature and Film.
Three lecture hours a week for one semester. Bridging Disciplines Program 329 (Topic: Global Environmental Lit & Film) and English 343G may not both be counted. Prerequisite: Of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 343I. Immigration Literature.
Three lecture hours a week for one semester. Only one of the following may be counted: English 343I, 376M (Topic 10), Liberal Arts Honors 350 (Topic 31). Prerequisite: Of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 343J. Literature and Social Justice.
Three lecture hours a week for one semester. Only one of the following may be counted: English 343J, 350S (Topic 1), Liberal Arts Honors 350 (Topic: Literature and Social Justice). Prerequisite: Of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 343L. Modernism and Literature.
Strands of thought and literature that form the network of modernist writing. Three lecture hours a week for one semester. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 343M. Black Queer Literature and Film.
Same as African and African Diaspora Studies 330W and Women's and Gender Studies 340 (Topic 47). Analyzes written works, films, and videos by and about lesbians, bisexual, transgender, and gay black people, with an emphasis on understanding the historical and theoretical construction of sexual and gender identities and sexual/cultural practices in black communities. Three lecture hours a week for one semester. Only one of the following may be counted: African and African Diaspora Studies 330W, 372E (Topic 13), English 343M, 376M (Topic 8), Women's and Gender Studies 340 (Topic 47). Prerequisite: For English majors, of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D; for others, upper-division standing.

E 343N. The Nobel Prize.
Three lecture hours a week for one semester. Only one of the following may be counted: English 343N, 360L (Topic: The Nobel Prize-Honors), Liberal Arts Honors 350 (Topic: The Nobel Prize). Prerequisite: Of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 343O. Contemporary United States Latina/o Literature and Culture.
Same as Mexican American Studies 345G. Three lecture hours a week for one semester. Only one of the following may be counted: English 323D (Topic: Contemp US Latina/o Lit/Cul), 343O, 376M (Topic: Contemp US Latina/o Lit & Cul), Mexican American Studies 345G. Prerequisite: Of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 343P. Postmodern Literature.
Survey of postmodern writing. As a period, the postmodern extends roughly from the era after World War II, and follows the modern, a term often applied to literature produced since the start of World War I. Three lecture hours a week for one semester. Prerequisite: Of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 343Q. Lesbian, Gay, Bisexual, Transgender, and Queer Literature and Culture.
Same as Women's and Gender Studies 345E. Three lecture hours a week for one semester. Only one of the following may be counted: English 343Q, 376W (Topic 8), Women's and Gender Studies 345 (Topic 30), 345E. Prerequisite: Of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 343R. Contemporary Native American Literature.
Three lecture hours a week for one semester. English 343R and 376M (Topic 6) may not both be counted. Prerequisite: Of the following: Comparative Literature 315, English 303D (or 603B), 316L, 316M, 316N, 316P, or Tutorial Course 303D (or 603B).

E 343S. Sustainability and Representation.
Three lecture hours a week for one semester. English 343S and 360S (Topic: Sustainability & Representation) may not both be counted. Prerequisite: Of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P; or Tutorial Course 303D.

E 343T. Contemporary Asian American Novels.
Same as Asian American Studies 320C. Three lecture hours a week for one semester. Only one of the following may be counted: Asian American Studies 320 (Topic 3), 320C, English 343T, 376M (Topic 5). Prerequisite: Of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 343U. Literature, Health, and Disease.
Three lecture hours a week for one semester. Only one of the following may be counted: English 343U, 360S (Topic: Lit/Health/Disease: Honors), Liberal Arts Honors 350 (Topic: Lit, Health, and Disease). Prerequisite: Of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 343V. Literature of AIDS in Africa.
Same as African and African Diaspora Studies 345V. Examine the emerging cultural representations of AIDS in sub-Saharan Africa through journalistic, social science, and historical accounts. Only one of the following may be counted: African and African Diaspora Studies 345V, 372G (Topic
E 343W. Contemporary African American Women's Fiction.

Same as African and African Diaspora Studies 330M and Women's and Gender Studies 340 (Topic 29). Three lecture hours a week for one semester. Only one of the following may be counted: African and African Diaspora Studies 330M, 372E (Topic 15), English 343W, 376M (Topic 7), Women's and Gender Studies 340 (Topic 29). Prerequisite: For English majors, one of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P; for others, upper-division standing.

E 344C. Young Adult: Fiction and Film.

See the works as embedded in specific historical, artistic, and cultural contexts that must be engaged in order to understand their expressed values and concerns about youth culture, specifically and comparatively. Discussions and analyses focus on aesthetics, form, and genre, framed by critical approaches and reading strategies rooted in film, genre, feminist, cultural, ethnic, and gender studies. Three lecture hours a week for one semester. Only one of the following may be counted: English 344C, 344L (Topic 4), Liberal Arts Honors 350 (Topic: Young Adult: Fict/Film), Mexican American Studies 374 (Topic: Young Adult: Fiction and Film). Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 344D. Australian Literature and Film.

Three lecture hours a week for one semester. English 344D and 344L (Topic 4) may not both be counted. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 344E. New York School Poets and Artists.

Three lecture hours a week for one semester. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 344F. Film Theory.

Three lecture hours a week for one semester. Only one of the following may be counted: English 344F, 344L (Topic: Film Theory-Honors), Liberal Arts Honors 350 (Topic: Film Theory). Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 344G. Gossip and Poetry.

Three lecture hours a week for one semester. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 344H. Twenty-First Century Poetry.

Three lecture hours a week for one semester. Only one of the following may be counted: English 344H, 379R (Topic: Twenty-First-Century Poetry), 379R (Topic 14). Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

Three lecture hours a week for one semester. Only one of the following may be counted: English 344J, 379R (Topic: Binge-Watching: Culturl Hist), 379R (Topic 12). Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 344M. Major Film Movements.

Three lecture hours a week for one semester Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P; or Tutorial Course 303D.

E 344N. Film Noir.

Three lecture hours a week for one semester. English 344N and 379R (Topic: Film Noir: Texts and Film) may not both be counted. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 344O. Popular Music and Youth Subcultures.

Three lecture hours a week for one semester. English 344O and 379R (Topic 6) may not both be counted. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 344P. Hollywood Babylon.

Explore Hollywood’s symbolic role in American culture, and the genre of the Hollywood story, as seen in an array of representations of Hollywood (primarily in films and novels, but also in essays, poems, paintings, photographs, songs, fan magazines, and notorious counter-historical accounts such as Kenneth Anger’s Hollywood Babylon). Three lecture hours a week for one semester. Only one of the following may be counted: English 344L (Topic: Hollywood Babylon), 344L (Topic: Hollywood Babylon-Hon), 344P Liberal Arts Honors 350 (Topic: Hollywood Babylon). Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 344R. Childhood and Adolescence in Literature and Film.

Examine historical to contemporary representations of childhood and adolescence in literature, film, culture, and society. Three lecture hours a week for one semester. English 344L (Topic 5) and 344R may not both be counted. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 344S. Film Auteurs.

Three lecture hours a week for one semester. English 344L (Topic: Film Auteurs) and 344S may not both be counted. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 344T. The Animated Film as Text.

Three lecture hours a week for one semester. English 344L (Topic: The Animated Film as Text) and 344T may not both be counted. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 344U. Writer-Directors: European Literary Cinema.

Explore a historical-to-contemporary survey of European literary and cinematic movements, featuring pre- and post-auteur writer-directors. Three lecture hours a week for one semester. English 344L (Topic 6) and 344U may not both be counted. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 344V. Music Videos: History and Theory.

Three lecture hours a week for one semester. Only one of the following may be counted: English 344V, 379R (Topic: Music Videos: Hist/Theory), 379R (Topic 13). Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.
E 344W. Citizen Kane and Company: The Essential Films.
Examine a select body of films, ranging from the early sound era to the present, that changed the vernacular of filmmaking, opened up new generic or stylistic directions, or epitomized the work of a widely influential director. Explore film history and theory, an introduction to the study of film genres and movements, the major tactics and techniques of film analysis, and the rigorous study of filmic texts. Three lecture hours a week for one semester English 344L (Topic: Citizen Kane and Company) and 344W may not both be counted. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 345D. Drugs in African American Popular Culture.
Same as African and African Diaspora Studies 331D and American Studies 334. Examine the legal, political, and philosophical intersection of blackness, whiteness, and drugs in the late twentieth century through film, music, and literature. Three lecture hours a week for one semester. Only one of the following may be counted: African and African Diaspora Studies 331D, 370 (Topic: Drugs in Afr Am Lit/Culture), American Studies 334, English 345D. Prerequisite: Upper-division standing.

E 345F. Food Writing, Culture, and Environment.
Trace the origins of food writing and explore the ways the genre engages with contemporary issues of cultural definition, political action, and global sustainability while activating various definitions of taste and judgment ascribed to aesthetic and philosophical pursuits. Three lecture hours a week for one semester. English 345F and 360S (Topic 6) may not both be counted. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 345S. Gender and Speculative Fiction.
Same as Women's and Gender Studies 345O. Examine how writers have used speculative fiction—including science fiction, utopia, and dystopia—as a tool to explore gender, race, sexuality, humanity, ethics, disability, and the environment. Three lecture hours a week for one semester. Only one of the following may be counted: English 323D (Topic: Gender and Speculative Fiction), 345S, 370W (Topic: Gender/Speculative Fiction), Women's and Gender Studies 345O. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 345T. The Theater in Austin.
Three lecture hours a week for one semester. Only one of the following may be counted: English 345T, 350V (Topic: Theater in Austin: Honors), Liberal Arts Honors 350 (Topic: Theater in Austin). Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P or Tutorial Course 303D.

E 345W. English Syntax for Writing.
Same as Linguistics 353S. Three lecture hours a week for one semester. Only one of the following may be counted: English 345W, Linguistics 350 (Topic: English Syntax for Writing), 353S. Prerequisite: Linguistics 306 and one of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P or Tutorial Course 303D.

E 348. The Short Story.
Extensive readings and analyses of stories by major modern writers such as Faulkner, Hemingway, Joyce, Chekhov, and Kafka, as well as contemporary writers. Three lecture hours a week for one semester. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P or Tutorial Course 303D.

E 348C. Julia Alvarez and Sandra Cisneros.
Same as Mexican American Studies 345C and Women's and Gender Studies 340 (Topic 86). Three lecture hours a week for one semester. Only one of the following may be counted: English 348C, 349S (Topic: Alvarez and Cisneros), Mexican American Studies 345C, 374 (Topic: Alvarez and Cisneros), Women's and Gender Studies 340 (Topic: Alvarez and Cisneros), 340 (Topic 86). Prerequisite: Upper-division standing.

E 348J. J. M. Coetzee.
Three lecture hours a week for one semester. English 348J and 349S (Topic: J M Coetzee) may not both be counted. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 348P. Plath and Sexton.
Explore the works of Sylvia Plath and Anne Sexton. Three lecture hours a week for one semester. English 348P and 349S (Topic: Plath and Sexton) may not both be counted. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316P, or Tutorial Course 303D.

E 348S. Zadie Smith.
Three lecture hours a week for one semester. English 348S and 349S (Topic: Zadie Smith-GBR) may not both be counted. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 348T. J. R. R. Tolkien.
Three lecture hours a week for one semester. English 348T and 349S (Topic: JRR Tolkien) may not both be counted. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 348U. Bruce Springsteen.
Three lecture hours a week for one semester. English 348U and 349S (Topic: Bruce Springsteen) may not both be counted. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 348W. Wes Anderson.
Three lecture hours a week for one semester. Only one of the following may be counted: English 348W, 349S (Topic: Wes Anderson: Honors), Liberal Arts Honors 350 (Topic: Wes Anderson). Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 349D. Danticat and Diaz.
Same as African and African Diaspora Studies 330S and Comparative Literature 323 (Topic 60). Three lecture hours a week for one semester. Only one of the following may be counted: African and African Diaspora Studies 330S, 372E (Topic: Danticat and Diaz), Comparative Literature 323 (Topic: Danticat and Diaz), 323 (Topic 60), English 349D, 349S (Topic: Danticat and Diaz). Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 349S. Topics on Major Authors.
Intensive study of the works of a single major author or two major authors. Three lecture hours a week for one semester. Only one of the following may be counted unless the topics vary: English 349S, 370W, 376M. May be repeated for credit when the topics vary. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

Topic 1: Jane Austen.
Topic 2: The Brontes. English 349S (Topic 2) and 370W (Topic: Brontes: Self and Society) may not both be counted.

Topic 3: James and Wharton.

Topic 4: James Joyce.

Topic 5: Toni Morrison. Same as African and African Diaspora Studies 330J and Women’s and Gender Studies 345I. An examination of select novels by the Nobel Laureate and Pulitzer Prize-winning novelist focuses on the positional uniqueness that womanism shares with a predominant feminism, which surfaces in historicized familial relationships. Three lecture hours a week for one semester. Only one of the following may be counted: African and African Diaspora Studies 330J, 372E (Topic 1), English 349S (Topic 5), Women’s and Gender Studies 345 (Topic 46), 345I. Additional prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P; or Tutorial Course 303D.

Topic 6: Walt Whitman.

Topic 7: Oscar Wilde.

Topic 8: Virginia Woolf. Same as Women’s and Gender Studies 345G. Examines critical and fictional works of Virginia Woolf and the author’s continuing legacy and influence. Explores the value and limitations of high modernism; English literary heritage and tradition; feminism; creative and critical definitions of gender and sexuality; intellectual activism, including Woolf’s critiques of patriarchy, war, and fascism; and Woolf and imperialism and colonialism. Three lecture hours a week for one semester. Only one of the following may be counted: English 349S (Topic 8), Women’s and Gender Studies 345 (Topic 40), 345G. Additional prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P; or Tutorial Course 303D.

Topic 10: Graham Greene. English 349S (Topic: Graham Greene) and 349S (Topic 10) may not both be counted.

Topic 11: Nathaniel Hawthorne. English 349S (Topic: Nathaniel Hawthorne) and 349S (Topic 11) may not both be counted.

Topic 12: Alice Munro. English 349S (Topic: Alice Munro) and 349S (Topic 12) may not both be counted.

Topic 13: Charles Dickens. English 349S (Topic: Charles Dickens) and 349S (Topic 13) may not both be counted.

Topic 14: David Foster Wallace. Only one of the following may be counted: English 349S (Topic: David Foster Wallace), 349S (Topic 14), Liberal Arts Honors 350 (Topic: David Foster Wallace), 350 (Topic 29).

Topic 15: Edgar Allan Poe. English 349S (Topic: Edgar Allan Poe) and 349S (Topic 15) may not both be counted.

Topic 16: Ernest Hemingway. English 349S (Topic: Ernest Hemingway) and 349S (Topic 16) may not both be counted.

Topic 17: George Eliot. English 349S (Topic: George Eliot) and 349S (Topic 17) may not both be counted.

Topic 18: Chaucer and Shakespeare. English 349S (Topic: Chaucer and Shakespeare) and 349S (Topic 18) may not both be counted.

Topic 19: Shakespeare and Marlowe.

E 349W. Bob Dylan.

Three lecture hours a week for one semester. English 349S (Topic: Bob Dylan) and 349W may not both be counted. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P; or Tutorial Course 303D.

E 350E. Topics in Language and Literature: Beginnings to 1630.

Three lecture hours a week for one semester. English 350E and 364D may not both be counted unless the topics vary. May be repeated for credit when the topics vary. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P; or Tutorial Course 303D.

E 350M. Topics in Language and Literature: 1630 to 1830.

Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P; or Tutorial Course 303D.

Topic 1: Eighteenth-Century Women Writers. Same as Women’s and Gender Studies 345L. Women writers in the early eighteenth-century canon. Argues for a historical perspective that demonstrates the centrality of early eighteenth-century women writers to the western canon. Three lecture hours a week for one semester. Only one of the following may be counted: English 350M (Topic 1), Women’s and Gender Studies 345 (Topic 7), 345L. Additional prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P; or Tutorial Course 303D.

E 350R. Topics in Language and Literature: 1830 to 1940.

Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P; or Tutorial Course 303D.

Examines the American Civil War not in terms of its military or political history but in relation to the ways literary and cultural texts have remembered and rewritten it. Only one of the following may be counted: English 350R (Topic 3), Liberal Arts Honors 350 (Topic: Literature, Cultural Memory, and the American Civil War), 350 (Topic 32).

Topic 4: The Paperback. Introduction to basic bibliography terminology and book history by tracking the evolution of the modern paperback, from 1850 to now, by means of author case studies. Only one of the following may be counted: English 350R (Topic: The Paperback), 350R (Topic 4), Liberal Arts Honors 350 (Topic: The Paperback).

E 350V. Topics in Language and Literature: 1940-Present.

Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P; or Tutorial Course 303D.

E 350W. American Women Writers.

Same as Women’s and Gender Studies 345P. Three lecture hours a week for one semester. Only one of the following may be counted: English 350R (Topic: Amer Women Wrtrs, 1830-1940), 350W. Women’s and Gender Studies 345P. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P; or Tutorial Course 303D.

E 351D. Angels and Devils in Victorian Fiction.

Three lecture hours a week for one semester. English 350R (Topic: Angels/Devils Victorn Fict) and 351D may not both be counted. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P; or Tutorial Course 303D.
E 351F. Literature and Business in Nineteenth-Century Britain.
Three lecture hours a week for one semester. English 350R (Topic: Lit and Bus in 19th-C Brit) and 351F may not both be counted. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P or Tutorial Course 303D.

E 351L. London: One Hundred Years Ago.
Three lecture hours a week for one semester. English 351L and 379R (Topic 9) may not both be counted. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P or Tutorial Course 303D.

E 351O. Literature of Oxford.
Three lecture hours a week for one semester. English 351O (Topic: Literature of Oxford-GBR) and 351O may not both be counted. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P or Tutorial Course 303D.

E 351P. Paradise Lost: Reception History.
Three lecture hours a week for one semester. English 351P and Liberal Arts Honors 350 (Topic 30) may not both be counted. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P or Tutorial Course 303D.

E 352C. Classical Backgrounds of Literature.
Three lecture hours a week for one semester. Only one of the following may be counted: English 350E (Topic: Epics and Influences), 350E (Topic 1), 352C, Liberal Arts Honors 350 (Topic: Epics and Influences). Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P or Tutorial Course 303D.

E 352D. American Dante.
Same as American Studies 323C and Italian Civilization 347. Examine the influence of the Italian poet Dante on American culture from the nineteenth century to the present. Three lecture hours a week for one semester. Only one of the following may be counted: American Studies 323C, English 352D, Italian Civilization 330 (Topic: American Dante), 347. Prerequisite: Upper-division standing.

E 352L. Interwar United States Literature.
Three lecture hours a week for one semester. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P or Tutorial Course 303D.

E 352K. Arthurian Literature and Film.
A survey of the major Arthurian narratives from their origins in the Middle Ages to the present in various textual (prose, poetry, drama) and visual (illustration, film, graphic) forms. Three lecture hours a week for one semester. English 350E (Topic: Arthurian Literature and Film) and 352K may not both be counted. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P or Tutorial Course 303D.

E 352V. Viking Literature.
A survey of early Norse and Anglo-Scandinavian prose and verse—saga; chronicle, heroic epic, and mythological (eddic and skaldic) verse—with attention to the image of the viking in contemporary popular culture. Three lecture hours a week for one semester. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P or Tutorial Course 303D.

E 353R. Literature of the Harlem Renaissance.
Same as African and African Diaspora Studies 330D. Three lecture hours a week for one semester. Only one of the following may be counted: African and African Diaspora Studies 330D, 374F (Topic: Harlem Renaissance), English 353R, 376M (Topic: Harlem Renaissance). Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P or Tutorial Course 303D.

Three lecture hours a week for one semester. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P or Tutorial Course 303D.

E 354C. Crime Fiction.
Three lecture hours a week for one semester. English 354C and 379R (Topic: Crime Fiction) may not both be counted. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P or Tutorial Course 303D.

E 354D. Post-Darwin Novel.
Three lecture hours a week for one semester. English 354D and Liberal Arts Honors 350 (Topic: Post-Darwin Novel) may not both be counted. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P or Tutorial Course 303D.

E 354M. From Middlemarch to Modernism.
Three lecture hours a week for one semester. Only one of the following may be counted: English 350R (Topic: Middlemarch to Modernism: Hon), 354M, Liberal Arts Honors 350 (Topic: Middlemarch to Modernism). Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P or Tutorial Course 303D.

E 355V. Vampires and Dandies.
Three lecture hours a week for one semester. Only one of the following may be counted: English 355V, Liberal Arts Honors 350 (Topic: Vampires and Dandies), 350 (Topic: Vampire and Dandies-WB). Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P or Tutorial Course 303D.

E 356. The European Novel.
Same as European Studies 347 (Topic 7). Selected masterpieces of continental fiction in English translation; representative novelists of the nineteenth and twentieth centuries. Three lecture hours a week for one semester. English 356 and European Studies 347 (Topic 7) may not both be counted. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P or Tutorial Course 303D.

E 358E. Eliot and Hardy.
Explore the works of George Eliot and Thomas Hardy. Three lecture hours a week for one semester. English 349S (Topic: Eliot and Hardy) and 358E may not both be counted. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P or Tutorial Course 303D.

E 358F. Faulkner and O'Connor.
Explore the works of William Faulkner and Flannery O'Connor. Three lecture hours a week for one semester. Only one of the following may be counted: English 349S (Topic: Faulkner and O'Connor-Honors), 358F, Liberal Arts Honors 350 (Topic: Faulkner and O'Connor). Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P or Tutorial Course 303D.

E 358J. The Bible as Literature.
Same as Religious Studies 355. In-depth literary study of the Bible, with emphasis on the formal features of narrative, hymn, prophecy, apocalypse, gospel, and epistle. Three lecture hours a week for one semester. English 358J and Religious Studies 355 may not both be
counted. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 358K. The Bible in British and American Literature.
Same as Religious Studies 355K. The reading of biblical masterpieces as literature; consideration of different versions of the Bible and their influence on British and American literature. Three lecture hours a week for one semester. English 358K and Religious Studies 355K may not both be counted. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 358P. Robert Frost.
Three lecture hours a week for one semester. English 349S (Topic: Robert Frost) and 358P may not both be counted. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 358Q. Supervised Research.
Student-initiated research conducted with instructor supervision. Three conference hours a week for one semester. May be taken twice for credit. May be repeated for credit. Prerequisite: Completion of at least sixty semester hours of coursework, including at least six semester hours of upper-division coursework in English or rhetoric and writing; a University grade point average of at least 3.00; and approval of written application by supervising instructor and the undergraduate faculty adviser.

E 358R. Research Apprenticeship.
Restricted to students in the English Honors Program. Supervised research on a faculty-initiated project. Individual instruction. Prerequisite: Consent of instructor.

E 359. British Drama from 1660 to 1900.
Representative drama texts from the Restoration to the beginnings of modern theatre, including Behn, Sheridan, Wilde, and Shaw. Three lecture hours a week for one semester. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 360C. Postcolonial Literature.
Examine the struggles of the migrant and exile with questions of identity, belonging, home, citizenship, and culture. Three lecture hours a week for one semester. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 360K. English Grammar.
The study of traditional and transformational grammar. Attention to social differences in language relevant to the teaching of English. Three lecture hours a week for one semester. English 360K and Linguistics 360K may not both be counted. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 360P. Literary Studies for High School Teachers of English.
Intended for students seeking a secondary school teaching certificate. The principles and practices of teaching literature in secondary schools. Three lecture hours a week for one semester. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 361K. British Drama to 1642.
A survey of early British drama, usually including works by Marlowe, Kyd, Shakespeare, Jonson, Webster, and Middleton. Three lecture hours a week for one semester. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 362L. The Contemporary British Novel.
Representative novels, including those of Joyce, Lawrence, and Woolf. Three lecture hours a week for one semester. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 363. Milton.
All the poetry of Milton, with particular attention to Comus, Samson Agonistes, and Paradise Lost. Three lecture hours a week for one semester. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 363K. Classic to Romantic.
The theory and practice of Classicism in literature and other arts; the rise of the Romanticists in the eighteenth century. Three lecture hours a week for one semester. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 363S. Early Black Atlantic.
Same as African and African Diaspora Studies 331. Three lecture hours a week for one semester. Only one of the following may be counted: African and African Diaspora Studies 331, English 363S, 376M (Topic: Early Black Atlantic). Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 364E. African American Language.
Same as African and African Diaspora Studies 365C and Linguistics 373D. Introduction to the history and contemporary form of African American Language (AAL). Through readings, examine the linguistic description of essential features, the use of AAL in the creation of culturally and historically influential texts, and AAL as a subject of public discussion. Three lecture hours a week for one semester. Only one of the following may be counted: African and African Diaspora Studies 365C, English 364D (Topic: African American English), 364E, Linguistics 373D. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 364M. History of the English Language.
Same as Linguistics 364M. Development of sounds, forms, and vocabulary of the English language from its origins to the present. Three lecture hours a week for one semester. English 364M and Linguistics 364M may not both be counted. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 364P. Old English.
An introduction to Old English with sufficient grammar for a reading knowledge of Old English texts. A course in language, not in linguistics. Three lecture hours a week for one semester. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 364T. The English Language and Its Social Context.
English language history, theory, and research for students of literature and rhetoric. May include such topics as language diversity and variation, linguistic attitudes, language variety and education, and language and public policy. Three lecture hours a week for one semester. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.
E 364V. Sailors, Explorers, and the British Novel.
Three lecture hours a week for one semester. Only one of the following may be counted: English 350M (Topic: Sailors/Explrs/Brit NovHON), 364V, Liberal Arts Honors 350 (Topic: Sailors/Explrs/Brit Nov).
Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P; or Tutorial Course 303D.

E 366D. Dante.
Same as Core Texts and Ideas 344D, European Studies 347 (Topic 23), and Italian Civilization 348. Three lecture hours a week for one semester. Only one of the following may be counted: Core Texts and Ideas 344D, 345 (Topic: Dante), English 322 (Topic 23), 366D, European Studies 347 (Topic: Dante), 347 (Topic 23), Italian Civilization 348, 349 (Topic 2). Prerequisite: Upper-division standing.

E 367C. Conference Course in Literature and Language.
For students who wish to work under supervision on specific projects in literature or language. Three conference hours a week for one semester. May be taken twice for credit. May be repeated for credit. Prerequisite: Completion of at least sixty semester hours of coursework, including at least six semester hours of upper-division coursework in English or rhetoric and writing; a University grade point average of at least 3.00; and approval of written application by supervising instructor and the undergraduate faculty adviser.

E 367E. English Internship.
Research and staff experience working in an appropriate agency or private business. At least twelve hours of fieldwork a week for one semester. May not be counted toward the English major or minor. Offered on the pass/fail basis only. Prerequisite: Completion of at least sixty semester hours of coursework, including at least six semester hours of upper-division coursework in English or rhetoric and writing; a University grade point average of at least 3.00; and approval of written application by the undergraduate faculty adviser.

E 368H. Honors Tutorial Course I.
Research into and development of a thesis topic and proposal. The equivalent of three lecture hours a week for one semester. Only one of the following may be counted: English 368H and 369H; or 679H. Prerequisite: Enrollment in or completion of at least one honors section of an English course, admission to the English Honors Program, and consent of the honors adviser.

E 368S. Scott and Wordsworth.
Explore the works of Walter Scott and William Wordsworth. Three lecture hours a week for one semester. English 368S and Liberal Arts Honors 350 (Topic: Scott and Wordsworth) may not both be counted. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P; or Tutorial Course 303D.

E 369. Twentieth-Century Drama.
Ibsen and other major dramatists; tradition and innovation in the substance and form of selected modern plays. Three lecture hours a week for one semester. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P; or Tutorial Course 303D.

E 369H. Honors Tutorial Course II.
Writing and defense of an Honors thesis. Individual instruction. The equivalent of three lecture hours a week for one semester. Only one of the following may be counted: English 368H and 369H; or 679H. Prerequisite: English 368H with a grade of at least B+.

The prose writer as artist and sage in the cultural, political, religious, and scientific controversies that influence the modern tradition. Representative writers: Carlyle, Mill, Newman, Arnold, Darwin. Three lecture hours a week for one semester. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P; or Tutorial Course 303D.

E 470H. Honors Tutorial Course for Teachers.
Research into and development of a thesis topic and proposal followed by the writing and defense of a thesis. The equivalent of four lecture hours a week for one semester. Prerequisite: Credit or registration for a minimum of one honors section of an English course, admission to the English Honors Program, admission to UTeach-Liberal Arts, and consent of the honors adviser.

E 371C. Early Celebrity Culture.
Three lecture hours a week for one semester. Only one of the following may be counted: English 350M (Topic: Early Celebrity Culture-Honors), 371C, Liberal Arts Honors 350 (Topic: Early Celebrity Culture). Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P; or Tutorial Course 303D.

E 371K. Modern and Contemporary Poetry.
Poets that may be studied include Eliot, Auden, Stevens, Thomas, Bishop, Rich, and Merwin. Three lecture hours a week for one semester. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P; or Tutorial Course 303D.

E 371S. Shakespearean Afterlives.
Three lecture hours a week for one semester. Only one of the following may be counted: English 350E (Topic: Shakespearean Afterlives:HON), 371S, Liberal Arts Honors 350 (Topic: Shakespearean Afterlives). Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P; or Tutorial Course 303D.

E 371T. Love and Betrayal in Troy.
Three lecture hours a week for one semester. Only one of the following may be counted: English 350E (Topic: Love/Betrayal in Troy: Hon), 371T, Liberal Arts Honors 350 (Topic: Love/Betrayal in Troy). Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P; or Tutorial Course 303D.

E 372L. The American Renaissance.
Selected writers of the pre-Civil War Romantic movement, including Emerson, Douglass, Fuller, Hawthorne, Melville, Thoreau, Whitman, and others. Three lecture hours a week for one semester. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P; or Tutorial Course 303D.

E 372M. American Realism.
Selected writers of the post-Civil War realistic movement: Howells, Twain, James, Jewett, Freeman, Crane, and others. Three lecture hours a week for one semester. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P; or Tutorial Course 303D.

E 373M. Early Globalisms, 500-1500 CE.
Examine, through global literature, the interconnected worlds, humans, activities, and cultures in the approximate time frame of a thousand years to discover what they reveal of early globalisms. Three lecture hours a week for one semester. English 350E (Topic: Imagining World, 500-1500 CE) and 373M may not both be counted Prerequisite: One of
the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P; or Tutorial Course 303D.

E 373R. Race in the Middle Ages.
Three lecture hours a week for one semester. Only one of the following may be counted: English 350E (Topic: Race in the Middle Ages), 360S (Topic 5), 373R. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P; or Tutorial Course 303D.

E 374C. Medieval Romance.
Three lecture hours a week for one semester. English 350E (Topic: Medieval Romance) and 374C may not both be counted. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P; or Tutorial Course 303D.

E 374G. Beowulf.
An extended reading of the work in its cultural and literary context. Three lecture hours a week for one semester. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P; or Tutorial Course 303D.

E 374K. Elizabethan Poetry and Prose.
Renaissance thought and culture as revealed in the lyric and narrative poetry and in the prose masterpieces. Three lecture hours a week for one semester. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P; or Tutorial Course 303D.

E 378E. Edmund Spenser.
Three lecture hours a week for one semester. Only one of the following may be counted: English 349S (Topic: Edmund Spenser), 378E, Liberal
Arts Honors 350 (Topic: Edmund Spenser). Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 678S. Shakespeare at Winedale.
Study and readings of selected works and criticism, culminating in public performance of the plays. For English 678SB, students are required to be in residence at Winedale near Round Top, Texas. For 678SA, the equivalent of five lecture hours a week for one semester; for 678SB, fifteen to eighteen hours of work a day, including weekends. Offered in the summer session only. Prerequisite: For 678SA, consent of instructor; for 678SB, English 678SA and consent of instructor.

Early American literature as an embodiment of American thought and experience. Such topics as European ideas in the New World, the political ideas of Hamilton, Jefferson, and Jackson; nationalism; industrialism. Three lecture hours a week for one semester. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 379D. Digital Research Lab.
Participate in original faculty research in the Digital Humanities in a project-based, hands-on setting. Three lecture hours a week for one semester. May be repeated for credit. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, or Tutorial Course 303D.

Such topics as transcendentalism, manifest destiny, Utopian thought, and the impact of the theory of organic evolution. Three lecture hours a week for one semester. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, or Tutorial Course 303D.

E 379L. Contemporary Drama.
Major playwrights since 1950, such as Williams, Shepard, Beckett, Stoppard, Churchill, Fugard, and Pinter. Three lecture hours a week for one semester. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

E 379P. Drama in Performance.
Intensive study of drama through active performance as a means of interpretation and an aid to comprehension. Three lecture hours a week for one semester. Prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P, or Tutorial Course 303D.

Graduate Courses

E 380E. Practicum in Editing.
A practicum for editing a literary journal. Three lecture hours a week for one semester. May be repeated for credit when the topics or instructors vary. Prerequisite: Graduate standing, admission to the creative writing concentration in English, and consent of the English graduate adviser.

E 380F. Literature for Writers.
Readings in fiction, poetry, drama, literary criticism, biography, and autobiography from the point of view of a creative writer rather than that of a scholar. Three lecture hours a week for one semester. May be repeated for credit when the instructors vary. Prerequisite: Graduate standing and consent of the English graduate adviser.

E 382J. Studies in Linguistic Analysis.
Lectures, textual analysis, outside readings. Three lecture hours a week for one semester. May count as linguistics. Prerequisite: Graduate standing and consent of the English graduate adviser.

E 382L. Studies in Linguistics and Literature.
Intensive study of specialized subjects. Three lecture hours a week for one semester. May count as linguistics. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of the English graduate adviser.

E 383L. The Teaching of English Composition and Literature.
A study of the major components of the English program in secondary school or college. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of the English graduate adviser.

Topic 1: World Literature and Globalism: Theory and Practice. Same as Comparative Literature 382 (Topic 1). Only one of the following may be counted: Comparative Literature 382 (Topic: World Lit/Globalism: Thry/Prac), 382 (Topic 1), English 383L (Topic: World Lit/Globalism: Thry/Prac), 383L (Topic: Wrld Lit/Globlsm: Thry/Prac), 383L (Topic 1).

E 384K. Methods of Literary Research.
Issues addressed include methods of literary and cultural interpretation, archival research, academic publishing, and professional development. Three class hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of the English graduate adviser.

Topic 2: Disciplinary Inquiries. English 384K (Topic: Approaches to Disciplinary Inquiries) and 384K (Topic 2) may not both be counted.

E 384L. Scholarly Publication.
Three lecture hours a week for one semester. Only one of the following may be counted: English 384K (Topic: Scholarly Publication), 384K (Topic 3), 384L. Offered on the credit/no credit basis only. Prerequisite: Graduate standing and consent of the English graduate adviser.

E 384M. Professional Outcomes.
Three lecture hours a week for one semester. Only one of the following may be counted: English 384K (Topic: Disciplinary Outcomes), 384K (Topic 4), 384M. Offered on the credit/no credit basis only. Prerequisite: Graduate standing and consent of the English graduate adviser.

E 385N. Creative Writing: Workshop in Fiction.
Three lecture hours a week for one semester. May be repeated for credit when the instructors vary. Prerequisite: Graduate standing and consent of instructor and the English graduate adviser.

E 385W. Creative Writing: Workshop in Fiction and Poetry.
Intended for graduate students who are not in a master of fine arts program. Three lecture hours a week for one semester. Prerequisite: Graduate standing and consent of the English graduate adviser.

E 386L. Creative Writing: Workshop in Poetry.
Three lecture hours a week for one semester. May be repeated for credit when the instructors vary. Prerequisite: Graduate standing and consent of instructor and the English graduate adviser.

E 387M. Studies in Rhetoric.
Advanced study of topics in rhetorical theory and in ancillary disciplines. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of the English graduate adviser.
E 387N. Methods of Research in Rhetoric and Composition.
A study of the theory, practice, and history of research in rhetoric and composition. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of the English graduate adviser.

E 387P. Productions in Rhetoric.
Applications of rhetoric to professional writing. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of the English graduate adviser.

E 387R. Rhetorical History.
Topics include classical rhetoric, medieval and Renaissance rhetoric, eighteenth- and nineteenth-century rhetoric, and twentieth-century rhetoric. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of the English graduate adviser.

E 388M. Studies in English and Computers.
Seminar on research in English literature, language, and rhetoric. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of the English graduate adviser.

E 389M. Studies in British and American Literature.
Selected British and American writers and issues. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of the English graduate adviser.

E 389P. Studies in Women, Gender, and Literature.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of the English graduate adviser.

E 390M. Studies in European Literature.
A study of the impact of European writers on British or American literature. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of the English graduate adviser.

E 391F, 691F. Field and Prospectus Examination.
Prepare for required Field and Prospectus examinations under the supervision of a faculty member. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. May be repeated for credit. Prerequisite: Graduate standing and consent of the English graduate adviser.

E 391L, 691L. Conference Course on Special Topics.
For each semester hour of credit earned, the equivalent of one class hour a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of the English graduate adviser.

E 392M. Studies in English Literature.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of the English graduate adviser.

E 393M. Studies in Criticism, English and American.
Historical and methodological approaches to literary criticism. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of the English graduate adviser.

E 395M. Studies in American Literature.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of the English graduate adviser.

E 395N. Studies in the History of Language.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of the English graduate adviser.

E 396L. Studies in the English Language.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of the English graduate adviser.

Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of the English graduate adviser.

E 397N. Studies in Ethnic and Third-World Literatures.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of the English graduate adviser.

Research and writing of a thesis under the supervision of the chair of the supervising committee and subject to the approval of the committee and the graduate dean. The equivalent of three lecture hours a week for two semesters. English 698A may not be repeated for credit. The student must register for 698B the semester he or she intends to graduate. Offered on the credit/no credit basis only. Prerequisite: For 698A, graduate standing in creative writing; for 698B, English 698A.

E 398D. Digital Studies Practicum.
Restricted to students pursuing the graduate portfolio in digital studies. Practical work on a faculty-led digital studies research project, planned and carried out in consultation with the supervising instructor. The equivalent of three lecture hours and at least five hours of fieldwork a week for one semester. Offered on the credit/no credit basis only. Prerequisite: Graduate standing and consent of the Digital Studies portfolio director.

E 398R. Master’s Report.
Preparation of a report to fulfill the requirement for the master's degree under the report option. The equivalent of three lecture hours a week for one semester. Offered on the credit/no credit basis only. Prerequisite: Graduate standing in English and consent of the graduate adviser.

E 398T. Supervised Teaching in English.
Three lecture hours a week for one semester. May be taken twice for credit. May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Graduate standing, consent of the English graduate
adviser, and appointment as a teaching assistant or assistant instructor in a lower-division English course in literature or writing.

May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Admission to candidacy for the doctoral degree.

Professional Courses
E M - Engineering Mechanics

Engineering Mechanics: E M

Lower-Division Courses
Vector algebra, force systems, free-body diagrams; engineering applications of equilibrium, including frames, friction, distributed loads; centroids, moments of inertia. Three lecture hours and two discussion hours a week for one semester. Prerequisite: Engineering Mechanics 306, and Mathematics 408D or 408M with a grade of at least C- in each.

E M 311M (TCCN: ENGR 2302). Dynamics.
Kinematics, dynamics, and energy and momentum methods for points as well as 2D/3D rigid bodies. Describe and predict the motion of different types of rigid bodies in space and time. Vibrations of simple systems. Three lecture hours and two discussion hours a week for one semester. Prerequisite: Engineering Mechanics 306, and Mathematics 408D or 408M with a grade of at least C- in each.

Internal forces and deformations in solids; stress and strain in elastic and plastic solids; application to simple engineering problems. Three lecture hours a week for one semester, with discussion hours if necessary. Prerequisite: Engineering Mechanics 306, and Mathematics 408D or 408M with a grade of at least C- in each.

Used to record credit the student earns while enrolled at another institution in a program administered by the University's Study Abroad Office or the school's International Engineering Education programs. Credit is recorded as assigned by the study abroad adviser in the Office or the school's International Engineering Education Programs. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. May be repeated for credit when the topics vary. Offered on the letter-grade basis only.

Upper-Division Courses
Same as Aerospace Engineering 339. Curved beams, shear deformation, beam columns, beams on elastic foundations; inelastic behavior of members; elementary plate bending. Three lecture hours a week for one semester. Prerequisite: Engineering Mechanics 319 with a grade of at least C.

Advanced work in the various areas of engineering mechanics, based on recent developments. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Upper-division standing in engineering and consent of instructor.

Used to record credit the student earns while enrolled at another institution in a program administered by the University’s Study Abroad Office or the school's International Engineering Education Programs. Credit is recorded as assigned by the study abroad adviser in the Department of Aerospace Engineering and Engineering Mechanics. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. May be repeated for credit when the topics vary. Offered on the letter-grade basis only.

Graduate Courses
Physical basis of plastic deformation; mathematical theory of incremental plasticity; total theories; numerical implementation; slip and physical theories of plastic deformation; rate dependent (viscoplastic) models; applications to several engineering problems. Three lecture hours a week for one semester. Prerequisite: Graduate standing, and Engineering Mechanics 388 or the equivalent.

E M 381. Advanced Dynamics.
Dynamics of systems of particles and rigid bodies; vibration theory; analytical dynamics, including Lagrangian and Hamiltonian formulations; dynamic stability; continuous systems. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

Methods for analyzing various types of nonlinear differential equations of dynamical systems; exact methods, perturbation and averaging techniques, direct method of Liapunov. Three lecture hours a week for one semester. Prerequisite: Graduate standing and consent of instructor.

Foundations of the general nonlinear theories of continuum mechanics; general treatment of motion and deformation of continua, balance laws, constitutive theory; particular application to elastic solids and simple materials. Three lecture hours a week for one semester. Prerequisite: Graduate standing, and Engineering Mechanics 386K or consent of instructor.

E M 384L. Structural Dynamics.
Same as Aerospace Engineering 384P (Topic 3: Structural Dynamics). Free and forced vibration of single-degree-of-freedom, multiple-degree-of-freedom, and continuous systems. Lagrange's equations and Hamilton's principle; discretization of continuous systems; numerical methods for response and algebraic eigenvalue problems. Three lecture hours a week for one semester. Prerequisite: Graduate standing and consent of instructor.

E M 386K. Analytical Methods I.
Basic topics in real and complex analysis, ordinary and partial differential equations, and other areas of applied mathematics with application to applied mechanics. Three lecture hours a week for one semester. Aerospace Engineering 380P (Topic 1) and Engineering Mechanics 386K may not both be counted. Prerequisite: Graduate standing.

E M 386L. Analytical Methods II.
Continuation of Engineering Mechanics 386K. Three lecture hours a week for one semester. Only one of the following may be counted: Aerospace Engineering 380P (Topic 2), Computational Science, Engineering, and Mathematics 386L, Engineering Mechanics 386L. Prerequisite: Graduate standing, and Engineering Mechanics 386K or consent of instructor.
Same as Computational Science, Engineering, and Mathematics 386M. An introduction to modern concepts in functional analysis and linear operator theory, with emphasis on their application to problems in theoretical mechanics; topological and metric spaces, norm linear spaces, theory of linear operators on Hilbert spaces, applications to boundary value problems in elasticity and dynamical systems. Three lecture hours a week for one semester. Prerequisite: Graduate standing. Computational Science, Engineering, and Mathematics 386M and Engineering Mechanics 386M may not both be counted. Prerequisite: Graduate standing, Engineering Mechanics 386L, and Mathematics 365C.

A study of methods for assessing the qualitative behavior of solutions to equations governing nonlinear continuum mechanics. Three lecture hours a week for one semester. Prerequisite: Graduate standing and Engineering Mechanics 386M.

Governing equations in differential and integral forms; applications to both inviscid and viscous flow problems. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

E M 388. Solid Mechanics I.
Same as Aerospace Engineering 384P (Topic 1: Solid Mechanics I). Mathematical description of stress, deformation, and constitutive equations of solid mechanics; boundary value problems of elasticity. Three lecture hours a week for one semester. Prerequisite: Graduate standing and consent of instructor.

E M 388F. Fracture Mechanics.
Griffith theory of brittle crack propagation, other theories, crack toughness testing concepts. Three lecture hours a week for one semester. Prerequisite: Graduate standing, and Engineering Mechanics 388 or consent of instructor.

E M 388L. Solid Mechanics II.
Same as Aerospace Engineering 384P (Topic 2: Solid Mechanics II). Continuation of Engineering Mechanics 388. Additional topics in elasticity, plasticity, viscoelasticity, variational methods, and other areas of solid mechanics. Three lecture hours a week for one semester. Prerequisite: Graduate standing, Engineering Mechanics 388 or Aerospace Engineering 384P (Topic 1), and consent of instructor.

E M 388M. Micromechanics.
 Constitutive characterization of materials based on their microstructure. Relationships between internal structure and mechanical properties for composites, polycrystals, and polymers on the basis of linear elasticity, plasticity, and theories that account for rate-dependence. Three lecture hours a week for one semester. Prerequisite: Graduate standing and a course in solid mechanics.

E M 388V. Theory of Viscoelasticity.
Introduction to linear viscoelasticity; methods of characterizing viscoelastic material behavior; analytical and approximate solution techniques for engineering problems, including contact, wave propagation, and thermoviscoelastic problems. Three lecture hours a week for one semester. Prerequisite: Graduate standing, and Engineering Mechanics 388 or consent of instructor.

Principles and techniques of measurement in mechanics; includes discussion of strain gauges, optical interference methods, photoelasticity, and dynamic measurements. Two lecture hours and three laboratory hours a week for one semester. Prerequisite: Graduate standing.

Continuum physics and thermodynamics including thermal, mechanical, electrical and magnetic behaviors of active/smart materials. Linear and non-linear behavior of ferroelectrics, ferromagnetic materials, and shape memory alloys. Crystal symmetry, domain structure, phenomenological constitutive models, phase-field modeling, and dielectric elastomers. Three lecture hours a week for one semester.

E M 392R. Random Vibrations.
Introduction to probability theory and its application to random excitation of linear and nonlinear systems; a probabilistic discussion of failure and fatigue in structures. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

Approximate solution methods for flow and transport problems in engineering and applied science. Finite element, finite difference, and residual methods for linear and nonlinear problems. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

E M 394. Structural Stability.
Fundamental theory of buckling of elastic structural elements such as bars, frames, rings, plates, and shells; also special stability topics including inelastic buckling, creep buckling, and buckling under dynamic loading. Three lecture hours a week for one semester. Only one of the following may be counted: Aerospace Engineering 384P (Topic 4), Computational Science, Engineering, and Mathematics 393F, Engineering Mechanics 394F. Prerequisite: Graduate standing and consent of instructor.

E M 394F. Finite Element Methods.
Same as Aerospace Engineering 384P (Topic 4) and Computational Science, Engineering, and Mathematics 393F. Derivation and implementation of the finite element method; basic coding techniques; application to problems of stress and diffusion. Three lecture hours a week for one semester. Only one of the following may be counted: Aerospace Engineering 384P (Topic 4), Computational Science, Engineering, and Mathematics 393F, Engineering Mechanics 394F. Prerequisite: Graduate standing and consent of instructor.

E M 394G. Computational Techniques in Finite Elements.
Organization and data management in finite element codes; element models and calculations; equation solving; preprocessing and postprocessing. Three lecture hours a week for one semester. Prerequisite: Graduate standing and Engineering Mechanics 394F.

Contemporary topics in the theory and application of finite element methods. Three lecture hours a week for one semester. Prerequisite: Graduate standing, Engineering Mechanics 394F, and Engineering Mechanics 386L or the equivalent.

E M 394V. Wave Propagation I.
Solutions of linear wave equations; waves in elastic media, including plates and cylinders; transient waves, transform methods, asymptotic approximation. Three lecture hours a week for one semester. Prerequisite: Graduate standing, and Engineering Mechanics 388 or consent of instructor.
For each semester hour of credit earned, one lecture hour a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of instructor.

- **Topic 1**: Advanced Topics in Viscoelasticity.
- **Topic 2**: Individual Research.
- **Topic 3**: Advanced Computational Flows and Transport.
- **Topic 4**: Grid Generation and Adaptive Grids.
- **Topic 5**: Adaptive Boundary/Finite Element Methods.

Must be arranged by mutual agreement between student and faculty member. Individual research. May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Graduate standing.

E M 397S. Mechanics Seminar.
Current topics in mechanics. Conference course. All engineering mechanics graduate students are required to register for either Engineering Mechanics 397S or 397T each semester. May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Graduate standing.

E M 397T. Computational Mechanics Seminar.
Current topics in computational mechanics. Conference course. All engineering mechanics graduate students are required to register for either Engineering Mechanics 397S or 397T each semester. May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Graduate standing.

The equivalent of three lecture hours a week for two semesters. Offered on the credit/no credit basis only. Prerequisite: For 698A, graduate standing in engineering mechanics and consent of the supervising professor and the graduate adviser; for 698B, Engineering Mechanics 698A.

E M 398R. Master's Report.
Preparation of a report to fulfill the requirement for the master's degree under the report option. The equivalent of three lecture hours a week for one semester. Offered on the credit/no credit basis only. Prerequisite: Graduate standing in engineering mechanics and consent of the graduate adviser.

Teaching methods and objectives, criteria for evaluating teaching effectiveness, procedures and regulations, laboratory teaching. Three lecture hours a week for one semester. Offered on the credit/no credit basis only. Prerequisite: Graduate standing and appointment as a teaching assistant.

May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Admission to candidacy for the doctoral degree.

### Professional Courses

**E S - Engineering Studies**

**Engineering Studies: E S**

**Lower-Division Courses**

**E S 301. Engineering Design and Problem Solving.**
Intended for non-Cockrell School of Engineering students. Introduction to the scope of engineering, foundations of engineering science, and engineering design. Three lecture hours a week for one semester.

**E S 102. Spatial Visualization.**
Restricted to engineering majors. Instruction in the learned ability to mentally manipulate two- and three-dimensional structures. The equivalent of one lecture hour a week for one semester. Engineering Studies 102 and General Engineering 119, 219, 319 (Topic: Spatial Visualization) may not both be counted. Offered on the letter-grade basis only.

**E S 119, 219, 319. Topics in Engineering.**
Restricted to engineering students. For each semester hour of credit earned, one lecture hour a week for one semester. Engineering Studies 119, 219, 319 and General Engineering 119, 219, 319 may not both be counted unless the topics vary. May be repeated for credit when the topics vary. Prerequisite: Varies with the topic.

**Upper-Division Courses**

**E S 321G. GLUE Undergraduate Research.**
Restricted to engineering majors. Research experience and seminar for undergraduate engineers. Seminar involves workshops, discussion, and oral reports. Semester long research project required. One and one-half lecture hours and six laboratory hours a week for one semester, with additional laboratory hours to be arranged. Only one of the following may be counted unless topics vary: Engineering Studies 122, 222, 322, 321G (or 322G), General Engineering 222. Offered on the letter-grade basis only. Prerequisite: Consent of instructor.

**E S 122, 222, 322. Topics in Professional Development.**
Restricted to engineering students. Small-group seminar involving reading, discussion, and oral reports. For each semester hour of credit earned, one lecture hour a week for one semester. Only one of the following may be counted unless topics vary: Engineering Studies 122, 222, 322, 321G (or 322G), General Engineering 222. May be repeated for credit when the topics vary. Offered on the pass/fail basis only.

- **Topic 1**: EOE Career Development Seminar. Introduction to skills and professional practices in engineering. Engineering Studies 122, 222, 322, 322 (Topic: EOE Career Development Seminar) and 122, 222, 322 (Topic 1) may not both be counted. Offered on the pass/fail basis only.
- **Topic 2**: EOE Leadership Development Seminar. Introduction to professional practices that focus on self-awareness and in-depth discussion of leadership styles and skill development. Engineering Studies 122, 222, 322, 322 (Topic: EOE Leadership Development Seminar) and 122, 222, 322 (Topic 2) may not both be counted. Offered on the pass/fail basis only.
- **Topic 3**: WEP Leadership Seminar. Practical applications to assess leadership and communication styles. Engineering Studies 122, 222, 322 (Topic: WEP Leadership Seminar) and 122, 222, 322 (Topic 3) may not both be counted. Offered on the pass/fail basis only.

**E S 225C. Humanitarian Product Design.**
Design a product that addresses the needs of people in marginalized communities such as those living in refugee camps or in other severely resource-limited environments. Examine and apply design tools, project
management methods, and other principles of product development. Present project to an advisory board. Two lecture hours and two laboratory hours a week for one semester. Engineering Studies 225C and 277 (Topic: Humanitarian Product Design) may not both be counted. Offered on the letter-grade basis only. Prerequisite: Consent of the instructor.

E S 225D. Humanitarian Product Prototyping.
Build and test prototype. Examine and apply design tools, project management methods, and other principles of product development. Present project to an advisory board. Two lecture hours and two laboratory hours a week for one semester. Engineering Studies 225D and 277 (Topic: Humanitarian Product Prototyping) may not both be counted. Offered on the letter-grade basis only. Prerequisite: Engineering Studies 225C with a grade of at least C- and consent of instructor.

E S 225K. Cooperative Engineering.
Restricted to Cockrell School of Engineering students. Covers the work period of engineering students in the Cooperative Engineering Program. Forty laboratory hours a week for one semester. Prerequisite: Application to become a member of the Cooperative Engineering Program, approval of the dean, and appointment for a full-time cooperative work tour.

E S 225L. Cooperative Engineering.
Restricted to Cockrell School of Engineering students. Covers the work period of engineering students in the Cooperative Engineering Program. Forty laboratory hours a week for one semester. Prerequisite: Engineering Studies 225K and appointment for a full-time cooperative work tour.

E S 125N. Cooperative Engineering.
This course covers the work period of environmental engineering students in the Cooperative Engineering Program. Forty laboratory hours a week for one semester. May be repeated for credit. Prerequisite: Application to become a member of the Cooperative Engineering Program, approval of the dean, and appointment for a full-time cooperative work tour.

E S 333T. Engineering Communication.
Explore technical communication skills for engineers, especially researching and writing technical documents for many kinds of readers, managing and documenting sources of information, using and explaining graphics, delivering oral presentations, working collaboratively, and eliciting information from experts and stakeholders. Two lecture hours and one-and-one-half laboratory hours a week for a semester. Only one of the following may be counted: Aerospace Engineering 333T, Biomedical Engineering 333T, Communication 333T, Civil Engineering 333T, Chemical Engineering 333T, Electrical and Computer Engineering 333T, Electrical Engineering 333T, Engineering Studies 333T, Mechanical Engineering 333T, Petroleum and Geosystems Engineering 333T. Prerequisite: Rhetoric and Writing 306 with a grade of at least C-

E S 358C. Industrial Design I.
Same as Design 358C. Restricted to design majors. Explore methods and techniques for industrial design. Six studio hours a week for one semester. Design 358C and Engineering Studies 358C may not both be counted. Offered on the letter-grade basis only. Prerequisite: Design 314 or Engineering Studies 319.

E S 160, 260, 360. Service Learning for Engineers.
Supervised participation in a service-learning project that helps meet a community need. May be repeated for credit when the projects vary. With approval of the student's major department, may be counted toward an engineering degree. Prerequisite: Consent of instructor.

E S 360M. Experiments in Materials Science and Engineering.
Same as Materials Science and Engineering 360M. Hands-on lab-based course designed to teach practical techniques in the synthesis and characterization of materials and their properties, and to use experiments to explore fundamental and potentially abstract materials concepts. Four-and-one-half laboratory hours a week for one semester. Only one of the following may be counted: Engineering Studies 360M, 377 (Topic: Experiments in Materials Science and Engineering), Materials Science and Engineering 360M. Prerequisite: Chemistry 301, Math 408C, 408D and 427J, and Physics 303K and 303L. For students in majors that offer an introductory materials science and engineering course, it is advised to take it prior to taking this course.

E S 369N. Sustainability Issues in Energy.
Restricted to engineering, chemistry, or geological sciences majors. Introduction to sustainable energy in the context of sustainable development goals and the technologies that can help achieve them. Discuss carbon capture and sequestration; geothermal energy; hydrogen storage and distribution; solar, wind, and biomass power generation; and batteries and distribution networks. Three lecture hours a week for one semester.

E S 370H. Engineering Entrepreneurship.
Principles of engineering entrepreneurship, including legal aspects and the ethics of practice. Three lecture hours a week for one semester. Engineering Studies 370H and General Engineering 370H may not both be counted. Prerequisite: Admission to an appropriate major sequence in engineering and to the Engineering Honors Program.

E S 370L. Nanofabrication and Nanomaterials.
Covers the basic tools and materials involved in the fabrication processes needed to create nano-scale structures and functional nanomaterials. Three lecture hours a week for one semester. Prerequisite: Upper-division standing and consent of instructor.

E S 370M. Nanodevices.
Covers the basic theory behind nano-scale devices used in the electronics, display, and energy industries. Three lecture hours a week for one semester. Prerequisite: Upper-division standing, Engineering Studies 370L, and consent of instructor.

E S 370N. Nanotechnology Innovation.
Provides a framework for innovation with a specific focus on applications of nanotechnology. Three lecture hours a week for one semester. Prerequisite: Upper-division standing, Engineering Studies 370L and 370M, and consent of instructor.

E S 370O. Nanometrology and Big Data.
Explore key concepts of metrology and data analytics in nanomanufacturing systems. Discuss the key steps in big data analytics which enable transformation of metrology and sensing data into optimal decisions. Examine key enabling methodologies and examples for statistical and dynamic modeling of big data in nanomanufacturing systems, as well as how those models are used for system-wide optimal decisions in terms of process control and system operations. Three lecture hours a week for one semester. Prerequisite: Engineering Studies 370M, upper-division standing, and consent of instructor.

E S 177, 277, 377. Topics in Engineering.
For each semester hour of credit earned, one lecture hour a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Varies with the topic.

Topic 1: Longhorn Startup Seminar. Overview of entrepreneurship using real-world examples. Only one of the following may be counted:
Restricted to engineering students. Projects must differ significantly from those developed for Electrical Engineering 364D and 364E. Focus on skill development and mentoring in start-up formation, technology development, market validation, marketing, sales, operations, human resources, program management, and finance. Includes discussion of intellectual property, social issues in design, as well as ethical and safety considerations. Emphasis on written and oral presentation of start-up activities. The equivalent of three lecture hours a week for one semester. Only one of the following may be counted: Computer Science 374L, 378 (Topic: Longhorn Startup), Electrical Engineering 377E, Engineering Studies 377E, Management 337 (Topic: Interdisciplinary Entrepreneurship), 337 (Topic 2). Prerequisite: Consent of instructor.

E S 277K. Project Development with Underserved Communities.
Restricted to engineering and social work majors. Focus on skills to initiate, evaluate, and plan an international engineering service project with an underserved community. Two lecture hours and two lab hours a week for one semester. Only one of the following may be counted: Engineering Studies 277K, Civil Engineering 277K (Topic: Project Development for Underserved Communities), Mechanical Engineering 279M (Topic: Project Development for Underserved Communities). Offered on the letter-grade basis only. Prerequisite: Consent of the instructor.

E S 277L. Project Design with Underserved Communities.
Restricted to students in the Projects for Underserved Communities program. Focuses on design of basic infrastructure systems in developing countries. Two lecture hours and two lab hours a week for one semester. Only one of the following may be counted: Engineering Studies 277L, Civil Engineering 277K (Topic: Project Design for Underserved Communities), Mechanical Engineering 279M (Topic: Project Design for Underserved Communities). Offered on the letter-grade basis only. Prerequisite: Consent of instructor.

E S 177M. Project Implementation with Underserved Communities.
Restricted to students in the Projects for Underserved Communities program. Taught on location in international locations such as India, Tanzania, and Guatemala. Entails implementation of project, collecting information for future projects, and checking on previously completed PUC projects if applicable. The equivalent of one lecture hour a week for one semester. Only one of the following may be counted: Engineering Studies 177M, 177 (Topic: Proj Impl Undersrvd Comms-Gua), 177 (Topic: Proj Impln Undersrvd Comms-Ind), 177 (Topic: Proj Impln Undersrvd Comms-Tan), 177 (Topic: Proj Impln Undersrvd Comms-Tha), Mechanical Engineering 179M (Topic: Project Imp Underserved Commun), 179M (Topic: PUC Implementation-Intl). Offered on the letter-grade basis only.

E S 279K. Undergraduate Research Experience.
Restricted to undergraduate students in the Graduates Linking with Undergraduates in Engineering (GLUE) program. Directed study or research in a selected area of engineering. One lecture hour and three laboratory hours a week for one semester. Engineering Studies 279K and General Engineering 279K may not both be counted. May be repeated for credit. Offered on the pass/fail basis only. Prerequisite: A major in engineering and a University grade point average of at least 3.00.

E S 279L. Women in Engineering Leadership Seminar.
Restricted to engineering students. Lectures, discussions, and exercises related to various leadership issues. Two lecture hours a week for one semester. Engineering Studies 279L and General Engineering 279L may not both be counted. Offered on the pass/fail basis only.

E S 079M. Undergraduate Research Experience.
Restricted to undergraduate students in the Equal Opportunity in Engineering Program. One lecture hour a week for one semester. Prerequisite: A major in engineering and a University grade point average of at least 3.00.

Graduate Courses

E S 380L. Nanofabrication and Nanomaterials.
Provides an understanding of the basic tools and materials involved in the fabrication processes needed to create nano-scale structures and functional nanomaterials. Three lecture hours a week for one semester. Engineering Studies 377 (Topic: Nanofabrication/Nanomats-WB) and 380L may not both be counted. Prerequisite: Consent of graduate adviser and consent of instructor.

E S 380N. Nanodevices.
Provides an understanding of the basic theory behind important nano-scale devices used in the electronics, display, and energy industries. Three lecture hours a week for one semester. Prerequisite: Consent of graduate adviser and consent of instructor.

E S 380M. Nanotechnology Innovation.
Provides a framework for innovation with a specific focus on applications of nanotechnology. Three lecture hours a week for one semester. Prerequisite: Engineering Studies 380L and 380M. Consent of graduate adviser and consent of instructor.

E S 380O. Nanometrology and Big Data.
Explore key concepts of metrology and data analytics in nanomanufacturing systems. Discuss the key steps in big data analytics which enable transformation of metrology and sensing data into optimal decisions. Examine key enabling methodologies and examples for statistical and dynamic modeling of big data in nanomanufacturing systems, as well as how those models are used for system-wide optimal decisions in terms of process control and system operations. Three lecture hours a week for one semester. Prerequisite: Graduate standing. Engineering Studies 380M, consent of graduate advisor, and consent of instructor.

E S 197, 297, 397. Special Subjects in Engineering.
For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. With consent of instructor, may be repeated for credit. Prerequisite: Graduate standing and consent of instructor.

Professional Courses
ECE - Electrical and Computer Engineering

Electrical and Computer Engineering: ECE Lower-Division Courses

ECE 302 (TCCN: ENGR 2305). Introduction to Electrical Engineering.
Examine the scope and nature of professional activities of electrical engineers, including problem-solving techniques; analysis and design methods; engineering professional ethics; analysis of analog resistive circuits, including Thevenin/Norton equivalents, mesh analysis, and nodal analysis; and operational amplifiers (DC response). Three lecture hours and two laboratory hours a week for one semester. Only one of the following may be counted: ECE 302 or 302H. Prerequisite: Credit with a grade of at least C- or registration for Mathematics 408C or 408K.

ECE 302H. Introduction to Electrical Engineering: Honors.
Restricted to students in the electrical and computer engineering honors program. Examine the scope and nature of professional activities of electrical engineers, including problem-solving techniques; analysis and design methods; engineering professional ethics; analysis of linear and non-linear analog circuits, including Thevenin/Norton equivalents, two-port networks, frequency domain analysis, mesh analysis, and nodal analysis; and operational amplifiers (DC response). Three lecture hours and two laboratory hours a week for one semester. Only one of the following may be counted: ECE 302 or 302H. Prerequisite: Credit with a grade of at least C- or registration for Mathematics 408C or 408K.

ECE 306. Introduction to Computing.
Introduction to computing including bits and operations on bits, number formats, arithmetic and logic operations, and digital logic. Explore the Von Neumann model of processing including memory, arithmetic logic unit, registers, and instruction decoding and execution. Examine structured programming and debugging, machine and assembly language programming, the structure of an assembler, physical input/output through device registers, subroutine call/return; trap instruction, stacks and applications of stacks. Three lecture hours and one recitation hour a week for one semester. Only one of the following may be counted: ECE 306 or 306H. Prerequisite: Credit with a grade of at least C- or registration for Mathematics 408C or 408K.

ECE 306H. Introduction to Computing: Honors.
Introduction to computing including bits and operations on bits, number formats, arithmetic and logic operations, and digital logic. Explore the Von Neumann model of processing including memory, arithmetic logic unit, registers, and instruction decoding and execution. Examine structured programming and debugging, machine and assembly language programming, the structure of an assembler, physical input/output through device registers, subroutine call/return; trap instruction, stacks and applications of stacks. Three lecture hours and one recitation hour a week for one semester. Only one of the following may be counted: ECE 306 or 306H. Prerequisite: Credit with a grade of at least C- or registration for Mathematics 408C or 408K.

ECE 307E. Elements of Electrical and Computer Engineering.
Introduction to electrical engineering: direct current circuit analysis, resistors, LEDs, switches, current and voltage measurements. Introduction to computer engineering: number systems, digital logic, storage, finite state machines, programming basics, microcontrollers.

ECE 107H. Engineering Leadership: Honors.
Explore different research areas in electrical and computer engineering and participate in community service projects within the discipline. One lecture hour a week for one semester. Offered on the letter-grade basis only.

ECE 108S. Topics in Technical Skills.
Explore the development of a specific technical skill. The equivalent of one lecture and one laboratory hour a week for one semester. May be repeated for credit when the topics vary. Offered on the pass/fail basis only. Prerequisite: Consent of instructor.

For each semester hour of credit earned, one lecture hour a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Consent of instructor.

ECE 302H. Introduction to Electrical Engineering: Honors.
Restricted to students in the electrical and computer engineering honors program. Examine the scope and nature of professional activities of electrical engineers, including problem-solving techniques; analysis and design methods; engineering professional ethics; analysis of linear and non-linear analog circuits, including Thevenin/Norton equivalents, two-port networks, frequency domain analysis, mesh analysis, and nodal analysis; and operational amplifiers (DC response). Three lecture hours and two laboratory hours a week for one semester. Only one of the following may be counted: Electrical and Computer Engineering 302, 302H, Electrical Engineering 302, 302H. Prerequisite: Credit with a grade of at least C- or registration for Mathematics 408C or 408K.

ECE 306. Introduction to Computing.
Introduction to computing including bits and operations on bits, number formats, arithmetic and logic operations, and digital logic. Explore the Von Neumann model of processing including memory, arithmetic logic unit, registers, and instruction decoding and execution. Examine structured programming and debugging, machine and assembly language programming, the structure of an assembler, physical input/output through device registers, subroutine call/return; trap instruction, stacks and applications of stacks. Three lecture hours and one recitation hour a week for one semester. Only one of the following may be counted: Biomedical Engineering 306, Electrical and Computer Engineering 306, 306H, Electrical Engineering 306, 306H. Prerequisite: Credit with a grade of at least C- or registration for Mathematics 408C or 408K.

ECE 306H. Introduction to Computing: Honors.
Introduction to computing including bits and operations on bits, number formats, arithmetic and logic operations, and digital logic. Explore the Von Neumann model of processing including memory, arithmetic logic unit, registers, and instruction decoding and execution. Examine structured programming and debugging, machine and assembly language programming, the structure of an assembler, physical input/output through device registers, subroutine call/return; trap instruction, stacks and applications of stacks. Three lecture hours and one recitation hour a week for one semester. Only one of the following may be counted: Biomedical Engineering 306, Electrical and Computer Engineering 306, 306H, Electrical Engineering 306, 306H. Prerequisite: Credit with a grade of at least C- or registration for Mathematics 408C or 408K.

ECE 307E. Elements of Electrical and Computer Engineering.
Introduction to electrical engineering: direct current circuit analysis, resistors, LEDs, switches, current and voltage measurements. Introduction to computer engineering: number systems, digital logic, storage, finite state machines, programming basics, microcontrollers.

ECE 411. Circuit Theory.
Examine capacitance and inductance; first- and second-order transient circuit response, including operational amplifier circuits; sinusoidal steady state analysis; Bode plots; complex power in single and balanced three-phase systems; transformers; two-port networks (Z-parameters and Y-parameters); and computer-aided analysis and design. Three lecture hours and two recitation hours a week for one semester. Only one of the following may be counted: Biomedical Engineering 311, Electrical and Computer Engineering 411, 411H, Electrical Engineering 411. Prerequisite: One of the following with a grade of at least C- Electrical and Computer Engineering 302 or 302H (or Electrical Engineering 302 or 302H) with grade of at least C-.

ECE 411H. Circuit Theory: Honors.
Examine capacitance and inductance; first- and second-order transient circuit response, including operational amplifier circuits; sinusoidal steady state analysis; Bode plots; complex power in single and balanced three-phase systems; transformers; two-port networks (Z-parameters and Y-parameters); and computer-aided analysis and design. Three lecture hours and two recitation hours a week for one semester. Only one of the following may be counted: Electrical and Computer Engineering 411, 411H, Electrical Engineering 411. Offered on the letter-grade basis only. Prerequisite: Electrical and Computer Engineering 302 (or Electrical Engineering 302) or 302H (or Electrical Engineering 302H) with a grade of at least B; credit with a grade of at
least C- or registration for Mathematics 427J or 427K, and Physics 303L and 103N

ECE 111S. Tools to Enhance Academic Success.
Explore the components necessary to enhance academic success in engineering coursework including academic self-regulation, time management, self-discipline, goal-setting, weekly and semester planning, growth mindset, self-motivation, management of anxiety and stress, learning and memory, learning strategies, retrieval practices, and exam preparation. One lecture hour a week for one semester. Only one of the following may be counted: Electrical and Computer Engineering 111S, Electrical Engineering 109K (Topic: Enhancing Academic Success), 111S.

ECE 312. Software Design and Implementation I.
Explore basic problem solving, design and implementation techniques for imperative programming; structured programming in the C/C++ language; programming idioms. Examine software design principles, including modularity, coupling and cohesion; software engineering tools; elementary data structures; and asymptotic analysis. Three lecture hours and one recitation hour a week for one semester. Only one of the following may be counted: Electrical and Computer Engineering 312, 312H, Electrical Engineering 312, 312H. Prerequisite: The following coursework with a grade of at least C: Biomedical Engineering 306 or Electrical and Computer Engineering 306 (or Electrical Engineering 306) or 306H (or Electrical Engineering 306H), and 319K (or Electrical Engineering 319K) or 319H (or Electrical Engineering 319H).

ECE 312H. Software Design and Implementation I: Honors.
Explore basic problem solving, design and implementation techniques for imperative programming; structured programming in the C/C++ language; programming idioms. Examine software design principles, including modularity, coupling and cohesion; software engineering tools; elementary data structures; and asymptotic analysis. Three lecture hours and one recitation hour a week for one semester. Only one of the following may be counted: Electrical and Computer Engineering 312, 312H, Electrical Engineering 312, 312H. Prerequisite: The following coursework with a grade of at least B: Biomedical Engineering 306 or Electrical and Computer Engineering 306 (or Electrical Engineering 306) or 306H (or Electrical Engineering 306H), and 319K (or Electrical Engineering 319K) or 319H (or Electrical Engineering 319H) or registration for Electrical and Computer Engineering 319H (or credit for Electrical Engineering 319H).

ECE 313. Linear Systems and Signals.
Examine representation of signals and systems; system properties; sampling; Laplace and z-transforms; transfer functions and frequency response; convolution; stability; Fourier transform; feedback; and control applications. Explore computer analysis using MATLAB or Python. Three lecture hours a week for one semester. Only one of the following may be counted: Biomedical Engineering 343, Electrical and Computer Engineering 313, 313H, Electrical Engineering 313. Offered on the letter-grade basis only. Prerequisite: Biomedical Engineering 311, Electrical and Computer Engineering 411 (or Electrical Engineering 411), 411H, or 331 (or Electrical Engineering 331) with a grade of at least B; Mathematics 427J or 427K with a grade of at least C; and credit with a grade of at least C- or registration for Mathematics 340L.

ECE 313H. Linear Systems and Signals: Honors.
Examine representation of signals and systems; system properties; sampling; Laplace and z-transforms; transfer functions and frequency response; convolution; stability; Fourier transform; feedback; and control applications. Explore computer analysis using MATLAB or Python. Three lecture hours a week for one semester. Only one of the following may be counted: Biomedical Engineering 343, Electrical and Computer Engineering 313, 313H, Electrical Engineering 313. Offered on the letter-grade basis only. Prerequisite: Biomedical Engineering 311, Electrical and Computer Engineering 411 (or Electrical Engineering 411), 411H, or 331 (or Electrical Engineering 331) with a grade of at least B; Mathematics 427J or 427K with a grade of at least C; and credit with a grade of at least C- or registration for Mathematics 340L.

ECE 316. Digital Logic Design.
Explore boolean algebra; analysis and design of combinational and sequential logic circuits; state machine design and state tables and graphs; simulation of combinational and sequential circuits; applications to computer design; and hardware description languages (HDLs) and field-programmable gate arrays (FPGAs). Three lecture hours and one recitation hour a week for one semester. Electrical and Computer Engineering 316 and Electrical Engineering 316 may not both be counted. Prerequisite: Biomedical Engineering 306, Computer Science 429, Electrical and Computer Engineering 306 (or Electrical Engineering 306) or 306H (or Electrical Engineering 306H) with a grade of at least C-.

ECE 319H. Introduction to Embedded Systems: Honors.
Examine embedded systems; machine language execution; assembly and C language programming; local variables and subroutines; input/output synchronization; analog to digital conversion and digital to analog conversion; debugging; and interrupts. Three lecture hours and one laboratory hour a week for one semester. Only one of the following may be counted: Electrical and Computer Engineering 319K, 319H, Electrical Engineering 319K, 319H. Prerequisite: Biomedical Engineering 306, Electrical and Computer Engineering 306 (or Electrical Engineering 306), 306H (or Electrical Engineering 306H), or Mechanical Engineering 340 and 140L with a grade of at least C-.

ECE 319K. Introduction to Embedded Systems.
Explore embedded systems; machine language execution; assembly and C language programming; local variables and subroutines; input/output synchronization; analog to digital conversion and digital to analog conversion; debugging; and interrupts. Three lecture hours and one laboratory hour a week for one semester. Only one of the following may be counted: Electrical and Computer Engineering 319K, 319H, Electrical Engineering 319K, 319H. Prerequisite: Biomedical Engineering 306, Electrical and Computer Engineering 306 (or Electrical Engineering 306), 306H (or Electrical Engineering 306H), or Mechanical Engineering 340 and 140L with a grade of at least C-.

Used to record credit the student earns while enrolled at another institution in a program administered by the University's Study Abroad Office. Credit is recorded as assigned by the study abroad advisor in the Department of Electrical and Computer Engineering. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

Upper-Division Courses
ECE 321K. Mixed Signal and Circuits Laboratory.
Explore digital and analog parametric testing of mixed-signal circuits and systems, including frequency response, harmonic and intermodulation, and noise behavior; use of system-level test equipment, including network analyzers, spectrum analyzers, and probe stations, coherent versus noncoherent measurements; and design for testability. Three lecture hours and three laboratory hours a week for one semester. Electrical and Computer Engineering 321K and Electrical Engineering 321K may not both be counted. Prerequisite: Electrical and Computer Engineering 438 (or Electrical Engineering 438) with a grade of at least
C-; and credit with a grade of at least C- or registration for Aerospace Engineering 333T, Biomedical Engineering 333T, Chemical Engineering 333T, Civil Engineering 333T, Electrical and Computer Engineering 333T (or credit with a grade of at least C- for Electrical Engineering 333T), Engineering Studies 333T, Mechanical Engineering 333T, or Petroleum and Geosystems Engineering 333T.

ECE 422C. Software Design and Implementation II.
Explore methods for engineering software with a focus on abstraction; specification, design, implementation, and testing of object-oriented code using a modern development tool-set for complex systems; design and implementation of object-oriented programs in Java; abstract data types; inheritance; polymorphism; parameterized types and generic programming; the operation and application of commonly used data structures; exception handling and fault tolerance; algorithm analysis; and team models. Three lecture hours and one and one-half laboratory hours a week for one semester. Electrical and Computer Engineering 422C and Electrical Engineering 422C may not both be counted. Prerequisite: Computer Science 312 or Electrical and Computer Engineering 312 (or Electrical Engineering 312) or 312H (or Electrical Engineering 312H) with a grade of at least C-

ECE 325. Electromagnetic Engineering.
Examine electrostatics and magnetostatics; properties of conductive, dielectric, and magnetic materials; solutions of Maxwell's equations; uniform plane wave applications; and frequency- and time-domain analyses of transmission lines. Three lecture hours a week for one semester. Electrical and Computer Engineering 325 and Electrical Engineering 325 may not both be counted. Prerequisite: Electrical and Computer Engineering 411 (or Electrical Engineering 411) or 411H, Mathematics 427J or 427K, Physics 303L, and Physics 105N or 103N with a grade of at least C- in each; and credit with a grade of at least C- or registration for Mathematics 427L.

ECE 325K. Antennas and Wireless Propagation.
Explore solutions of time-varying Maxwell's equations with applications to antennas and wireless propagation; antenna theory and design, array synthesis; electromagnetic wave propagation, scattering, and diffraction; and numerical methods for solving Maxwell's equations. Three lecture hours a week for one semester. Electrical and Computer Engineering 325K and Electrical Engineering 325K may not both be counted. Prerequisite: Electrical and Computer Engineering 325 (or Electrical Engineering 325) with a grade of at least C-

ECE 125S. Internship in Electrical and Computer Engineering.
Practical work experience in industry or a research lab under the supervision of an engineer or scientist. Requires a substantial final report. At least ten hours of work a week, for a total of 150 hours a semester. May be repeated for credit. Offered on the pass/fail basis only.

This course is used to record credit the student earns while enrolled at another institution in a program administered by the University's Study Abroad Office. Credit is recorded as assigned by the study abroad adviser in the Department of Electrical and Computer Engineering. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

ECE 331. Electrical Circuits, Electronics, and Machinery.
Restricted to non-electrical engineering majors. Explore brief theory of direct and alternating current circuits; single-phase and three-phase power transmission; electronic devices and instrumentation; and electromechanics. Three lecture hours a week for one semester. Electrical and Computer Engineering 331 and Electrical Engineering 331 may not both be counted. Prerequisite: Mathematics 408D or 408M with a grade of at least C- and Physics 303L and 103N with a grade of at least C- in each.

ECE 333T. Engineering Communication.
Restricted to electrical engineering majors. Explore advanced engineering communication skills, with emphasis on technical documents, oral reports, and graphics. Participate in collaborative work involving online communication and research. Three lecture hours a week for one semester. Only one of the following may be counted: Aerospace Engineering 333T, Biomedical Engineering 333T, Communication 333T, Civil Engineering 333T, Chemical Engineering 333T, Electrical and Computer Engineering 333T, Electrical Engineering 333T, Engineering Studies 333T, Mechanical Engineering 333T, Petroleum and Geosystems Engineering 333T. Prerequisite: Rhetoric and Writing 306, and Electrical and Computer Engineering 319K or 319H with a grade of at least C-

Introduction to quantum mechanics; atoms and molecules; electron statistics; quantum theory of solids; electronic phenomena in semiconductors; and device applications based on these phenomena. Three lecture hours a week for one semester. Electrical and Computer Engineering 334K and Electrical Engineering 334K may not both be counted. Prerequisite: Mathematics 427J or 427K, Physics 303L, and Physics 105N OR 103N with a grade of at least C- in each.

ECE 438. Fundamentals of Electronic Circuits I Laboratory.
Explore the analysis and design of electronic circuits using semiconductor devices. Examine basic device physics and small-signal modeling for diodes, bipolar junction transistors, and metal-oxide-semiconductor transistors; operation region and biasing; basic switching circuits; single-stage and multi-stage amplifier design and analysis; input and output impedance characteristics of amplifiers; frequency response; AC and DC coupling techniques; and differential amplifiers and output stages. Three lecture hours and three laboratory hours a week for one semester. Electrical and Computer Engineering 438 and Electrical Engineering 438 may not both be counted. Prerequisite: Biomedical Engineering 311, Electrical and Computer Engineering 411 (or Electrical Engineering 411), or 411H with a grade of at least C-; and credit with a grade of at least C- or registration for one of the following: Aerospace Engineering 333T, Biomedical Engineering 333T, Chemical Engineering 333T, Civil Engineering 333T, Electrical and Computer Engineering 333T (or Electrical Engineering 333T), Mechanical Engineering 333T, or Petroleum and Geosystems Engineering 333T.

ECE 438K. Analog Electronics.
Explore the analysis and design of analog electronic circuits; transistor models; single-ended amplifiers; differential amplifiers; operational amplifiers; frequency response; feedback theory; stability analysis; circuit nonidealities; op-amp-based circuits; output stages; power amplifiers; passive and active analog filters; and relaxation oscillators. Three lecture hours and three laboratory hours a week for one semester. Electrical and Computer Engineering 438K and Electrical Engineering 438K may not both be counted. Prerequisite: Electrical and Computer Engineering 438 (or Electrical Engineering 438) with a grade of at least C-

ECE 338L. Analog Integrated Circuit Design.
Explore the analysis and design of analog integrated circuits; transistor models; simple and advanced current mirrors; single-ended amplifiers; differential amplifiers; operational amplifiers; frequency response;
feedback theory; stability analysis; circuit nonidealities and noise; output stages; and analog filters. Examine computer-aided design (CAD) tools for circuit analysis and design. Three lecture hours a week for one semester. Electrical and Computer Engineering 338L and Electrical Engineering 338L may not both be counted. Prerequisite: Electrical and Computer Engineering 438 (or Electrical Engineering 438) with a grade of at least C-

**ECE 339. Solid-State Electronic Devices.**

Examine semiconductor materials; atomic orbitals to energy band structure of semiconductors; charge carrier transport, electron-hole generation and recombination; p-n junctions and Schottky barrier; bipolar and field-effect transistors; and optoelectronic devices. Three lecture hours a week for one semester. Electrical and Computer Engineering 339 and Electrical Engineering 339 may not both be counted. Prerequisite: Mathematics 427J or 427K, Physics 303L, and Physics 105N or 103N with a grade of at least C- in each.

**ECE 339S. Solar Energy Conversion Devices.**

Investigate basic principles of photovoltaic devices which convert light into charge carriers (electrons and holes). Examine electrons and holes in semiconductors, generation and recombination, junctions, analysis of the p-n junction, silicon and III-V semiconductor solar cell design and optimization, thin film solar cell technologies, managing light, strategies for higher efficiency, and a brief overview of non-photovoltaic approaches to solar energy conversion. Three lecture hours a week for one semester. Electrical and Computer Engineering 339S and Electrical Engineering 339S may not both be counted. Prerequisite: Mathematics 427J or 427K, Physics 303L, and Physics 105N or 103N with a grade of at least C- in each.

**ECE 440. Integrated Circuit Nanomanufacturing Techniques.**

Examine integrated circuit processing: crystal growth and wafer preparation; epitaxial growth; oxidation, diffusion, and ion implantation; thin-film deposition techniques; and lithography and etching. Three lecture hours and three laboratory hours a week for one semester. Electrical and Computer Engineering 440 and Electrical Engineering 440 may not both be counted. Prerequisite: Credit with a grade of at least a C- for Mathematics 427J or 427K; credit with a grade of at least a C- for Physics 303L; credit with a grade of at least a C- for Physics 103N; and credit with a grade of at least C- or registration for Aerospace Engineering 333T, Biomedical Engineering 333T, Chemical Engineering 333T, Civil Engineering 333T, Electrical and Computer Engineering 333T (or Electrical Engineering 333T), Engineering Studies 333T, Mechanical Engineering 333T, or Petroleum and Geosystems Engineering 333T.

**ECE 340P. High-Throughput Nanopatterning.**

Explore sub-50nm fabrication using mechanical patterning techniques; overview of photolithography, mechanical nanopatterning processes, hot embossing, and UV imprint lithography, wafer-scale and roll-to-roll nanopatterning with applications in electronics, photonics, and nanomedicine; physics of nanoreplication, process limits, template (mold) fabrication, defect mechanisms, and factors affecting throughput. Three lecture hours a week for one semester. Only one of the following may be counted: Electrical and Computer Engineering 340P; Electrical Engineering 340P 379K (Topic: High Throughput Nanopatterning), Mechanical Engineering 379M (Topic: High Throughput Nanopatterning). Prerequisite: Electrical and Computer Engineering 411 (or Electrical Engineering 411) or 411H, and 339 (or Electrical Engineering 339), and Mathematics 427K or 427J, with a grade of at least C- in each.

**ECE 341. Electric Drives and Machines.**

Explore fundamentals of electric machines. Examine electromechanical energy conversion; magnetic circuits, transformers, and energy conversion devices; and power electronics. Discuss motor drive fundamentals and applications. Three lecture hours a week for one semester. Electrical and Computer Engineering 341 and Electrical Engineering 341 may not both be counted. Prerequisite: Electrical and Computer Engineering 411 (or Electrical Engineering 411) or 411H with a grade of at least C-.

**ECE 445L. Embedded Systems Design Laboratory.**

Explore the design of microcontroller-based embedded systems; interfacing from both a hardware and software perspective; and applications, including audio, data acquisition, and communication systems. Three lecture hours and three laboratory hours a week for one semester. Electrical and Computer Engineering 445L and Electrical Engineering 445L may not both be counted. Prerequisite: Electrical and Computer Engineering 312 (or Electrical Engineering 312) or 312H (or Electrical Engineering 312H) and 319K (or Electrical Engineering 319K) or 319H (or Electrical Engineering 319H) with a grade of at least C- in each; Electrical and Computer Engineering 411 (or Electrical Engineering 411) or 411H and 313 (or Electrical Engineering 313) or 313H, or Biomedical Engineering 311 and 343, or Mechanical Engineering 348E with a grade of at least C- in each; and credit with a grade of at least C- or registration for Aerospace Engineering 333T, Biomedical Engineering 333T, Chemical Engineering 333T, Civil Engineering 333T, Electrical and Computer Engineering 333T (or Electrical Engineering 333T), Engineering Studies 333T, Mechanical Engineering 333T, or Petroleum and Geosystems Engineering 333T.

**ECE 445M. Embedded and Real-Time Systems Laboratory.**

Explore real-time operating systems; implementation of context switching, threads, multitasking, real-time scheduling, synchronization, communication, storage, file systems, memory management, process linking and loading, hardware interfacing, and networking; debugging and testing; operating system performance, including latency, jitter, deadlines, deadlocks, and starvation; real-time systems, including data acquisition, sensing, actuating, digital control, signal processing, and robotics. Three lecture hours and three laboratory hours a week for one semester. Electrical and Computer Engineering 445M and Electrical Engineering 445M may not both be counted. Prerequisite: One of the following with a grade of at least C-: Electrical and Computer Engineering 306 (or Electrical Engineering 306) or 306H (or Electrical Engineering 306H); one of the following with a grade of at least C-: Electrical and Computer Engineering 312 (or Electrical Engineering 312) or 312H (or Electrical Engineering 312H); and one of the following with a grade of at least C-: Electrical and Computer Engineering 319K (or Electrical Engineering 319K) or 319H (or Electrical Engineering 319H).

**ECE 445S. Real-Time Digital Signal Processing Laboratory.**

Explore digital signal processing algorithms; simulation and real-time implementation of audio and communication systems; filters; pulse shaping and matched filters; modulation and demodulation; adaptive filters; carrier recovery; symbol synchronization; equalization; quantization; and data conversion. Three lecture hours and three laboratory hours a week for one semester. Electrical and Computer Engineering 445S and Electrical Engineering 445S may not both be counted. Prerequisite: Electrical and Computer Engineering 312 (or Electrical Engineering 312) or 312H (or Electrical Engineering 312H) and 319K (or Electrical Engineering 319K) or 319H (or Electrical Engineering 319H) with a grade of at least C- in each; Biomedical Engineering 343, Electrical and Computer Engineering 313 (or Electrical Engineering 313), or 313H with a grade of at least C-; credit with a grade of at least C- or registration for Aerospace Engineering 333T, Biomedical Engineering 333T, Chemical Engineering 333T, Civil Engineering 333T, Electrical and Computer Engineering 333T (or Electrical Engineering 333T), Engineering Studies 333T, Mechanical Engineering 333T, or Petroleum and Geosystems Engineering 333T; and credit with a grade of at least C-
or registration for Biomedical Engineering 335, Electrical and Computer Engineering 351K (or Electrical Engineering 351K), or 351H.

**ECE 347. Modern Optics.**
Explore modern optical wave phenomena with applications to imaging, holography, fiber optics, lasers, and optical information processing. Three lecture hours a week for one semester. Electrical and Computer Engineering 347 and Electrical Engineering 347 may not both be counted. Prerequisite: Electrical and Computer Engineering 313 (or Electrical Engineering 313) or 313H, and 325 (or Electrical Engineering 325) with a grade of at least C- in each; or Biomedical Engineering 343 with a grade of at least C-.

**ECE 348. Laser and Optical Engineering.**
Explore principles of operation and applications of lasers, optical modulators, and optical detectors. Three lecture hours a week for one semester. Electrical and Computer Engineering 348 and Electrical Engineering 348 may not both be counted. Prerequisite: Electrical and Computer Engineering 325 (or Electrical Engineering 325) with a grade of at least C-.

**ECE 351H. Probability and Random Processes: Honors.**
Examine probability, random variables, statistics, and random processes, including counting, independence, conditioning, expectation, density functions, distributions, law of large numbers, central limit theorem, confidence intervals, hypothesis testing, statistical estimation, stationary processes, Markov chains, and ergodicity. Three lecture hours and one laboratory hour a week for one semester. Only one of the following may be counted: Electrical and Computer Engineering 351H, 351K, Electrical Engineering 351K. Offered on the letter-grade basis only. Prerequisite: Biomedical Engineering 306, Electrical and Computer Engineering 306 (or Electrical Engineering 306), 306H (or Electrical Engineering 306H), or Mechanical Engineering 340 and 140L with a grade of at least B.

**ECE 351K. Probability and Random Processes.**
Examine probability, random variables, statistics, and random processes, including counting, independence, conditioning, expectation, density functions, distributions, law of large numbers, central limit theorem, confidence intervals, hypothesis testing, statistical estimation, stationary processes, Markov chains, and ergodicity. Three lecture hours a week for one semester. Only one of the following may be counted: Electrical and Computer Engineering 351H, 351K, Electrical Engineering 351K. Prerequisite: Mathematics 427J or 427K with a grade of at least C-.

**ECE 351M. Digital Signal Processing.**
Explore sampling, aliasing, truncation effects; discrete and fast Fourier transform methods; convolution and deconvolution; finite and infinite impulse response filter design methods; Wiener, Kalman, noncausal, linear phase, median, and prediction filters; and spectral estimation. Three lecture hours a week for one semester. Electrical and Computer Engineering 351M and Electrical Engineering 351M may not both be counted. Prerequisite: Biomedical Engineering 343, Electrical and Computer Engineering 313 (or Electrical Engineering 313), or 313H with a grade of at least C-, and credit with a grade of at least C- or registration for Biomedical Engineering 335, Electrical and Computer Engineering 351K (or credit with a grade of at least C- for Electrical Engineering 351K), or 351H.

**ECE 155. Electrical and Computer Engineering Seminar.**
Hear presentations by speakers from industry, government, academia, and professional private practice. Explore environmental and other ethical concerns, safety awareness, quality management, technical career descriptions, and professionalism with a focus on engineering communication. One lecture hour a week for one semester. Only one of the following may be counted: Electrical and Computer Engineering 155, Electrical Engineering 155, Electrical and Computer Engineering 364D, Electrical Engineering 364D. Prerequisite: One of the following with a grade of at least C-: English 316L (or 316K), 316M (or 316K), 316N (or 316K), or 316P (or 316K).

**ECE 155L. Engineering Leadership Seminar.**
Hear presentations by speakers from industry, government, academia, and professional private practice. Explore environmental and other ethical concerns, safety awareness, quality management, technical career descriptions, and professionalism. One lecture hour a week for one semester. Electrical and Computer Engineering 155L and Electrical Engineering 155L may not both be counted. Prerequisite: Consent of the dean and one of the following with a grade of at least C-: English 316L (or 316K), 316M (or 316K), 316N (or 316K), or 316P (or 316K).

**ECE 155R. Undergraduate Research Seminar.**
Restricted to students in the Department of Electrical and Computer Engineering. Explore areas of research in electrical and computer engineering. One lecture hour a week for a semester. Electrical and Computer Engineering 155R and Electrical Engineering 155R may not both be counted. Offered on the pass/fail basis only.

**ECE 160, 260, 360, 460. Special Problems in Electrical and Computer Engineering.**
Restricted to engineering majors. Investigate special problems as approved by the electrical and computer engineering department. For each semester hour of credit earned, the equivalent of three laboratory hours a week for one semester. May be repeated for credit. Prerequisite: Electrical and Computer Engineering 312 (or Electrical Engineering 312), 312H (or Electrical Engineering 312H), 313 (or Electrical Engineering 313), or 313H with a grade of at least C- and consent of instructor.

**ECE 360C. Algorithms.**
Explore advanced problem-solving methods; algorithm design principles; complexity analysis; the study of the nature, impact, and handling of intractability; and the study of common algorithmic classes and their applications. Three lecture hours a week for one semester. Electrical and Computer Engineering 360C and Electrical Engineering 360C may not both be counted. Prerequisite: Computer Science 312, Electrical and Computer Engineering 312 (or Electrical Engineering 312), or 312H (or Electrical Engineering 312H) with a grade of at least C-; and Mathematics 325K, Computer Science 311, or 311H with a grade of at least C-.

**ECE 360F. Introduction to Software Engineering.**
Introduction to the discipline of software engineering. Explore software system creation and evolution; fundamental concepts and principles of software product and software process systems, including requirements, architecture and design, construction, deployment, and maintenance; and documentation and document management, measurement and evaluation, software evolution, teamwork, and project management. Three lecture hours a week for one semester. Electrical and Computer Engineering 360F and Electrical Engineering 360F may not both be counted. Prerequisite: One of the following with a grade of at least C-: Computer Science 314, 314H, or Electrical and Computer Engineering 422C (or Electrical Engineering 422C) and consent of instructor.

**ECE 460J. Data Science Laboratory.**
Explore predictive modeling, regression and classification, data cleaning and preprocessing, feature engineering, unsupervised methods, principal component analysis, data clustering, model selection and feature selection, entropy and information theory, neural networks, deep learning, and machine learning for signals and time-series data. Three lecture hours and three laboratory hours a week for one semester. Only one of the following may be counted: Electrical and Computer Engineering 460J, Electrical Engineering 460J, 379K (Topic: Data Science Laboratory),
ECE 360K. Introduction to Digital Communications.
Examine characterization of baseband and passband communication signals and channels, digital modulation, and pulse shaping; optimum receivers in additive white Gaussian noise including matched-filtering, machine learning (ML), and mean average precision (mAP) detection and their bit error probability for M-ary modulation; intersymbol interference channels, finite impulse response (FIR) and infinite impulse response (IIR) equalization, multicarrier modulation, orthogonal frequency-division multiplexing (OFDM) and frequency domain equalization. Introduction to information theory, channel capacity, error control codes, and ML sequence detection (Viterbi decoding). Explore applications to stationary wireless and wireline channels. Three lecture hours a week for one semester. Electrical and Computer Engineering 360K and Electrical Engineering 360K may not both be counted. Prerequisite: Biomedical Engineering 335, Electrical and Computer Engineering 351K (or Electrical Engineering 351K), or 351H with a grade of at least C; Biomedical Engineering 343, Electrical and Computer Engineering 313 (or Electrical Engineering 313), or 313H with a grade of at least C; and Electrical and Computer Engineering 351M (or Electrical Engineering 351M) or 445S (or Electrical Engineering 445S) with a grade of at least C-.

ECE 460M. Digital Systems Design Using Hardware Description Languages.
Explore organization, design, simulation, synthesis, and testing of digital systems; hardware description languages (HDLs); field programmable gate arrays (FPGAs); hardware implementation of arithmetic and other algorithmic processes; state machine charts; microprogramming; and microprocessor design. Three lecture hours and three laboratory hours a week for one semester. Electrical Engineering 460M and Electrical Engineering 460M may not both be counted. Prerequisite: Electrical and Computer Engineering 312 (or Electrical Engineering 312) or 312H (or Electrical Engineering 312H), 316 (or Electrical Engineering 316), and Electrical and Computer Engineering 319K (or Electrical Engineering 319K) or 319H (or Electrical Engineering 319H) with a grade of at least C- in each.

ECE 460N. Computer Architecture.
Examine characteristics of instruction set architecture and microarchitecture; physical and virtual memory; caches and cache design; interrupts and exceptions; integer and floating-point arithmetic; I/O processing; buses; pipelining, out-of-order execution, branch prediction, and other performance enhancements; design trade-offs; and case studies of commercial microprocessors. Explore behavioral-level design of a microarchitecture in a laboratory setting. Three lecture hours and one-and-one-half laboratory/recitation hours a week for one semester. Electrical and Computer Engineering 460N and Electrical Engineering 460N may not both be counted. Prerequisite: Computer Science 312 or 312H, and 429 or 429H with a grade of at least C- in each; or Electrical and Computer Engineering 306 (or Electrical Engineering 306) or 306H (or Electrical Engineering 306H), 312 (or Electrical Engineering 312) or 312H (or Electrical Engineering 312H), and 319K (or Electrical Engineering 319K) or 319H (or Electrical Engineering 319H) with a grade of at least C- in each.

ECE 360P. Concurrent and Distributed Systems.
Investigate concurrency, lock-based and lock-free synchronization, resource allocation, multi-threaded programming, distributed systems programming, mutual exclusion, global snapshots, global property evaluation, message ordering, consensus, Byzantine agreement, and commit protocols. Three lecture hours a week for one semester. Electrical and Computer Engineering 360P and Electrical Engineering 360P may not both be counted. Prerequisite: Electrical and Computer Engineering 422C (or Electrical Engineering 422C) and 360C (or Electrical Engineering 360C) with a grade of at least C-.

ECE 460R. Introduction to VLSI Design.
Explore theory and practice of very-large-scale integration (VLSI) circuit design. Examine metal-oxide-semiconductor (MOS) transistors; static and dynamic complementary metal-oxide-semiconductor (CMOS) combinational and sequential circuits; design of adders, multipliers, and shifters; performance, power consumption and testing. Use computer-aided design (CAD) tools for layout, timing analysis, synthesis, physical design, and verification. Three lecture hours and three laboratory hours a week for one semester. Electrical and Computer Engineering 460R and Electrical Engineering 460R may not both be counted. Prerequisite: Electrical and Computer Engineering 316 (or Electrical Engineering 316) and 438 (or Electrical Engineering 438) with a grade of at least C- in each.

ECE 360S. Digital Integrated Circuit Design.
Examine circuit-level aspects of metal oxide silicon (MOS) and bipolar integrated circuit technologies. Explore logic gates and latches; propagation delays; and circuit simulation models. Three lecture hours a week for one semester. Electrical and Computer Engineering 360S and Electrical Engineering 360S may not both be counted.

ECE 360T. Software Testing.
Explore basic concepts and techniques used in testing software and finding bugs. Examine process, unit, integration, and system testing; manual and automatic techniques for generation of test inputs and validation of test outputs; and coverage criteria. Focus on functional testing. Three lecture hours a week for one semester. Only one of the following may be counted: Electrical and Computer Engineering 360T, Electrical Engineering 360T, 379K (Topic: Software Testing). Prerequisite: One of the following with a grade of at least C-: Computer Science 314 or 314H, or Electrical and Computer Engineering 422C (or Electrical Engineering 422C).

ECE 361C. Multicore Computing.
Explore theoretical and practical aspects of designing multicore software systems; programming constructs for concurrent computation; openMP; sequential consistency; linearizability; lock-based synchronization; lock-free synchronization; wait-free synchronization; consensus number; software transactional memory; testing and debugging parallel programs; race detection; concurrent data structures such as stacks, queues, linked lists, hash tables, and skiplists; formal models; temporal logic; reachability analysis; and parallel graph algorithms. Three lecture hours a week for one semester. Only one of the following may be counted: Electrical and Computer Engineering 361C and Electrical Engineering 361C. Prerequisite: Computer Science 314T or Electrical and Computer Engineering 422C (or Electrical Engineering 422C) and Electrical and Computer Engineering 360C (or Electrical Engineering 360C) with a grade of at least C-.

ECE 361D. System Design Metrics.
Examine engineering design, manufacturing, and lifetime support issues; implications of customer perceptions of quality on design; economics of design; and legal implications of design decisions. The equivalent of three lecture hours a week for one semester. Only one of the following may be counted: Electrical and Computer Engineering 361D and Electrical Engineering 361D.
counted. Prerequisite: Electrical and Computer Engineering 364D (or Electrical Engineering 364D) with a grade of at least C-.

ECE 361E. Machine Learning and Data Analytics for Edge Artificial Intelligence.

Examine edge computing; Internet-of-Things (IoT); cyber-physical systems; energy-aware machine learning (ML); deep learning; model compression; knowledge distillation; federated learning; ML security; system optimization; model-architecture co-design; object detection; and social sensing. Three lecture hours a week for one semester. Electrical and Computer Engineering 361E and Electrical Engineering 379K (Topic: ML/Data Analytic for EDGE AI) may not both be counted. Prerequisite: Electrical and Computer Engineering 460J (or Electrical Engineering 460J) or Computer Science 342 with a grade of at least C-.

ECE 361G. Engineering Program Analysis.

Explore program analysis; compilers; interpreters; code instrumentation; control-flow analysis; data-flow analysis; static single assignment form; dependency analysis; incremental analysis; autotuning; and just-in-time compilation. The equivalent of three lecture hours for one semester. Electrical and Computer Engineering 361G and Electrical Engineering 379K (Topic: Engineering Dynmic Pgrm Anly) may not both be counted. Prerequisite: Electrical and Computer Engineering 422C (or Electrical Engineering 422C) and Electrical and Computer Engineering 360C (or Electrical Engineering 360C) with a grade of at least C- in each.

ECE 461L. Software Engineering and Design Laboratory.

Examine generation of concrete software engineering artifacts at all stages of the software life-cycle processes; stakeholder needs to system requirements mapping; object-oriented design and analysis; and test driven development. Study design principles and methods; design and modeling tools; collaborative development environment; design patterns and refactoring; integration and testing tools. Examine emerging concepts in cloud native devops, including microservices, containers, and application programming interfaces (APIs). Explore design and development of at-scale software system using modern software development techniques, including re-usable front-end and back-end components, and cloud deployment. Three lecture hours and three laboratory hours a week for one semester. Electrical and Computer Engineering 461L and Electrical Engineering 461L may not both be counted. Prerequisite: Computer Science 314, 314H, or Electrical and Computer Engineering 422C (or Electrical Engineering 422C) with a grade of at least C-; Mathematics 325K with a grade of at least C-; and credit or registration with a grade of at least C- for Aerospace Engineering 333T, Biomedical Engineering 333T, Chemical Engineering 333T, Civil Engineering 333T, Electrical and Computer Engineering 333T (or Electrical Engineering 333T), Engineering Studies 333T, Mechanical Engineering 333T, or Petroleum and Geosystems Engineering 333T.

ECE 361M. Software Architectures.

Explore the definitions, motivations, and utility of software system architectures from a technical and business perspective; derivation, specification, and analysis of architectural views in support of different phases in the system engineering lifecycle; methods to judge architectural quality; and communication of architectural views to a wide range of system stakeholders. Three lecture hours a week for one semester. Electrical and Computer Engineering 361M and Electrical Engineering 379K (Topic: Software Architectures) may not both be counted. Offered on the letter-grade basis only. Prerequisite: Upper-division standing; and Electrical and Computer Engineering 422C (or Electrical Engineering 422C) or 360C (or Electrical Engineering 360C) with a grade of at least C-.

ECE 361N. Information Security and Privacy.

Explore information valuation; information classification; information confidentiality, integrity and availability; access control models; trusted entity; trust frameworks. Examine cryptography, designing information system security and privacy, threats and vulnerabilities. Introduction to network, software, and web security; risk assessments; data breach incident response; privacy laws and regulations. The equivalent of three lecture hours a week for one semester. Only one of the following may be counted: Electrical and Computer Engineering 361N, Electrical Engineering 361N, 379K (Topic: Information Security & Privacy). Prerequisite: Computer Science 312 or 312H, or Electrical and Computer Engineering 312 (or Electrical Engineering 312) or 312H (or Electrical Engineering 312H) with a grade of at least C-.

ECE 461P. Data Science Principles.

Examine principles of unsupervised and supervised learning; exploratory data analysis; feature engineering; predictive modeling for regression and classification; clustering algorithms; neural networks and stochastic gradient descent methods; scalable models for Big Data sets; case studies; and programming predictive models in Python and R. Four lecture hours a week for one semester. Only one of the following may be counted: Electrical and Computer Engineering 461P, Electrical Engineering 361M, 461P. Prerequisite: The following with a grade of at least C- in each: Mathematics 340L; and Biomedical Engineering 343, Electrical and Computer Engineering 313 (or Electrical Engineering 313), or 313H; and Biomedical Engineering 335 or Electrical and Computer Engineering 351K (or Electrical Engineering 351K), 351H, or Mathematics 362K.

ECE 361Q. Requirements Engineering.

Explore the methods and technology for acquiring, representing, documenting, verifying, validating, and maintaining requirements; text-based, graphic-based, and computational requirements model representations; requirements analysis to synthesize and resolve conflicts among disparate stakeholder viewpoints; requirements traceability and evolution; and change management. The equivalent of three lecture hours a week for one semester. Electrical and Computer Engineering 361Q and Electrical Engineering 361Q may not both be counted. Prerequisite: Computer Science 312, 312H, Electrical and Computer Engineering 312 (or Electrical Engineering 312) or 312H (or Electrical Engineering 312H) with a grade of at least C-.

ECE 361R. Radio-Frequency Electronics.

Examine modeling of active and passive devices and transmission line structures at high frequencies. Explore analysis and design of radio-frequency electronic circuits including amplifiers, mixers, multipliers, detectors, and oscillators; transistor-, circuit-, and system-level design methods, challenges, and topologies; noise and distortion analysis; and evaluation of modern radio systems. The equivalent of three lecture hours a week for one semester. Electrical and Computer Engineering 361R and Electrical Engineering 361R may not both be counted. Prerequisite: Electrical and Computer Engineering 325 (or Electrical Engineering 325) and 438 (or Electrical Engineering 438) with a grade of at least C- in each.

ECE 461S. Operating Systems.

Introduction to operating system design and implementation; the shell; process management and system calls; memory management; thread management, scheduling, synchronization and concurrency; file systems; input/output systems; virtual machines; and networking and security. Three lecture hours and one-and-one-half laboratory hour a week for one semester. Only one of the following may be counted: Electrical and Computer Engineering 461S, Electrical Engineering 461S, Electrical Engineering 379K (Topic: Operating Systems). Prerequisite: The following with a grade of at least C-: Electrical and Computer Engineering
ECE 362G. Smart Grids.
Explore the fundamentals of smart electric power grids; smart grid architecture, communications, measurement, sensing, design, performance, standards and cyber security; distributed energy, renewable sources, and energy storage; and interoperability. Three lecture hours a week for one semester. Only one of the following may be counted: Electrical and Computer Engineering 362G, Electrical Engineering 362G, Electrical Engineering 379K (Topic: Smart Grids). Prerequisite: Electrical and Computer Engineering 468L (or Electrical Engineering 368L) or 369 (or Electrical Engineering 369) with a grade of at least C-.

ECE 362K. Introduction to Automatic Control.
Restricted to engineering majors. Explore analysis of linear automatic control systems in time and frequency domains; state variable analysis of continuous-time and discrete-time systems; root locus; Nyquist diagrams; Bode plots; sensitivity; and lead and lag compensation. Three lecture hours a week for one semester. Electrical and Computer Engineering 362K and Electrical Engineering 362K may not both be counted. Prerequisite: Upper-division standing, Electrical and Computer Engineering 313 (or Electrical Engineering 313) or 313H, and Mathematics 340L with a grade of at least C- in each.

ECE 462L. Power Electronics Laboratory.
Explore the analysis, design, and operation of power electronic circuits; power conversion from AC to DC, DC to DC, and DC to AC; rectifiers, inverters, and pulse width modulated motor drives. Examine the use of energy from renewable sources such as photovoltaics and wind in a laboratory setting. Three lecture hours and three laboratory hours a week for one semester. Electrical and Computer Engineering 462L and Electrical Engineering 462L may not both be counted. Prerequisite: Electrical and Computer Engineering 411 (or Electrical Engineering 411) or 411H with a grade of at least C-; and credit with a grade of at least C- or registration for one of the following: Aerospace Engineering 333T, Biomedical Engineering 333T, Chemical Engineering 333T, Civil Engineering 333T, Electrical and Computer Engineering 333T (or Electrical Engineering 333T), Engineering Studies 333T, Mechanical Engineering 333T, or Petroleum and Geosystems Engineering 333T.

ECE 362M. Power Electronics II.
Examine pulse-width-modulated power converters, rigorous physical design and device selection, gate driving, thermal design, magnetics design, small-signal modeling and control, and EMI filtering. Explore design and prototyping. Three lecture hours a week for one semester. Electrical and Computer Engineering 362M and Electrical Engineering 379K (Topic: Fundamentals of Power Electronics) may not both be counted. Prerequisite: Upper-division standing, Electrical and Computer Engineering 462L (or Electrical Engineering 462L), and consent of instructor.

ECE 362Q. Power Quality and Harmonics.
Examine and analyze power quality and harmonic phenomena in electric power systems, including characteristics and definitions, voltage sags, electrical transients, harmonics, mitigation techniques, and standards of power quality and harmonics. The equivalent of three lecture hours a week for one semester. Electrical and Computer Engineering 362Q and Electrical Engineering 362Q may not both be counted. Prerequisite: Electrical and Computer Engineering 368L (or Electrical Engineering 368L) or 468L with a grade of at least C-.

Examine renewable energy sources and their integration into power systems. Explore wind energy: resources, turbines, blades, rotor power characteristics, generators, active and reactive power, variability, and voltage regulation; solar energy: resources, solar radiation measurements, photovoltaic materials and properties, photovoltaic electrical characteristics, and system integration; and demonstrations with commercial-grade solar panels and laboratory-scale wind turbines. Three lecture hours a week for one semester. Electrical and Computer Engineering 362R and Electrical Engineering 362R may not both be counted. Prerequisite: Electrical and Computer Engineering 411 (or Electrical Engineering 411) or 411H with a grade of at least C-.

ECE 362S. Development of a Solar-Powered Vehicle.
Analyze, design, and construct a solar-powered car for national competitions involving other universities. Study electrical, mechanical, and aerodynamic systems. Three lecture hours and three laboratory hours a week for one semester. Only one of the following may be counted: Electrical and Computer Engineering 362S, Electrical Engineering 362S, Mechanical Engineering 362S. Prerequisite: One of the following with a grade of at least C-: Electrical and Computer Engineering 312 (or Electrical Engineering 312), 312H (or Electrical Engineering 312H), 313 (or Electrical Engineering 313), or 313H.

ECE 363M. Microwave and Radio Frequency Engineering.
Examine design principles in microwave and radio frequency systems; transmission lines and waveguides; S-parameter representation; impedance matching; microwave network analysis; microwave devices and components; and electromagnetic effects in high-speed and high-frequency applications. Three lecture hours a week for one semester. Electrical and Computer Engineering 363M and Electrical Engineering 363M may not both be counted. Prerequisite: Electrical and Computer Engineering 325 (or Electrical Engineering 325) with a grade of at least C-.

ECE 363N. Engineering Acoustics.
Same as Mechanical Engineering 379N. Principles of acoustics, with applications drawn from audio engineering, biomedical ultrasound, industrial acoustics, noise control, room acoustics, and underwater sound. Three lecture hours a week for one semester. Only one of the following may be counted: Electrical and Computer Engineering 363N, Electrical Engineering 363N, Mechanical Engineering 379N. Prerequisite: Mathematics 427J or 427K with a grade of at least C-.

ECE 464C. Corporate Senior Design Project.
Undertake design and experimental projects in the laboratories of local companies. Examine the ethics of design for safety and reliability. Designed for electrical engineering students working full-time in the industry. Three lecture hours and one-and-one-half laboratory hours a week for one semester. Electrical and Computer Engineering 464C and Electrical Engineering 464C may not both be counted. Prerequisite: Electrical and Computer Engineering 364D (or Electrical Engineering 364D) with a grade of at least C-, and one of the following with a grade of at least C-: Electrical and Computer Engineering 438 (or Electrical Engineering 438), 440 (or Electrical Engineering 440), 445L (or Electrical Engineering 445L), 445S (or Electrical Engineering 445S), 460J (or Electrical Engineering 460J), 461L (or Electrical Engineering 461L), 462L (or Electrical Engineering 462L), 468L, 471C (or Electrical Engineering 471C).

ECE 364D. Introduction to Engineering Design.
Introduction to the engineering design process. Explore the assessment and documentation of engineering problems and customer needs, such as acquiring, documenting, and verifying requirements; high-level system design principles; effects of economic, environmental, ethical, safety,
and social issues in design; writing and presenting design specifications; and effective teamwork. Two lecture hours and three laboratory hours a week for one semester. Only one of the following may be counted: Electrical and Computer Engineering 155, Electrical Engineering 155, Electrical and Computer Engineering 364D, Electrical Engineering 364D. Only one of the following may be counted: Electrical and Computer Engineering 364E, 364D, Electrical Engineering 364D, 364E. Prerequisite: Aerospace Engineering 333T, Biomedical Engineering 333T, Chemical Engineering 333T, Civil Engineering 333T, Electrical and Computer Engineering 333T (or Electrical Engineering 333T), Engineering Studies 333T, Mechanical Engineering 333T, or Petroleum and Geosystems Engineering 333T with a grade of at least C; and credit with a grade of at least C- or registration for Electrical and Computer Engineering 438 (or Electrical Engineering 438), 440 (or Electrical Engineering 440), 445L (or Electrical Engineering 445L), 445S (or Electrical Engineering 445S), 460J (or Electrical Engineering 460J), 461L (or Electrical Engineering 461L), 462L (or Electrical Engineering 462L), 468L, or 471C (or Electrical Engineering 471C).

**ECE 364E. Interdisciplinary Entrepreneurship.**

Start a company with a team. Explore skill development and mentoring in start-up formation, technology development, market validation, marketing, sales, operations, human resources, program management, and finance. Discuss the role of intellectual property and the social issues in design, as well as ethical and safety considerations. The equivalent of three lecture hours a week for one semester, with additional hours to be arranged. Only one of the following may be counted: Electrical and Computer Engineering 364D, 364E, Electrical Engineering 364D, 364E. Prerequisite: Credit with a grade of at least C- in Aerospace Engineering 333T, Biomedical Engineering 333T, Chemical Engineering 333T, Civil Engineering 333T, Electrical and Computer Engineering 333T (or Electrical Engineering 333T), Mechanical Engineering 333T, or Petroleum and Geosystems Engineering 333T; credit with a grade of at least C- or registration for Electrical and Computer Engineering 438 (or Electrical Engineering 438), 440 (or Electrical Engineering 440), 445L (or Electrical Engineering 445L), 445S (or Electrical Engineering 445S), 460J (or Electrical Engineering 460J), 461L (or Electrical Engineering 461L), 462L (or Electrical Engineering 462L), or 471C (or Electrical Engineering 471C); and consent of instructor.

**ECE 364G. Multidisciplinary Senior Design Project.**

Undertake design and experimental projects with teams from multiple engineering disciplines. Examine the ethics of design for safety and reliability. Three lecture hours and one-and-one-half laboratory hours a week for one semester. Electrical and Computer Engineering 464G and Electrical Engineering 464G may not both be counted. Prerequisite: Electrical and Computer Engineering 364D (or Electrical Engineering 364D) with a grade of at least C; and one of the following with a grade of at least C-: Electrical and Computer Engineering 438 (or Electrical Engineering 438), 440 (or Electrical Engineering 440), 445L (or EE445L), 445S (or Electrical Engineering 445S), 460J (or Electrical Engineering 460J), 461L (or Electrical Engineering 461L), 462L (or Electrical Engineering 462L), 468L, 471C (or Electrical Engineering 471C).

**ECE 464H. Honors Senior Design Project.**

Implement the previously developed engineering system design, including design review, prototyping, project testing and any subsequent design modifications; addressing economic, environmental, ethical, safety, and social issues; documentation of each of the preceding and publicly presenting design results; and working effectively in teams. Three lecture hours and six laboratory hours a week for one semester. Only one of the following may be counted: Electrical and Computer Engineering 464H, 464K, 464R, 464S, Electrical Engineering 464H, 464K, 464R, 464S. Prerequisite: Electrical and Computer Engineering 364D (or Electrical Engineering 364D) with a grade of at least C; and one of the following with a grade of at least C-: Electrical and Computer Engineering 438 (or Electrical Engineering 438), 440 (or Electrical Engineering 440), 445L (or Electrical Engineering 445L), 445S (or Electrical Engineering 445S), 460J (or Electrical Engineering 460J), 461L (or Electrical Engineering 461L), 462L (or Electrical Engineering 462L), 468L, 471C (or Electrical Engineering 471C).

**ECE 464K. Senior Design Project.**

Implement the previously developed engineering system design, including design review, prototyping, project testing and any subsequent design modifications; addressing economic, environmental, ethical, safety, and social issues; documentation of each of the preceding and publicly presenting design results; and working effectively in teams. Three lecture hours and six laboratory hours a week for one semester. Only one of the following may be counted: Electrical and Computer Engineering 464H, 464K, 464R, 464S, Electrical Engineering 464H, 464K, 464R, 464S. Prerequisite: Electrical and Computer Engineering 364D (or Electrical Engineering 364D) with a grade of at least C; and one of the following with a grade of at least C-: Electrical and Computer Engineering 438 (or Electrical Engineering 438), 440 (or Electrical Engineering 440), 445L (or Electrical Engineering 445L), 445S (or Electrical Engineering 445S), 460J (or Electrical Engineering 460J), 461L (or Electrical Engineering 461L), 462L (or Electrical Engineering 462L), 468L, 471C (or Electrical Engineering 471C).

**ECE 464R. Research Senior Design Project.**

Implement the previously developed engineering system design, including design review, prototyping, project testing and any subsequent design modifications; addressing economic, environmental, ethical, safety, and social issues; documentation of each of the preceding and publicly presenting design results; and working effectively in teams. Three lecture hours and six laboratory hours a week for one semester. Only one of the following may be counted: Electrical and Computer Engineering 464H, 464K, 464R, 464S, Electrical Engineering 464H, 464K, 464R, 464S. Prerequisite: Electrical and Computer Engineering 364D (or Electrical Engineering 364D) with a grade of at least C; and one of the following with a grade of at least C-: Electrical and Computer Engineering 438 (or Electrical Engineering 438), 440 (or Electrical Engineering 440), 445L (or Electrical Engineering 445L), 445S (or Electrical Engineering 445S), 460J (or Electrical Engineering 460J), 461L (or Electrical Engineering 461L), 462L (or Electrical Engineering 462L), 468L, 471C (or Electrical Engineering 471C).

**ECE 464S. Start-Up Senior Design Project.**

Complete a practical engineering product design; validate the design through prototype construction and testing, modeling and simulation, and manufacturability analysis. Develop a completed company prospectus and seek venture funding for the project. Three lecture hours and six laboratory hours a week for one semester. Only one of the following may be counted: Electrical and Computer Engineering 464H, 464K, 464R, 464S, Electrical Engineering 464H, 464K, 464R, 464S. Prerequisite: Electrical and Computer Engineering 364D (or Electrical Engineering 364D) with a grade of at least C; and one of the following with a grade of at least C-: Electrical and Computer Engineering 438 (or Electrical Engineering 438), 440 (or Electrical Engineering 440), 445L (or Electrical Engineering 445L), 445S (or Electrical Engineering 445S), 460J (or Electrical Engineering 460J), 461L (or Electrical Engineering 461L), 462L (or Electrical Engineering 462L), 468L, 471C (or Electrical Engineering 471C).

**ECE 366. Engineering Economics I.**

Explore business organization; discounted cash flow calculations, including present-worth and rate-of-return calculations; replacement analyses; financial analyses; accounting and depreciation; income taxes; inflation; risk analysis, utility theory, decision models, sequential
decision; and value of information. Three lecture hours a week for one semester. Electrical and Computer Engineering 366 and Electrical Engineering 366 may not both be counted. Prerequisite: The following with a grade of at least C-: Biomedical Engineering 335, Electrical and Computer Engineering 351K (or Electrical Engineering 351K), or 351H; and Biomedical Engineering 343, Electrical and Computer Engineering 313 (or Electrical Engineering 313), or 313H.

**ECE 366K. Engineering Economics II.**

Explore the fundamentals of risk management, including portfolio theory, capital asset pricing theory, and optimal project mix; hedging financial risk; advanced economic analysis of alternative energy systems; and advanced mathematical modeling techniques for economic analysis. Three lecture hours a week for one semester. Electrical and Computer Engineering 366K and Electrical Engineering 366K may not both be counted. Prerequisite: Electrical and Computer Engineering 366 (or Electrical Engineering 366) with a grade of at least C-.

**ECE 366L. Statistics for Manufacturing.**

Explore statistical analysis applied to the development and control of manufacturing operations. Examine quality control, statistical process control, and design of experiments. Three lecture hours a week for one semester. Electrical and Computer Engineering 366L and Electrical Engineering 366L may not both be counted. Prerequisite: The following with a grade of at least C-: Biomedical Engineering 335, Electrical and Computer Engineering 351K (or Electrical Engineering 351K), or 351H; and Biomedical Engineering 343, Electrical and Computer Engineering 313 (or Electrical Engineering 313), or 313H.

**ECE 368L, 468L. Power Systems Apparatus and Laboratory.**

Explore fundamentals of power systems emphasized through laboratory experiments; complex power, three-phase circuits, per-unit system, transformers, synchronous machines, transmission line models, steady-state analysis, induction machines, capacitor banks, protective relaying, surge arrestors, and instrumentation. Three lecture hours and three laboratory hours a week for one semester. Electrical and Computer Engineering 368L and Electrical Engineering 368L may not both be counted. Prerequisite: Electrical and Computer Engineering 411 (or Electrical Engineering 411) with a grade of at least C-; and credit with a grade of at least C- or registration for Aerospace Engineering 333T, Biomedical Engineering 333T, Chemical Engineering 333T, Civil Engineering 333T, Electrical and Computer Engineering 333T (or Electrical Engineering 333T), Mechanical Engineering 333T, or Petroleum and Geosystems Engineering 333T.

**ECE 369. Power Systems Engineering.**

Examine power systems engineering. Explore complex power, phasors, balanced three phase power systems, transformers and per-unit systems, transmission line parameters, steady state operation of transmission lines, the power flow problem, symmetrical faults, power system controls, economic operation of power systems, optimal power flow, and deregulation and restructuring of electricity markets. Three lecture hours a week for one semester. Electrical and Computer Engineering 369 and Electrical Engineering 369 may not both be counted. Prerequisite: Electrical and Computer Engineering 411 (or Electrical Engineering 411) or 411H with a grade of at least C-.

**ECE 369L. Relay Protection of Power Systems.**

Examine the theory, principles, and practices for protecting medium-voltage industrial power systems and high-voltage transmission grids, including symmetrical components; fault calculations and grounding; protection of motors, generators, cables, and transmission lines; and relay settings, fusing, and coordination of multiple protection devices. Two lecture hours and three laboratory hours a week for one semester. Electrical and Computer Engineering 369L and Electrical Engineering 369L may not both be counted. Prerequisite: Electrical and Computer Engineering 313 (or Electrical Engineering 313) or 313H with a grade of at least C-.

**ECE 370. Automatic Control II.**

Introduction to modern control theory; nonlinear and optimal control systems; controllability, observability, stability; state feedback, observers, eigenvalue assignment. Three lecture hours a week for one semester. Electrical and Computer Engineering 370 and Electrical Engineering 370 may not both be counted. Prerequisite: Credit with a grade of at least C- or registration for Electrical and Computer Engineering 362K (or credit with a grade of at least C- for Electrical Engineering 362K).

**ECE 370K. Computer Control Systems.**

Explore the analysis and design of linear discrete time control systems; z-transform theory; modified z-transforms; stability; multirate systems; digital simulation of discrete time systems; and synthesis of algorithms for computer controllers. Three lecture hours a week for one semester. Electrical and Computer Engineering 370K and Electrical Engineering 370K may not both be counted. Prerequisite: Credit with a grade of at least C- or registration for Electrical and Computer Engineering 362K (or Electrical Engineering 362K).

**ECE 370L. Introduction to Manufacturing Systems Automation.**

Explore applications of automation techniques to manufacturing systems, robotics, and computer vision. Three lecture hours a week for one semester. Electrical and Computer Engineering 370L and Electrical Engineering 370L may not both be counted. Prerequisite: Electrical and Computer Engineering 362K (or Electrical Engineering 362K) with a grade of at least C-.

**ECE 370N. Introduction to Robotics and Mechatronics.**

Examine structures for industrial robots; geometry and transformation; direct and inverse kinematics; differential kinematics; dynamics; trajectory planning; actuators and sensors; adaptive control and learning compliance; vision and pattern recognition; and expert systems. Three lecture hours a week for one semester. Electrical and Computer Engineering 370N and Electrical Engineering 370N may not both be counted. Prerequisite: Electrical and Computer Engineering 362K (or Electrical Engineering 362K) with a grade of at least C-.

**ECE 471C. Wireless Communications Laboratory.**

Examine the fundamentals of wireless communication from a digital signal processing perspective; linear modulation, demodulation, and orthogonal frequency division multiplexing; synchronization, channel estimation, and equalization; communication in fading channels; and wireless standards. Three lecture hours and three laboratory hours a week for one semester. Electrical and Computer Engineering 371C and Electrical Engineering 371C may not both be counted. Prerequisite: Electrical and Computer Engineering 445S (or Electrical Engineering 445S), 351M (or Electrical Engineering 351M), or 360K (or Electrical Engineering 360K) with a grade of at least C-; and credit with a grade of at least C- or registration for Aerospace Engineering 333T, Biomedical Engineering 333T, Chemical Engineering 333T, Civil Engineering 333T, Electrical and Computer Engineering 333T (or Electrical Engineering 333T), Mechanical Engineering 333T, or Petroleum and Geosystems Engineering 333T.

**ECE 371D. Introduction to Neural Networks.**

Explore characteristics of artificial neural networks, feedforward networks, and recurrent networks; learning algorithms; self-organization; biological links; and data mining and other applications. Three lecture hours a week for one semester. Electrical and Computer Engineering 371D and Electrical Engineering 371D may not both be
counted. Prerequisite: The following with a grade of at least C- in each: Mathematics 340L; and Biomedical Engineering 343, Electrical and Computer Engineering 313 (or Electrical Engineering 313), or 313H; and Biomedical Engineering 335, Electrical and Computer Engineering 351K (or Electrical Engineering 351K), 351H, or Mathematics 362K.

**ECE 371M. Communication Systems.**

Explore analog and digital modulation; noise in communication systems; signal-to-noise ratio; coding; optimal receiver design; phase-locked loops; and performance analysis. Three lecture hours a week for one semester. Electrical and Computer Engineering 371M and Electrical Engineering 371M may not both be counted. Prerequisite: The following with a grade of at least C- in each: Mathematics 340L; and Biomedical Engineering 343, Electrical and Computer Engineering 313 (or Electrical Engineering 313), or 313H; and Biomedical Engineering 335, Electrical and Computer Engineering 351K, (or Electrical Engineering 351K), 351H, or Mathematics 362K.

**ECE 371Q. Digital Image Processing.**

Examine digital image acquisition, processing, and analysis; two dimensional Fourier analysis; 2D wavelets; image filtering; image denoising; image compression; machine learning for image processing and analysis; deep learning of images; picture quality prediction; image analysis; 3D stereoscopic ranging. Three lecture hours a week for one semester. Only one of the following may be counted: Electrical and Computer Engineering 371Q, Electrical Engineering 371Q, 371R. Prerequisite: The following with a grade of at least C- in each: Biomedical Engineering 343, Electrical and Computer Engineering 313 (or Electrical Engineering 313), or 313H; and Biomedical Engineering 335, Electrical and Computer Engineering 351K (or Electrical Engineering 351K), 351H, or Mathematics 362K.

**ECE 472L. Network Engineering Laboratory.**

Explore local, metropolitan, and wide-area operations; telecommunication common carrier organizations and services; administrative and political considerations; premise distribution systems; name resolution, address assignment, and mail; datagrams, packets, frames, and cells; addressing and network-level interconnection; internetwork architecture; TCP/IP protocol suite (v. 4 and 6); Ethernet and IEEE 802.3 standards; IEEE 802.11 standards and wireless access points; repeaters, hubs, bridges, routers; local area network emulation; public switched network access through POTS and ISDN; intradomain and interdomain routing; routing protocols, including RIP, OSPF, and BGP; multicast; media testing; and local- and wide-area diagnostic tools. Three lecture hours and three laboratory hours a week for one semester. Electrical and Computer Engineering 472L and Electrical Engineering 372L may not both be counted. Prerequisite: Electrical and Computer Engineering 372N (or Electrical Engineering 372N) with a grade of at least C-; and credit with a grade of at least C- or registration for Aerospace Engineering 333T, Biomedical Engineering 333T, Chemical Engineering 333T, Civil Engineering 333T, Electrical and Computer Engineering 333T (or credit with a grade of at least C- for Electrical Engineering 333T), Engineering Studies 333T, Mechanical Engineering 333T, or Petroleum and Geosystems Engineering 333T.

**ECE 374N. Neural Engineering.**

Examine a variety of clinical conditions and their associated neurological basis, and then analyze the engineering solutions to cope with the neurological deficits, with an emphasis on electrical and computer engineering components. Study approaches to design motor neuroprosthetics and sensory neuroprosthetics that restore lost functions. Learn principles of deep brain stimulation, neuromodulation, and brain plasticity. Explore the concepts behind technological approaches for neurorehabilitation, in particular robotics and brain-computer interfaces. Three lecture hours a week for one semester. Electrical and Computer Engineering 374N and Electrical Engineering 379K (Topic: Neural Engineering) may not both be counted. Prerequisite: Upper-division standing; Electrical and Computer Engineering 351M (or Electrical Engineering 351M) or 445S (or Electrical Engineering 351M); Electrical and Computer Engineering 461P (or Electrical Engineering 461P) or 460J (or Electrical Engineering 460J); and consent of the instructor.

**ECE 679H. Undergraduate Honors Thesis.**

Restricted to students in the Engineering Honors Program. Undertake research across two consecutive semesters under the supervision of an engineering faculty member. Investigate a research area, selected with a faculty member with approval by the director of the Honors Program. Deliver an oral presentation and write a thesis. Individual instruction for two semesters. Electrical and Computer Engineering 679H and Electrical Engineering 335, Electrical and Computer Engineering 351K (or Electrical Engineering 351K), 351H, or Mathematics 362K.

**ECE 372S. Cryptography and Network Security.**

Explore distributed information system security, cryptographic tools, authentication, message security, and system management. The equivalent of three lecture hours a week for one semester. Electrical and Computer Engineering 372S and Electrical Engineering 372S may not both be counted. Prerequisite: Mathematics 325K or 340L with a grade of at least C-.

**ECE 374K. Biomedical Electronic Instrument Design.**

Explore the application of electrical engineering principles in the design of electronic instrumentation at the circuit-board level for the measurement of pressure, temperature, flow, and impedance. Examine the study of light intensity, bioelectric potentials, and stimulation devices such as pacemakers and defibrillators. Focus on design considerations specific to electro-medical environments, safety and efficacy, and public policy issues. Three lecture hours a week for one semester. Electrical and Computer Engineering 374K and Electrical Engineering 374K may not both be counted. Prerequisite: Electrical and Computer Engineering 438 (or Electrical Engineering 438) with a grade of at least C-.

**ECE 374L. Applications of Biomedical Engineering.**

Examine areas of biomedical engineering, such as optical and thermal properties of laser interaction with tissue; measurement of perfusion in the microvascular system; diagnostic imaging; interaction of living systems with electromagnetic fields; robotic surgical tools; ophthalmic instrumentation; and noninvasive cardiovascular measurements. Three lecture hours and six laboratory hours a week for one semester. Electrical and Computer Engineering 374L and Electrical Engineering 374L may not both be counted. Prerequisite: Electrical and Computer Engineering 374K (or Electrical Engineering 374K) with a grade of at least C-; and credit with a grade of at least C- or registration for Aerospace Engineering 333T, Biomedical Engineering 333T, Chemical Engineering 333T, Civil Engineering 333T, Electrical and Computer Engineering 333T (or credit with a grade of at least C- for Electrical Engineering 333T), Engineering Studies 333T, Mechanical Engineering 333T, or Petroleum and Geosystems Engineering 333T.

**ECE 377. Digital Signal Processing.**

Explore the analysis of signals in time and frequency domains; linear signal processing; correlation functions; filtering and estimation techniques; and digital signal processing methods. Three lecture hours a week for one semester. Electrical and Computer Engineering 377 and Electrical Engineering 377 may not both be counted. Prerequisite: Electrical and Computer Engineering 372S and Electrical Engineering 372S with a grade of at least C-; and credit with a grade of at least C- for Electrical Engineering 372S, Biomedical Engineering 372S, or 372S, Electrical and Computer Engineering 372S, or 372S, Mathematics 362K.

**ECE 378. Computer Networks.**

Examine interconnection of local area networks; Internet protocol suite; network design; and network security. Three lecture hours a week for one semester. Electrical and Computer Engineering 378 and Electrical Engineering 378 may not both be counted. Prerequisite: Electrical and Computer Engineering 372S and Electrical Engineering 372S with a grade of at least C-; and credit with a grade of at least C- for Electrical Engineering 372S, Biomedical Engineering 372S, or 372S, Electrical and Computer Engineering 372S, or 372S, Mathematics 362K.
Graduate Courses

ECE 380C. Introduction to Optimization.
Three lecture hours a week for one semester. Electrical and Computer Engineering 380C and Electrical Engineering 380C may not both be counted. Prerequisite: Graduate standing.

ECE 380K. Introduction to System Theory.
Introduction to linear dynamical systems and differential equations, state space analysis and applications to feedback control, functional analytic methods, realization theory, stability theory, and elements of optimal control. Three lecture hours a week for one semester. Electrical and Computer Engineering 380K and Electrical Engineering 380K may not both be counted. Prerequisite: Graduate standing and knowledge in real analysis.

ECE 380L. Topics in Computer Systems in Engineering.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

Topic 5: Engineering Programming Languages. Explore higher-level languages for engineering design and problem solving; object-oriented programming in C++ and Unix systems programming. Electrical and Computer Engineering 380L (Topic 5) and Electrical Engineering 380L (Topic 5) may not both be counted.

Topic 7: Introduction to Pattern Recognition and Computer Vision. Explore pattern recognition, including Bayesian decision theory, maximum likelihood and estimation, nonparametric techniques, and linear discriminant functions. Examine computer vision, including geometric camera models and calibration, structure from motion, and tracking. Electrical and Computer Engineering 380L (Topic 7) and Electrical Engineering 380L (Topic 7) may not both be counted.

Topic 8: Computer Vision Systems. Discuss current research results and explore new directions in computer vision systems, including linear discriminant functions, nonmetric methods, unsupervised learning and clustering, model-based vision, segmentation using probabilistic methods, and content-based image and video analysis. Apply the techniques to real-world vision systems. Electrical and Computer Engineering 380L (Topic 8) and Electrical Engineering 380L (Topic 8) may not both be counted.

Topic 9: Artificial Neural Systems. Examine feed-forward networks, distributed associative memory, recurrent networks, self-organization, parallel implementation, and applications. Electrical and Computer Engineering 380L (Topic 9) and Electrical Engineering 380L (Topic 9) may not both be counted.

Topic 11: Mining the Web. Analyze data and information available from the World Wide Web. Explore the exploitation of the hyperlink structure of the Web for developing better search engines. Examine content analysis; information retrieval, clustering, and hierarchical categorization of Web documents; web usage mining; and collaborative filtering and personalizing the Web. Electrical and Computer Engineering 380L (Topic 11) and Electrical Engineering 380L (Topic 11) may not both be counted. Additional prerequisite: Electrical and Computer Engineering 380L (Topic 10) or Electrical Engineering 380L (Topic 10) or Computer Science 391L.

Topic 12: Real-Time Operating Systems Laboratory. Explore real-time operating systems; implementation of context switching, threads, multitasking, real-time scheduling, synchronization, communication, storage, file systems, memory management, process linking and loading, hardware interfacing, and networking; debugging and testing; operating system performance, including latency, jitter, deadlines, deadlocks, and starvation; real-time systems, including data acquisition, sensing, actuating, digital control, signal processing, and robotics. Only one of the following may be counted: Electrical and Computer Engineering 380L (Topic 12), Electrical Engineering 380L (Topic 6), 380L (Topic 12). Additional prerequisite: General understanding of assembly and C programming, computer architecture, embedded systems, and hardware/software interfacing.
ECE 380N. Topics in System Theory.

Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and Electrical and Computer Engineering 380K (or Electrical Engineering 380K).

**Topic 1: Nonlinear Systems: Input-Output Properties.** Electrical and Computer Engineering 380N (Topic 1) and Electrical Engineering 380N (Topic 1) may not both be counted.

**Topic 2: Nonlinear Systems: Geometric Theory.** Electrical and Computer Engineering 380N (Topic 2) and Electrical Engineering 380N (Topic 2) may not both be counted.

**Topic 3: Adaptive Control Systems.** Electrical and Computer Engineering 380N (Topic 3) and Electrical Engineering 380N (Topic 3) may not both be counted.

**Topic 4: Learning Systems and Cybernetic Machines.** Electrical and Computer Engineering 380N (Topic 4) and Electrical Engineering 380N (Topic 4) may not both be counted.

**Topic 5: Stochastic Control Theory.** Examine dynamic programming in finite and infinite horizon, models with imperfect state information, ergodic control problems, and adaptive and risk-sensitive control. Electrical and Computer Engineering 380N (Topic 5) and Electrical Engineering 380N (Topic 5) may not both be counted. Additional prerequisite: Electrical and Computer Engineering 381J (or Electrical Engineering 381J).

**Topic 7: Design of Computer-Controlled Systems.** Electrical and Computer Engineering 380N (Topic 7) and Electrical Engineering 380N (Topic 7) may not both be counted.

**Topic 8: Algorithms for Parallel and Distributed Computation.** Electrical and Computer Engineering 380N (Topic 8) and Electrical Engineering 380N (Topic 8) may not both be counted.

**Topic 9: Fundamentals of Robotics and Mechatronics.** Explore the theory of robotics and mechatronics, with emphasis on control, sensing, actuation, low- and high-level vision. Examine manipulator geometry, kinematics, dynamics, and planning of trajectories. Electrical Engineering 380N (Topic 9) and Electrical Engineering 380N (Topic 9) may not both be counted.

**Topic 10: Robotics II.** Electrical and Computer Engineering 380N (Topic 10) and Electrical Engineering 380N (Topic 10) may not both be counted.

ECE 381C. Verification and Validation.

Three lecture hours a week for one semester. Electrical and Computer Engineering 381C and Electrical Engineering 381C may not both be counted. Prerequisite: Graduate standing.

ECE 381J. Probability and Stochastic Processes I.

Examine probability spaces, random variables, expectation, conditional expectation, stochastic convergence, characteristic functions, and limit theorems. Explore Markov and Gaussian processes, stationary processes, spectral representation, ergodicity, renewal processes, martingales, and applications to estimation, prediction, and queueing theory. Three lecture hours a week for one semester. Electrical and Computer Engineering 381J and Electrical Engineering 381J may not both be counted. Prerequisite: Graduate standing, and an undergraduate course in probability, statistics, and random processes.
Topic 11: Wireless Communications. Introduction to fundamental aspects of wireless communication systems including channel modeling, diversity, multiple antenna transmission and reception, beamforming, adaptive modulation. Explore multiuser communication concepts including OFDMA and SC-FDMA, spread spectrum and CDMA, and broadcast and MAC channels. Examine system-level modeling including network information theory, stochastic geometry, and network interference models. Electrical and Computer Engineering 381K (Topic 11) and Electrical Engineering 381K (Topic 11) may not both be counted. Additional prerequisite: Electrical and Computer Engineering 381K (Topic 2) (or Electrical Engineering 381K (Topic 2)), Electrical and Computer Engineering 471C (or Electrical Engineering 471C) or Electrical and Computer Engineering 381K (Topic 17) (or Electrical Engineering 381K (Topic 17)) or consent of instructor.

Topic 13: Analysis and Design of Communication Networks. Examine stochastic and deterministic traffic and queueing models. Explore techniques for call admission, routing, flow control, network optimization, estimation, and decision making in uncertain environments. Electrical and Computer Engineering 381K (Topic 13) and Electrical Engineering 381K (Topic 13) may not both be counted. Additional prerequisite: Electrical and Computer Engineering 381J (or Electrical Engineering 381J) and 381K (Topic 15) (or Electrical Engineering 381K (Topic 15) or 382N (Topic 5)).

Topic 14: Multidimensional Digital Signal Processing. Explore multidimensional signals and systems, multidimensional discrete Fourier analysis, discrete cosine transform, two-dimensional filters, beamforming, seismic processing, tomography, multidimensional multirate systems, image halftoning, and video processing. Electrical and Computer Engineering 381K (Topic 14) and Electrical Engineering 381K (Topic 14) may not both be counted. Additional prerequisite: Electrical and Computer Engineering 380K (or Electrical Engineering 380K), 381K (Topic 8) (or Electrical Engineering 381K (Topic 8)), or 383P (Topic 1) (or Electrical Engineering 383P (Topic 1)).

Topic 15: Communication Networks: Technology, Architectures, and Protocols. Explore network services and techniques, layered architectures, circuit and packet-switching networks, internetworking, switch architectures, control mechanisms, and economic issues. Only one of the following may be counted: Electrical and Computer Engineering 381K (Topic 15), Electrical Engineering 381K (Topic 15), 382N (Topic 5). Additional prerequisite: Consent of instructor.

Topic 16: Digital Video. Same as Biomedical Engineering 381J (Topic 14). Examine video sampling and transform; video (retinal and cortical) filters; motion detection and estimation; statistical models of videos; neuroscience of video perception; natural video statistics; modern video compression standards; video quality prediction; video denoising; active contour models; and video saliency. Only one of the following may be counted: Biomedical Engineering 381J (Topic: Digital Video), 381J (Topic 14), Electrical and Computer Engineering 381K (Topic 16), Electrical Engineering 381K (Topic 16), 381V (Topic: Digital Video).

Topic 17: Wireless Communications Laboratory. Explore the fundamentals of wireless communication from a digital signal processing perspective; linear modulation, demodulation, and orthogonal frequency division multiplexing; synchronization, channel estimation, and equalization; communication in fading channels; principles of multiple-input, multiple-output (MIMO) communication; and wireless standards. Only one of the following may be counted: Electrical and Computer Engineering 381K (Topic 17), Electrical Engineering 381K (Topic 17), 381V (Topic: Wireless Communications Lab). Additional prerequisite: Consent of instructor.

Topic 18: Convex Optimization. Same as Operations Research and Industrial Engineering 391Q (Topic 15). The fundamentals of convex optimization with a focus on modeling, computation and scale: convex sets and functions, unconstrained optimization via first and second-order methods, duality, constrained optimization, SDPs, stochastic and sub-gradient descent methods, ADMMs, and applications. Only one of the following may be counted: Electrical and Computer Engineering 381K (Topic 18), Electrical Engineering 381K (Topic 18), 381V (Topic: Large Scale Optimization), Operations Research and Industrial Engineering 391Q (Topic 15). Additional prerequisite: Consent of instructor.

Topic 19: Wireless Network Modeling and Performance Evaluation. Explore modeling of large wireless networks, random graphs, stochastic geometry, point processes, space and time averages, connectivity, stability, capacity, and network design optimization, with applications for cellular network, mobile ad hoc networks, device to device networks, and vehicular networks. Electrical and Computer Engineering 381K (Topic 19) and Electrical Engineering 381K (Topic 19) may not both be counted. Additional prerequisite: Consent of instructor.

ECE 381L. Digital Time Series Analysis and Applications. Examine digital implementation of higher-order spectra and other techniques useful in analyzing, interpreting, and modeling random time series data from linear and nonlinear physical systems. Three lecture hours a week for one semester. Electrical and Computer Engineering 381L and Electrical Engineering 381L may not both be counted. Prerequisite: Graduate standing in engineering or natural sciences.

ECE 381M. Probability and Stochastic Processes II. Examine random walk and Brownian motion; renewal and regenerative processes; Markov processes; ergodic theory; continuous parameter martingales; stochastic differential equations; diffusions; stochastic control; and multidimensional stochastic models. Three lecture hours a week for one semester. Electrical and Computer Engineering 381M and Electrical Engineering 381M may not both be counted. Prerequisite: Graduate standing and Electrical and Computer Engineering 381J (or Electrical Engineering 381J).

ECE 381S. Space-Time Communication. Explore multiple-input multiple-output (MIMO) wireless communication, including discrete-time signal models, equalization, and channel estimation; channel models; channel capacity; average probability of error in fading channels; channel coding; transmit and receive diversity; space-time codes; spatial multiplexing; precoding and limited feedback; space-time adaptation; multiuser communication; multiuser information theory; practical multiuser algorithms; and applications in recent standards. Three lecture hours a week for one semester. Electrical and Computer Engineering 381S and Electrical Engineering 381S may not both be counted. Prerequisite: Graduate standing and Electrical and Computer Engineering 381S and Electrical Engineering 381S (or Electrical Engineering 381J) and 381K (Topic 2) (or Electrical Engineering 381K (Topic 2)).

ECE 381V. Topics in Communications, Networks, and Systems. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.
ECE 382C. Topics in Software Engineering and Systems.

Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

**Topic 1: Engineering Design of Software and Software Systems.** Explore the software development process; selection and application of software design methods; and evaluation of software designs. Electrical and Computer Engineering 382C (Topic 1) and Electrical Engineering 382C (Topic 1) may not both be counted.

**Topic 2: Creation and Maintenance of Distributed Software Systems.** Examine the creation of large distributed software applications, with emphasis on specification, failure models, correctness, and security. Electrical and Computer Engineering 382C (Topic 2) and Electrical Engineering 382C (Topic 2) may not both be counted.

**Topic 3: Verification and Validation of Software.** Evaluate software for correctness, efficiency, performance, and reliability. Electrical and Computer Engineering 382C (Topic 3) and Electrical Engineering 382C (Topic 3) may not both be counted.

**Topic 4: Software and Hardware Engineering Project Management.** Examine the requirements for a project management plan; role of the manager of the software development life cycle; economic and customer-driven factors. Electrical and Computer Engineering 382C (Topic 4) and Electrical Engineering 382C (Topic 4) may not both be counted.

**Topic 5: Large Software, Hardware, and Communications Systems Engineering.** Explore the techniques used to specify and design systems of software, hardware, and communications components. Create a requirements document and system specification. Electrical and Computer Engineering 382C (Topic 5) and Electrical Engineering 382C (Topic 5) may not both be counted.

**Topic 6: Software for Highly-Available Distributed Applications.** Electrical and Computer Engineering 382C (Topic 6) and Electrical Engineering 382C (Topic 6) may not both be counted.

**Topic 7: Software Architectures.** Explore the definitions, motivations, and utility of software system architectures from a technical and business perspective; derivation, specification, and analysis of architectural views in support of different phases in the system engineering lifecycle; methods to judge architectural quality; and communication of architectural views to a wide range of system stakeholders. Electrical and Computer Engineering 382C (Topic 7) and Electrical Engineering 382C (Topic 7) may not both be counted.

**Topic 8: Theory Blockchains and Smart Contracts.** Explore blockchains and smart contracts, including but not limited to distributed consensus; layer 1 protocol architecture; associated cryptosystems; decentralized peer to peer networks; properties of blockchains; design of blockchain protocols and associated cryptosystems; security and privacy; scalability; liveness of such networks; proof of work; stake and other consensus mechanisms; and incentive design for participation in decentralized systems. Examine decentralized finance and decentralized applications. Only one of the following may be counted: Electrical and Computer Engineering 382C (Topic 8), Electrical and Computer Engineering 382V (Topic: Intro BckChn/Smart Cntrcts), Electrical Engineering 382V (Topic: Intro BckChn/Smart Cntrcts).

**Topic 9: Embedded Software Systems.** Examine dataflow models, uniprocessor and multiprocessor scheduling, hardware/software co-design, hierarchical finite state machines, synchronous languages, reactive systems, synchronous reactive languages, and heterogeneous systems. Electrical and Computer Engineering 382C (Topic 9) and Electrical Engineering 382C (Topic 9) may not both be counted.

**Topic 11: Requirements Engineering.** Electrical and Computer Engineering 382C (Topic 11) and Electrical Engineering 382C (Topic 11) may not both be counted.

**Topic 12: Multicore Computing.** Examine theoretical and practical aspects of designing multicore software systems; programming constructs for concurrent computation, openMP, sequential consistency, linearizability, lock-based synchronization, lock-free synchronization, wait-free synchronization, consensus number, software transactional memory, testing and debugging parallel programs, race detection, concurrent data structures such as stacks, queues, linked lists, hash tables and skiplists, formal models, temporal logic, reachability analysis, and parallel graph algorithms. Only one of the following may be counted: Electrical and Computer Engineering 382C (Topic 12), Electrical Engineering 382C (Topic 12), 382V (Topic: Multicore Computing).

**Topic 13: Mobile Computing.** Explore an overview of emerging research areas in mobile computing with a specific focus on the software engineering ramifications of mobile and pervasive computing technologies. Develop a solid foundation to support future discourse and research in the areas of mobile and pervasive computing, and skills to critically read research papers, assimilate information, find additional resources, and draw connections. Only one of the following may be counted: Electrical and Computer Engineering 382C (Topic 13), Electrical Engineering 382C (Topic 13), 382V (Topic: Mobile Computing).

**Topic 14: Software Evolution Principles.** Review program analysis techniques for evolving software; incremental testing, debugging, and verification; static and dynamic dependency analysis; program transformations; and software visualization. Only one of the following may be counted: Electrical and Computer Engineering 382C (Topic 14), Electrical Engineering 382V (Topic: Software Evolution), 382V (Topic 1), 382C (Topic 14). Additional prerequisite: Knowledge in algorithms, concurrent and distributed systems, software testing, or consent of instructor.

**Topic 15: Middleware Architecture and Design.** Introduction to the design of distributed computing middleware, with a focus on architectural principles. Explore an overview of required functions of emerging middleware and how middleware is designed to support these functions. Examine particular domains such as middleware for mobile computing, middleware for embedded systems, and middleware for sensor networks. Electrical and Computer Engineering 382C (Topic 15) and Electrical Engineering 382C (Topic 15) may not both be counted. Additional prerequisite: Consent of instructor.

**Topic 16: Software Testing.** Examine basic concepts and techniques for testing software and finding bugs. Explore the testing process; unit, integration and system testing; manual and automatic techniques for generation of test inputs and validation of test outputs; and coverage criteria. Focus on functional testing. Only one of the following may be counted: Electrical and Computer Engineering 382C (Topic 16), Electrical Engineering 382C (Topic 16), 382V (Topic: Software Testing). Additional prerequisite: Consent of instructor.

**Topic 17: Algorithmic Foundations for Software Systems.** Examine complex data structures and algorithms, graph algorithms, performance analysis, correctness analysis, engineering effective techniques, and domain-specific methods, such as systematic or heuristic search. Only one of the following may be counted: Electrical and Computer Engineering 382C (Topic 17), Electrical and Computer Engineering 382C (Topic 17), 382V (Topic: Algor Fndtn Software Sys). Additional prerequisite: Consent of instructor.

**Topic 18: Computer Graphics.** Examine computer graphics, including in-depth treatments of techniques for realistic image synthesis, advanced geometric modeling methods, animation and dynamic simulation, scientific visualization, and high-performance graphics architectures. Only one of the following may be counted: Electrical and Computer Engineering 382C (Topic 18), Electrical Engineering 382C (Topic 18), 382V (Topic: Computer Graphics). Additional prerequisite: Consent of instructor.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

**Topic 1: Switching Theory.** Explore general theory and realization algorithms for combinational, sequential, and array logic. Electrical and Computer Engineering 382L (Topic 1) and Electrical Engineering 382L (Topic 1) may not both be counted.

**Topic 2: Graph Theory and Applications.** Examine elementary graph theory concepts; graph theory algorithms and applications in multicomputer architecture, switching and coding theory, data structures, computer networks, programming, algorithm analysis, diagnosis and fault tolerance. Electrical and Computer Engineering 382L (Topic 2) and Electrical Engineering 382L (Topic 2) may not both be counted.

ECE 382M. Topics in Integrated Circuits and Systems.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

**Topic 1: VLSI Testing.** Examine hardware and software reliability analysis of digital systems; testing, design for testability, self-diagnosis, fault-tolerant logic design, error-detecting and error-correcting codes. Electrical and Computer Engineering 382M (Topic 1) and Electrical Engineering 382M (Topic 1) may not both be counted.

**Topic 2: Dependable Computing.** Examine design techniques for reliable, fault-tolerant, fail-safe and fail-soft systems; fault diagnosis and fault avoidance methods at program and system levels; experimental and commercial fault-tolerant computer systems. Electrical and Computer Engineering 382M (Topic 2) and Electrical Engineering 382M (Topic 2) may not both be counted.

**Topic 7: VLSI I.** Examine very-large-scale integration (VLSI) circuit design. Explore complementary metal oxide semiconductor (CMOS) technology; static and dynamic CMOS combinational and sequential circuits; design of datapath elements; performance, power consumption, and testing. Use computer-aided design (CAD) tools for layout, timing analysis, synthesis, physical design, and verification. Electrical and Computer Engineering 382M (Topic 7) and Electrical Engineering 382M (Topic 7) may not both be counted.

**Topic 8: VLSI II.** Examine microelectronic systems architecture; VLSI circuit testing methods; integration of heterogeneous computer-aided design tools; wafer scale integration; advanced high-speed circuit design and integration. Electrical and Computer Engineering 382M (Topic 8) and Electrical Engineering 382M (Topic 8) may not both be counted.

**Topic 9: Simulation Methods in CAD and VLSI.** Examine techniques and algorithms for simulating large-scale digital and analog circuits. Electrical and Computer Engineering 382M (Topic 9) and Electrical Engineering 382M (Topic 9) may not both be counted.

**Topic 10: Synthesis of Digital Systems.** Explore automatic generation of gate-level implementations from hardware description language (HDL) specifications; optimization of two-level, multilevel, and sequential circuits for area, speed, and testability. Electrical and Computer Engineering 382M (Topic 10) and Electrical Engineering 382M (Topic 10) may not both be counted.

**Topic 11: Verification of Digital Systems.** Examine automatic verification of digital systems; formal models and specifications, equivalence checking, design verification, temporal logic, binary decision diagrams (BDDs), logical foundations, automata theory, recent developments. Electrical and Computer Engineering 382M (Topic 11) and Electrical Engineering 382M (Topic 11) may not both be counted.

**Topic 12: Semiconductor Memory Design.** Examine semiconductor memory design in depth. Explore volatile memory circuit designs with static random access memory (SRAM), dynamic RAMs (DRAM), multi-ported RAMs, and content addressable memories (CAMs). Explore non-volatile semiconductor memory designs such as read-only-memories, resistive RAM, magnetic RAM, FLASH, and 3D memories. Discuss in-memory and near-memory computing circuit techniques for machine learning and artificial intelligence applications. Electrical and Computer Engineering 382M (Topic 12) and Electrical Engineering 382V (Topic: Semiconductor Memories) may not both be counted.

**Topic 13: Analysis and Design of Digital Integrated Circuits.** Examine device and circuit-level aspects of metal oxide semiconductors (MOS) digital integrated circuit design. Electrical and Computer Engineering 382M (Topic 13) and Electrical Engineering 382M (Topic 13) may not both be counted.

**Topic 14: Analog Integrated Circuit Design.** Explore the analysis and design of analog integrated circuits; transistor models and integrated circuit technologies; layout techniques; noise; mismatches; current mirrors; differential amplifiers; frequency response and compensation; feedback and stability; nonlinear circuits; voltage references; and operational amplifiers using state-of-the-art computer-aided design (CAD) tools for design, simulation, and layout. Electrical and Computer Engineering 382M (Topic 14) and Electrical Engineering 382M (Topic 14) may not both be counted.

**Topic 16: Application-Specific Processing.** Examine techniques for the design and analysis of application-specific processors, including special purpose systems, embedded processors, and systems-on-chip. Electrical and Computer Engineering 382M (Topic 16) and Electrical Engineering 382M (Topic 16) may not both be counted.

**Topic 17: High-Level Synthesis of Digital Systems.** Examine the synthesis from high-level languages (C) to RTL; allocation, scheduling and binding algorithms, and optimizations under area and performance objectives and constraints. Electrical and Computer Engineering 382M (Topic 17) and Electrical Engineering 382M (Topic 17) may not both be counted.

**Topic 19: Mixed-Signal System Design and Modeling.** Explore architecture development for mixed-signal integrated circuits. Model analog and digital filters, data converters, and digital data receivers. Electrical and Computer Engineering 382M (Topic 19) and Electrical Engineering 382M (Topic 19) may not both be counted.

**Topic 20: System-on-Chip Design.** Examine the methodologies and tools for System-on-Chip (SoC) design, hardware/software co-design and co-verification; partitioning; real-time scheduling; hardware acceleration; high-level C-to-RTL synthesis; allocation, scheduling and binding algorithms for hardware synthesis; SoC integration, communication architectures and hardware/software interfacing; virtual prototyping and hardware/software co-simulation; FPGA prototyping of hardware/software systems. Electrical and Computer Engineering 382M (Topic 20) and Electrical Engineering 382M (Topic 20) may not both be counted.

**Topic 22: VLSI Physical Design Automation.** Examine algorithms and methodologies in circuit partitioning, floorplanning, global placement, detailed placement, global routing, detailed routing, clock tree routing, and power and ground routing. Explore new trends in physical design. Only one of the following may be counted: Electrical and Computer Engineering 382M (Topic 22), Electrical Engineering 382M (Topic 22), 382V (Topic: VLSI Physical Design Automation). Additional prerequisite: Consent of instructor.

**Topic 23: Low-Power and Robustness Design.** Examine nanometer transistors and models; design-time and runtime techniques for dynamic and standby power minimization; power minimization at circuit and architecture levels; power minimization for logic, memory, and interconnect; sources of variability; statistical data collection and analysis of variance; statistical circuit simulation and timing analysis; manufacturability and resolution enhancement techniques. Electrical and Computer Engineering 382M (Topic 23) and Electrical Engineering 382M (Topic 23) may not both be counted. Additional prerequisite: Consent of instructor.
Topic 24: Analog-Digital Data Conversion Circuits. Explore the analysis and design of analog-digital data conversion circuits including both architectural-level and transistor-level design considerations; design trade-offs among power, noise, linearity, and speed; sample-and-hold circuits and voltage comparators; noise analysis for mixed-signal circuits, flash, pipelined, successive approximation, and delta-sigma oversampling analog-to-digital-converters (ADCs); resistor-string, R-2R, current-steering, and delta-sigma oversampling digital-to-analog-converters (DACs); and the use of state-of-the-art computer-aided design (CAD) tools for analysis, design, and validation. Only one of the following may be counted: Electrical and Computer Engineering 382N (Topic 24), Electrical Engineering 382M (Topic 24), 382V (Topic: Data Converters). Additional prerequisite: Consent of instructor.

Topic 25: Radio Frequency Integrated Circuit Design. Examine noise and distortion in devices and circuits; amplifier design techniques for low noise, variable gain, high output power, and high dynamic range; analysis and design of integrated mixers and other frequency converters; voltage and current mode mixers; rectifiers; integrated oscillators for generating fixed and variable frequencies; relevant performance metrics and trade-offs; noise in linear and non-linear time varying circuits; circuit techniques for linearity enhancement; design optimization in bipolar and complementary metal-oxide-semiconductor (CMOS) technologies. Explore transceiver architectures. Only one of the following may be counted: Electrical and Computer Engineering 382M (Topic 25), Electrical Engineering 382M (Topic 25), 382V (Topic: Radio Freq Integ Circuit Dsgn). Additional prerequisite: Consent of instructor.

Topic 26: VLSI CAD and Optimization. Explore interconnect and gate modeling; timing analysis; interconnect topology optimization; gate sizing; buffer insertion and sizing; wire sizing and planning; crosstalk analysis and mitigation; clock network synthesis; interconnect planning; modern placement techniques; congestion mitigation; low power optimization; design for manufacturability and reliability; design and computer-aided design (CAD) for emerging technologies. Only one of the following may be counted: Electrical and Computer Engineering 382M (Topic 26), Electrical Engineering 382M (Topic 21), 382M (Topic 26). Additional prerequisite: Consent of instructor.

ECE 382N. Topics in Architecture, Computer Systems, and Embedded Systems.

Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

Topic 1: Computer Architecture. Examine characteristics of instruction set architecture and microarchitecture; physical and virtual memory; caches and cache design; interrupts and exceptions; integer and floating-point arithmetic; I/O processing; buses; pipelining, out-of-order execution, branch prediction, and other performance enhancements; design trade-offs; and case studies of commercial microprocessors. Participate in an individual laboratory. Electrical and Computer Engineering 382N (Topic 1) and Electrical Engineering 382N (Topic 1) may not both be counted.

Topic 3: Interconnection Networks. Explore topologies, routing algorithms, permutations, resource allocations, performance evaluation, fault tolerance, VLSI design, parallel and distributed algorithms, languages for specifying protocols, and distributed operating systems. Electrical and Computer Engineering 382N (Topic 3) and Electrical Engineering 382N (Topic 3) may not both be counted.

Topic 4: Advanced Embedded Microcontroller Systems. Examine hardware and software design of advanced microcontroller systems; embedded applications, Linux drivers, handlers, and kernel modules, file systems, debugging; hardware acceleration, intelligent sensors and I/O subsystems, embedded field-programmable gate array (FPGAs), and networking-on-chip. Electrical and Computer Engineering 382N (Topic 4) and Electrical Engineering 382N (Topic 4) may not both be counted. Additional prerequisite: Consent of instructor.

Topic 10: Parallel Computer Architecture. Study parallel computing, including models, algorithms, languages, compilers, interconnection networks, and architectures. Electrical and Computer Engineering 382N (Topic 10) and Electrical Engineering 382N (Topic 10) may not both be counted.

Topic 11: Distributed Systems. Examine tracking dependency, mutex algorithms, snapshot algorithms, leader election, spanning tree, distributed algorithms, Map-Reduce, slicer, termination detection, message order, synchronizers, self-stabilization, knowledge, consensus, Byzantine agreement, fault-tolerance. Electrical and Computer Engineering 382N (Topic 11) and Electrical Engineering 382N (Topic 11) may not both be counted.

Topic 14: High-Speed Computer Arithmetic I. Explore the design of computer arithmetic units: fast adders, fast multipliers, dividers, and floating-point arithmetic units. Electrical and Computer Engineering 382N (Topic 14) and Electrical Engineering 382N (Topic 14) may not both be counted.

Topic 15: High-Speed Computer Arithmetic II. Explore advanced computer arithmetic, including error correcting coding, residue number systems, CORDIC arithmetic, and VLSI implementation. Electrical and Computer Engineering 382N (Topic 15) and Electrical Engineering 382N (Topic 15) may not both be counted. Additional prerequisite: Electrical and Computer Engineering 382N (Topic 14) (or Electrical Engineering 382N (Topic 14)).

Topic 16: Distributed Information System Security. Electrical and Computer Engineering 382N (Topic 16) and Electrical Engineering 382N (Topic 16) may not both be counted.

Topic 17: Superscalar Microprocessor Architectures. Examine superscalar processor architectures; instruction level parallelism; machine level parallelism; superscalar organization; instruction windows; reservation station; register data flow; register renaming; reorder buffers; memory disambiguation; branch prediction; value prediction; instruction reuse techniques; comparison with very long instruction word (VLIW), single instruction-multiple data (SIMD), and multiple instruction-multiple data (MIMD) approaches; memory systems for superscalar processors; design for performance and power efficiency; performance evaluation of superscalar processors; and case studies. Electrical and Computer Engineering 382N (Topic 17) and Electrical Engineering 382N (Topic 17) may not both be counted.

Topic 18: Distributed Systems II. Electrical and Computer Engineering 382N (Topic 18) and Electrical Engineering 382N (Topic 18) may not both be counted.

Topic 19: Microarchitecture. Explore concepts in architecture and microarchitecture. Examine critical path, bread-and-butter design, partitioning, timing, and pipelining; data path, state machine, microsequencer, microinstruction, microcode, microprogramming, and CAD tools; pipelining, branch prediction, and out-of-order execution; trace cache, block-structured ISA, simultaneous multithreading, and clustering; single instruction-multiple data (SIMD), very long instruction word (VLIW), decoupled access/execute (DAE), high performance switch (HPS), and data flow. survey the impact of compiler technology, reduced instruction set computing (RISC), and predicated execution; multiprocessor issues, cache coherency, memory consistency, and graphics processing units (GPUs); IEEE Floating Point, and example state-of-the-art microarchitectures. Electrical Engineering 382N (Topic 19) and Electrical Engineering 382N (Topic 19) may not both be counted.

Topic 20: Computer Architecture: Parallelism and Locality. Examine hardware and software parallelism and locality mechanisms, and their impact on processor performance, bandwidth, and power requirements; architectures and microarchitectures of throughput-
oriented processors that rely on parallelism, locality, and hierarchical control; parallel memory systems; and streaming and bulk execution and programming models. Explore programming and measuring performance on massively parallel processors. Electrical and Computer Engineering 382N (Topic 20) and Electrical Engineering 382N (Topic 20) may not both be counted.

Topic 21: Computer Performance Evaluation and Benchmarking. Examine performance analysis of microprocessors and computer architectures; impact of performance analysis on microprocessor design; techniques for analysis of architectural trade-offs; performance and power modeling; performance metrics; benchmarks, measurement tools, and techniques; simulation, challenges in full-system simulation; instruction profiling; trace generation; sampling; simulation points; analytical modeling; calibration of microprocessor performance models; workload characterization; benchmarks for emerging programming paradigms; synthetic benchmarks; statistical methods to compare alternatives; linear regression; and design of experiments. Only one of the following may be counted: Electrical and Computer Engineering 382N (Topic 21), Electrical Engineering 382M (Topic 15), 382N (Topic 21). Additional prerequisite: Consent of instructor.

Topic 22: Computer Architecture: User System Interplay. Explore fundamental principles in computer architecture focusing on the hardware and the compiler, as well as developing an understanding of their interplay with each other and with usage and programming models. Examine the development of several system families and follow common threads of identifying the intended users, system properties, and evaluation methodology. Review case studies including PCs and workstations with general-purpose processors, large parallel systems, graphics processors, and more experimental architectures such as stream processing and transactional memory. Electrical and Computer Engineering 382N (Topic 22) and Electrical Engineering 382N (Topic 22) may not both be counted. Additional prerequisite: Consent of instructor.

Topic 23: Embedded System Design and Modeling. Examine the methods and techniques for formal specification, modeling, and system-level design of embedded systems; models of computation (MoCs), concurrency and time including finite state machines (FSMs), process networks and dataflow; system-level design languages (SLDLs) and methodologies; system-level synthesis algorithms for partitioning, scheduling and design space exploration; system refinement and implementation models; virtual platform prototyping, system simulation and transaction-level modeling (TLM); hardware and software synthesis; system-level design tools and case studies. Electrical and Computer Engineering 382N (Topic 23) and Electrical Engineering 382N (Topic 23) may not both be counted.

Topic 24: Code Generation and Optimization. Generate executable machine code understood by machines from program source code understood by programmers. Explore program optimization for performance, energy efficiency and reliability; code generation and optimization for different types of hardware; and runtime systems and just-in-time compilation. Only one of the following may be counted: Electrical and Computer Engineering 382N (Topic 24), Electrical Engineering 382N (Topic 24), 382V (Topic: Code Generation & Optimization). Additional prerequisite: Consent of instructor.

Topic 25: Runtime Systems. Examine fundamentals of runtime systems; design, implementation, and optimization of emulation engines; interpreters; binary translators; dynamic binary optimization; high-level language virtual machines; co-designed virtual machines; system-level virtual machines; and processor virtualization. Only one of the following may be counted: Electrical and Computer Engineering 382N (Topic 25), Electrical Engineering 382N (Topic 25), 382V (Topic: Dynamic Compilation). Additional prerequisite: Basic knowledge of computer architecture and operating systems; and consent of instructor.

Topic 26: Machine Learning Hardware-Algorithm CoDesign. Explore co-design of machine learning (ML) algorithms and hardware; foundations of ML, compute-intensive ML architectures, high-performance matrix multiplication, spatial computing, roofline modeling, and scheduling and dataflows; ML-specific numerics, compression, quantization, and architectures for edge and mobile; codesign for scaling and system considerations; and circuit-level techniques for ultra-low-power ML, analog, and processing-in-memory techniques. Only one of the following may be counted: Electrical and Computer Engineering 382N (Topic 26), Electrical and Computer Engineering 382V (Topic: Crss-Lyr ML Algo/Hw Co-Dsgn), Electrical Engineering 382V (Topic: Crss-Lyr ML Algo/Hw Co-Dsgn).

ECE 382V. Topics in Computer Engineering. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

ECE 383L. Electromagnetic Field Theory. Examine vector space, Green’s function; equivalence theorem; vector potentials; plane, cylindrical, and spherical waves; and radiation and scattering. Three lecture hours a week for one semester. Electrical and Computer Engineering 383L and Electrical Engineering 383M may not both be counted. Prerequisite: Graduate standing in electrical engineering.

ECE 383M. Microwave Field Theory. Examine guided waves in cylindrical waveguides, microstrip lines, dielectric and optical waveguides; integrated circuits; and periodic structures. Three lecture hours a week for one semester. Electrical and Computer Engineering 383M and Electrical Engineering 383M may not both be counted. Prerequisite: Graduate standing in electrical engineering.

ECE 383N. Theory of Electromagnetic Fields: Electrodynamics. Explore intermediate electromagnetic field theory, with emphasis on the interaction of fields and material media, including anisotropic media. Three lecture hours a week for one semester. Electrical and Computer Engineering 383N and Electrical Engineering 383N may not both be counted. Prerequisite: Graduate standing.

ECE 383P. Topics in Optical Processing and Laser Communications. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing in engineering, mathematics, chemistry, or physics.

Topic 1: Fourier Optics. Examine Fourier transforming properties of lenses, frequency analysis of optical imaging systems, and spatial filtering. Explore optical information processing and holography. Electrical and Computer Engineering 382P (Topic 1) and Electrical Engineering 382P (Topic 1) may not both be counted.

Topic 3: Techniques of Laser Communications. Examine optical propagation in crystalline media, harmonic generation, frequency conversion, and modulation systems. Electrical and Computer Engineering 383P (Topic 3) and Electrical Engineering 383P (Topic 3) may not both be counted.

Topic 4: Fiber and Integrated Optics I. Examine waveguiding in slabs, cylinders, and fibers; optical fiber communications principles; mode coupling; guided-wave optical sources, modulators, and detectors. Electrical and Computer Engineering 383P (Topic 4) and Electrical Engineering 383P (Topic 4) may not both be counted.

Topic 5: Fiber and Integrated Optics II. Examine principles and practices of guided-wave optical sensor technology. Explore nonlinear optical effects in fibers, including amplification and fiber lasers.
ECE 383V. Topics in Electromagnetics.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

ECE 384N. Topics in Acoustics.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of instructor.

Topic 1: Acoustics I. Same as Mechanical Engineering 384N (Topic 1). Plane waves in fluids; transient and steady-state reflection and transmission; lumped elements; refraction, strings, membranes, and rooms; horns; ray acoustics; absorption and dispersion. Only one of the following may be counted: Electrical and Computer Engineering 384N (Topic 1), Electrical Engineering 384N (Topic 1), Mechanical Engineering 384N (Topic 1).

Topic 2: Acoustics II. Same as Mechanical Engineering 384N (Topic 2). Spherical and cylindrical waves, radiation and scattering, multipole expansions, Green’s functions, waveguides, sound beams, Fourier acoustics, Kirchhoff theory of diffraction, and arrays. Only one of the following may be counted: Electrical and Computer Engineering 384N (Topic 2), Electrical Engineering 384N (Topic 2), Mechanical Engineering 384N (Topic 2).

Topic 3: Electromechanical Transducers. Same as Mechanical Engineering 384N (Topic 3). Modeling, analysis, and design of transducers for reception and transmission of acoustic and vibration signals; dynamics of coupled electrical, mechanical, and acoustical systems; and the effects of transducer characteristics on fidelity and efficiency of transduction. Only one of the following may be counted: Electrical and Computer Engineering 384N (Topic 3), Electrical Engineering 384N (Topic 3), Mechanical Engineering 384N (Topic 3).

Topic 5: Underwater Acoustics. Same as Mechanical Engineering 384N (Topic 5). Acoustic properties of the ocean; acoustic propagation, reflection, reverberation, scattering and target strength; ocean noise; introduction to array and signal processing; basics of sonar design. Only one of the following may be counted: Electrical and Computer Engineering 384N (Topic 5), Electrical Engineering 384N (Topic 5), Mechanical Engineering 384N (Topic 5).

Topic 6: Architectural Acoustics. Same as Mechanical Engineering 384N (Topic 6). Human perception of sound, principles of room acoustics, sound-absorptive materials, transmission between rooms, and acoustical design of enclosed spaces. Only one of the following may be counted: Electrical and Computer Engineering 384N (Topic 6), Electrical Engineering 384N (Topic 6), Mechanical Engineering 384N (Topic 6).

Topic 7: Ultrasonics. Same as Mechanical Engineering 384N (Topic 7). Acoustic wave propagation in fluids, elastic solids, and tissue; transducers, arrays, and beamforming; nondestructive evaluation; and acoustical imaging. Only one of the following may be counted: Electrical and Computer Engineering 384N (Topic 7), Electrical Engineering 384N (Topic 7), Mechanical Engineering 384N (Topic 7).

Topic 8: Wave Phenomena. Same as Mechanical Engineering 384N (Topic 8). Fourier acoustics and angular spectra; nearfield acoustical holography; Fraunhofer, Fresnel, and parabolic approximations; sound beams; Green’s functions; Born approximation; propagation and scattering in moving, periodic, and random media. Only one of the following may be counted: Electrical and Computer Engineering 384N (Topic 8), Electrical Engineering 384N (Topic 8), Mechanical Engineering 384N (Topic 8), 397 (Topic: Wave Phenomena).

Topic 9: Acoustic Metamaterials. Same as Mechanical Engineering 384N (Topic 9). Examine wave propagation in heterogeneous media displaying nonclassical effective properties. Introduction to effective medium theories including fundamental limits on effective properties, transmission and scattering matrices, waves in periodic media, localized resonance, and transformation acoustics. Only one of the following may be counted: Mechanical Engineering 384N (Topic 9), 397 (Topic: Acoustic Metamaterials), Electrical and Computer Engineering 384N (Topic 9).

ECE 385J. Topics in Biomedical Engineering.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing in engineering and consent of instructor.

Topic 1: Neural Engineering. Examine a variety of clinical conditions and their associated neurological basis, and then analyze the engineering solutions to cope with the neurological deficits, with an emphasis on electrical and computer engineering components. Study approaches to design motor neuroprosthetics and sensory neuroprosthetics that restore lost functions. Learn principles of deep brain stimulation, neuromodulation, and brain plasticity. Explore the concepts behind technological approaches for neurorehabilitation, in particular robotics and brain-computer interfaces. Electrical and Computer Engineering 385J (Topic: Neural Engineering) and 385J (Topic 1) may not both be counted. Additional prerequisite: Course in Data Mining or Data Science Principles and course in Digital Signal Processing or equivalent, or consent of instructor.

Topic 3: Bioelectric Phenomena. Same as Biomedical Engineering 384J (Topic 4). Examines the physiological bases of bioelectricity and the techniques required to record bioelectric phenomena both intracellularly and extracellularly; the representation of bioelectric activity by equivalent dipoles and the volume conductor fields produced. Only one of the following may be counted: Biomedical Engineering 384J (Topic 4), Electrical and Computer Engineering 385J (Topic 3), Electrical Engineering 385J (Topic 3).
Topic 9: Laser-Tissue Interaction: Thermal. Same as Biomedical Engineering 381J (Topic 1). The thermal response of random media in interaction with laser irradiation. Calculation of the rate of heat production caused by direct absorption of the laser light, thermal damage, and ablation. Only one of the following may be counted: Biomedical Engineering 381J (Topic 1), Electrical and Computer Engineering 385J (Topic 9), Electrical Engineering 385J (Topic 9).

Topic 15: Biosignal Analysis. Same as Biomedical Engineering 384J (Topic 3). Theory and classification of biological signals such as EEG, EKG, and EMG. Data acquisition and analysis procedures for biological signals, including computer applications. Only one of the following may be counted: Biomedical Engineering 384J (Topic 3), Electrical and Computer Engineering 385J (Topic 15), Electrical Engineering 385J (Topic 15).

Topic 16: Laser-Tissue Interaction: Optical. Same as Biomedical Engineering 381J (Topic 2). The optical behavior of random media such as tissue in interaction with laser irradiation. Approximate transport equation methods to predict the absorption and scattering parameters of laser light inside tissue. Port-wine stain treatment; cancer treatment by photochemotherapy; and cardiovascular applications. Only one of the following may be counted: Biomedical Engineering 381J (Topic 2), Electrical and Computer Engineering 385J (Topic 16), Electrical Engineering 385J (Topic 16).

Topic 17: Biomedical Instrumentation II: Real-Time Computer-Based Systems. Same as Biomedical Engineering 384J (Topic 2). Design, testing, patient safety, electrical noise, biomedical measurement transducers, therapeutics, instrumentation electronics, microcomputer interfaces, and embedded systems. Participate in an individual laboratory. Only one of the following may be counted: Biomedical Engineering 384J (Topic 2), Electrical and Computer Engineering 385J (Topic 17), Electrical Engineering 385J (Topic 17).

Topic 18: Imaging Signals and Systems. Same as Biomedical Engineering 381J (Topic 3). Physical principles and signal processing techniques used in thermographic, ultrasonic, and radiographic imaging, including image reconstruction from projections such as CT scanning, MRI, and millimeter wave determination of temperature profiles. Only one of the following may be counted: Biomedical Engineering 381J (Topic 3), Electrical and Computer Engineering 385J (Topic 18), Electrical Engineering 385J (Topic 18).

Topic 23: Optical Spectroscopy. Same as Biomedical Engineering 381J (Topic 4). Measurement and interpretation of spectra: steady-state and time-resolved absorption, fluorescence, phosphorescence, and Raman spectroscopy in the ultraviolet, visible, and infrared portions of the spectrum. Only one of the following may be counted: Biomedical Engineering 381J (Topic 4), Electrical and Computer Engineering 385J (Topic 23), Electrical Engineering 385J (Topic 23).

Topic 26: Therapeutic Heating. Same as Biomedical Engineering 381J (Topic 5). Engineering aspects of electromagnetic fields that have therapeutic applications: diathermy (short wave, microwave, and ultrasound), electrosurgery (thermal damage processes), stimulation of excitable tissue, and electrical safety. Only one of the following may be counted: Biomedical Engineering 381J (Topic 5), Electrical and Computer Engineering 385J (Topic 26), Electrical Engineering 385J (Topic 26).

Topic 28: Noninvasive Optical Tomography. Same as Biomedical Engineering 381J (Topic 6). Basic principles of optical tomographic imaging of biological materials for diagnostic or therapeutic applications. Optical-based tomographic imaging techniques including photothermal, photoacoustic, and coherent methodologies. Only one of the following may be counted: Biomedical Engineering 381J (Topic 6), Electrical and Computer Engineering 385J (Topic 28), Electrical Engineering 385J (Topic 28).

Topic 31: Biomedical Instrumentation I. Same as Biomedical Engineering 384J (Topic 1). Application of electrical engineering techniques to analysis and instrumentation in biological sciences: pressure, flow, temperature measurement; bioelectrical signals; pacemakers; ultrasonics; electrical safety; electrotherapeutics. Only one of the following may be counted: Biomedical Engineering 384J (Topic 1), Electrical and Computer Engineering 385J (Topic 31), Electrical Engineering 385J (Topic 31).

Topic 32: Projects in Biomedical Engineering. Same as Biomedical Engineering 384J (Topic 5). An in-depth examination of selected topics, such as optical and thermal properties of laser interaction with tissue; measurement of perfusion in the microvascular system; diagnostic imaging; interaction of living systems with electromagnetic fields; robotic surgical tools; ophthalmic instrumentation; noninvasive cardiovascular measurements. Only one of the following may be counted: Biomedical Engineering 384J (Topic 5), Electrical and Computer Engineering 385J (Topic 32), Electrical Engineering 385J (Topic 32). Additional prerequisite: Biomedical Engineering 384J (Topic 1) or Electrical and Computer Engineering 385J (Topic 31) (or Electrical Engineering 385J (Topic 31)).

Topic 33: Neurophysiology/Prosthesis Design. Same as Biomedical Engineering 384J (Topic 6). The structure and function of the human brain. Discussion of selected neurological diseases in conjunction with normal neurophysiology. Study of neuroprosthesis treatments and design philosophy, functional neural stimulation, and functional muscular stimulation. Only one of the following may be counted: Biomedical Engineering 385J (Topic 6), Electrical and Computer Engineering 385J (Topic 33), Electrical Engineering 385J (Topic 33).

Topic 35: Brain-Computer Interaction. Examine the architecture of a brain-computer interface (BCI), the brain signals that can be recorded as input to a BCI, and the interaction paradigms where these signals can be decoded and exploited. Study the design principles of complex brain-controlled devices, with an emphasis on electroencephalogram (EEG) signals, the most common signal for BCI. Explore how to enhance EEG signal-to-noise ratio, and techniques to decode subjects' intents and cognitive states. Apply those techniques EEG signals acquired during closed-loop BCI experiments. Electrical and Computer Engineering 385J (Topic 35) and Electrical Engineering 385V (Topic: Brain Computer Interaction) may not both be counted. Additional prerequisite: Course in Data Mining or Data Science Principles and course in Digital Signal Processing or equivalent; or consent of instructor.

ECE 386C. Software Architecture.

Three lecture hours a week for one semester. Electrical and Computer Engineering 386C and Electrical Engineering 386C may not both be counted. Prerequisite: Graduate standing.

Examine the interpretation of data from designed experiments and production processes. Explore subjects including probability distributions, confidence intervals, analysis of variance, hypothesis testing, factorial designs, and quality control data. Three lecture hours a week for one semester. Electrical and Computer Engineering 390C and Electrical Engineering 390C may not both be counted. Prerequisite: Graduate standing in engineering and a course in probability and statistics.

ECE 390V. Topics in Manufacturing Systems Engineering.

Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

ECE 391C. Technical Entrepreneurship.

Examine the technology-based company: entrepreneurship, intrapreneurship, strategic planning, finance, marketing, sales, operations, research and development, manufacturing, and management. Form hypothetical companies in a team and simulate their ventures.
over an extended period. Three lecture hours a week for one semester. Electrical and Computer Engineering 391C and Electrical Engineering 391C may not both be counted. Prerequisite: Graduate standing.

ECE 392C. Software Testing.
Three lecture hours a week for one semester. Only one of the following may be counted: Electrical and Computer Engineering 392C, Electrical Engineering 382V (Topic: Software Testing), 392C. Prerequisite: Graduate standing.

ECE 392K. Antenna Theory and Practice.
Explore modern antenna systems for receiving and transmitting, including driven and parasitic arrays, horns, parabolic and other antennas. Three lecture hours a week for one semester. Electrical and Computer Engineering 392K and Electrical Engineering 392K may not both be counted. Prerequisite: Graduate standing in electrical engineering and knowledge in electromagnetic engineering.

ECE 392L. Computational Electromagnetics.
Explore fundamental computational modeling and analysis techniques for applications in antennas, microwave circuits, biomedical engineering, and geophysics. Focus on boundary-value problem formulation, numerical methods, computer implementation, and error quantification. Examine differential and integral equation-based methods for solving Maxwell's equations in frequency and time domains. Three lecture hours a week for one semester. Electrical and Computer Engineering 392L and Electrical Engineering 392L may not both be counted. Prerequisite: Graduate standing.

ECE 392N. Principles of Radar.
Explore the fundamentals of radar, with an emphasis on electromagnetics and signal processing. Examine radar range equation, antennas, propagation and target scattering, matched filter, ambiguity function, waveform design, pulse compression, microwave imaging, synthetic aperture radar, and inverse synthetic aperture radar (ISAR). Three lecture hours a week for one semester. Electrical and Computer Engineering 392N and Electrical Engineering 392N may not both be counted. Prerequisite: Graduate standing.

ECE 393C. Topics in Plasma Dynamics.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing in engineering, physics, chemistry, or mathematics.

Topic 1: Introduction to Plasma Dynamics. Examine plasma properties, including collective effects, Debye shielding, quasineutrality, the plasma frequency, and collisions. Explore single particle motions in electric and magnetic fields. Study particle drifts, adiabatic invariants, and cyclotron resonance. Electrical and Computer Engineering 393C (Topic 1) and Electrical Engineering 393C (Topic 1) may not both be counted.

ECE 394. Topics in Power System Engineering.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing in electrical engineering, or graduate standing and consent of instructor.

Topic 7: Power Electronic Devices and Systems. Explore power electronic components and circuits; high-voltage, direct current (HVDC) converters; electronic drives for machines; AC/DC converters. Electrical and Computer Engineering 394 (Topic 7) and Electrical Engineering 394 (Topic 7) may not both be counted.

Topic 9: Power Quality. Examine electrical transients, switching surges, lightning, and other phenomena that cause deviations in 60-hertz sinusoidal voltages and currents. Electrical and Computer Engineering 394 (Topic 9) and Electrical Engineering 394 (Topic 9) may not both be counted.

Topic 14: Electrical Transients in Power Systems. Explore analysis and modeling of electrical transient phenomena in power systems, traveling wave, insulation coordination, and overvoltage protection. Electrical and Computer Engineering 394 (Topic 14) and Electrical Engineering 394 (Topic 14) may not both be counted.

Topic 15: Power System Operations and Control. Only one of the following may be counted: Electrical and Computer Engineering 394 (Topic 15), Electrical Engineering 394 (Topic 15), 394V (Topic: Power Sys Operatns/Control).

Topic 16: Restructured Electricity Markets: Locational Marginal Pricing. Examine locational marginal pricing (LMP) model of electricity markets. Explore market dispatch formulated as an optimization problem, unit commitment issues, and pricing rules and incentives in markets; energy-price and transmission-price risk hedging and energy network models; and revenue adequacy of financial transmission rights, a mixed-integer programming approach to unit commitment, the representation of voltage constraints into market models, and the design of electricity markets to mitigate market power. Only one of the following may be counted: Electrical and Computer Engineering 394 (Topic 16), Electrical Engineering 394 (Topic 16), 394V (Topic: Res Elect Mrkts: Loc Marg Pric).

Topic 17: Restructured Electricity Markets: Market Power. Explore the definition and analysis of market power, especially as an issue in the design and functioning of electricity markets. Focus on transmission constraints and offer-based markets that involve locational marginal pricing. Electrical and Computer Engineering 394 (Topic 17) and Electrical Engineering 394 (Topic 17) may not both be counted.

Topic 18: Electric Machinery and Drive Systems. Explore electric drives and machines used in commercial and industrial applications. Examine magnetic circuits and magnetic materials; electromechanical energy conversion principles; rotating and linear machine concepts, including synchronous, induction, DC, and variable reluctance; and control strategies. Only one of the following may be counted: Electrical and Computer Engineering 394 (Topic 18), Electrical Engineering 394 (Topic 13), 394 (Topic 18).

ECE 394J. Topics in Energy Systems.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

Topic 1: Power System Engineering I. Examine physical features, operational characteristics, and analytical models for major electric power systems and components. Electrical and Computer Engineering 394J (Topic 1) and Electrical Engineering 394J (Topic 1) may not both be counted.

Topic 2: Power System Engineering II. Explore advanced techniques for solving large power networks; load flow, symmetrical components, and short circuit analysis. Electrical and Computer Engineering 394J (Topic 2) and Electrical Engineering 394J (Topic 2) may not both be counted.

Topic 9: Wind Energy Systems. Examine wind resource characteristics and assessments; wind turbine technologies (fixed and variable-speed turbines); wind power transmission; integration and interconnection issues; and reliability impacts. Electrical and Computer Engineering 394J (Topic 9) and Electrical Engineering 394J (Topic 9) may not both be counted.

Topic 10: Distributed Generation Technologies. Examine distributed generation and microgrid elements; microsources; energy storage; power electronics interfaces; DC and AC architectures; economics, operation, stabilization, and control; reliability and availability aspects; interaction between microgrids and bulk power grids; and smart grids. Electrical and Computer Engineering 394J (Topic 10) and Electrical Engineering 394J (Topic 10) may not both be counted. Additional
prerequisite: Knowledge of fundamentals of power electronics and power systems, familiarity with modeling and simulation techniques, and knowledge of how to use professional publications.

**Topic 11: Advanced Power Electronics.** Explore resonant converters, switched-capacitor converters, the dual active bridge converter, high-frequency magnetics, high-frequency inverters and rectifiers, power factor correction, and other areas of current interest. Undertake projects with intensive design, prototyping, and/or simulation components. Electrical and Computer Engineering 394J (Topic 11) and Electrical Engineering 394J (Topic 11) may not both be counted. Additional prerequisite: Consent of instructor.

**Topic 12: Modeling and Simulation of Wind Power Plants.** Explore the analysis, modeling, and simulation of wind turbines and wind farms; fundamentals of wind turbines and technologies, reference-frame theory, dynamic models of induction and synchronous machines, fixed-speed direct-connect, wide-slip, doubly-fed, full-converter wind turbines, operation and control, and interconnection issues. Electrical and Computer Engineering 394J (Topic 12) and Electrical Engineering 394J (Topic 12) may not both be counted. Additional prerequisite: Consent of instructor.

**ECE 394L. Power Systems Apparatus and Laboratory.**

Examine the fundamentals of power systems emphasized through laboratory experiments. Explore complex power, three-phase circuits, per-unit system, transformers, synchronous machines, transmission line models, steady-state analysis, induction machines, capacitor banks, protective relaying, surge arrestors, and instrumentation. Three lecture hours and three laboratory hours a week for one semester. Only one of the following may be counted: Electrical and Computer Engineering 394L, Electrical Engineering 394L, 394V (Topic: Power Systems Apparatus and Laboratory). Prerequisite: Graduate standing.

**ECE 396K. Topics in Solid-State Device Theory.**

Explore the theory of electron, magnetic, and electro-optic devices. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of instructor.

**Topic 1: Metal Oxide Semiconductor Devices: Physics and Technology.** Electrical and Computer Engineering 396K (Topic 1) and Electrical Engineering 396K (Topic 1) may not both be counted.

**Topic 2: Semiconductor Physics.** Introduction to the fundamental physics of charge carrier states in semiconductors, charge carrier interactions among themselves and with the environment, and charge transport in semiconductors and their heterostructures. Electrical and Computer Engineering 396K (Topic 2) and Electrical Engineering 396K (Topic 2) may not both be counted. Additional prerequisite: An undergraduate-level introduction to solid-state devices and quantum mechanics.

**Topic 4: Synthesis, Growth, and Analysis of Electronic Materials.** Electrical and Computer Engineering 396K (Topic 4) and Electrical Engineering 396K (Topic 4) may not both be counted. Additional prerequisite: Consent of instructor.

**Topic 5: Superconducting Electronic Devices.** Electrical and Computer Engineering 396K (Topic 5) and Electrical Engineering 396K (Topic 5) may not both be counted.

**Topic 6: Magnetic Phenomena in Materials.** Electrical and Computer Engineering 396K (Topic 6) and Electrical Engineering 396K (Topic 6) may not both be counted. Additional prerequisite: Consent of instructor.

**Topic 7: Metal Oxide Semiconductor Integrated Circuit Process Integration.** Electrical and Computer Engineering 396K (Topic 7) and Electrical Engineering 396K (Topic 7) may not both be counted. Additional prerequisite: Consent of instructor.

**Topic 8: Ultra-Large-Scale Integration Techniques.** Examine integrated circuit processing; crystal growth and wafer preparation; epitaxial growth; oxidation, diffusion, and ion implantation; thin-film deposition techniques; and lithography and etching. Participate in an individual laboratory. Electrical and Computer Engineering 396K (Topic 8) and Electrical Engineering 396K (Topic 8) may not both be counted. Additional prerequisite: Knowledge in solid-state electronic devices.

**Topic 9: Localized versus Itinerant Electrons in Solids.** Same as Mechanical Engineering 386R (Topic 1). Description of electrons, from free atoms to crystals; band theory contrasted with crystal-field theory; evolution of electronic properties on passing from magnetic insulators to normal metals, from ionic to covalent solids, from single-valent compounds to mixed-valent systems; electron-lattice interactions and phase transitions; many examples. Only one of the following may be counted: Electrical and Computer Engineering 396K (Topic 9), Electrical Engineering 396K (Topic 9), Mechanical Engineering 386R (Topic 1). Additional prerequisite: A semester of quantum mechanics and a semester of solid-state science or technology.

**Topic 10: Ionic Conductors.** Same as Mechanical Engineering 386T (Topic 1). Only one of the following may be counted: Mechanical Engineering 386T (Topic 1), Electrical Engineering 396K (Topic 10), Electrical and Computer Engineering 396K (Topic 10).

**Topic 11: High-Temperature Superconductors.** Same as Mechanical Engineering 386T (Topic 2). Only one of the following may be counted: Mechanical Engineering 386T (Topic 2), Electrical Engineering 396K (Topic 11), Electrical and Computer Engineering 396K (Topic 11).

**Topic 12: Catalytic Electrodes.** Same as Mechanical Engineering 386T (Topic 3). Only one of the following may be counted: Mechanical Engineering 386T (Topic 3), Electrical and Computer Engineering 396K (Topic 12), Electrical Engineering 396K (Topic 12).

**Topic 13: Magnetic Materials.** Same as Mechanical Engineering 386T (Topic 4). Only one of the following may be counted: Electrical and Computer Engineering 396K (Topic 13), Electrical Engineering 396K (Topic 13), Mechanical Engineering 386T (Topic 4).

**Topic 14: Optical Interconnects.** Electrical and Computer Engineering 396K (Topic 14) and Electrical Engineering 396K (Topic 14) may not both be counted. Additional prerequisite: Consent of instructor.

**Topic 15: Optoelectronics Integrated Circuits.** Electrical and Computer Engineering 396K (Topic 15) and Electrical Engineering 396K (Topic 15) may not both be counted. Additional prerequisite: Consent of instructor.

**Topic 16: Semiconductor Lasers.** Examine the principles of compound semiconductor lasers and LEDs; bulk and quantum-well laser structures; radiative and nonradiative recombination processes; optical, electrical, and thermal properties of lasers; dynamic rate equations and modulation characteristics; lasing spectra, chirp, modal noise and linewidth; and edge-emitting and surface-emitting lasers. Electrical and Computer Engineering 396K (Topic 16) and Electrical Engineering 396K (Topic 16) may not both be counted. Additional prerequisite: Knowledge in electromagnetic engineering, quantum theory of electronic materials, and solid-state electronic devices; and consent of instructor.

**Topic 17: Localized-Electron Phenomena.** Same as Mechanical Engineering 386R (Topic 2). Analysis of the variation in physical properties versus chemical composition of several groups of isostructural transition-metal compounds. Only one of the following may be counted: Electrical and Computer Engineering 396K (Topic 17), Electrical Engineering 396K (Topic 17), Mechanical Engineering 386R (Topic 2). Additional prerequisite: A semester of solid-state science and/or quantum mechanics.

**Topic 19: Plasma Processing of Semiconductors I.** Explore plasma analysis using Boltzmann and fluid equations; plasma properties, including Debye length, quasineutrality, and sheaths; basic collisional properties, including Coulomb and polarization scattering; analysis
of capacitive and wave-heated plasma processing reactors. Electrical and Computer Engineering 396K (Topic 19) and Electrical Engineering 396K (Topic 19) may not both be counted. Additional prerequisite: Consent of instructor.

**Topic 20: Plasma Processing of Semiconductors II.** Explore plasma chemistry and equilibrium; analysis of molecular collisions; chemical kinetics and surface processes; plasma discharge particle and energy balance; analysis of inductive and DC plasma processing reactors; plasma etching, deposition, and implantation. Electrical and Computer Engineering 396K (Topic 20) and Electrical Engineering 396K (Topic 20) may not both be counted. Additional prerequisite: Consent of instructor.

**Topic 21: Nanoscale Device Physics and Technologies.** Examine physical principles and operational characteristics of semiconductor devices. Explore the physics of metal-oxide-semiconductor field-effect transistors (MOSFET) and bipolar junction transistors (BJT). Discuss short-channel effects, ultra-thin oxide, and high-k gate dielectrics; semiconductor interface characterization; hot-electron effects; lightly-doped drain devices (LDD); subthreshold characteristics; complementary-symmetry metal-oxide- semiconductor (CMOS) latchup; gate-induced leakage current of MOSFETs; poly-depletion and quantum mechanical effects; silicon on insulator (SOI) devices; strained-Si; advanced 3-D devices and bandgap narrowing effect; Webster effect; Kirch effect; punchthrough and avalanche breakdown; base transit time for bipolar transistors; and scaling issues of both BJT and MOSFETs. Electrical and Computer Engineering 396K (Topic 21) and Electrical Engineering 396K (Topic 21) may not both be counted. Additional prerequisite: Knowledge in solid-state electronic devices.

**Topic 22: Semiconductor Microlithography.** Electrical and Computer Engineering 396K (Topic 22) and Electrical Engineering 396K (Topic 22) may not both be counted. Additional prerequisite: Consent of instructor.

**Topic 23: Semiconductor Heterostructures.** Electrical and Computer Engineering 396K (Topic 23) and Electrical Engineering 396K (Topic 23) may not both be counted. Additional prerequisite: Consent of instructor.

**Topic 24: Microwave Devices.** Electrical and Computer Engineering 396K (Topic 24) and Electrical Engineering 396K (Topic 24) may not both be counted. Additional prerequisite: Consent of instructor.

**Topic 25: Organic and Polymeric Semiconductor Devices.** Electrical and Computer Engineering 396K (Topic 25) and Electrical Engineering 396K (Topic 25) may not both be counted. Additional prerequisite: Consent of instructor.

**Topic 26: Microelectromechanical Systems.** Electrical and Computer Engineering 396K (Topic 26) and Electrical Engineering 396K (Topic 26) may not both be counted. Additional prerequisite: Consent of instructor.

**Topic 27: Charge Transport in Organic Semiconductors.** Electrical and Computer Engineering 396K (Topic 27) and Electrical Engineering 396K (Topic 27) may not both be counted. Additional prerequisite: Consent of instructor.

**Topic 28: Magnetic Materials and Devices.** Explore the fundamentals and applications of magnetic materials, in particular to nano-devices. Examine the origin of magnetism in oxides and metals, magnetic switching mechanisms, and how spin structures arise such as domain walls and topologically-protected spin states. Discuss applications to future computing nano-devices. Only one of the following may be counted: Electrical and Computer Engineering 396K (Topic 28), Electrical Engineering 396K (Topic 28), 396V (Topic: Magnetic Material/Devices). Additional prerequisite: Undergraduate-level course or background in electricity and magnetism strongly recommended; undergraduate-level course or background in quantum mechanics also recommended.

**Topic 29: Thin Film Transistors.** Explore device physics of thin-film and 2D transistors, charge transport phenomena, and materials aspects. Discuss organic polymer and amorphous inorganic semiconductors (oxides and silicon). Study organic polymer and amorphous inorganic semiconductors (oxides and silicon), and field effect transistors with 2D semiconductors such as transition metal dichalcogenides (TMDs). Review change of properties with layer thickness, device physics and transport, contacts, and performance characteristics and discuss unusual properties of thin film transistors (TFTs) such as light emission and ambipolar charge transport, lateral junctions, and ionic gating. Electrical and Computer Engineering 396K (Topic 29) and Electrical Engineering 396V (Topic: Thin Film Transistors) may not both be counted. Additional prerequisite: Undergraduate course in semiconductor devices or the equivalent, or consent of instructor.

**Topic 30: Solar Energy Conversion Devices.** Study radiation from the Sun and the solar energy flux on Earth, and discuss the principles of semiconductors and semiconductor device physics relevant to diodes under various bias conditions. Examine the physics of pn junction under solar illumination and with various recombination mechanisms. Review the most important materials families of solar cells including single crystal silicon; polysilicon; amorphous silicon; solar cells based on CdTe and copper indium diselenide and related compounds; and III-V compound semiconductor heterojunction solar cells including tandem cells and space-grade solar cells. Discuss new materials technologies including organic and perovskite-based solar cells. Electrical and Computer Engineering 396K (Topic 30) and Electrical Engineering 396V (Topic: Solar Energy Conversion Devices) may not both be counted.

**ECE 396M. Topics in Quantum Electronics.** Examine quantum mechanical principles as applied to electron devices, lasers, and electro-optics; material properties and interaction of radiation and material. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing in electrical engineering or physics.

**Topic 1: Introductory Quantum Electronics.** Examine basic quantum mechanics and applications to solid-state phenomena and lasers. Electrical and Computer Engineering 396M (Topic 1) and Electrical Engineering 396M (Topic 1) may not both be counted.

**Topic 2: Quantum Information Hardware.** Explore various hardware platforms used for quantum information processing from an applied physics perspective. Examine the physical requirements for a hardware platform to process quantum information. Review characteristics of current hardware platforms such as superconducting quantum circuits, atomic systems, solid-state spins and optical photons. Electrical and Computer Engineering 396M (Topic 2) and Electrical Engineering 396V (Topic: Quantum Information Hardware) may not both be counted.

**ECE 396N. Topics in Nanotechnology.** Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

**Topic 1: Semiconductor Nanostructures.** Examine the theoretical framework for the understanding of electronic properties and electron transport in quantum confined devices; two-dimensional electron systems in semiconductor heterostructures; quantum wires; quantum dots; spintronic devices; and growth and fabrication techniques. Electrical and Computer Engineering 396N (Topic 1) and Electrical Engineering 396N (Topic 1) may not both be counted. Additional prerequisite: Knowledge in quantum theory of electronic materials and solid-state electronic devices.

**Topic 2: Carbon and 2D Devices.** Introduction to the material properties and device physics of carbon nanotubes, graphene and...
related 2D materials; science and technology of carbon nanomaterials and their electronic, optical, and sensor properties; and a basic review of quantum mechanics and elementary theory of solids. Examine carbon synthesis, sensor devices, energy devices, interconnects, transistors, and circuit applications of carbon nanomaterials. Explore 2D materials beyond graphene including transitional metal dichalcogenides. Electrical and Computer Engineering 396N (Topic 2) and 396V (Topic: Carbon and 2D Devices) may not both be counted.

ECE 396V. Topics in Solid-State Electronics.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

Topic 5: Introduction to Solid-State Properties of Materials. Same as Materials Science and Engineering 386P (Topic 4) and Mechanical Engineering 386P (Topic 4). Introduction to the electronic, magnetic, and optical properties of materials. Solid-state properties of metals, semiconductors, and ceramics; fundamental concepts needed for the description of these properties, using an introductory-level description of the electronic structure of solids. Only one of the following may be counted: Electrical Engineering 396V (Topic 5), Electrical and Computer Engineering 396V (Topic 5), Mechanical Engineering 386P (Topic 4), Materials Science and Engineering 386P (Topic 4). Additional prerequisite: Graduate standing and consent of instructor.

Topic 6: Advanced Semiconductor Lasers. Examine dynamic properties of semiconductor lasers; intensity, phase, and frequency noise; dynamic lasing spectra, chirp, and mode partition noise; injection locking and optical feedback; short pulse generation by mode-locking and gain switching; single-mode distributed feedback, distributed Bragg reflector (DBR), and coupled-cavity lasers; wavelength-tunable single-mode lasers; externally modulated lasers; coherent high-power laser arrays; quantum-dot lasers and amplifiers; vertical-cavity surface-emitting lasers; and integrated wavelength-division multiplexing (WDM) laser arrays and photonic integrated circuits. Electrical and Computer Engineering 396V (Topic 6) and Electrical Engineering 396V (Topic 6) may not both be counted. Additional prerequisite: Electrical and Computer Engineering 396K (Topic 16) or the equivalent.

Topic 7: Optoelectronics for Optical Networking. Examine advanced optical communication systems and optoelectronics technologies, including dense and coarse wavelength division multiplexing, soliton transmission, coherent detection, subcarrier multiplexing, nonregenerative erbium-doped fiber amplifier (EDFA) networks, and Raman amplification. Explore photonic switching system architectures and optical switching technologies, including both passive and active components. Electrical and Computer Engineering 396V (Topic 7) and Electrical Engineering 396V (Topic 7) may not both be counted. Additional prerequisite: Electrical and Computer Engineering 383P (Topic 6) and 396K (Topic 16), or their equivalents, are recommended.

Select and research a problem with approval of the department. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. Electrical and Computer Engineering 197C and Electrical Engineering 197C may not both be counted. Offered on the credit/no credit basis only. Prerequisite: Graduate standing in electrical engineering and consent of the graduate advisor.

Problem selected by the student with approval of the department. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. Electrical and Computer Engineering 197G and Electrical Engineering 197G may not both be counted. Offered on the letter-grade basis only. Prerequisite: Graduate standing in electrical engineering and consent of instructor and the graduate advisor.

ECE 397K. Advanced Topics in Electrical Engineering.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing in electrical engineering and consent of instructor.

ECE 197M, 297M, 397M. Graduate Research Internship.
Engage in research associated with enrollment in the Graduate Research Internship Program (GRIP). For every hour of credit earned, the equivalent of one lecture hour a week for one semester. Electrical and Computer Engineering 197M and Electrical Engineering 197M may not both be counted. Offered on the credit/no credit basis only. Prerequisite: Graduate standing in electrical engineering and consent of instructor.

ECE 397N. Conference Course.
The equivalent of three lecture hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing in electrical and computer engineering and consent of instructor.

ECE 197S, 297S, 397S. Graduate Seminar in Electrical Engineering.
For each semester hour of credit earned, one lecture hour a week for one semester. May be repeated for credit. Prerequisite: Graduate standing.

ECE 698. Thesis.
The equivalent of three lecture hours a week for two semesters. Electrical and Computer Engineering 698 and Electrical Engineering 698 may not both be counted. Offered on the credit/no credit basis only. Prerequisite: For 698A, graduate standing in electrical and computer engineering and consent of the graduate advisor; for 698B, Electrical and Computer Engineering 698A (or Electrical Engineering 698A).

ECE 398R. Master's Report.
Prepare a report to fulfill the requirement for the Master's degree under the report option. The equivalent of three lecture hours a week for one semester. Electrical and Computer Engineering 398R and Electrical Engineering 398R may not both be counted. Offered on the credit/no credit basis only. Prerequisite: Graduate standing in electrical and computer engineering and consent of the graduate advisor.

ECE 398T. Supervised Teaching in Electrical Engineering.
Teach under close supervision for one semester. Attend group meetings or individual consultations, and submit reports as required. The equivalent of three lecture hours a week for one semester. Electrical and Computer Engineering 398T and Electrical Engineering 398T may not both be counted. Offered on the credit/no credit basis only. Prerequisite: Graduate standing and appointment as a teaching assistant.

May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Admission to candidacy for the doctoral degree.

Professional Courses

ECO - Economics

Economics: ECO

Lower-Division Courses

ECO 301. Introduction to Economics.
Introduction to the structure and functioning of the aggregate economy and specific markets, including the labor market, housing market, and
financial markets. Basic concepts of market regulation and monetary and fiscal policy. Concepts used in the social and behavioral sciences for measuring and interpreting economic data. Three lecture hours a week for one semester. May not be counted toward a major in economics.

**ECO 101S. Professional Development and Career Planning.**

Restricted to economics majors. Discuss issues surrounding career planning implementation and evaluation in order to establish a job search, including resumes, networking, and interviewing techniques. Focus on career management as a lifelong process. One lecture hour a week for one semester. Only one of the following may be counted: Economics 101S, Liberal Arts 101M, Liberal Arts Honors 104H. Offered on the letter-grade basis only.

**ECO 304K (TCCN: ECON 2302). Introduction to Microeconomics.**

Analysis of the economic behavior of individual consumers, firms, and workers. Demand, supply, and market equilibrium. Impact of taxes, externalities, and market power on equilibrium. Three lecture hours a week for one semester, with additional hours to be arranged.

**ECO 304L (TCCN: ECON 2301). Introduction to Macroeconomics.**

Analysis of the economy as a whole. Measurement of output, the price level, and employment. Basic theories of the determination of Gross domestic product, investment and growth, and inflation. Introduction to fiscal policy and monetary policy. Three lecture hours a week for one semester, with additional hours to be arranged. Prerequisite: Economics 304K with a grade of at least C-.

**ECO 305, 205, 305. Introductory Topics in Economics.**

Restricted to students in the College of Liberal Arts. Explore topics covering computational and analytic methods and software platforms that are commonly used by economists. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. May be repeated for credit when the topics vary.

**ECO 318Q. Supervised Research.**

Individual instruction. May be repeated once for credit when the research topics vary. Prerequisite: Economics 304K and 304L with a grade of at least C- in each.

This course is used to record credit the student earns while enrolled at another institution in a program administered by the University’s Study Abroad Office. Credit is recorded as assigned by the study abroad adviser in the Department of Economics. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

**Upper-Division Courses**

**ECO 420K. Microeconomic Theory.**

Economic theory of the behavior of individuals, households, firms, and markets. Roles of relative prices and information, with a focus on constrained optimization. Four lecture hours a week for one semester. Only one of the following may be counted: Finance 321K, Economics 420K, 420S, 421K. Prerequisite: Economics 304K and 304L with a grade of at least C- in each; Mathematics 408Q, or Mathematics 408K and 408L, or 408C and 408D, or 408C and 408L, or 408N and 408S, or 408K and 408S, or 408C and 408S, or 408L and 408R, or 408R and 408S, or 408L and 408N, or 408L and 408R, or 408N and 408S, or 408Q and 408S, or 408R and 408S, with a grade of at least C- in each.

**ECO 320L. Macroeconomic Theory.**

Theories of the determination of output, employment, and the price level. Basic models of growth. Design of monetary and fiscal policies, and the mechanisms by which they affect the economy. Three lecture hours a week for one semester. Prerequisite: Economics 420K, 420S, or 421K with a grade of at least C-.

**ECO 420S. Mathematical Microeconomic Theory with Advanced Applications.**

Examine mathematical treatment of microeconomic theory with application to real world subjects. Explore mathematical methods used by economists and apply them to analyze consumer behavior, choice under uncertainty, theory of the firm, game theory and general equilibrium. Four lecture hours a week for one semester. Only one of the following may be counted: Economics 420K, 420S, 421K, Finance 321K. Prerequisite: Economics 304K and 304L with a grade of at least C- in each; Economics 329 with a grade of at least C; and Mathematics 408C and 408D, or 408C and 408L, or 408C and 408S, or 408K and 408L, or 408K and 408S, or 408L and 408N, or 408L and 408Q, or 408L and 408R, or 408N and 408S, or 408Q and 408S, or 408R and 408S, with a grade of at least C- in each.

**ECO 321. Public Economics.**

Study of appropriate allocations of economic activity between government (federal, state, and local) and the private sector. The workings of social security, welfare, education, pollution control, deregulation, taxation; and proposals for reform. Three lecture hours a week for one semester. Prerequisite: Economics 420K, 420S, 421K, or Finance 321K with a grade of at least C-.

**ECO 421K. Microeconomic Theory For Business.**

Restricted to business majors. May not count toward a major in economics. Microeconomic analysis and applications for business majors. Preferences, including behavioral factors. Consumer demand, industry supply, and market equilibrium. Decision-making under uncertainty. Information problems, moral hazard, and adverse selection. Game theory and behavioral game theory. Applications include insurance markets, financial markets, contracts, and strategic behavior in business settings. Four lecture hours a week for one semester. Only one of the following may be counted: Economics 420K, 420S, 421K, Finance 321K. Prerequisite: Economics 304K and 304L with a grade of at least C- in each; Economics 329 with a grade of at least C; Mathematics 408Q, or Mathematics 408K and 408L, or 408C and 408D, or 408C and 408L, or 408N and 408S, or 408K and 408S, or 408C and 408S, or 408L and 408R, or 408R and 408S, or 408L and 408N, with a grade of at least C- in each.

**ECO 322. Money and Banking.**

Theories of financial intermediation and the role played by money. Financial policy and monetary policy in theory and practice. Three lecture hours a week for one semester. Economics 322 and Finance 354 may not both be counted. Prerequisite: Economics 420K, 420S, 421K or Finance 321K with a grade of at least C-.

**ECO 323L. Political Economy.**

Economic issues in the political arena. Use of microeconomic tools to study issues associated with collective decision-making, including the role of government in a market economy, and the formulation and implementation of government policies. Three lecture hours a week for one semester. Economics 323L and 330T (Topic: Political Economy) may not both be counted. Prerequisite: One of the following with a grade of at least C: Economics 301 or 304K.
ECO 324. Introduction to Labor Economics.
Labor markets in modern economies. Role of institutions and policies in shaping labor market outcomes for individuals and businesses. Three lecture hours a week for one semester. Prerequisite: Economics 420K, 420S, 421K, or Finance 321K with a grade of at least C-.

ECO 325K. Health Economics.
Explores medical care as a commodity, demand for health and medical services, economic behavior of medical care providers, and the functioning of medical insurance markets. Government regulation and provision of health care and health insurance. Three lecture hours a week for one semester. Only one of the following may be counted: Economics 325K, 325L, 330T (Topic 1), 350K (Topic 9). Prerequisite: Economics 420K, 420S, 421K, or Finance 321K with a grade of at least C-.

ECO 325L. Economics of Health.
Explore the application of basic microeconomics to the study of health and issues arising in the provision of medical care. Examine the demand for and the supply of medical care. Discuss the roles of the private sector and government in the provision of medical insurance. Analyze the regulation of health care and health insurance. Three lecture hours a week for one semester. Only one of the following may be counted: Economics 325K, 325L, 330T (Topic: Health Economics), 330T (Topic 1), 350K (Topic: Health Economics), and 350K (Topic 9). Prerequisite: Economics 304K with a grade of at least C-.

ECO 326L. Economics of Education.
Applications of economic principles and empirical methods to education, including the concept of human capital, economic returns to education, the determinants and measurement of teacher impact, the roles of school inputs and factors outside of school, and the market for higher education. Methodology for evaluating education policy. Three lecture hours a week for one semester. Prerequisite: Economics 420K, 420S, 421K, or Finance 321K with a grade of at least C-.

Economic systems in theory and practice. Role of government and regulation. Three lecture hours a week for one semester. Prerequisite: Economics 304K and 304L with a grade of at least C- in each.

ECO 328. Industrial Organization.
Organization of industries and markets; competition, monopoly, and oligopoly. Introduction to antitrust policy, regulatory policy, and other alternatives. Three lecture hours a week for one semester. Prerequisite: Economics 420K or 420S with a grade of at least C-.

Interpretation of economic data. Introduction to statistical models, estimation, and inference in economics. Three lecture hours a week for one semester. Prerequisite: Economics 304K and 304L with a grade of at least C- in each; Mathematics 408Q, or Mathematics 408K and 408L, or 408C and 408D, or 408C and 408L, or 408N and 408S, or 408K and 408S, or 408C and 408S, or 408L and 408R, or 408R and 408S, or 408L and 408N, with a grade of at least C- in each.

Topics in Economics.
This course is used to record credit the student earns while enrolled at another institution in a program administered by the University's Study Abroad Office. Credit is recorded as assigned by the study abroad adviser in the Department of Economics. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

ECO 330T. Topics in Economics.
Open to nonmajors. Topics cover aspects of economic theory, applications, and policy. Three lecture hours a week for one semester. Economics 330T and 350K may not both be counted unless the topics vary. May be repeated for credit when the topics vary. Prerequisite: Economics 304K with a grade of at least C-; additional prerequisites may vary with the topic.

Topic 2: Introduction to Law and Economics. Only one of the following may be counted: Economics 330T (Topic 2), 349K (Topic: Law and Economics), 349K (Topic 1).

ECO 333K. Development Economics.
Same as Urban Studies 321D. Introduction to theories of economic development. Economic analysis of leading issues. Three lecture hours a week for one semester. Only one of the following may be counted: Economics 333K, Urban Studies 351 (Topic 4), 321D. Prerequisite: Economics 420K, 420S, 421K, or Finance 321K with a grade of at least C-.

ECO 333L. Development and Population.
Microeconomics of economic development, population growth and the age structure of the population, and their impact on the environment. Three lecture hours per week for one semester. Economics 333L and 372M (Topic: Development and Population) may not both be counted. Prerequisite: Economics 420K, 420S, 421K, or Finance 321K with a grade of at least C-.

ECO 334K. Urban Economics.
Same as Urban Studies 322E. Economic analysis of urban areas, emphasizing current problems, such as spatial concentration of poverty, lack of access to jobs and financial services, and transportation systems. Examines the role of policy in addressing these problems. Three lecture hours a week for one semester. Only one of the following may be counted: Economics 334K, Urban Studies 322E, 351 (Topic 2). Prerequisite: Economics 420K, 420S, 421K, or Finance 321K with a grade of at least C-.

ECO 334L. Regional Economics.
Spatial aspects of economics, including concepts, theories, and policy applications. Three lecture hours a week for one semester. Economics 334L and Urban Studies 351 (Topic 3) may not both be counted. Prerequisite: Economics 420K, 420S, 421K, or Finance 321K with a grade of at least C-.

ECO 334M. Migration Economics and Policy.
Immigration policy of the United States compared to that of other countries. Determinants of migration. Characteristics of migrants. Effects of migration on the country of origin and the receiving country. Unauthorized immigration to the United States. Three lecture hours a week for one semester. Economics 334M and 349K (Topic: Migration Economics and Policy) may not both be counted. Prerequisite: The following with a grade of at least C-: Economics 420K, 420S, 421K, or Finance 321K, and Economics 341K or 441K.

ECO 335K. Energy Economics.
Economic analysis of the markets for resources that supply energy, including coal, oil, natural gas, and shale gas, and the market for electricity. Principles of valuation and optimal dynamic allocation of energy resources. Financial contracts and risk management in energy markets. Regulation of energy markets. Three lecture hours a week for one semester. Prerequisite: Economics 420K, 420S, 421K, or Finance 321K with a grade of at least C-.
ECO 336M. Economics of Auctions.
Explore auctions as a mechanism for allocating resources. Analyze bidders’ strategic interactions using game theory. Investigate market rules designed to attain specific policy objectives. Utilize empirical methods to analyze auction data. Three lecture hours a week for one semester. Economics 336M and 350K (Topic: Economics of Auctions) may not both be counted. Prerequisite: Economics 420K or 420S with a grade of at least C-.

Theories explaining the location of production facilities and patterns in international trade. Implications of international trade for per capita income, growth, and inequality. Three lecture hours a week for one semester. Only one of the following may be counted: Economics 339K, European Studies 348 (Topic 2), International Business 320F, 350, 350S. Prerequisite: Economics 420K, 420S, 421K, or Finance 321K with a grade of at least C-.

ECO 339L. International Finance.
Exchange rates and foreign exchange markets; reasons for financial globalization; open-economy macroeconomics; exchange rate regimes (fixed and floating exchange rates, currency boards, and currency areas such as the euro zone); central bank accumulation of foreign exchange reserves; and sovereign debt crises and currency crashes. Reasons for different exchange rate arrangements and other policies are explored. Three lecture hours a week for one semester. Prerequisite: Economics 420K, 420S, 421K, or Finance 321K with a grade of at least C-, and Economics 320L with a grade of at least C-.

ECO 341K, 441K. Introduction to Econometrics.
Parameter estimation and inference in regression models. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. Prerequisite: Economics 304K and 304L with a grade of at least C-, or a grade of at least C in each. Economics 336M and 350K (Topic: Economics of Auctions) may not both be counted. Prerequisite: Economics 420K or 420S, 421K, or Finance 321K with a grade of at least C-, and Economics 320L with a grade of at least C-.

ECO 342L. Advanced Econometrics.
Explore advanced methods of causal inference and prediction. Three lecture hours a week for one semester. Economics 342L and 348K (Topic 1) may not both be counted. Prerequisite: Economics 420K or 420S, and 431K or 441K with a grade of at least C- in each.

ECO 342M. Applied Econometrics and Data Analysis.
Explore advanced regression analysis, maximum likelihood, discrete choice models, nonparametric methods, causality, and regression discontinuity design. Evaluate the use of these techniques in applied research and apply them in a variety of data sets. Three lecture hours a week for one semester. Economics 342M and 348K (Topic: Applied Econometrics/Data) may not both be counted. Prerequisite: Economics 341K or 441K, and 420K or 420S with a grade of at least C-.

ECO 348K. Advanced Topics in Econometrics.
Topics in econometric modeling and estimation. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Economics 341K or 441K, and 420K or 420S with a grade of at least C- in each.

ECO 349K. International Business.
Explore international business and global business strategy. Theories explaining the location of production facilities and patterns in international trade. Implications of international trade for per capita income, growth, and inequality. Three lecture hours a week for one semester. Prerequisite: Economics 329, Mathematics 378K, Mechanical Engineering 335, Chemical Engineering 253K, Economics 329, Mathematics 378K, Mechanical Engineering 335, or Statistics and Data Sciences 378 with a grade of at least C-.

ECO 350K. Advanced Topics in Economics.
Topics in economic theory, and the application of theory to empirical models. Three lecture hours a week for one semester. Economics 330T and 350K may not both be counted unless the topics vary. May be repeated for credit when the topics vary. Prerequisite: Economics 420K or 420S with a grade of at least C-; additional prerequisites may vary with the topic.

ECO 351N. Economic Principles of Managerial Decisions.
Use of economic concepts and models to make strategic business decisions (adverse selection, game theory, price discrimination, strategic commitment, barriers to entry, network effects). Economics of strategic responses to the legal environment (regulations, antitrust policies, intellectual property, fiduciary duty, liability). Three lecture hours a week for one semester. Only one of the following may be counted: Economics 350K (Topic: Economic Principles of Managerial Decisions), 351N, Finance 172 (Topic 10), 272 (Topic 10), 372 (Topic 10). Prerequisite: Economics 420K, 420S, 421K, or Finance 321K with a grade of at least C-.

ECO 352K. Business Strategy.
Economic analysis of business strategy, including introducing new products, vertically integrating, bundling goods, pricing, distribution, mergers, and product differentiation. Relevant aspects of antitrust law. Case studies of specific firms. Three lecture hours a week for one semester. Prerequisite: Economics 420K, 420S, 421K, or Finance 321K with a grade of at least C-.

ECO 352R. Economics of Entrepreneurship.
Explore the application of economics to the practice of starting or expanding a business. Examine evaluation of the market; strategic decisions, including pricing, advertising, location, and deterring competitors; raising capital; and employee compensation. Three lecture hours a week for one semester. Economics 349K (Topic: Economics of Entrepreneurship) and 352R may not both be counted. Prerequisite: Economics 341K or 441K, and 420K or 420S with a grade of at least C- in each.
ECO 353K. Antitrust Law and Economics.
Economic analysis of antitrust law intended to deter firms from engaging in anti-competitive conduct that harms consumers, including mergers that impede competition, price-fixing, and anti-competitive practices by a dominant firm in an industry. Focus on various industries and select antitrust cases. Three lecture hours a week for one semester. Prerequisite: Economics 420K, 420S, 421K, or Finance 321K with a grade of at least C-.

ECO 353M. Empirical Public Economics.
Use of data to evaluate public policy issues. Issues considered include the effect of having health insurance on health outcomes; the relationship between earning power and the type of college attended; charter schools and educational outcomes; the effect of an increase in the minimum wage on employment; and the welfare effects of bank bailouts. Three lecture hours a week for one semester. Only one of the following may be counted: Economics 353M, 361 (Topic: Empirical Public Economics), 361 (Topic 1) Prerequisite: The following with at least a grade of C-: Economics 420K, 420S, 421K or Finance 321K, and Economics 341K or 441K.

ECO 354K. Introductory Game Theory.
Introduction to the formal study of interdependent decision making. Applications of game theory include pricing and advertising strategies, labor-management bargaining, and tariff negotiations. Three lecture hours a week for one semester. Prerequisite: Economics 329 and 420K, 420S, 421K, or Finance 321K with a grade of at least C- in each.

ECO 354M. Experimental Economics.
Examine what economic theory has to say about economic choices and strategic interactions and what people actually do when faced with strategic decisions. Conduct experiments to either identify systematic deviations or confirm theoretical predictions. Explore how economic experiments are useful in reshaping economic thinking. Three lecture hours a week for one semester. Economics 330T (Topic: Experimental Economics) and 354M may not both be counted. Prerequisite: Economics 304K with a grade of at least C-.

Same as Latin American Studies 355 (Topic 1). Analysis of the economies of Latin America. Issues may include the structure and functioning of cities, rural-urban migration, the sectoral composition of GDP and employment, and determinants of growth. Three lecture hours a week for one semester. Only one of the following may be counted: Economics 355, Latin American Studies 355 (Topic 1), Urban Studies 351 (Topic 1). Prerequisite: Economics 304K and 304L with a grade of at least C- in each.

ECO 358R. Supervised Research.
The equivalent of three lecture hours a week for one semester. Economics 358Q and 358R may not both be counted. May be taken twice for credit. May be repeated for credit. Prerequisite: Economics 329 and 420K or 420S with a grade of at least C- in each and consent of advisor.

ECO 359M. Environmental and Natural Resource Economics.
Optimal use of exhaustible and renewable resources, including fuels, minerals, fisheries, forests, and water; resource scarcity and economic growth; valuation of nonmarketed environmental amenities; the economics of pollution control instruments, including taxes, permits, direct regulation, and negotiation; environmental quality and international trade; the economics of global climate change; pollution control policy in practice. Three lecture hours a week for one semester. Prerequisite: Economics 329 and 420K or 420S with a grade of at least C- in each.

ECO 363C. Computational Economics.
Three lecture hours a week for one semester. Prerequisite: Economics 320L and 420K or 420S with a grade of at least C- in each.

ECO 367R. Monetary Economics.
Theories explaining the role of money in the economy. Three lecture hours a week for one semester. Prerequisite: Economics 420K, 420S, 421K, or Finance 321K with a grade of at least C-, and Economics 320L with a grade of at least C-.

Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

ECO 369F. Financial Economics.
Economic analysis of the operation of financial markets, including arbitrage theory, asset pricing, and corporate finance. Three lecture hours a week for one semester. Prerequisite: Economics 329 and 420K or 420S with a grade of at least C- in each.

ECO 370E. Economics of Gender, Race, and Ethnicity.
Study large and persistent differences in economic outcomes across genders and between major racial and ethnic groups in the United States. Examine empirical evidence for, and gaps in, economic models explaining these differences. Three lecture hours a week for one semester. Economics 330T (Topic: Econ: Gender/Race/Ethnicity) and 370E may not both be counted. Prerequisite: Upper-division standing and Economics 304K with a grade of at least C-.

ECO 370M. Behavioral Economics.
Explaining how heuristics result in biases in individual decisions and anomalies in the market place. Applications to choice under uncertainty, intertemporal choice, choice in a strategic environment, and behavioral finance. Three lecture hours a week for one semester. Only one of the following can be counted: Economics 330T (Topic: Behavioral Economics), 350K (Topic: Behavioral Economics), 370M. Prerequisite: Economics 301 or 304K with a grade of at least C-.

ECO 371M. Social Economics: Outside the Market.
Explore concepts of social welfare, fairness, and social choice procedures. Discuss economic analysis of social interactions that take place outside of markets. Three lecture hours a week for one semester. Economics 330T (Topic: SocI Eco: Eco Outside the MkI) and 371M may not both be counted. Prerequisite: Upper-division standing and Economics 304K with a grade of at least C-.

ECO 376N. Personnel Economics.
Use of microeconomic theory to analyze how firms make decisions involving human resources, including recruiting and hiring strategies, training and investment in worker skills, evaluating and motivating worker performance, and job design. Three lecture hours a week for one semester. Economics 376M (Topic 1) and 376N may not both be counted. Prerequisite: Economics 420K, 420S, 421K, or Finance 321K with a grade of at least C-.

ECO 378H. Honors Tutorial Course I.
Supervised individual reading, research, and writing of a substantial paper on a special topic in the field of economics. Conference course. Prerequisite: Upper-division standing, admission to the Economics Honors Program, and consent of the honors adviser.
ECO 379C. Individual Conference Course.
Supervised individual study of selected problems in economics. Conference course. May not be counted toward the twenty-four semester hours in economics required for the major in economics. May be repeated for credit. Prerequisite: Upper-division standing and consent of instructor. Students should ordinarily have completed six semester hours of upper-division coursework in economics and coursework with supervising instructor.

ECO 379E. Internship in Economics.
Conduct research while working in an appropriate government agency or private business. Ten hours of fieldwork a week for one semester. May be taken twice for credit. May be repeated for credit. Offered on the pass/fail basis only. Prerequisite: Consent of advisor. Economics 420K or 420S with a grade of at least C.

ECO 379H. Honors Tutorial Course II.
Supervised individual reading, research, and writing of a substantial paper on a special topic in the field of economics. Conference course. Prerequisite: Economics 378H.

Graduate Courses

ECO 180, 380, 680, 980. Research Course.
For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. May be repeated for credit. Prerequisite: Graduate standing and consent of instructor and the graduate advisor in economics.

ECO 180D, 380D. Internship in Economics.
Restricted to Master's students in the Economics Option III program. Practical working involvement with an appropriate business, government or research agency, or similar institution. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester; additional hours to be arranged. Prerequisite: Consent of the program adviser.

ECO 380M. Regional Economics.
Survey of theoretical and empirical literature related to location theory, regional development, regional disparities, growth and function of cities, and political economy of spatial planning. Three lecture hours a week for one semester. Prerequisite: Graduate standing, six semester hours of upper-division coursework in economics, and six additional semester hours of upper-division coursework in social science or business.

ECO 380N. Urban Economics.
Provides an economic analysis of pressing urban problems such as poverty, housing, transportation, environment, and finance. Three lecture hours a week for one semester. With consent of instructor, may be repeated for credit when the topics vary. Prerequisite: Graduate standing, six semester hours of upper-division coursework in economics, and six additional semester hours of upper-division coursework in social science or business.

ECO 180P, 380P. Internship in Economics.
Restricted to economics PhD students. Practical working involvement with an appropriate business, government or research agency, or similar institution. For each semester hour of credit earned, one lecture hour a week for one semester; additional hours to be arranged. Offered on the credit/no credit basis only. Prerequisite: Graduate standing and consent of the graduate adviser.

ECO 381K. Seminar in Money and Banking.
Topics include monetary policy and problems, theory of central banking, and money and banking history. The equivalent of three lecture hours a week for one semester. With consent of instructor, may be repeated for credit when the topics vary. Prerequisite: Graduate standing.

ECO 383K. Seminar in General Economic History.
Same as History 383L. A historical study of economic development and economic policy. The equivalent of three lecture hours a week for one semester. With consent of instructor, may be repeated for credit when the topics vary. Prerequisite: Graduate standing, six semester hours of upper-division coursework in economics or related history or government, and six additional semester hours of upper-division coursework in social science or business.

ECO 384G. Seminar in International Economics.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

ECO 384H. Seminar in Public Finance.
Analysis of public expenditure and taxation. Three lecture hours a week for one semester. Economics 382L and 384H may not both be counted unless the topics vary. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

ECO 384J. Seminar in Development Economics.
Analysis includes theories of economic development and planning. Three lecture hours a week for one semester. Economics 380K and 384J may not both be counted unless the topics vary. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

ECO 384K. Industrial Organization.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

ECO 384N. Resource Economics.
Definition, measurement, production, and conservation of renewable and exhaustible resources; models of economic growth and resources; world distribution and consumption; United States resource policy. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of instructor.

ECO 385C. Probability and Statistics.
Three lecture hours a week for one semester. Economics 385C and 392M (Topic 19) may not both be counted. Prerequisite: Graduate standing.

ECO 385D. Mathematics for Economists.
Three lecture hours a week for one semester. Economics 385D and 392M (Topic 8) may not both be counted. Prerequisite: Graduate standing.
ECO 385K. Labor Economics.
Analysis of the empirical and theoretical factors that influence labor markets. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

Topic 1: Introduction to Labor Economics.
Topic 3: Advanced Labor Economics. Economics 385K (Topic 2) and 385K (Topic 3) may not both be counted.

ECO 386C. Microeconomics I.
Three lecture hours a week for one semester. Economics 386C and 387L (Topic 1) may not both be counted. Prerequisite: Graduate standing.

ECO 386D. Microeconomics II.
Three lecture hours a week for one semester. Economics 386D and 387L (Topic 3) may not both be counted. Prerequisite: Graduate standing.

ECO 386E. Seminar in Advanced Microeconomics.
Three lecture hours a week for one semester. Economics 386E and 387L may not both be counted unless the topics vary. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

Topic 1: Introduction to Game Theory. Economics 386E (Topic 1) and 387L (Topic 27) may not both be counted.
Topic 2: Applications of Game Theory. Economics 386E (Topic 2) and 387L (Topic 28) may not both be counted.
Topic 3: Advanced Microeconomic Analysis. Economics 386E (Topic 3) and 387L (Topic 26) may not both be counted.
Topic 4: Mathematical Economics. Economics 386E (Topic 4) and 387L (Topic 24) may not both be counted.
Topic 5: Experimental Methods in Economics.
Topic 6: Health Economics. Economics 386E (Topic: Health Economics) and Economics 386E (Topic 6) may not both be counted.

ECO 387C. Macroeconomics I.
Three lectures a week for one semester. Economics 387C and 387L (Topic 2) may not both be counted. Prerequisite: Graduate standing.

ECO 387D. Macroeconomics II.
Three lecture hours a week for one semester. Economics 387D and 387L (Topic 4) may not both be counted. Prerequisite: Graduate standing.

ECO 387E. Seminar in Advanced Macroeconomics.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

Topic 1: Advanced Macroeconomic Analysis I. Economics 387E (Topic 1) and 387L (Topic 15) may not both be counted.
Topic 2: Advanced Macroeconomic Analysis II.
Topic 3: Advanced Macroeconomic Labor I. Economics 387E (Topic: Adv Macro Labor I) and 387E (Topic 3) may not both be counted.
Topic 4: Advanced Macroeconomic Labor II. Economics 387E (Topic: Adv Macro Labor II) and 387E (Topic 4) may not both be counted.

ECO 387K. Monetary Theory.
Theories, based on microeconomic foundations, covering such topics as the usefulness of monetary exchange, optimal central bank policy, the interaction of money and fiscal policy, and the role of financial intermediation in the macroeconomy. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

ECO 387M. Writing Seminar in Economics.
The equivalent of three lecture hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing and consent of instructor.

ECO 387N. Survey of Fields in Economics.
Introduction to the questions, methods, and scope of research in different fields in economics. One lecture hour a week for one semester. Offered on the credit/no credit basis only. Prerequisite: Graduate standing and consent of instructor.

ECO 388C. Econometrics I.
Three lecture hours a week for one semester. Economics 388C and 392M (Topic 2) may not both be counted. Prerequisite: Graduate standing.

ECO 388D. Econometrics II.
Three lecture hours a week for one semester. Economics 388D and 392M (Topic 3) may not both be counted. Prerequisite: Graduate standing.

ECO 388E. Seminar in Advanced Econometrics.
Three lecture hours a week for one semester. Economics 388E and 392M may not both be counted unless the topics vary. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

Topic 1: Advanced Econometric Theory I. Economics 388E (Topic 1) and 392M (Topic 6) may not both be counted.
Topic 2: Advanced Econometric Theory II. Economics 388E (Topic 2) and 392M (Topic 7) may not both be counted.
Topic 3: Applied Microeconometrics. Economics 388E (Topic 3) and 392M (Topic 4) may not both be counted.
Topic 4: Time-Series Analysis. Economics 388E (Topic 4) and 392M (Topic 5) may not both be counted.
Topic 5: Applied Macroeconometrics. Economics 388E (Topic 5) and 392M (Topic 15) may not both be counted.

ECO 390L. Seminar in the History of Economic Thought.
Survey and analysis of principal contributions and historical influences in the evolution of contemporary economic thought from the late eighteenth through the early twentieth century. Three lecture hours a week for one semester. With consent of instructor, may be repeated for credit when the topics vary. Prerequisite: Graduate standing, and completion of core courses in economic theory or consent of instructor.

ECO 392M (Topic 15) may not both be counted.

ECO 492L. Quantitative Methods in Economics.
Topics include optimization methods, probability theory, and statistical inference. Four lecture hours a week for one semester. Prerequisite: Graduate standing and consent of instructor.

ECO 393. Seminar in Industrial Organization.
The equivalent of three lecture hours a week for one semester. With consent of instructor, may be repeated for credit when the topics vary. Prerequisite: Graduate standing.

ECO 394C. Mathematics for Economists.
Restricted to master's students in the economics Option III program. Mathematical tools widely used for economic analysis, including advanced calculus, optimization methods, linear algebra, and dynamic systems. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

ECO 394D. Probability and Statistics.
Restricted to master's students in the economics Option III program. Probability theory and statistical methods used in economics and econometrics. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

ECO 394K. Microeconomics.
Restricted to master's students in the economics Option III program. Rigorous introduction to the methods of microeconomic theory, including consumer and producer theory, decision under uncertainty, markets and
competition, and general equilibrium. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

**ECO 394L. Macroeconomics.**
Restricted to master’s students in the economics Option III program. Dynamic optimization concepts and methods used in modern macroeconomics. General equilibrium applications in the areas of economic growth, business cycles, and the role of monetary and fiscal policy. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

**ECO 394M. Econometrics.**
Restricted to master’s students in the economics Option III program. Identification and estimation of linear and nonlinear regression models; inference and hypothesis testing. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

**ECO 395K. Topics and Applications in Microeconomics.**
Restricted to Option III economics master’s degree students. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

**ECO 396. Studies in Economic History.**
The equivalent of three lecture hours a week for one semester. With consent of instructor, may be repeated for credit when the topics vary. Prerequisite: Graduate standing, six semester hours of upper-division coursework in economics, and consent of the graduate adviser; for 698B, Economics 698A.

**ECO 397. Seminar in International Economic Problems.**
The equivalent of three lecture hours a week for one semester. With consent of instructor, may be repeated for credit when the topics vary. Prerequisite: Graduate standing.

**ECO 297L. Specialized Topics in Macroeconomics.**
Restricted to Option III economics master’s degree students. Two lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

**ECO 297K. Specialized Topics in Microeconomics.**
Restricted to Option III economics master’s degree students. Two lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

**ECO 297M. Specialized Topics in Quantitative Methods.**
Restricted to Option III economics master’s degree students. Two lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

**ECO 397. Seminar in International Economic Problems.**
The equivalent of three lecture hours a week for one semester. With consent of instructor, may be repeated for credit when the topics vary. Prerequisite: Graduate standing.

**ECO 398. Thesis.**
The equivalent of three lecture hours a week for two semesters. Offered on the credit/no credit basis only. Prerequisite: For 698A, graduate standing in economics, twelve semester hours of upper-division or graduate coursework in economics, and consent of the graduate adviser; for 698B, Economics 698A.

**ECO 198K. Specialized Topics in Microeconomics.**
Restricted to students in the Option III economics master’s degree program. One lecture hour a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

**ECO 198L. Specialized Topics in Macroeconomics.**
Restricted to students in the Option III economics master’s degree program. One lecture hour a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

**ECO 198M. Specialized Topics in Quantitative Methods.**
Restricted to students in the Option III economics master’s degree program. One lecture hour a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.
EDC 319. Qualitative Inquiry and Education for Social Change.
Examines the socio-historical contexts of education for minoritized groups in the U.S. through empirical approach of critical qualitative inquiry in education. Explores qualitative and historical studies in which students, teachers, administrators, and parents seek to change or reform their educational experiences. Entails research in schools and non-school settings. Three lecture hours a week for one semester.

EDC 332S. Designs for Instruction.
One of the beginning courses in the professional development sequence for approved programs in secondary education. Three lecture hours a week for one semester, with a single seven-hour media competency evaluation to be arranged. Prerequisite: Admission to the professional development sequence of courses, completion of seventy-two semester hours of coursework, and a University grade point average of at least 2.50, and concurrent enrollment in Curriculum and Instruction 331E; Curriculum and Instruction 331S; Speech, Language, and Hearing Sciences 331E. Prerequisite: Communication Sciences and Disorders 331E; Curriculum and Instruction 331E, Speech, Language, and Hearing Sciences 331E. Prerequisite: Admission to the professional development sequence of courses, completion of seventy-two semester hours of coursework, and a University grade point average of at least 2.50.

EDC 331S. School Organization and Classroom Management in Secondary Schools.
Administrative structure of secondary schools; concepts, principles, and strategies for establishing an orderly classroom environment, preventing inappropriate behavior, and promoting student involvement in academic work. Three lecture hours a week for one semester, with at least sixty hours of fieldwork in a secondary school. Prerequisite: Admission to the professional development sequence of courses, completion of seventy-two semester hours of coursework, and a University grade point average of at least 2.50.

EDC 332S. Introduction to Teaching.
Open to all upper-division students. Overview of the objectives, organization, and operation of schools; the teaching process; teaching as a professional career. Two lecture hours and two hours of fieldwork a week for one semester. Prerequisite: Upper-division standing.
EDC 339C. Community Literacy.
Three lecture hours a week for one semester. Prerequisite: Admission to the professional development sequence of courses.

EDC 339D. Reading Assessment and Development.
Three lecture hours a week for one semester. Prerequisite: Admission to the professional development sequence of courses.

EDC 339E. Secondary School Literacy across the Disciplines.
Designed for students in a University secondary teacher preparation program. Three lecture hours a week for one semester.

EDC 339F. Adolescent Literacy.
Designed for students in a University secondary teacher preparation program. Social, political, cultural, emotional, and personal perspectives on adolescent literacy. Subjects may include adolescent literacy practices in and out of school; literacy in relation to identity, peer communities, meaning, communication, and social engagement; curricula that emphasize the social and civic purposes of literacy; and motivation, fulfillment, and democratic participation as educational outcomes. Three lecture hours a week for one semester.

EDC 339G. Literacy Seminar.
Three lecture hours a week for one semester. Prerequisite: Admission to the professional development sequence of courses.

EDC 340C. Spanish Language Methods for the Bilingual Classroom Teacher I.
Restricted to bilingual generalist certification students. Designed primarily to help prospective bilingual education teachers expand their oral Spanish proficiency for instructional purposes in the bilingual education classroom. Three lecture hours a week for one semester, with field hours to be arranged. Prerequisite: Credit or registration for Spanish 611D or 312L.

EDC 340D. Spanish Language Methods for the Bilingual Classroom Teacher II.
Restricted to bilingual generalist certification students. Intensive practice in the various aspects and conventions governing literacy within the elementary bilingual education curriculum. Three lecture hours a week for one semester, with field hours to be arranged. Prerequisite: Curriculum and Instruction 340C, Spanish 611D or 312L, and admission to the professional development sequence of courses.

EDC 340E. Latino Children's Literature for Bilingual Teachers.
Restrict ed to students seeking certification in bilingual generalist. Covers the use of oral and written literature for children in bilingual programs while examining the history and development of Spanish-language children's literature from social, cultural, and political perspectives. Subjects may include foundational books, authors, and illustrators of Latina/o children's literature; criteria for evaluating culturally authentic children's literature; multimedia and online resources related to bilingual children's literature; and the literary response process. Three lecture hours a week for one semester, with field hours to be arranged. Prerequisite: Knowledge of Spanish and completion of at least thirty-six semester hours of coursework.

EDC 340F. Foundations of Bilingual Education.
Restricted to bilingual generalist certification students. An overview of theory, practice, programs, and policy related to bilingual education as implemented in the United States. Designed to give students an opportunity to learn about and discuss issues related to bilingual education, and the education of linguistically and culturally diverse populations. Three lecture hours a week for one semester, with field hours to be arranged.

EDC 341C. Early Childhood Education.
Introduces socio-cultural understandings of key early childhood education approaches. Critically examines these approaches in relation to their constructions of the young child as a learner, images of the early childhood educator, the social purposes of early childhood education institutions, and implications for culturally sustaining pedagogy. Three lecture hours a week for one semester.

EDC 341D. Early Childhood Program Development.
Focuses on strategies for developing and supporting inquiry-based curriculum in early childhood education classrooms. Introduces pedagogical documentation as a tool to support curriculum development that is critically reflective, culturally sustaining and promotes a culture of inquiry in early childhood environments. Three lecture hours a week for one semester.

EDC 343. Informal Science Education.
Three lecture hours and one three-hour field laboratory a week for one semester, with one four-hour Saturday field trip to be arranged. Prerequisite: Upper-division standing, six semester hours of coursework in science, or consent of instructor.

EDC 344. Digital Literacy for Teaching and Learning.
Use of digital tools to increase technical, pedagogical, and administrative proficiencies in a series of hands-on laboratory projects involving word-processing, handling of databases and spreadsheets, multimedia presentations, digital image and video editing, web page creation, and tools to create digital storytelling, e-portfolios, and electronic gradebooks. Experiential foundation creates a repertoire of possibilities for content-specific, technology-supported teaching and learning associated with learner-centered, collaborative classrooms. Emphasis on the development of critical perspectives (including pedagogical, social, technical, cultural, ethical, economic, legal, and political) to help youth fully participate in digital learning. Three lecture hours a week for one semester.

EDC 345. Curriculum Issues in Physical Education.
Study of personal teaching and physical education programs. Accompanies student teaching. Three lecture hours a week for one semester. Prerequisite: A major in applied movement science, admission to the professional development sequence of courses, and concurrent enrollment in Curriculum and Instruction 951W.

EDC 350. Topics in Educational Studies.
Analysis of selected topics and problems in education. Three lecture hours a week for one semester. May be repeated for credit when the topics vary.

EDC 350E, 650E, 950E. Elementary Grade Teaching Practicum.
Supervised practicum in early childhood through grade four classroom teaching, conducted in cooperating schools, as part of the teacher preparation program. Consists of teaching, analysis, and evaluation. Two lecture hours and at least fifteen, thirty, or forty-five hours of fieldwork a week for one semester. Offered on the pass/fail basis only. Prerequisite:
Admission to the teacher preparation program and consent of the Office of Student Field Experiences.

Supervised practicum in secondary classroom teaching, conducted in cooperating schools, as part of the teacher preparation program. Consists of teaching, analysis, and evaluation. For each semester hour of credit earned, one lecture hour a week for one semester, with additional hours to be arranged. No more than nine semester hours of this course may be taken for credit. May be repeated for credit when the topics vary. Offered on the pass/fail basis only. Prerequisite: Admission to the teacher preparation program and consent of the Office of Student Field Experiences.

Topic 1: Secondary School Teaching Practicum: English. Restricted to students seeking secondary teaching certification in English. Offered on the pass/fail basis only.
Topic 2: Secondary School Teaching Practicum: Social Studies. Offered on the pass/fail basis only.
Topic 3: Secondary School Teaching Practicum: Math. Offered on the pass/fail basis only.
Topic 4: Secondary School Teaching Practicum: Science. Offered on the pass/fail basis only.

EDC 351W, 651W, 951W. All Level Teaching Practicum.
Supervised practicum in elementary, middle school, and secondary classroom teaching. Conducted in cooperating schools as part of the teacher preparation program. Consists of teaching, analysis, and evaluation. For each semester hour of credit earned, one lecture hour a week for one semester, with additional hours to be arranged. May be repeated for credit when the topics vary. Offered on the pass/fail basis only. Prerequisite: Admission to the teacher preparation program and consent of the Office of Student Field Experiences.

Topic 1: All Level Teaching Practicum: Theatre. Offered on the pass/fail basis only.
Topic 2: All Level Teaching Practicum: Visual Art. Offered on the pass/fail basis only.
Topic 3: All Level Teaching Practicum: Dance. Offered on the pass/fail basis only.
Topic 4: All Level Teaching Practicum: Music. Offered on the pass/fail basis only.
Topic 5: All Level Teaching Practicum: Kinesiology. Offered on the pass/fail basis only.

Focus on secondary teaching, and addressing instructional design and assessment. For each semester hour of credit earned, one lecture hour a week for one semester. No more than nine semester hours of this course may be taken for credit. May be repeated for credit when the topics vary. Offered on the letter-grade basis only.

EDC 363. Social Entrepreneurship in Youth and Community Studies.
Restricted to Youth and Community Studies majors. Explore social entrepreneurship and responsibility. Apply entrepreneurship skills and project management skills through individual or group assignments focusing on business development. Three lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Upper-division standing.

EDC 364, 664. Internship.
Supervised fieldwork or clinical work in the student’s area of study. For 364, at least one conference hour and ten hours of fieldwork a week for one semester; for 664, at least one conference hour and twenty hours of fieldwork a week for one semester. Only one of the following may be counted: Communication Sciences and Disorders 364, Curriculum and Instruction 364, 664, Speech, Language, and Hearing Sciences 364. Offered on the pass/fail basis only. Prerequisite: Consent of instructor.

EDC 364C. Fieldwork in Youth and Community Studies.
Restricted to Youth and Community Studies majors. Explore experiential learning in professional environments related to a chosen concentration area. Nine hours of fieldwork a week for one semester. Offered on the letter-grade basis only. Prerequisite: Upper-division standing, University grade point average of at least 2.50, and consent of the faculty adviser.

EDC 665. Classroom Interactions and Project Based Instruction.
Restricted to students admitted to the UTeach Natural Sciences post-baccalaureate program. Students are assigned to a mentor teacher classroom where they might continue as apprentice teachers the next semester. Students will be observing or teaching in the classroom at least 3 hours a week, in addition to the 6 contact hours per week. Students prepare, implement and analyze results of inquiry- and project-based lessons, focusing on student thinking and participation, and meeting the needs of students with reading and writing difficulties, those learning in a second language, and those with behavioral and psychological issues. Six lecture hours a week for one semester, with three additional fieldwork hours to be arranged. Curriculum and Instruction 665 and Science, Technology, Engineering, and Mathematics Education 695 may not both be counted. Offered on the letter-grade basis only. Prerequisite: Curriculum and Instruction 365C or Science, Technology, Engineering, and Mathematics Education 385.

EDC 365C. Knowing and Learning in Math and Science.
Same as UTeach-Natural Sciences 350. Restricted to students in the UTeach-Natural Sciences program. Psychological foundations of learning; problem solving in mathematics and science education utilizing technology; principles of expertise and novice understanding of subject matter; implications of high-stakes testing; and foundations of formative and summative assessment. Three lecture hours a week for one semester; additional hours may be required. Curriculum and Instruction 365C and UTeach-Natural Sciences 350 may not both be counted. Prerequisite: Credit with a grade of at least C- or registration for UTeach-Natural Sciences 101.

EDC 365D. Classroom Interactions.
Same as UTeach-Natural Sciences 355. Restricted to students in the UTeach-Natural Sciences program. Principles of delivering effective instruction in various formats (lecture, lab activity, collaborative settings); examination of gender, class, race, and culture in mathematics and science education; overview of policy related to mathematics and science education. Three lecture hours a week for one semester; additional hours may be required. Curriculum and Instruction 365D and UTeach-Natural Sciences 355 may not both be counted. Prerequisite: The following courses with a grade of at least C-: Curriculum and Instruction 365C and UTeach-Natural Sciences 350, and UTeach-Natural Sciences 110; and a University grade point average of at least 2.50.

EDC 365E. Project-Based Instruction.
Same as UTeach-Natural Sciences 360. Restricted to students in the UTeach-Natural Sciences program. Foundations of project-based, case-based, and problem-based learning environments; principles of project-based curriculum development in mathematics and science education; classroom management and organization of project-based learning.
classrooms. Three lecture hours a week for one semester with additional fieldwork hours to be arranged. Curriculum and Instruction 365E and UTeach-Natural Sciences 360 may not both be counted. Prerequisite: Curriculum and Instruction 365D or UTeach-Natural Sciences 355 with a grade of at least C; and a University grade point average of at least 2.50.

EDC 370E. Elementary School Subjects.
Curriculum content and organization, teaching procedures, materials, and research in elementary school subjects. Three lecture hours a week for one semester, including field hours in elementary schools. May be repeated for credit when the topics vary. Prerequisite: A University grade point average of at least 2.50.

   Topic 1: Reading. Additional prerequisite: Admission to the professional development sequence of courses.
   Topic 2: Language Arts. Additional prerequisite: Admission to the professional development sequence of courses.
   Topic 3: Science. Additional prerequisite: Admission to the professional development sequence of courses.
   Topic 4: Social Studies. Additional prerequisite: Admission to the professional development sequence of courses.
   Topic 5: Mathematics. Additional prerequisite: Mathematics 316L or consent of the mathematics education faculty; and admission to the professional development sequence of courses.
   Topic 15: Special Adaptations for the Deaf.
   Topic 19: Reading/Language Arts. Additional prerequisite: Admission to the professional development sequence of courses.
   Topic 20: Teaching English as a Second Language. The methods, teaching strategies, and materials for developing and assessing English language proficiency in culturally and linguistically diverse populations within the context of the elementary school curriculum.
   Topic 21: Teaching Elementary Physical Education.

Curriculum content and organization, teaching procedures, materials, and research in one secondary school subject. Three lecture hours a week for one semester. The topic in the appropriate field is required for secondary school teacher certification. May be repeated for credit when the topics vary. Prerequisite: Admission to the professional development sequence of courses. Additional prerequisite: Consent of instructor.

   Topic 1: Reading. Additional prerequisite: Admission to the Department of Curriculum and Instruction.
   Topic 3: Reading/Language Arts. Additional prerequisite: Admission to the Department of Curriculum and Instruction.
   Topic 5: Science. Additional prerequisite: Admission to the Department of Curriculum and Instruction.
   Topic 7: Social Studies. Additional prerequisite: Admission to the Department of Curriculum and Instruction.
   Topic 8: Mathematics. Additional prerequisite: Admission to the Department of Curriculum and Instruction.
   Topic 9: Music (Vocal). Additional prerequisite: Curriculum and Instruction 331S and 332S.
   Topic 10: Music (Instrumental). Additional prerequisite: Curriculum and Instruction 331S and 332S.
   Topic 12: Teaching Secondary Physical Education.
   Topic 13: Teaching Secondary School Theatre. Curriculum and Instruction 370S (Topic: Sec Sch Sum: Theatre) and 370S (Topic 15) may not both be counted.
   Topic 14: Secondary English. Offered on the letter-grade basis only.

EDC 370W. All-Level School Subjects.
Curriculum content and organization; teaching procedures, materials, and research in one school subject at all grade levels. Three lecture hours a week for one semester. The topic in the appropriate field is required for all-level school teacher certification. May be repeated for credit when the topics vary. Prerequisite: Admission to the professional development sequence of courses.

   Topic 1: English as a Second Language.
   Topic 2: Art.
   Topic 3: Music.
   Topic 4: Theatre.
   Topic 5: Foreign Language Education.

EDC 371G. Teaching Young Children.
Designed to provide students with frameworks for observing and interacting with young children in classroom settings, and to acquaint students with the teacher’s varied roles in early childhood classrooms. Topics include cultural and linguistic diversity; supervising and interacting with children in a range of instructional groupings, including center-based and play-based learning activities and whole-group experiences; planning and implementing appropriate practices and strategies; and record-keeping and assessment. Three lecture hours a week for one semester, and twelve to sixteen hours of fieldwork a week in a public school. Prerequisite: Upper-division standing, twelve semester hours of upper-division coursework in education, or consent of the education adviser; and admission to the professional development sequence of courses and a University grade point average of at least 2.50.

EDC 371P. Social Entrepreneurship.
Introduction to social entrepreneurship and responsibility. Apply entrepreneurship skills and project management skills through individual or group assignments focusing on business development. Three lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Upper-division standing.

EDC 371R. Reading Difficulties.
Reading theory, assessment, materials, and instruction with emphasis on struggling readers; field experiences in reading tutoring. Three lecture hours a week for one semester with additional field hours to be arranged. Prerequisite: Upper-division standing, twelve semester hours of upper-division coursework in education, or consent of the education adviser; and admission to the professional development sequence of courses and a University grade point average of at least 2.50.

EDC 371S, 671S, 971S. Praxis for Student Teaching.
Restricted to students in the UT Urban Teachers program. Explore the development of pedagogical practices that adheres to the principals of democratic education. For each semester hour of credit earned, one lecture hour a week for one semester, with additional hours to be arranged. May be repeated for credit when the topics vary. Offered on the letter-grade basis only.

   Topic 1: Secondary English. Offered on the letter-grade basis only.
EDC 373. African Americans in Sports.
Same as African and African Diaspora Studies 352E. Theoretical and practical complexities in issues surrounding African Americans in sports, including the relationship between athletics and higher education. Focuses on racial stereotyping, identity theory, and how practical knowledge of these theories can aid in understanding the current state of athletics. Three lecture hours a week for one semester. Only one of the following may be counted: African and African Diaspora Studies 352E, 374D (Topic 12), Curriculum and Instruction 373.

EDC 377. Conference Course in Curriculum and Instruction.
Independent studies in instructional methodology and curriculum. Conference course. May be repeated for credit. Prerequisite: Upper-division standing and consent of instructor.

Graduate Courses
EDC 380F. Sociocultural Foundations.
Problems and issues in the study of education from a sociocultural perspective. Examines research in different fields, including history, sociology, and anthropology of education; innovative education reform in the field of multicultural education; and issues of racial, class, and gender inequality. Includes a critical assessment of the American public school system, with an emphasis on social justice. Three lecture hours a week for one semester. Prerequisite: Graduate standing and admission to a Doctor of Education or a Doctor of Philosophy degree program.

EDC 380G. Anthropology of Education.
Same as Anthropology 388K (Topic 2: Anthropology of Education). A study of social life in contemporary American schools from an anthropological perspective. Three lecture hours a week for one semester. Prerequisite: Graduate standing, and twelve semester hours of upper-division coursework in education or consent of instructor.

EDC 380R. Educational Research and Design.
An introduction to the methodology of social science research, with a focus on the field of education. Examines the fundamental assumptions, principles, and procedures of research; the meaning of knowledge and the ways in which knowledge may be acquired and communicated to others; preparation and utilization of effective questions; principles of data collection and data analysis; drawing conclusions from data; and evaluation of current research. Three lecture hours a week for one semester. Prerequisite: Graduate standing and admission to a Master of Arts or a Master of Education degree program.

Studies research, theory, pedagogy, and curricula in writing for school and extracurricular settings and investigates personal writing processes, habits, and strategies. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

EDC 380W. Teaching Composition.
Topics in the methodologies for the teaching of writing in American elementary, intermediate, and secondary classrooms. Topics may include writing assessment, connections between school and other settings, reading-writing connections, writing development, writing to think and learn, writing for a range of purposes and in a range of genres, and classroom structures for the teaching of writing. Three lecture hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing.

EDC 381F. Introduction to Teaching and Teacher Education.
Examines research on teaching, research in teacher education, and modes of inquiry. Three lecture hours a week for one semester. Prerequisite: Graduate standing and admission to a Doctor of Education or a Doctor of Philosophy degree program.

EDC 381J. Curriculum Organization.
Designed for master's degree students with majors outside curriculum and instruction and for doctoral students needing to update preparation. An overview of theories, principles, and issues in curriculum construction for modern education. The equivalent of three lecture hours a week for one semester. Prerequisite: Graduate standing and consent of instructor.

EDC 381M. Designs for Instruction.
Examination of the instructional design process at one of the following levels: elementary school, secondary school, higher education, all-level. Emphasis on promising practices and current efforts toward improvement. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing, twelve semester hours of upper-division coursework in education, and teaching experience.

EDC 381R. Introduction to Systems of Human Inquiry.
Designed to provide students with the knowledge and competence in social science research methods required for careers in teaching or human services. Explores competing definitions of research; the idea of a research paradigm; characteristics of various forms of inquiry, including quantitative and qualitative research; and research methods in relation to issues of ethics and rigor. Three lecture hours a week for one semester. Curriculum and Instruction 381R and 385G (Topic: Introduction to Systems of Human Inquiry) may not both be counted. Prerequisite: Graduate standing and admission to a Doctor of Education or a Doctor of Philosophy degree program.

EDC 382E. Teaching Elementary School Subjects.
Examination of the discipline of the subject-field selected, coupled with intensive study of research findings, publications of learned societies, and advanced experimentation with the improvement of instruction. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing, twelve semester hours of upper-division coursework in education, an undergraduate course in the subject-field selected (if appropriate), and teaching experience or consent of the graduate adviser.

Additional prerequisite: Curriculum and Instruction 370E (Topic 19: Reading/Language Arts) or the equivalent.
EDC 382E. Teaching Elementary School Subjects.
Examination of the discipline of the subject-field selected, coupled with intensive study of research findings, publications of learned societies, and advanced experimentation with the improvement of instruction. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing, twelve semester hours of upper-division coursework in education, an undergraduate course in the subject-field selected (if appropriate), and teaching experience or consent of the graduate adviser.

EDC 382E. Teaching Elementary School Subjects.
Examination of the discipline of the subject-field selected, coupled with intensive study of research findings, publications of learned societies, and advanced experimentation with the improvement of instruction. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing, twelve semester hours of upper-division coursework in education, an undergraduate course in the subject-field selected (if appropriate), and teaching experience or consent of the graduate adviser.

Additional prerequisite: Curriculum and Instruction 370E (Topic 19: Reading/Language Arts) or the equivalent.
EDC 382E. Teaching Elementary School Subjects.
Examination of the discipline of the subject-field selected, coupled with intensive study of research findings, publications of learned societies, and advanced experimentation with the improvement of instruction. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing, twelve semester hours of upper-division coursework in education, an undergraduate course in the subject-field selected (if appropriate), and teaching experience or consent of the graduate adviser.

Additional prerequisite: Curriculum and Instruction 370E (Topic 19: Reading/Language Arts) or the equivalent.
Topic 10: Bilingual Education. Additional prerequisite: Knowledge of Spanish.

EDC 382R. Fundamentals of Statistics.
Designed for students majoring in the social sciences. Three lecture hours a week for one semester. Prerequisite: Graduate standing and admission to a Doctor of Education or a Doctor of Philosophy degree program.

EDC 382S. Teaching Secondary School Subjects.
Examination of the discipline of the subject-field selected, coupled with intensive study of research findings, publications of learned societies, and advanced experimentation with the improvement of instruction. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing, twelve semester hours of upper-division education, twelve semester hours of upper-division coursework in the subject-field of the topic or consent of instructor, and teaching experience or consent of the graduate adviser.

EDC 382T. Problems of College Teaching.
Methods and procedures for teaching in specific fields selected by participants; major emphasis on successful classroom practices. Three lecture hours a week for one semester. Prerequisite: Graduate standing and an interest in teaching at the college level.

EDC 383C. Bibliography in Teaching and Curriculum.
Survey of the scholarly literature in teaching and curriculum, with emphasis on bibliographic sources and techniques. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

EDC 383F. Curriculum Theory.
An introduction to the central issues in curriculum theory. Includes historical and contemporary approaches to the philosophy and analysis of curriculum, and curriculum theory and practice. Emphasis on the issues of power, knowledge, and exclusion. Three lecture hours a week for one semester. Prerequisite: Graduate standing and admission to a Doctor of Education or a Doctor of Philosophy degree program.

EDC 383T. Instructional Theory.
Identification and analysis of the major types of contemporary instructional theory. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

EDC 385G. Seminar: Program Development and Research.
Advanced investigations of selected topics and problems in curriculum theory, program design, and research design at one of the following levels: elementary school, secondary school, higher education, all-level. The equivalent of three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of instructor.

Topic 1: Global Comparative Early Childhood. An examination of international and indigenous perspectives on early childhood, as well as the types of fieldwork and comparative inquiry that international research requires using work from early childhood scholars within anthropology, child development, psychology, sociology, and early childhood education. Students will prepare a research proposal for a comparative and/or international project with or about young children.

Topic 2: Parents and Education. An exploration of the relationship between families and schooling in the United States through racial, class-based, linguistic, cultural, and global perspectives, using multiple theoretical frameworks to both understand and challenge current approaches towards parental involvement in school.

Topic 4: Second Language Acquisition.
Topic 5: The Second Language Learner. Additional prerequisite: Curriculum and Instruction 385G (Topic 4) or consent of instructor.

Topic 6: Linguistics and Language Teaching. Same as Linguistics 387. Designed primarily for participants in international education exchange programs. Application of the findings of linguistics to the teaching of languages. Three lecture hours a week for one semester. Additional prerequisite: Graduate standing and consent of instructor.

Topic 7: Language and Politics in Language Planning. Same as Middle Eastern Studies 381 (Topic 30). Additional prerequisite: Consent of instructor.

Topic 17: Culture, Gender, and Race in Organizations.
Topic 21: Training and Development.
Topic 24: Qualitative Research: Mixed-Method Investigation. Additional prerequisite: Completion of one qualitative research methods course.

Topic 25: Life History Research.
Topic 27: Qualitative Research: Naturalistic Inquiry.
Topic 28: Multimedia Authoring.
Topic 29: Interactive Multimedia Design and Production. Engaging in the design and production process through work with a client on an interactive, web-based application through new media technology tools. Emphasis on industry standard technology: graphics, video, audio, animation, and web development.

Topic 30: Advanced Qualitative Research: Discourse Analysis. Additional prerequisite: Completion of one qualitative research methods course; completion of a graduate course in linguistics, sociolinguistics, or psycholinguistics; and admission to the doctoral program.

Topic 31: Inquiry in Play. An examination of play as a meaningful aspect of curriculum and child development; philosophical, psychological, and educational perspectives on play; and the grounding of educational play research in broader fields of inquiry.

Topic 32: Advanced Science and Mathematics Education.
Topic 33: Computer-Supported Collaborative Learning. Explores current research, theories, and strategies of computer-supported collaborative learning. Includes web-based activities focused on collaborative inquiry and writing, and approaches to project-based and foreign language learning.

Topic 34: Language, Culture, and Identity.
Topic 35: Constructivism and Instructional Design. Examines the philosophical, rhetorical, practical, and evaluative bases for constructivist approaches to instructional design. Students visit one constructivist classroom at the kindergarten through grade twelve level, and one at the college level.

Topic 36: Content and Instruction of Reform Algebra.
Topic 37: Critical Issues in Bilingual and Bicultural Education.
Topic 40: Current Issues in Teaching Social Studies.
Topic 42: Curriculum History in Science, Technology, Engineering, and Mathematics Education. The historical development of science, technology, engineering, and mathematics curricula in the United States from the mid-nineteenth century to the present. Discusses politics, equity, the development of technology, and theories of learning; and examines current curricular trends. Additional prerequisite: Curriculum and Instruction 385G (Topic 59: Knowing...
and Learning in Science, Technology, Engineering, and Mathematics Education).

**Topic 43:** Curriculum in Science and Mathematics Education.

**Topic 44:** Curriculum Theories for Prekindergarten and Kindergarten.

**Topic 45:** Designs and Strategies for New Media. Explores human-computer interaction (HCI), emphasizing designs and strategies for new media through various evaluations and hands-on activities. Examining the use of new media from the perspectives of information design, interaction design, and interface design; and using industry standard new media tools to illustrate understanding.

**Topic 47:** Educational Communication Networks: Theory and Practice.

**Topic 48:** Educational Communication: Diffusion of Innovation.

**Topic 49:** Teaching and Learning with the Internet.

**Topic 51:** Feminist Participatory Action Research. An overview of feminist social-action theory and research. Studies social action within the local community setting and with community projects.

**Topic 52:** Foundations of Instructional Technology.

**Topic 53:** Curriculum and High-Stakes Testing. Explores the provisions of state and federal legislation regarding high-stakes testing, including the implications for culturally and linguistically diverse student populations, the motivations for use, and the impact upon curricula, teaching, and student academic performance.

**Topic 55:** Historical Perspectives on Curriculum.

**Topic 56:** Service Learning as an Instructional Strategy.

**Topic 57:** Learning Technology Planning and Management. Current theories, research, and strategies related to the planning and management of learning technology projects. Exploration of funding proposals, strategic planning, and the use of planning tools such as surveys, inventory forms, project management aids, and decision-support systems.

**Topic 58:** Multicultural Education in Austin. Explores local educational and community resources for teaching from a multicultural and global perspective. Curriculum and Instruction 385G (Topic 58) and 385G (Topic: International Austin: Multicultural Classrooms) may not both be counted.

**Topic 59:** Knowing and Learning in Science, Technology, Engineering, and Mathematics Education. Explores various theories related to science, technology, engineering, and mathematics epistemology. Includes memory and the structure of knowledge, problem solving and reasoning, and the foundations of learning.

**Topic 60:** Language Acquisition in Multicultural Special Education.

**Topic 61:** International Perspectives on Literacy Development. Curriculum and Instruction 385G (Topic 61) and 385G (Topic: Literacy Development: International Perspectives) may not both be counted.

**Topic 62:** Education in Contemporary Black America. Examines the historical and contemporary philosophies, practices, and pedagogies for Black education. Includes culturally responsive pedagogy, African-centered pedagogy and curriculum, multicultural curriculum and critical race theory.

**Topic 63:** Identity, Agency, and Education. Considers the cultural production of identity and identity politics and agency within a cultural, political, racial, gender, and activist framework in relation to education.

**Topic 64:** Cultural Theory in Education. Investigation of theories of popular culture, cultural difference, and cultural politics, and their applications in educational research and practice. Focuses on the relation between culture and power, with attention to issues of identity as well as social structure.

**Topic 65:** Critical Pedagogy. Introduction to critical pedagogy, focusing on theoretical foundations and methodologies of teaching and curriculum. Explores approaches to education oriented toward the development of critical consciousness, empowerment, and social action.

**Topic 67:** Cultural Knowledge of Teachers and Teaching. Examines how scholars have utilized cultural theory and cultural knowledge to situate and respond to: the identity, role and responsibility of "being" a teacher; the pedagogic functioning of teaching; and teacher preparation. Particular emphasis is placed on how these factors concern the education of historically marginalized student population.

**Topic 68:** Women and Education: Research, Theory, and Practice. Explores the roles and experiences associated with women and girls in the broad field of education. Subjects related to women across a diverse social terrain are targeted including: historical scholarship, research, theoretical frameworks and policy issues.

**Topic 69:** Chicana Feminist Theorists. Explores current historical and theoretical writings of Chicana women feminist theorists. Themes include patriarchy, domination/resistance politics, epistemology, contestation, social reproduction, identity and difference and how these connect to schooling practices, policies, and politics.

**Topic 70:** Chicana Participatory Action Research. Investigates the history and philosophy of participatory action research, including that done by and for Chicanas. A research project benefiting Chicanas and other young, Latina females in a public educational setting will be required.

**Topic 71:** Exploration in the Education of the Mexican American Child. Provides a historical and contemporary overview of Mexican American children's schooling experiences that consider tracking, bilingual education, school finance, higher education access, and standardized testing.

**Topic 72:** Race and Ethnic Relations in Schools. Investigates the role of race and ethnicity as key organizing principles of society. Themes include individual and institutional racism, reproduction theory, cultural and structural assimilation, critical race theory, epistemology, anti-racist and culturally relevant pedagogy.

**Topic 73:** Seminar in Advanced Educational Policy. Investigates policy from a critical policy analysis perspective. Considers the importance of context, discourses, players, and policy articulations that influence policy development primarily in education and areas such as immigration and the economy.

**Topic 74:** History of American Reading Instruction. Focuses on shifts in reading pedagogy in relation to changing societal conditions in the United States from colonial times through the 1980s. Engages with instructional materials and investigate practices through readings and course lectures. Considers historical research methods including oral history.

**Topic 75:** Reading and Writing in the Elementary School. Offers an overview of methods, materials, and assessments used in the reading and writing instruction at the elementary level. Focuses primarily on classroom and school level processes with additional consideration of the instruction for special needs learners.

**Topic 76:** Literacy and Culture. Examines the relationship between culture and literacy from a variety of theoretical perspectives including New Literacy Studies, identity and agency, sociocritical literacy and critical race theory with a particular emphasis on discourse and social change.

**Topic 77:** Classroom Discourse and Teacher Research. Designed as a collaborative, critical examination of teacher/action research, particularly in relation to the exploration of classroom discourse. Focuses on the rationale, issues, and implications of the teacher research movement within education and on the research strategies and techniques that can be used by teachers in conducting research in their own classroom settings.

**Topic 78:** The Teaching of Literacy. Develops a stance of inquiry into teaching from a social practices framework. Emphasis will be on formulating thoughtful and theoretical questions to enhance the quality of interactions with children in classrooms; making ideologies that operate within the school literacy communities explicit; and
looking through informed and critical lenses at each aspect of literacy instruction.

**Topic 79: Sociolinguistics in Research and Teaching.** Focuses on the sociocultural investigation of language, particularly as it pertains to educational settings. Traces the historical emergence of the related fields of sociolinguistics and linguistic anthropology, exploring how each of these scholarly traditions approaches the study of language, identifying key points of overlap and tension between the two fields, and discussing recent examples of inter-disciplinary scholarship. Issues to be addressed include linguistic variation, language and identity, bilingualism and multilingualism, language ideologies, and classroom discourse.

**Topic 80: Orality, Literacy, and Technology.** Explores the relationships among speech, writing, and technology across human history, in contemporary cultures, in individual lives, and in processes of education. Situates discussions of “new literacies” in the context of the history of literacy.

**Topic 81: Research on Adolescent Literacy In and Out of School.** Considers ways in which the literacy practices of youth in out-of-school settings and the literacy work of schools might productively inform each other, and examines the purposes, processes, and outcomes of this literacy work.

**Topic 82: Major Theorists in Early Childhood.** Studies a historical range of theorists who have tried to explain childhood and early learning in the fields of anthropology, psychology, philosophy, education, and child development.

**Topic 83: Research on Teacher Education in Physical Education.** Discusses philosophical orientations such as progressivism, post-modernism, humanism, and social reconstruction. Of particular value to those in the doctoral program in physical education teacher education.

**Topic 84: Contemporary Problems in Science, Technology, Engineering, and Mathematics Education.** Identifies and explores contemporary problems in science and mathematics education through collaboration with a practitioner in the field.

**Topic 85: Current Issues in Physical Education.** Explores and critically analyzes current issues, coalitions, and legislation related to physical education and develops the understanding and skills necessary to impact the future directions.

**Topic 86: Critical Perspectives in Early Childhood Education.** Critically analyzes scholars of early childhood education research, practice, and curricula. Questions assumptions about early childhood education; beliefs, theories, and ideas about working with young children, their families, and the communities in which they live and work. Curriculum and Instruction 185G, 385G (Topic 38) and Curriculum and Instruction 185G, 385G (Topic 86) may not both be counted.

**Topic 87: Technology, Teacher Learning, and School Change.** Examines the complexity of the change process, especially in relation to the introduction of digital technologies in the PK-12 school context.

**Topic 88: Research on Early Childhood Education.** An introduction to research practices in the field of early childhood education. Classic studies and research reviews in various facets of early childhood education will be reviewed. Subjects include: child development, early childhood program models and evaluation, curriculum (including concept development and play), parent involvement, and teacher education in early education.

**Topic 89: Social Construction of Thinking in Childhood.** An intensive exploration of social constructivism, particularly Vygotskian theory and research. Classroom interactions, teaching and learning, parent and family contributions to education, cultural influences, and other contextually applicable aspects of education will be explored.

**Topic 90: Social Contexts of Early Childhood Education.** With a sociological lens, an examination of the constructs of the child and childhood through a range of social, political, educational, and economic contexts.

**Topic 91: Early Childhood Education Programs.** An examination of specific approaches to early childhood education including the Montessori approach; programs such as Head Start; and critical analysis of how these various models of early childhood education define their role within the education of the young child as well as define the role of the child, teacher, and family. Philosophical, theoretical, historical, and empirical approaches to the field will be investigated.

**Topic 92: Theories of Curriculum for Pre-kindergarten and Kindergarten.** An exploration of the central issues and theoretical orientations of curriculum theory and practice in early childhood and elementary public school programs in the United States.

**Topic 93: Evaluation in Language Education.** Explores the policy and classroom implications of language assessment and evaluation practices, including review and critique of the assessment of English language proficiency for language minority students, standardized language assessment tools, and informal classroom-based methods for assessing language.

**Topic 95: Language Policy in Education.** Explores the implications of the perception of language as alternately a right, a resource, and a problem. Emphasis is on the development of linguistic support movements (bilingual, ESL, AAVE/Ebonics, etc.) as well as implicit and explicit language policies in the United States and in other countries.

**Topic 96: Biliteracy and New Literacy Studies.** Focuses on the theoretical foundations of biliteracy theories and new literacy studies.

**Topic 97: Biliteracy and Culture.** Includes theories and research topics relevant to teaching and learning literacy in two languages, Spanish and English. Discussion of the ways in which sociocultural, linguistic, and academic factors influence biliteracy development.

**Topic 98: Social, Cultural, and Political Contexts of Language Learning.** An analysis of oral and written language learning from interdisciplinary perspectives and within a variety of contexts, both within and outside of school settings. Particular attention is paid to issues of pedagogy, “non-standard” dialects of English, second-language learning, and multiliteracies.

**Topic 99: Curriculum in Physical Education.** An examination of current research regarding physical education curriculum paradigms, reform initiatives, and physical activity interventions as related to curriculum.

**EDC 385H. Cultural Transmissions in America.** Analysis of contemporary social, political, and economic trends in national and international life from the standpoint of educational implications. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing, twelve semester hours of upper-division coursework in social science, and twelve semester hours of upper-division coursework in education.

**EDC 385K. General Foundations of Education.** Designed for curriculum and instruction doctoral students preparing for qualifying examinations and other master’s or doctoral degree students without previous work in foundations of education. General survey of basic concepts, topics, and policy issues in the foundations of education. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

**EDC 385R. Introduction to Quantitative Research.** Designed to help students develop skills in a variety of approaches and methodologies used in research design that requires quantitative methods. Focuses on multivariate methods; and includes research questions, purposes, methodologies, instruments, measures, participant
selection, data collection and data analysis methods, results, and conclusions. Three lecture hours a week for one semester. Prerequisite: Graduate standing; admission to a Doctor of Education or a Doctor of Philosophy degree program; and Curriculum and Instruction 382R, Educational Psychology 371, or an equivalent introductory statistics course and consent of the graduate adviser.

EDC 386R. Introduction to Qualitative Research.
An introduction to the theoretical and methodological issues central to conducting qualitative research studies. Designed to help students develop practical research skills, and includes opportunities to evaluate current research, analyze data, observe, and interview. Three lecture hours a week for one semester. Curriculum and Instruction 385G (Topic: Qualitative Research in Educational Settings) and 386R may not both be counted. Prerequisite: Graduate standing and admission to a Doctor of Education or a Doctor of Philosophy degree program.

EDC 387R. Topics in Advanced Quantitative Research.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing, Curriculum and Instruction 385R, and admission to a Doctor of Education or Doctor of Philosophy degree program.

Topic 1: Advanced Quantitative Analysis.
Topic 2: Statistical Inference.
Topic 3: Survey Research Methods. Curriculum and Instruction 385G (Topic: Survey Research Methods) and 387R (Topic 3) may not both be counted.

EDC 388R. Topics in Advanced Qualitative Research.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing, Curriculum and Instruction 386R, and admission to a Doctor of Education or a Doctor of Philosophy degree program.

Topic 1: Narrative and Oral Tradition. Curriculum and Instruction 385G (Topic: Narrative and Oral Tradition) and 388R (Topic 1) may not both be counted.
Topic 2: Discourse Analysis. Additional prerequisite: Completion of one qualitative research methods course, and completion of a graduate course in linguistics, sociolinguistics, or psycholinguistics.
Topic 3: Educational Ethnography. Only one of the following may be counted: Curriculum and Instruction 385H (Topic: Ethnographic and Qualitative Research Methods), 388R (Topic: Educational Ethnography), 388R (Topic 3).
Topic 4: Postmodern Analytical Methods. Curriculum and Instruction 385G (Topic: Advanced Qualitative Research: Postmodern Analytical Methods) and 388R (Topic 4) may not both be counted.
Topic 5: Life History.
Topic 6: Naturalistic Inquiry.
Topic 7: Feminist Participatory Action Research.
Topic 9: Case Study. An in-depth investigation into the methodology of case study research, including approaches and theories, development of goals, and current issues and challenges. Curriculum and Instruction 385G (Topic: Case Study Research) and 388R (Topic 9) may not both be counted.

EDC 389R. Topics in Advanced Mixed Methods Research.
Instruction in design-based research, a methodology aimed to improve educational practices through interventions involving iterative analysis, design, and development, and implementation of interventions based on collaboration among researchers and practitioners in real-world settings. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing; admission to a Doctor of Education or Doctor of Philosophy degree program; and Curriculum and Instruction 385R and 386R, or consent of instructor.

EDC 390T. Institute in Instruction.
Various topics designed to help students analyze and improve instruction at one of the following levels: elementary school, secondary school, higher education, all-level. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

Topic 1: Reading.
Topic 3: Science.
Topic 4: Social Studies.
Topic 5: Mathematics.
Topic 7: Advanced Instructional Systems Design. Advanced topics, theoretical frameworks, and strategies for the design of instructional systems. Students work in teams to design and develop an instructional product for an authentic client such as a state agency, school system, university, corporation, or museum that meets specified criteria. Additional prerequisite: Curriculum and Instruction 390T (Topic 21: Instructional Systems Design).
Topic 8: English as a Second Language. Additional prerequisite: Consent of instructor.
Topic 9: Bilingual Education.
Topic 10: Analysis of Teaching in Physical Education. An examination of the history and current practice of physical education methods of analyzing teaching. Commonly used evaluation systems such as the Professional Development and Appraisal System (PDAS) and National Board Certification will be reviewed.
Topic 11: Archaeology Education for Social Studies.
Topic 12: Childhood and Adolescent Literature.
Topic 15: Elementary School Curriculum.
Topic 17: English as a Second Language: Literacy.
Topic 18: English as a Second Language: Reading.
Topic 19: Equity in Science, Technology, Engineering, and Mathematics Education.
Topic 20: Systemic Reform and Science and Mathematics Education. Curriculum and Instruction 385G (Topic: Systemic Reform and Science and Mathematics Education) and 390T (Topic 20) may not both be counted.
Topic 21: Instructional Systems Design. Provides an overview of the theoretical frameworks, current trends, and common concerns associated with the design and development of instructional materials. Investigates the theoretical, practical, and critical perspectives on instructional design as applicable in a variety of educational contexts (K-12 education, higher education, and corporate training) and modes (face-to-face, online, and hybrid environments). Includes readings, discussions, real-world design, practical applications, and interactions with instructional design experts.
Topic 22: Improving Social Studies Education.
Topic 23: Instructional Telecommunications.
Topic 24: Introduction to Curriculum Studies. Designed to familiarize doctoral students with the theoretical, philosophical, sociocultural, and practical areas within the field of curriculum study.
Topic 25: Literature for Young Adults.
Topic 26: Multicultural Curriculum and Teaching.
Topic 27: The Planning and Management of Instructional Programs.
Topic 28: Practice in Reading Difficulties. A practicum in assessing and teaching elementary school students who struggle with reading. Class meetings take place at a local elementary school and include
Topic 30: Research on Teaching.

Topic 31: Research on Teaching in Science, Technology, Engineering, and Mathematics Education.

Topic 32: Seminar in Elementary School Curriculum.

Topic 33: Studies in Curriculum and Instruction.

Topic 36: Humanities and Literacy in Social Education.

Topic 37: Systemic Reform in Science, Technology, Engineering, and Mathematics Education. Covers the major themes of systemic reform in science, technology, engineering, and mathematics (STEM) education and explores, develops, and investigates models of reform initiatives. Additional prerequisite: Curriculum and Instruction 385G (Topic 59: Knowing and Learning in STEM Education); and credit or registration for Curriculum and Instruction 385G (Topic 42: Curriculum History in STEM Education).

Topic 38: Advanced Topics in Science, Technology, Engineering, and Mathematics Education. Focuses on a critical issue in science, technology, engineering, and mathematics (STEM) education aligned with STEM education faculty research interests, culminating in a product (paper, presentation, proposal) that can be submitted to professional or funding agencies. Additional prerequisite: Curriculum and Instruction 385G (Topic 59: Knowing and Learning in STEM Education) and 385G (Topic 42: Curriculum History and Development in STEM Education).

Topic 39: Instructional Systems Design. An overview of the theoretical frameworks, current trends, and common concerns associated with the design and development of instructional materials. The theoretical, practical, and critical perspectives on instructional design as it is applied in a variety of educational contexts will be reviewed for the purpose of designing effective and engaging learning experiences.

Topic 40: Advanced Instructional Systems Design. Includes advanced topics, theoretical frameworks, and strategies for the design of instructional systems. Students work in teams to design and develop an instructional product for an authentic client such as a state agency, school system, university, corporation, or museum that meets specified criteria for quality.

Topic 41: Measurement and Assessment of Physical Activity. An introduction to theoretical bases for evaluating and investigating physical education teaching effectiveness. Emphasis is placed on current technologies and issues of assessment for physical education instruction, basic statistics concepts, and current educational evaluation trends. Designed primarily for physical education teachers.

Topic 42: Research on Teaching in Physical Education. An examination of past and current research on teaching, teachers, and curriculum in physical education. Empirical and conceptual scholarship related to the physical education teaching process, the preparation of teachers and their experiences, and the development of curriculum in physical education settings will be explored.

Topic 43: Foundations of Learning Technology. Introduces students to the field of learning technology by learning its history, as well as the learning theories, paradigms, thought leaders, trends, and issues that have shaped the field. Primarily web-based and involves both individual and collaborative work. Online class meetings will be held every two to three weeks to facilitate real-time discussions on the readings, as well as opportunities for interaction with visiting experts in the field. The equivalent of three lecture hours a week for one semester. Curriculum and Instruction 390T (Topic: Foundations of Learning Technology) and 390T (Topic 43) may not both be counted.

EDC 391C. Curriculum and Pedagogy.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of instructor.

EDC 391G. Gender and Race in Education.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

EDC 391P. Educational Policy.
May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

EDC 391T. Educational Theory.
May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

EDC 391V. Educational Evaluation.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of instructor.

EDC 392L. Philosophical Foundations of Education.
Designed for master's degree students without previous graduate work in philosophy or philosophy of education and for doctoral students who need to update preparation. A systematic overview of the field of philosophy of education. Three lecture hours a week for one semester. Prerequisite: Graduate standing, and either twelve semester hours of coursework in upper-division education or consent of instructor.

EDC 395C. Cultural Studies in Education.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

Topic 1: Black Education: Contexts, Dilemmas, and Possibilities.
Explore theories of using literacy as a tool for increasing social justice in the world. Understand and translate that knowledge into curriculum and instructional approaches that can educate students about how to use literacy to
EDC 395M. Bilingual Bicultural Education.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

EDC 395P. Physical Education and Teacher Education.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

EDC 395T. Learning Technologies.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

Topic 1: Introduction to Instructional Design. Explore an overview of the theoretical frameworks, current trends, and common concerns associated with the design and development of instructional materials. Investigate the theoretical, practical, and critical perspectives on instructional design as it is applied in a variety of educational contexts (i.e. K-12, higher education, and corporate training) and modes (i.e. face-to-face, hybrid, and online). Three lecture hours a week for one semester. Only one of the following may be counted: Curriculum and Instruction 384P (Topic 21), 390T (Topic 21), 390T (Topic 39), 395T (Topic 1).

Topic 2: Humanizing Pedagogy and Technology Integration. Explore theoretical and applied practices of teaching and learning in a twenty-first-century classroom, as informed by research and best practices. Examine the framing, applied knowledge and design thinking needed to transform curriculum using technology integration and connected learning strategies. Consider authentic learning problems and devise teaching and classroom solutions that promote student learning, humanize pedagogy, and work towards the elimination of digital inequity in schools. Curriculum and Instruction 395T (Topic: Humanizing Pedag Tech Integ) and 395T (Topic 2) may not both be counted.

Topic 3: Humanizing Pedagogy and Online Teaching for K-12 Education. Examine models that help design teaching and learning within online spaces, in ways that help to balance cognitive, teaching, and social presence throughout the online course student experience. Explore theoretical models that drive high impact online learning designs, research that informs K-12 practice and models for technology integration and student engagement that promote digital equity. Apply these theoretical frameworks to design online courses that are intended for use in authentic K-12 online educational settings. Curriculum and Instruction 395T (Topic: Hum Pedag Online Tch K12 Ed) and 395T (Topic 3) may not both be counted.

Topic 4: Technology Designs for Digital Justice. Learn theoretical approaches to digital justice that promote culturally and community connected, digital learning designs within and beyond the walls of the classroom. Explore a critical frame using a design justice lens and interrogate instructional technology designs while evaluating and designing digital learning spaces. Examine how connected and design justice approaches can meet students at typical boundaries of where they live and learn, extend learning environments to cultivate learners’ interests, and provide secure and inclusive learning experiences that span the formal and informal. Curriculum and Instruction 395T (Topic: Tech Dsgn for Digi Justice) and 395T (Topic 4) may not both be counted.

Topic 5: Technology Innovation for Digital Justice. Develop as “Connected Educators” by participating within Communities of Practice (CoPs) related to educators’ digital equity interests. Apply design justice and design thinking strategies to create equity-focused educational technology innovations that empower student learning. Additional prerequisite: Curriculum and Instruction 395T (Topic 2), 395T (Topic 3), 395T (Topic 4), or consent of instructor.

EDC 196, 396. Doctoral Seminar.
Research projects and creative investigations in a selected subject-field and developments in instructional practices and in research findings and methodologies. Offered at the following levels: elementary school, secondary school, higher education, all-level. The equivalent of one or three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing, and admission to candidacy for the doctoral degree or consent of instructor.
EDC 198P, 398P, 698P. Graduate Internship.
Supervised practice in a professional position. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. May be taken five times for credit. May be repeated for credit. Prerequisite: Graduate standing and admission to approved internship program.

EDC 398R. Master’s Report.
Preparation of a report to fulfill the requirement for the master’s degree under the report option. The equivalent of three lecture hours a week for one semester. Offered on the credit/no credit basis only. Prerequisite: Graduate standing in curriculum and instruction and consent of the graduate adviser.

EDC 398T. Supervised Teaching in Curriculum and Instruction.
Supervised college teaching experience. Three lecture hours a week for one semester. Prerequisite: Graduate standing and appointment as a teaching assistant or an assistant instructor.

May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Admission to candidacy for the doctoral degree.

Professional Courses
EDP - Educational Psychology

Lower-Division Courses
EDP 304 (TCN: EDUC 1300, PSYC 1300). Strategic Learning for the Twenty-First Century.
Explores a wide range of subjects in educational psychology that impact student learning, including theories of cognition and motivation, and applies them to academic work. Covers strategies to improve student academic performance. Three lecture hours a week for one semester. Only one of the following may be counted: Educational Psychology 304; 110, 210, 310 (Topic 1); 110, 210, 310 (Topic 4); 110, 210, 310 (Topic 5). Offered on the letter-grade basis only.

EDP 308. Statistical Reasoning and Literacy.
Introduction to statistical applications and their interpretation in daily life. Covers principles of gathering and analyzing data, and interpreting analysis results in order to critically evaluate findings reported in the media and social science research. Explores basic statistical analyses, and skills needed for informed research consumerism. Three lecture hours a week for one semester. Only one of the following may be counted: Educational Psychology 308, Statistics 309, 309H or Statistics and Data Sciences 301.

EDP 216, 316, 416. Intergroup Dialogue.
Group discussion of the definitions and implications of social identities. Topics may include gender, race, ethnicity, religion, sexual orientation, physical ability, and age. For each semester hour of credit earned, one lecture hour a week for one semester. Only one of the following may be counted: Educational Psychology 210 (Topic: Intergroup Dialogue), 210 (Topic 3), 310 (Topic 3), and 216, 316, 416. Offered on the letter-grade basis only.

EDP 118T, 218T, 318T, 418T. Selected Topics in Educational Psychology.
Issues, research, and topics of contemporary interest in various areas of educational psychology and the behavioral sciences that may vary from semester to semester. For each semester hour of credit earned, one lecture hour a week for one semester; additional laboratory hours may be arranged for some topics. May be repeated for credit when the topics vary.

This course is used to record credit the student earns while enrolled at another institution in a program administered by the University’s Study Abroad Office. Credit is recorded as assigned by the study abroad adviser in the Department of Educational Psychology. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

Upper-Division Courses

This course is used to record credit the student earns while enrolled at another institution in a program administered by the University’s Study Abroad Office. Credit is recorded as assigned by the study abroad adviser in the Department of Educational Psychology. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

EDP 350E. Introduction to Life Span Development.
Explores theories of personality, as well as research and literature on mental health and character development, applying principles and theories to the educative enterprise. Covers application of personality theory to the guidance of children and youth. Study of physical, social, and cognitive development in humans. Three lecture hours a week for one semester. Only one of the following may be counted: Educational Psychology 350E, 363M (Topic: Introduction to Life Span Development), and 363M (Topic 6). Prerequisite: Upper-division standing recommended.

EDP 350G. Adolescent Development.
Addresses contemporary adolescent development in relation to major transitions, contextual influences, and psychosocial tasks. Covers adolescent identity development, with focus on the education of adolescents. Three lecture hours a week for one semester. Only one of the following may be counted: Educational Psychology 350G, 363M (Topic: Adolescent Development), 363M (Topic 3). Prerequisite: Upper-division standing and six semester hours of upper-division coursework in education or behavioral sciences.

EDP 350L. Human Sexuality.
Taught from a psychological perspective with attention to the physiological, emotional, and relationship dimensions of sexuality. Presents factual information and promotes scholarly examination of social and personal factors in developing healthy relationships and sexual expression. Three lecture hours a week for one semester.
Educational Psychology 350L and 363 (Topic 3) may not both be counted. Prerequisite: Upper-division standing.

**EDP 352D. Introduction to Individual Counseling and Psychotherapy.**

Nature of the counseling process, dynamics of behavior change, client-counselor roles and relationships; an experiencing of the group process as a basis for studying dynamics of individual and group behavior. Three lecture hours a week for one semester. Educational Psychology 352D and 367 (Topic 1) may not both be counted. Prerequisite: Upper-division standing.

**EDP 352G. Multicultural Approach to Counseling and Psychotherapy.**

An introduction to cultural diversity, cultural issues, cultural groups, and multiculturalism in counseling. Three lecture hours a week for one semester. Educational Psychology 352G and 367 (Topic 2) may not both be counted. Prerequisite: Upper-division standing and completion of six semester hours of upper-division coursework in behavioral sciences.

**EDP 352K. Mindfulness, Compassion, and the Self.**

Subjects include mindfulness, self-compassion, well-being, and self-concept. Three lecture hours a week for one semester. Only one of the following may be counted: Educational Psychology 352K, 362 (Topic 8), and 362 (Topic: Mindfulness, Compassion, and the Self). Prerequisite: Upper-division standing and completion of three semester hours of coursework in behavioral sciences.

**EDP 352N. Addiction Counseling and Theories.**

Studies in biological mechanisms of categories of commonly abused substances and behaviors, as well as prevention and treatment approaches to addiction. Includes discussion of other forms of addiction, including food, sex, and internet, and addiction in diverse populations. Three lecture hours a week for one semester. Educational Psychology 352N and 367 (Topic 3) may not both be counted. Prerequisite: Upper-division standing.

**EDP 354E. Psychology of Women.**

Study of women's experiences, issues, and behavior in the context of psychological theory and research. Integrates several sub-disciplines of psychology, including physiological, personality, developmental, social, abnormal, and applied psychology. Explores a variety of topics relevant to psychology of women, including theories of women's personality, gender socialization, sex differences, victimization, oppression, and motherhood. Three lecture hours a week for one semester. Only one of the following may be counted: Educational Psychology 354E, 362 (Topic: Psychology of Women), 362 (Topic 10), and Women's and Gender Studies 345 (Topic: Psychology of Women). Prerequisite: Upper-division standing.

**EDP 354G. Psychology of the African American Experience.**

**EDP 354J. Psychology of Race and Racism.**

Same as African and African Diaspora Studies 352C. Review of the history and evolution of the construct of race as a psychological and social phenomenon. Multidisciplinary but primarily social-psychological approach: in addition to readings from psychology, ideas in the areas of anthropology, sociology, and biology will be discussed. Emphasis on theoretical and conceptual approaches toward understanding the psychology of racial thinking. Three lecture hours a week for one semester. Only one of the following may be counted: African and African Diaspora Studies 352C, 372D (Topic 1), Educational Psychology 354J, 362 (Topic 6). Prerequisite: Upper-division standing.

**EDP 358D. Emotional and Behavioral Disorders.**

Covers theory and research on several mental disorders with a critical perspective on how social structures and assumptions influence the way they are conceptualized and treated. Three lecture hours a week for one semester. Only one of the following may be counted: Educational Psychology 358D, 363 (Topic 5), 376T (Topic: Emo/Behav Disorders: Youth/Ad). Prerequisite: Upper-division standing and completion of three semester hours of coursework in behavioral sciences.

**EDP 371. Introduction to Statistics.**

Examine descriptive and inferential statistics; measures of central tendency and variability; standardized scores; confidence intervals; correlation and regression; probability and statistical inference; analysis of variance; and nonparametric statistics. Three lecture hours a week for one semester, with additional laboratory hours to be arranged.

**EDP 176T, 276T, 376T, 476T. Topics in Educational Psychology.**

Issues, research, and topics of contemporary interest in various areas of educational psychology and the behavioral sciences. For each semester hour of credit earned, one lecture hour a week for one semester; additional laboratory hours may be arranged for some topics. May be repeated for credit when the topics vary. Prerequisite: Prerequisites may vary with the topic.

**Topic 3: Disability and Culture in Education.** Examination of the culture of disability in the educational context. Explores language and terminology around disability; history of ableism (discrimination/prejudice), the role of accommodations and access in defining disability and inclusion, perceptions of disability over time, identity development for individuals with a disability, diversity and difference of language within disability groups.

**Topic 9: Pediatric Psychology and Health Disparities.** Examine the biological, psychological, and social foundations of pediatric conditions, as well as lifespan health conditions related to development in childhood. Explore pediatric health disparities, the intersection of psychology and public health, research methods used in the field of pediatric psychology, and assessment and intervention with children and families. Educational Psychology 376T (Topic 7) and 376T (Topic 9) may not both be counted. Additional prerequisite: Upper-division standing and six semester credit hours of coursework in behavioral sciences is recommended.

**Topic 12: Sport and Performance Psychology.** Examine the intersection of psychology and sport/performance. Discuss reinforcement and behavior modification, team management, mental health and athletics, and diversity and athletics. Educational Psychology 376T (Topic: Sport & Performance Psych) and 376T (Topic 12) may not both be counted.

**Topic 14: Teaching Sexual Health.** Examine effective teaching strategies related to sexual development, sexual health, and other subjects included in comprehensive sexuality education for children, adolescents, and adults. Designed for those interested in education, social work, nursing, criminal justice, public health, and other professional areas that intersect with providing information. Educational Psychology 376T (Topic: Teaching Sexual Health) and 376T (Topic 14) cannot both be counted. Additional prerequisite: Educational Psychology 350L or equivalent Human Sexuality course.
EDP 379L. Research in Educational Psychology.
Supervised research experience in educational psychology. Individual instruction. May be repeated for credit. Prerequisite: Upper-division standing, completion of twelve semester hours of upper-division coursework in behavioral sciences, and consent of instructor.

Graduate Courses

EDP 380C, 480C. Quantitative Methods.
Theory, models, methods, and applications of quantitative methods used in applied research. Three lecture hours a week for one semester, with additional laboratory hours to be arranged. Educational Psychology 380C, 480C and 182K, 282K, 382K, 482K may not both be counted unless the topics vary. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of the adviser in the student’s area of specialization; additional prerequisites vary with the topic.

**Topic 2: Fundamental Statistics.** Introductory course designed for students in the fields of education and the social, behavioral, and health sciences who expect to take a second course in statistics. Subjects include descriptive and inferential statistics; sampling distributions; hypothesis testing; correlation; linear prediction; tests of mean differences; tests of frequencies and proportions; and one-way analysis of variance. Educational Psychology 380C (Topic 2) and 180E (Topic 1), 280E (Topic 1), 380E (Topic 1) may not both be counted.

**Topic 4: Correlation and Regression Methods.** Examines tests of association; multiple regression, including multiple predictors of a single interval-scaled outcome; and related subjects such as regression models for mediation and moderation. Educational Psychology 380C, 480C (Topic 4) and Educational Psychology 182K, 282K, 382K, 482K (Topic 2) may not both be counted. Additional prerequisite: Educational Psychology 380C (Topic 2), and EDP 380C (Topic 6) or EDP 480C (Topic 6), or consent of instructor.

**Topic 6: Statistical Analysis for Experimental Data.** Subjects include hypothesis tests and data analysis procedures for a variety of experimental designs, including one-way analysis of variance; factorial analysis of variance; analysis of covariance; and repeated measures designs. Instruction in the use of statistical software is provided. Additional hours to be arranged. Educational Psychology 380C (Topic 6) and 182K (Topic 1: Experimental Design and Statistical Inference), 282K (Topic 1: Experimental Design and Statistical Inference), 382K (Topic 1: Experimental Design and Statistical Inference), or 482K (Topic 1: Experimental Design and Statistical Inference) may not both be counted. Additional prerequisite: Educational Psychology 380C (Topic 2), or 180E (Topic 1), 280E (Topic 1), 380E (Topic 1), or consent of instructor.

**Topic 10: Factor Analysis.** Exploratory and confirmatory factor analysis models; elementary matrix algebra; basic formulae for common factor analysis and principal components analysis; factor extraction methods; rotation models; criteria for analytical orthogonal and oblique rotation; interpretation of factors; calculation of factor scores; use of computer programs; and tests of model fit. Educational Psychology 380C (Topic 10) and 182K (Topic 3), 282K (Topic 3), 382K (Topic 3), 482K (Topic 3) may not both be counted. Additional prerequisite: Educational Psychology 380C (Topic 4) or 182K (Topic 2), 282K (Topic 2), 382K (Topic 2), 482K (Topic 2) and 380D (Topic 4) (or 180P (Topic 2), 280P (Topic 2), 380P (Topic 2), 480P (Topic 2)), or consent of instructor.

**Topic 12: Survey of Multivariate Methods.** Examine fundamentals of vector and matrix algebra; multivariate analysis of variance; principal components analysis and exploratory factor analysis; discriminant analysis; logistic regression; multivariate mixed modeling; cluster analysis; multidimensional scaling; and missing data. Educational Psychology 380C (Topic 12) and Educational Psychology 182K (Topic 4), 282K (Topic 4), 382K (Topic 4), 482K (Topic 4) may not both be counted. Additional prerequisite: Educational Psychology 380C (Topic 4) or 182K (Topic 2), 282K (Topic 2), 382K (Topic 2), 482K (Topic 2)) and Educational Psychology 380C (Topic 6) or 182K (Topic 1: Experimental Design and Statistical Inference), 282K (Topic 1: Experimental Design and Statistical Inference), 382K (Topic 1: Experimental Design and Statistical Inference), or consent of instructor.

**Topic 14: Structural Equation Modeling.** Provides the basic theoretical background necessary for the application of structural equation modeling to research problems including model specification, identification, path analysis, estimation, testing fit, respecification, confirmatory factor analysis, and issues concerning the interpretation of structural equation models. Educational Psychology 380C (Topic 14) and 182K (Topic 6), 282K (Topic 6), 382K (Topic 6), 482K (Topic 6) may not both be counted. Additional prerequisite: Educational Psychology 380C (Topic 12), or 182K (Topic 4), 282K (Topic 4), 382K (Topic 4), 482K (Topic 4)), or consent of instructor.

**Topic 16: Hierarchical Linear Modeling.** Introduction to the basic concepts and applications of hierarchical linear (i.e. multilevel) models. Learn strategies for analyzing various nested data structures, such as students within schools, and measurement occasions within subjects. Determine when and how to use hierarchical linear models, with an emphasis placed both on the statistical concepts of the modeling framework and the application of hierarchical linear modeling to data sets via software. Educational Psychology 380C (Topic 16) and 184 (Topic 16), 284 (Topic 16), 384 (Topic 16) may not both be counted. Additional prerequisite: Educational Psychology 380C (Topic 6) and 380C (Topic 4).

**Topic 18: Applied Bayesian Analysis.** Examine practical introduction to Bayesian statistical inference with an emphasis on applications in behavioral and measurement research. Explore conceptual differences between Bayesian and classical statistical inference and the differences between these approaches in the context of various statistical procedures. Use Bayesian software for analysis. Educational Psychology 380C (Topic 18) and 182K (Topic 10), 282K (Topic 10), 382K (Topic 10), 482K (Topic 10) may not both be counted. Additional prerequisite: Educational Psychology 380C (Topic 4) or 382K (Topic 2), or 482K (Topic 2); and 380C (Topic 6) or 382K (Topic 1), 482K (Topic 1); and 380C (Topic 16), or consent of instructor.

**Topic 22: Analysis of Categorical Data.** Introduces basic concepts, common statistical models, and analysis methods for categorical data. Provides theory and examples of applications using categorical techniques. Subjects include inference methods for contingency tables, generalized linear models for binary and count data, logistic regression models, multivariate logit models, loglinear models for contingency tables, and models for matched pairs. Educational Psychology 380C, 480C (Topic 22) and 182K, 282K, 382K, 482K (Topic 5) may not both be counted. Additional prerequisite: Educational Psychology 380C (Topic 4) and 380C, 480C (Topic 6), or consent of instructor.

**Topic 23: Missing Data Analysis.** Analyze data with missing values. Examine missing data theory, estimating statistical models with missing data, and other practical issues related to missing data, including the use of statistical software for handling missing data. Additional prerequisite: Educational Psychology 380C (Topic 6) and 380C (Topic 12).

**Topic 26: Data Exploration and Visualization in R.** Explore R, an open-source statistical programming platform for data analysis and visualization. Examine the foundational facilities and skills in R programming and how to use the tools to accomplish real-world, reproducible data analysis and visualization. Only one of the following may be counted: Educational Psychology 380C (Topic: Data Analysis/ Sim in R), 380C (Topic 20), 380C (Topic 26).
Topic 28: Statistical Modeling and Simulation in R. Building on the foundational skills in R, examine how to design and program Monte Carlo simulation studies, which are a tool for evaluating the performance of statistical estimation and inference procedures. Explore translating mathematical equations to code and implementing statistical algorithms, building R packages, parallelizing, and integrating high-performance functions into R. Additional prerequisite: Educational Psychology 380C (Topic 12); and 380C (Topic 26) or 380C (Topic 20).

EDP 380D. Psychometrics.

Theory, models, methods, and applications in psychometrics and program evaluation. Three lecture hours a week for one semester. Educational Psychology 380D and 180P, 280P, 380P, 480P may not both be counted unless the topics vary. Prerequisite: Graduate standing and consent of the adviser in the student’s area of specialization.

Topic 2: Measurement and Evaluation. A basic background in measurement and evaluation is necessary to be appropriately critical of tests and instruments that are used in educational and psychological measurement situations. Subjects include general principles and basic concepts; types of reliability and validity; and the use of psychometric principles in various testing areas, such as intelligence testing; special aptitudes and abilities; educational achievement; and non-cognitive characteristics. Educational Psychology 380D (Topic 2) and 180P (Topic 1), 280P (Topic 1), 380P (Topic 1), 480P (Topic 1) may not both be counted. Additional prerequisite: Twelve semester hours of upper-division coursework in education, psychology, or other behavioral sciences.

Topic 4: Psychometric Theory and Methods. Addresses major approaches to analyzing responses to test items for making inferences about characteristics of examinees and items. Subjects include mental test theory and methods (e.g., the classical true-score model, item response theory models, and test construction methods); an introduction to factor analysis; and psychological scaling theory and procedures. Educational Psychology 380D (Topic 4) and 180P, 280P, 380P, 480P (Topic 2) may not both be counted. Additional prerequisite: Educational Psychology 380C (Topic 2) (or 180E, 280E, 380E (Topic 1)) and Educational Psychology 380D (Topic 2) (or 180P, 280P, 380P, 480P (Topic 1)), or consent of instructor.

Topic 6: Program Evaluation Models and Techniques. Subjects include background and theory (including classical test theory, objectivity in mental measurement, dichotomous and polytomous models, conventional item analysis versus the item response theory approach, item parameter and ability estimation, and information functions), and applications (including relative efficiency of tests, flexilevel and two-stage tests, computerized adaptive tests and mastery tests, test equating, differential item functioning, and attitude and personality measurement). Educational Psychology 380D (Topic 6) and 180P (Topic 4: Evaluation Models and Techniques), 280P (Topic 4: Evaluation Models and Techniques), 380P (Topic 4: Evaluation Models and Techniques), 480P (Topic 4: Evaluation Models and Techniques) may not both be counted. Additional prerequisite: Educational Psychology 380C (Topic 2) (or 180E (Topic 1), 280E (Topic 1), 380E (Topic 1), 480E (Topic 1)), or consent of instructor.

Topic 8: Item Response Theory. Subjects include background and theory (including classical test theory, objectivity in mental measurement, dichotomous and polytomous models, conventional item analysis versus the item response theory approach, item parameter and ability estimation, and information functions), and applications (including relative efficiency of tests, flexilevel and two-stage tests, computerized adaptive tests and mastery tests, test equating, differential item functioning, and attitude and personality measurement). Educational Psychology 380D (Topic 8) and 180P (Topic 6), 280P (Topic 6), 380P (Topic 6), 480P (Topic 6) may not both be counted. Additional prerequisite: Educational Psychology 380D (Topic 4) (or 180P (Topic 2), 280P (Topic 2), 380P (Topic 2), 480P (Topic 2)), or consent of instructor.

Topic 10: Test and Scale Construction. Design of effective instruments and cognitive tests; facet theory for scale construction; measurement of opinions and beliefs; tryout of experimental forms and item analysis; use of factor analysis and multidimensional scaling; norms and scaled scores; reliability and validity assessment; and test equating methods. Educational Psychology 380D (Topic 10) and Educational Psychology 180P (Topic 8), 280P (Topic 8), 380P (Topic 8), 480P (Topic 8) may not both be counted. Additional prerequisite: Educational Psychology 380D (Topic 4), (or Educational Psychology 180P (Topic 2), 280P (Topic 2), 380P (Topic 2), 480P (Topic 2)), or consent of instructor.

Topic 11: Computer Adaptive Testing. In-depth examination of computer adaptive testing (CAT) methodologies based on Item Response Theory (IRT) models. Subjects include optimal test design principles; estimation of person parameters; item banking techniques; components of fully-adaptive and multi-stage testing algorithms; and issues concerning reliability, validity, item exposure, and score reporting. Only one of the following may be counted: Educational Psychology 380D (Topic 11), 380D (Topic 12), 380P (Topic 13). Additional prerequisite: Educational Psychology 380D (Topic 8) or consent of instructor.

Topic 14: Applied Psychometrics. In-depth examination of applied psychometric techniques. Subjects include equating scores; setting standards; detecting differential item functioning and selection, placement, and classification. Educational Psychology 380D (Topic 14) and Educational Psychology 180P (Topic 14), 280P (Topic 14), 380P (Topic 14), 480P (Topic 14) may not both be counted. Additional prerequisite: Educational Psychology 380D (Topic 4) (or 180P (Topic 2), 280P (Topic 2), 380P (Topic 2), 480P (Topic 2)), or consent of instructor.

Topic 16: Advanced Psychometrics Seminar. Discussion of emerging technical subjects in the areas of psychometrics, measurement, and educational statistics. Addresses advanced techniques for analyzing item response data, and studying characteristics of tests/assessment instruments, using available computer software. Educational Psychology 380D (Topic 16) and 180P 280P, 380P, 480P (Topic 9) may not both be counted. Additional prerequisite: Educational Psychology 380D (Topic 4) (or 180P; 280P; 380P; 480P (Topic 2)), or consent of instructor.

EDP 380Q. Practicum in Psychometrics.

Three lecture hours a week for one semester. May be repeated for credit. Offered on the credit/no credit basis only.

EDP 381C. Research Methodology.

Theories and models for educational and psychological research. Three lecture hours a week for one semester. Educational Psychology 381C and 184, 284, 384 may not both be counted unless the topics vary. May be repeated for credit when the topics vary. Prerequisite: Graduate standing; twelve semester hours of upper-division coursework in education or behavioral science, including an adequate background in statistics; and consent of the adviser in the student’s area of specialization.

Topic 2: Research Design and Methods for Psychology and Education.

Introduction to essential concepts and methods used in quantitative
empirical research in psychology and education. Examine ideas from the philosophy of science, threats to validity, causal inference, and experimental and quasi-experimental techniques, with a focus on the logic and methods of designing and evaluating research. Educational Psychology 381C (Topic 2) and 184, 284, 384 (Topic 24) may not both be counted. Additional prerequisite: Educational Psychology 380C (Topic 6); Educational Psychology 480C (Topic 4) is recommended.

**Topic 4: Research Methodology for Practitioners.** Designed to facilitate understanding of research methods and statistical analysis. Overviews development of needs assessment, program evaluation, and program modifications. Facilitates skills in critically evaluating research to select evidence-based approaches for practice settings. Educational Psychology 381C (Topic 4) and 184, 284, 384 (Topic 20) may not both be counted.

**Topic 6: Literature and Research Synthesis.** Focuses on the creation of a literature review or systematic research synthesis. Subjects to be covered include: problem formation; how research is communicated and how the scientific communication system affects knowledge; methods for locating research; problems in retrieving data from secondary sources; judging the quality of research; estimating the impact of policies and practices and gauging the strength of relations; and assessing variance in impacts and relationships across studies. Educational Psychology 381C (Topic 6) and 184, 284, 384 (Topic 22) may not both be counted.

**Topic 8: Qualitative Research Methods.** Examines research methods that are descriptive, field-based, interpretive, and discovery-focused. Subjects include the varieties of qualitative research; identifying questions and phenomena for research; planning and conducting qualitative research; coding and other analytic procedures; developing an interpretation; and trustworthiness issues in qualitative inquiry. Educational Psychology 381C (Topic 8) and 184, 284, 384 (Topic 8) may not both be counted. Additional prerequisite: Educational Psychology 380C (Topic 2) (or 180E, 280E, 380E (Topic 1)), or consent of instructor.

**Topic 10: Issues in Multicultural Research.** Designed to provide knowledge and tools to critique and evaluate theoretical, conceptual, and methodological issues related to the role and importance of culture, ethnicity, and race in multicultural research. Draws from social, developmental, counseling, and clinical psychology research, and emphasizes the challenges in conducting rigorous, culturally sound research. Educational Psychology 381C (Topic 10) and 184, 284, 384 (Topic 17) may not both be counted.

**Topic 12: Meta-analysis.** Effect size calculation for different designs; quantitative methods and models for synthesizing and testing moderators of effect size, and related subject matter. Educational Psychology 381C (Topic 12) and 184, 284, 384 (Topic 7) may not both be counted. Additional prerequisite: Educational Psychology 480C (Topic 6), 480C (Topic 4), and 380C (Topic 16), or consent of instructor.

**Topic 14: Causal Inference.** Survey of quantitative methods for studying causal effect of interventions, with emphasis on data analysis and interpretation. Subjects include potential outcomes models, graphical models, randomized experiments, propensity scores, matching and weighting, instrumental variables, interrupted time series, regression discontinuities, and mediation models. Educational Psychology 381C (Topic 14) and 184, 284, 384 (Topic 25) may not both be counted. Additional prerequisite: Educational Psychology 381C (Topic 2) (or 184, 284, 384 (Topic 24)).

**Topic 16: Survey Research Design.** Overview of the survey research process; addresses various topics in survey research within the context of the development of a survey study. Covers sequence of a survey study, from conceptualization to measurement, administration, data management and analysis, and writing the research report. Issues in quasi-experimental design, sampling, questionnaire construction, administration, and the use of computers in survey research are covered within this framework. The relative advantages, disadvantages, and appropriateness of the different modes of survey administration (i.e., face-to-face interviews, telephone interviews, mail, internet surveys, and other self-administered questionnaires) for different research questions are also examined. Educational Psychology 381C (Topic 16) and 184, 284, 384 (Topic 7) may not both be counted. Additional prerequisite: Educational Psychology 380C (Topic 2) or consent of instructor.

**EDP 381D. Advanced Statistical Modeling.**
Advanced course intended for doctoral students specializing in quantitative methods. Subject matter includes extensions of basic two- and three-level multilevel models and of structural equation models; simulation study design; and related subjects. Three lecture hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing; Educational Psychology 380C (Topic 14) (or Educational Psychology 182K (Topic 6), 282K (Topic 6), 382K (Topic 6), 482K (Topic 6)) and 380C (Topic 16) (or 184 (Topic 16), 284 (Topic 16), 384 (Topic 16)), or consent of instructor.

**EDP 381E. Advanced Item Response Theory.**
Advanced course intended for doctoral students specializing in quantitative methods. Subjects include extensions of Item Response Theory (IRT) models, including multidimensional IRT and Testlet Response Theory, explanatory item response modeling, IRT rater models, cognitive diagnostic IRT models, response time models, and related subjects. Three lecture hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing; Educational Psychology 380C (Topic 16) (or 184 (Topic 16), 284 (Topic 16), 384 (Topic 16) and 380D (Topic 8) (or 180P (Topic 17), 280P (Topic 17), 380P (Topic 17), 480P (Topic 17)), or consent of instructor.

**EDP 381S. Practicum in Program Evaluation.**
Three lecture hours a week for one semester. May be repeated for credit. Offered on the credit/no credit basis only.

**EDP 382C. Social Psychology and Behavioral Sciences in Education.**
Examination of issues, theories, and research in selected areas of social psychology and other behavioral sciences that have implications for education. Social psychology is the study of how individuals are influenced by others. Behavioral sciences examines the interaction of cognitive processes and social environment, including social relationships. Three lecture hours a week for one semester. Educational Psychology 381M and 382C may not both be counted unless the topics vary. May be repeated for credit when the topics vary. Prerequisite: Graduate Standing.

**Topic 2: Social Psychology.** Explore basic theories and methods of social psychology including attitudes and social cognition, interpersonal relations and group processes, and personality processes and individual differences. Educational Psychology 381M (Topic 2) and 382C (Topic 2) may not both be counted.

**Topic 4: Families and Education in Three Cultures.** Covers intersection of families and education in the cultures of China, Japan, and the U.S. from pre-school through higher education; content is situated within the discipline of psychology. Educational Psychology 381M (Topic 6) and 382C (Topic 4) may not both be counted.

**Topic 6: Psychology of Race, Prejudice, and Stereotypes.** Studies the history and evolution of race, prejudice, and stereotyping from a social psychological perspective. Focuses on understanding the psychology of racial attitudes, prejudice, and stereotyping. Includes related ideas from the areas of anthropology, sociology, and biology. Educational Psychology 381M (Topic 12) and 382C (Topic 6) may not both be counted.
Topic 8: The Social Psychology of Siblings. Survey multiple theories and research literature evaluating the influence of siblings, including the absence of siblings on social, psychological, and health outcomes across the lifespan. Utilize an empirical research study about sibling effects during childhood, adolescence, adulthood, and old age. Additional prerequisite: Graduate standing.

EDP 382D. Learning and Motivation.
History and systems of psychology applied to education; modern theories and current research in learning and human motivation, especially in relation to new educational media and to the educative process. Three lecture hours a week for one semester. Educational Psychology 382D and 382L may not both be counted unless the topics vary. May be repeated for credit when the topics vary. Prerequisite: Graduate standing; twelve semester hours of upper-division coursework in educational psychology and/or psychology, and consent of the adviser in the student’s area of specialization.

Topic 2: History and Systems of Psychology. Overview of the major theoretical frameworks in psychology and its antecedents as a scientific field. Includes discussion of influential ideas, the people behind them, and their historical contexts. Special focus is on particular psychology paradigm characteristics of certain periods in history. Additional emphasis is placed on the research methodologies that accompany each paradigm, and on building communication skills and co-constructing understanding through class discussions, oral presentations, and analytical writing. Educational Psychology 382D (Topic 2) and 382L (Topic 17) may not both be counted.

Topic 4: Psychology of Learning. Examination of the current literature on how people learn, the factors that influence the acquisition of knowledge, and on the philosophical frameworks that have characterized views of the learning process. Educational Psychology 382D (Topic 4) and 382L (Topic 1) may not both be counted.

Topic 6: Motivation and Emotion. Explore human motivation and emotion from a psychological perspective. Examine classical and contemporary theories to understand the nature, predictors, functions, and consequences of motivation and emotion. Review basic theories of motivation and emotion in application to educational issues. Educational Psychology 382D (Topic 6) and 382L (Topic 2) may not both be counted.

Topic 8: Instructional Psychology. Translating the theories and research on human learning and motivation into practice for educational psychology students through designing instruction to meet the needs of a range of audiences and instructional situations. Emphasis is placed on communicating how various learning and motivation theories get translated into design theories and instructional practice, and how a given instructional practice might be based in theory. Educational Psychology 382D (Topic 8) and 382L (Topic 3) may not both be counted.

Topic 16: Research on Discourse Practices. Considers the current research and thinking about how individuals use language in human interaction, how writing and reading processes are multidimensional and socially situated, and how new forms of discourse arise in social interactions. Educational Psychology 382D (Topic 16) and 382L (Topic 19) may not both be counted.

Topic 20: Current Issues in Motivation. Discuss advanced issues and debates in motivation research: motivational interventions, methodological innovations, the roles of culture and context, and current theoretical debates in the field. Educational Psychology 382D (Topic 20) and 382L (Topic 20) may not both be counted.

EDP 382E. Biological Basis of Behavior and Learning.
An investigation of how the biological processes influence behavior, as well as how biological, social, and psychological factors influence health, illness, and learning. Three lecture hours a week for one semester.

EDP 382F. Human Development.
Theories of development and the educative process. Three lecture hours a week for one semester. Educational Psychology 382F and 385 may not both be counted unless the topics vary. May be repeated for credit when the topics vary. Prerequisite: Graduate standing; twelve semester hours of upper-division coursework in educational psychology and/or psychology, and consent of the adviser in the student’s area of specialization.

Topic 2: Biological Basis of Behavior. Provides an overview of brain structure and function and the brain bases of behavior and disorders of behavior. Focus is on the structure of the nervous system, with a primary emphasis on the functional organization of the brain, and the mechanisms underlying neural communication, followed by a review of various functional systems of the brain and clinical disorders known to be associated with dysfunction of these systems. Only one of the following may be counted: Educational Psychology 382E (Topic 2), 382L (Topic 9), 383 (Topic 1).

Topic 10: Child and Adolescent Psychopharmacology, Health, and Learning. Educational Psychology 382E (Topic 10) and 382L (Topic 18) may not both be counted.

Topic 11: Pediatric Psychology and Health Disparities. Focus on current research and practice in pediatric psychology, including the biological, psychological, and social foundations of pediatric conditions, as well as lifespan health conditions related to development in childhood. Explore general principles of pediatric psychology, pediatric health disparities, and disease-specific issues (e.g., cancer, asthma, diabetes, obesity), including developmental processes of risk and resilience and prevention and intervention for these conditions. Only one of the following may be counted: Educational Psychology 382E (Topic 11), 382E (Topic 12), 397 (Topic 6).

Topic 14: Health Psychology.

EDP 382G. Research on Discourse Practices.
In-depth discussion subjects include parenting and socialization; cognitive, social, and emotional development; the effects of socioeconomic status; culture change and acculturation;
and racism and critical race theory. Educational Psychology 382F (Topic 6) and 391 (Topic 1), 691 (Topic 1) may not both be counted. 

**Topic 10: Mindfulness, Compassion, and the Self.** Research and theory related to the concept of the "self" from both Eastern and Western philosophical perspectives, and on the evidence for mental and physical health benefits of mindfulness, compassion for others, and self-compassion. Educational Psychology 382F (Topic 10) and 386N (Topic 13) may not both be counted.

**Topic 12: Dysfunction in Human Behavior/Social Organizations.** Designed to provide an overview of the development of human dysfunction using both psychological and cultural perspectives. Includes a review of personality development as well as the societal dynamics associated with dysfunctional behavior.

**EDP 382G. Cultural Diversity and Individual Differences.**

Theory and research on cultural diversity and individual differences as factors in psychology and education. Three lecture hours a week for one semester. Educational Psychology 381, 481 and 382G may not both be counted unless the topics vary. Educational Psychology 382G and 189H, 289H, 389H, 489H may not both be counted unless the topics vary. Educational Psychology 382G and 385 may not both be counted unless the topics vary. May be repeated for credit when the topics vary.

**Topic 2: Latino/a Psychology.** United States Latino/a experiences, issues, and behavior in the context of psychological theory and research; including, but not limited to, Mexican Americans, Puerto Ricans, Dominicans, Cubans, Central, and South Americans. Integrates sub-disciplines of psychology and explores a variety of subjects relevant to the psychology of Latinos/as, including: race; ethnicity; culture; immigration; acculturation; identity; language; sexuality and sexual orientation; racial and gender socialization; racism, colonization, and colorism; oppression; and health disparities. Educational Psychology 381 (Topic 38), 481 (Topic 38) and 382G (Topic 2) may not both be counted.

**Topic 4: Psychology of Women and Gender.** Study of women’s experiences, issues, and behavior in the context of psychological theory and research. Integrates many sub-disciplines of psychology and explores a variety of subjects relevant to the psychology of women, including sexuality, gender socialization, sex differences, victimization, oppression, and motherhood. Educational Psychology 381 (Topic 12), 481 (Topic 12) and 382G (Topic 4) may not both be counted.

**Topic 10: Disability and Culture in Education.** Examine the culture of disability in the educational context. Explore language and terminology around disability, the history of ableism (discrimination/prejudice), the role of accommodations and access in defining disability and inclusion, perceptions of disability over time, identity development for individuals with a disability, diversity and difference of language within disability groups. Educational Psychology 382G (Topic 10) and 382G (Topic: Disability/Culture in Eductn) may not both be counted.

**EDP 382Q. Research Practicum in Human Development, Culture, and Learning Sciences.**

Three lecture hours a week for one semester. May be repeated for credit. Offered on the credit/no credit basis only.

**EDP 383C, 483C. Assessment and Diagnosis.**

Advanced study of theory, issues, and application of methods of measurement and diagnostic systems. Topics include techniques to estimate individual and group differences as these inform learning and behavior in educational and community settings. For 383C, three lecture hours a week for one semester. For 483C, three lecture hours and one-and-one-half laboratory hours a week for one semester. Educational Psychology 180P; 280P; 380P; 480P and 383C may not both be counted unless the topics vary. Educational Psychology 381, 481 and 383C may not both be counted unless the topics vary. Educational Psychology 383C and 189H, 289H, 389H, 489H may not both be counted unless the topics vary. Educational Psychology 383C and 397 may not both be counted unless the topics vary. May be repeated for credit when the topics vary. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

**Topic 2: Overview of Psychoeducational Assessment.** Reviews the principles and concepts underlying assessment and appraisal of aptitudes, achievement, personality, behavioral and emotional regulation. Reviews standardized testing procedures, as well as checklists, clinical interviewing and projective measures. Develops literacy skills for reviewing test reports and implementing recommendations from assessment reports. Offered on the letter-grade basis only.

**Topic 4: Individual Testing.** Focuses on the selection, administration, scoring, and interpretation (oral and written) of commonly administered individual tests of intelligence for children and adolescents. Educational Psychology 180P, 280P, 380P, 480P (Topic 3) and 383C, 483C (Topic 4) may not both be counted. Offered on the letter-grade basis only.

**Topic 6: Academic Assessment and Intervention.** Explore the application of theory and research along with psychometric knowledge to the assessment of academic skills, with the intent of using this and other (e.g., cognitive) data to recommend evidence-based interventions for children and youth in academic settings. Address the use of data to monitor response to academic services and interventions. Educational Psychology 383C, 483C (Topic 6) and 189H, 289H, 389H, 489H (Topic 2) may not both be counted. Offered on the letter-grade basis only. Additional prerequisite: Educational Psychology 383C (Topic 4) or 483C (Topic 4)

**Topic 8: Social and Emotional Assessment with Children and Adolescents.** Focus on developing knowledge and skills in evidence-based social/emotional assessment, including conducting and interpreting evidence-based assessments of children's social, emotional, and behavioral functioning, and the diagnosis of mental health disorders in youth. Educational Psychology 383C (Topic 8) and 189H, 289H, 389H, 489H (Topic 21) may not both be counted. Offered on the letter-grade basis only. Additional prerequisite: Educational Psychology 383C (Topic 28) (or 397 (Topic 2: Child Psychopathology)) or the equivalent; students in areas other than school psychology must also have consent of instructor.

**Topic 12: Assessment in Counseling.** Introduction to the fundamentals of objective assessment, with emphasis on cultural and ethical considerations. Review of assessment techniques includes diagnostic interviewing, intelligence testing, achievement testing, objective personality testing, interpretation of assessment data, writing integrated reports, providing feedback, and making appropriate referrals. First course of a two-part sequence in psychological assessment; the second course in the sequence is Educational Psychology 383C (Topic 14). Educational Psychology 381 (Topic 6), 481 (Topic 6) and 383C (Topic 12) may not both be counted. Offered on the letter-grade basis only.

**Topic 14: Rorschach and Thematic Apperception Test Interpretation.** Second part of a two-course sequence in psychological assessment; continuation of Educational Psychology 383C (Topic 12). Educational Psychology 381 (Topic 10), 481 (Topic 10) and 383C (Topic 14) may not both be counted. Offered on the letter-grade basis only. Additional prerequisite: Educational Psychology 383C (Topic 12) (or 381 (Topic 6), 481 (Topic 6)); for students outside of counseling psychology, Educational Psychology 383C (Topic 12) (or 381 (Topic 6), 481 (Topic 6)) and consent of instructor.

**Topic 30: Developmental Psychopathology.** Explore the nature, structure, etiology and developmental course of psychopathology
through the lifespan. Examine key issues including approaches to the classification of disorders, incidence and prevalence rates, developmental course of disorders, and risk and protective factors. Only one of the following may be counted: Educational Psychology 383C (Topic 26), 383 (Topic 28), 383C (Topic 30), 397 (Topic 1).
Offered on the letter-grade basis only.

EDP 383D. Practicum: Level One.
The equivalent of three lecture hours a week for one semester. May be repeated for credit. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

EDP 383E. Practicum: Level Two.
The equivalent of three lecture hours a week for one semester. May be repeated for credit. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

EDP 383F. Practicum: Level Three.
The equivalent of three lecture hours a week for one semester. May be repeated for credit. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

EDP 384C. Prevention and Intervention.
Advanced study of theories, processes, and techniques of evidence-based prevention and intervention to enhance learning and behavior in educational and community settings. Three lecture hours a week for one semester. Educational Psychology 381, 481, and 384C may not both be counted unless the topics vary. Educational Psychology 383 and 384C may not both be counted unless the topics vary. Educational Psychology 384C and 189H, 289H, 389H, 489H may not both be counted unless the topics vary. Educational Psychology 384C and 397 may not both be counted unless the topics vary. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

Topic 2: Theories in Counseling. Theories and research for developing counseling interventions in a pluralistic world. Educational Psychology 381 (Topic 1), 481 (Topic 1), and 384C (Topic 2) may not both be counted.

Topic 4: School Counseling. Covers subjects related to the design, implementation, and evaluation of socio-emotional interventions in educational settings. Included is a review of American School Counseling Association Standards, standards of the Texas Education Agency for school counselors, and legislative rules related to school counseling. Educational Psychology 381, 481 (Topic 3: School Counseling) and 384C (Topic 4) may not both be counted. Additional prerequisite: Consent of instructor.

Topic 6: Career Development. Introduction to the basic principles, models, and methods of career development used in educational settings. Educational Psychology 381, 481 (Topic 4: Career Development) and 384C (Topic 6) may not both be counted.

Topic 8: Helping and Counseling Skills. Designed to provide a foundation for the professional practice of counseling and the skills necessary for professional training in counseling and related fields. Studies basic interpersonal helping skills, clinical interviewing, and intervention strategies. Educational Psychology 381, 481 (Topic 8: Counseling Skills and Procedures) and 384C (Topic 8) may not both be counted.

Topic 9: Approaches to Intervention. Subjects include ecological prevention methods, psychoeducational prevention activities, and relapse prevention; clinical interventions include crisis intervention and early interventions. Proactive prevention efforts are emphasized.

Topic 11: Family and Couples Interventions. Review major family systems theories and practices. Only one of the following may be counted: Educational Psychology 384C (Topic 10), 384C (Topic 11), 384C (Topic 12).

EDP 384D. Group Counseling and Interventions.
Explore theory and research in group practice; group dynamics and membership; principles of group planning; and development of leadership skills through structured in-class experiences. Three lecture hours a week for one semester. Educational Psychology 381 (Topic 7), 481 (Topic 7) and 384D may not both be counted. Prerequisite: Graduate standing.

EDP 384Q. Practicum in Counseling.
Three lecture hours a week for one semester. May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Graduate standing.

EDP 384S. Practicum in Spanish for the Helping Professions.
Three lecture hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing.

EDP 384V. Advanced Practicum.
Advanced study and practice of theories, processes, and techniques of evidence-based prevention and intervention to enhance learning and behavior in educational and community settings. Three lecture hours a week for one semester. May be repeated for credit. Offered on the letter-grade basis only. Prerequisite: Graduate standing.
EDP 187T, 287T, 387T, 487T, 587T, 687T. Topics in Educational Psychology.

Explore issues, research, and topics of contemporary interest in various areas of educational psychology and the behavioral sciences. For each semester hour of credit earned, one lecture hour a week for one semester. May be repeated for credit. Prerequisite: Graduate standing.

EDP 193E, 393E. School Psychology Specialist Internship.
For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Graduate standing.

EDP 193N, 393N. Internship in School Psychology.
For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Graduate standing.

EDP 194. Colloquium in Educational Psychology.
Presentation and discussion of issues related to graduate study in educational psychology, including research proposals and developments in the field, by advanced graduate students, members of the faculty, and visiting lecturers. One lecture hour a week for one semester. May be repeated for credit when the topics vary. Offered on the credit/no credit basis only. Prerequisite: Graduate standing and consent of the adviser in the student’s area of specialization.

EDP 194E, 394E. Internship in Counseling.
For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Graduate standing.

EDP 194N, 394N. Internship in Counseling Psychology.
For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. May be repeated for credit. Offered on the credit/no credit basis only.

Individual research planned, carried out, and reported under the supervision of a Graduate Studies Committee member. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Graduate standing; consent of instructor; and consent of the adviser in the student’s area of specialization.

EDP 395R. Qualifying Process Research.
Investigation of assigned problems under the direction of a Graduate Studies Committee member; development and demonstration of competence in research design and execution; and production of an acceptably written research report. Required of doctoral students with a major in educational psychology. The equivalent of three lecture hours a week for one semester. May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Graduate standing, consent of instructor, and consent of the adviser in the student’s area of specialization.

EDP 698. Thesis.
The equivalent of three lecture hours a week for two semesters. Offered on the credit/no credit basis only. Prerequisite: For 698A, graduate standing in educational psychology and consent of the adviser in the student’s area of specialization; for 698B, Educational Psychology 698A.

EDP 398R. Master’s Report.
Preparation of a report to fulfill the requirement for the master’s degree under the report option. The equivalent of three lecture hours a week for one semester. Offered on the credit/no credit basis only. Prerequisite: Graduate standing in educational psychology and consent of the adviser in the student’s area of specialization.

EDP 398T. College Teaching Methodology.
Supervised college teaching experience. Three lecture hours a week for one semester. With consent of the adviser in the student’s area of specialization, may be repeated for credit when the topics vary.
Prerequisite: Graduate standing and consent of the adviser in the student’s area of specialization.

May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Admission to candidacy for the doctoral degree.

Professional Courses

EEE - Earth Energy Engineering

Earth Energy Engineering: EEE

Lower-Division Courses

Upper-Division Courses

Graduate Courses

EEE 380. Topics in Earth Energy Engineering.
May be repeated for credit when the topics vary.

EEE 381. Advanced Geothermal Engineering.
Review all geothermal systems for power generation and direct use, focusing on well engineering, facility engineering, production engineering, and techno-economic analyses. Explore current research and development trends and opportunities from around the world for such systems as conventional hydrothermal, enhanced geothermal, advanced geothermal, geo-exchange, district heating, etc. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

EEE 381K. Subsurface Water Management.
Examine methods for treating, utilizing and disposing of water produced from the subsurface. Discuss the chemistry and engineering principles involved in water treatment and reinjection. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

EEE 381L. Nuclear Waste Storage.
Introduction to engineering and science of nuclear waste storage and disposal with emphasis on geological methods. Review current methods and new solutions to safely dispose of radioactive waste resulting from nuclear energy generation. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

EEE 381M. Advanced Well Integrity.
Focus on the unique challenges in the construction and integrity of special purpose wells, such as geothermal wells, carbon capture and underground storage (CCUS) wells, nuclear storage and waste injection wells. Consider the entire lifecycle of these wells, from initial drilling and well construction all the way to their long-term plugging and abandonment. Explore how to maintain well integrity to prevent premature failure of geothermal wells, CO2 leakage in CCUS wells, and nuclear and other waste leakage in waste injection/storage wells for an indefinite period. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

EEE 382. Subsurface Energy Storage.
Introduction to hydrogen, compressed air, and carbon storage in geological formations as well review of ongoing projects and their relations to net-zero greenhouse emission targets. Discuss flow, transport, and geochemical interactions of different gases with site minerals. Using hands-on numerical simulation training and exercises, gain insights and quantify storage capacity, deliverability, dissolution, trapping and other loss mechanisms. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

EEE 382K. Global Carbon Monitoring Systems.
Introduction to the myriad of ways we measure global greenhouse gas emissions, from ubiquitous ground sensors to low-earth orbit satellites. Explore how new technologies are revolutionizing our ability to monitor global energy flows, track progress on emissions reduction goals, and enable new policy approaches to addressing climate change. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

EEE 698. Thesis.
The equivalent of three lecture hours a week for two semesters. Offered on the credit/no credit basis only. Prerequisite: For 698A, graduate standing and consent of the graduate advisor; for 698B, Earth Energy Engineering 698A.

EEE 398R. Master’s Report.
Prepare a report to fulfill the requirement for the master’s degree under the report option. The equivalent of three lecture hours a week for one semester. Offered on the credit/no credit basis only. Prerequisite: Graduate standing and consent of the graduate advisor.

Professional Courses

EER - Energy and Earth Resources

Energy and Earth Resources: EER

Lower-Division Courses

Upper-Division Courses

Graduate Courses

EER 194, 294, 394. Directed Readings in Energy and Earth Resources.
Restricted to students in the energy and earth resources program. Energy, water, and environmental issues related to the exploration, production, and consumption of energy in society. For each semester hour of credit earned, one lecture hour a week for one semester. May be repeated for credit when the topics vary. Offered on the credit/no credit basis only. Prerequisite: Graduate standing.

EER 396. Seminar in Energy and Earth Resources.
Restricted to students in the Energy and Earth Resources program. Graduate seminar covering a wide range of issues in energy and earth resources. Three lecture hours a week for one semester, with additional hours for some topics. May be repeated for credit when the topics vary. Prerequisite: Graduate Standing.

EER 396R. Study of Geologic, Economic, Societal, and Environmental Issues Related to the Production and Consumption of Energy, Metal, Industrial Mineral, and Water Resources. Emphasizes the descriptive geology and origin of earth resources within the context of their overall geologic

Topic 1: Energy and Earth Resource Economics. Same as Petroleum and Geosystems Engineering 383 (Topic 60: Energy and Earth Resource Economics). Theoretical and applied topics in natural resources economics, including project analysis, production theory, industrial organization, markets and regulation, and environmental economics. Additional prerequisite: Graduate standing in computational and applied mathematics, engineering, or geological sciences. Students seeking to enroll in this course must present technical prerequisites satisfactory to the instructor.

Topic 3: Policy and Law.

Topic 5: Geology of Earth Resources. Same as Geological Sciences 386R. Study of geologic, economic, societal, and environmental issues related to the production and consumption of energy, metal, industrial mineral, and water resources. Emphasizes the descriptive geology and origin of earth resources within the context of their overall geologic
settings. Three lecture hours and one laboratory hour a week for one semester. Only one of the following may be counted: Energy and Earth Resources 396 (Topic: Geology of Earth Resources), 396 (Topic 5), Geological Sciences 386R, 391 (Topic: Geology of Earth Resources). May not be counted toward a graduate degree in geological sciences or petroleum engineering. Prerequisite: Graduate standing.

EER 698. Thesis.
The equivalent of three lecture hours a week for two semesters. Offered on the credit/no credit basis only. Prerequisite: For 698A, graduate standing in energy and earth resources, at least nine semester hours of coursework in the energy and earth resources program, and consent of the graduate adviser; for 698B, Energy and Earth Resources 698A.

Professional Courses

ELP - Educational Leadership and Policy

Educational Leadership and Policy: ELP

Lower-Division Courses

ELP 017. First-Year Connection Seminar: University Leadership Network.
Explore undergraduate education through lectures, discussion, and experiential learning focusing on various contemporary issues, with an emphasis on multidisciplinary perspectives and critical discourse. One lecture hour a week for one semester. May be repeated for credit.

This course is used to record credit the student earns while enrolled at another institution in a program administered by the University’s Study Abroad Office. Credit is recorded as assigned by the study abroad adviser in the Department of Educational Leadership and Policy. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

Upper-Division Courses

ELP 327M. First-Year Seminar: University Leadership Network Mentors.
Explore undergraduate education, as it pertains to student educators, through lectures, peer leadership best practices, discussion, and experiential learning. Three lecture hours a week for one semester. May be repeated for credit.

ELP 127S, 227S, 327S. Academic Success Seminar.
Explore academic success strategies and complete a project related to each student’s probationary status at the University. For each semester hour of credit earned, one lecture hour a week for one semester. May be repeated for credit.

This course is used to record credit the student earns while enrolled at another institution in a program administered by the University's Study Abroad Office. Credit is recorded as assigned by the study abroad adviser in the Department of Educational Leadership and Policy. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

ELP 351L. Leadership for New Student Transition.
Explore peer leadership within the University community, with a focus on supporting the transition to college through the first-year experience. Three lecture hours a week for one semester. Offered on the letter-grade basis only.

ELP 351N. Sorority and Fraternity Leadership Issues.
Explore leadership within university sororities and fraternities. Discuss leadership skills in areas such as community building, risk management, social justice, and community service. Three lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Consent of the Office of the Dean of Students.

ELP 153N, 353N, 653N. Internship.
Supervised practice in a professional position. For each semester hour of credit earned, one lecture hour a week for one semester. May be repeated for credit. Prerequisite: Consent of instructor.

ELP 354C. How Colleges Work.
Examine the ways in which colleges function, informed by history, bureaucracy, organization, administration, governance, and law and policy. Three lecture hours a week for one semester. Offered on the letter-grade basis only.

ELP 354D. Equity and Diversity Issues in Education.
Examine foundational and current issues related to research-based knowledge on equity and diversity issues in PK-12 and higher education. Three lecture hours a week for one semester. Offered on the letter-grade basis only.

ELP 354E. College Students and Their Environments.
Examine issues challenging the ability of colleges to support students, including campus history and legacy. Explore how students’ environments affect the way they engage with colleges. Three lecture hours a week for one semester. Offered on the letter-grade basis only.

ELP 354F. Foundations of Educational Policy.
Introduction to the history of the American educational system. Consider historical, economic, social, and political trends when examining contemporary educational policy. Explore policies related to race, ethnicity, class, and gender, and the recurring nature of controversial issues related to language, segregation, funding, and accountability. Three lecture hours a week for one semester. Offered on the letter-grade basis only.

ELP 354K. Special Topics in Higher Education.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Offered on the letter-grade basis only.

ELP 354L. Introduction to Educational Leadership Studies.
Examine the study and practice of educational leadership. Through a variety of experiences, explore large leadership questions in schools, higher education institutions, and other organizations. Three lecture hours a week for one semester. Offered on the letter-grade basis only.

ELP 354P. Introduction to Educational Policy.
Introduction to basic research, theory, and practice about educational policy and its influence on student outcomes. Discuss the ways in which educational inequalities from early-childhood through postsecondary education contribute to broad social and economic inequality. Three
Enrollment in the principalship program in educational leadership and policy. May not both be counted. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

ELP 384E, 684E. Public School Leadership.
Enrollment in the principalship program in educational leadership and policy. A fused, multidisciplinary foundational core course covering major task areas, administrative theory and processes, and supporting knowledge from other disciplines. For each semester hour of credit earned, one lecture hour a week for one semester. Educational Administration 682H (Topic 1) and Educational Leadership and Policy 384E, 684E may not both be counted. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

ELP 384F. Foundations of Educational Policy.
Introduction to the history of the American educational system. Considers historical, economic, social, and political precedents when examining contemporary educational policy. Emphasis on policies related to race, ethnicity, class, and gender, and the recurring nature of controversial issues related to language, segregation, funding, and accountability. Three lecture hours a week for one semester. Educational Administration 395F and Educational Leadership and Policy 384F may not both be counted. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

ELP 384G, 384G. General, Elementary, and Secondary Programs.
Enrollment in the principalship program in educational leadership and policy. To introduce principal responsibilities for general education programs regarding state/local budget, policies and practices for elementary and secondary schools. Executive leadership practices for general education with an emphasis on instruction, data triangulation, organizational design, fiscal management, strategic planning and site-based decision making for elementary and secondary schools. For each semester hour of credit earned, one lecture hour a week for one semester. Educational Administration 385, 685 (Topic 1) and Educational Leadership and Policy 184G, 384G, 684G may not both be counted. Prerequisite: Graduate standing.

ELP 384H. Policy Implementation.
Examine the challenges and implementation of systemic school reform in the context of American cities. Three lecture hours a week for one semester. Only one of the following may be counted: Educational Administration 395G, Educational Leadership and Policy 384H, 384M. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

ELP 384J. Policy Analysis in Education.
Analyze policy in education, including traditional and critical approaches. Review methods and principles of policy analysis, the role of policy development, context, history, and micropolitical influences. Three lecture hours a week for one semester. Only one of the following may be counted: Educational Administration 395M, Educational Leadership and Policy 384C, 384J. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

ELP 384L. Legal Issues in Schools.
Enrollment in the principalship program in educational leadership and policy. Legal bases for organizing and administering public and private school systems; statutes and court decisions affecting educational functions; administrative legal issues pertaining to various functions of school. Three lecture hours a week for one semester. Educational Administration 388L and Educational Leadership and Policy 384L may not both be counted. Offered on the letter-grade basis only. Prerequisite: Graduate standing.
Enrollment in the principalship program in educational leadership and policy. Examines the organization of elementary and secondary schools and the expertise needed to manage their resources. Applied learning opportunities in the areas of school finance and accounting, property management, state reporting and other statutory requirements, policy interpretation, budget preparation and administration, cash management, personnel management, purchasing, risk management, and strategic planning. For each semester hour of credit earned, one lecture hour a week for one semester. Educational Administration 383, 683 (Topic 5) and Educational Leadership and Policy 184N, 384N, 684N may not both be counted. Prerequisite: Graduate standing.

Enrollment in the principalship program in educational leadership and policy. Group and individual studies of research literature; execution of investigative projects and reports of research. For each semester hour of credit earned, one lecture hour a week for one semester. Educational Administration 383, 683 (Topic 15) and Educational Leadership and Policy 384P, 684P may not both be counted. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

ELP 384Q. Leading for Equity and Justice in K-12 Schools.
Enrollment in the principalship program in educational leadership and policy. Explores development of leadership capacity to lead high-achieving, equitable, and socially just schools for all students in integrated ways, especially for students who have been traditionally underserved. Focus on research-based leadership practices for addressing inequities and ways to develop schools that give all students equitable opportunity for high academic achievement. Three lecture hours a week for one semester. Educational Administration 395E and Educational Leadership and Policy 384Q may not both be counted. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

Enrollment in the principalship program in educational leadership and policy. Introduction to concepts of school-family-community engagement with a focus on equity, social justice, and democratic participation. Explores the capacity to lead community engaged schools through equitably and authentically partnering with traditionally underserved families, communities, and community-based organizations. For each semester hour of credit earned, one lecture hour a week for one semester. Educational Administration 383, 683 (Topic 2) and Educational Leadership and Policy 384R, 684R may not both be counted. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

ELP 384S. School Leadership: Micropolitics and Change.
Enrollment in the principalship program in educational leadership and policy. The micropolitics of leadership, from control to empowerment, as they affect what principals can and should do about change within the school. Designed to assist prospective principals in analyzing and interpreting the dynamic process of initiation, implementation, and institutionalization of change in and around schools. Three lecture hours a week for one semester. Educational Administration 395C and Educational Leadership and Policy 384S may not both be counted. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

ELP 384T. School Improvement: Instructional Leadership and Development.
Enrollment in the principalship program in educational leadership and policy. Designed to provide prospective school leaders with the conceptual, technical, and human-interaction skills necessary for school improvement. Focus on knowledge, principles, problems, and issues related to instructional leadership. Examines instructional supervision theory, goals, functions, supervisory models, and strategies that enhance teaching and learning. Three lecture hours a week for one semester. Educational Administration 385C and Educational Leadership and Policy 384T may not both be counted. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

ELP 384V. Poverty and Education Policy.
The social context of education, the development and expansion of concentrated poverty in central-city schools, and the relationship between poverty and educational performance as it affects schoolchildren and parents in closely related fields such as welfare, housing, employment and training, health care, food assistance, and day care. Three lecture hours a week for one semester. Educational Administration 395V and Educational Leadership and Policy 384V may not both be counted. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

ELP 384W. Systems for Observing and Analyzing Instruction.
Enrollment in the principalship program in educational leadership and policy. Explores skills in systematic observation, organized ways of examining teacher/student behavior in the classroom. Incorporates Texas Teacher Assessment Seminar training. Three lecture hours a week for one semester. Educational Administration 381K and Educational Leadership and Policy 384W may not both be counted. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

ELP 385C. Contemporary Issues In Higher Education Management.
An examination of responsibilities, functions, challenges, and current issues that affect managers in institutions of higher education. Three lecture hours a week for one semester. Educational Administration 391Q and Educational Leadership and Policy 385C may not both be counted. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

ELP 385E. The College Student.
Study of the student population in contemporary colleges and universities, with emphasis on student development theory and the impact of campus environments on student development. Three lecture hours a week for one semester. Educational Administration 391E and Educational Leadership and Policy 385E may not both be counted. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

ELP 385R. Organization and Administration of Higher Education.
Introduction to the study of higher education organizations. Analysis of all elements of higher education institutions, with particular attention to structure and governance. Three lecture hours a week for one semester. Educational Administration 391R and Educational Leadership and Policy 385R may not both be counted. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

ELP 385T. Student Affairs in Higher Education.
Examination of the rationale for student affairs professions and the various administrative units involved in carrying out their mission. Three lecture hours a week for one semester. Educational Administration 391T and Educational Leadership and Policy 385T may not both be counted. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

Foundation for cohort interaction among incoming doctoral students. Establishes a learning community among students and faculty to explore issues related to P20 education with opportunities for team conferring, planning, academic research, relevant practical experiences and site visits, professional presenting, writing and analysis, and other curricular
and career enhancement opportunities. For each semester hour of credit earned, one lecture hour a week for one semester. Educational Administration 181F, 281F, 381F and Educational Leadership and Policy 190C, 290C, 390C may not both be counted. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

**ELP 390D. Pro-Seminar and Systems of Higher Education.**

Restricted to students in the Executive Doctoral Education Program. Build the foundation for cohort interaction and provides opportunities to explore issues related to careers and research in higher education. An introduction to the systems of higher education in the United States. Three lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Consent of instructor.

**ELP 390E. Economics and Finance.**

Survey of the theoretical and empirical literature related to the economic context of and finance policy within K-12 or higher education institutions. Separate K-12 and higher education sections are taught. Covers a wide range of concepts, processes, and policies, such as patterns of financing educational institutions; federal, state, and local governmental roles; revenue sources; costs; benefits; equity; efficiency; budgeting; and finance policy implementation. Three lecture hours a week for one semester. Educational Administration 388P and Educational Leadership and Policy 390P may not both be counted. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

**ELP 390F. School Finance and Ethics.**

A study of public school finance, including budgeting and accounting, encompassing historical and current trends and legal issues. An in-depth examination of state school finance for educational leaders addressing legal and ethical issues and strategic planning that impact the operation of public schools will be addressed. The principal issues that are examined are why education is worthy of funding, who contributes to that funding, and in what proportions, and how the funding is raised in adequate amounts and equitably distributed. Current trends in Texas school finance and what the future holds for education finance will also be examined. Three lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

**ELP 390G. Educational Politics and Policy.**

Survey of theoretical and empirical literature related to educational politics and policy concerning K-12 or higher education institutions, including political systems theory, intergovernmental relations, power and conflict, community relations and intergroup theory, and policies dealing with equity, quality, efficiency, and choice. Three lecture hours a week for one semester. Educational Administration 388P and Educational Leadership and Policy 390P may not both be counted. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

**ELP 390R. Organizational Design and Behavior.**

Theories of organization from structuralist, behaviorist, and critical traditions that are useful for diagnosing problems endemic to schools and colleges, and for developing skills necessary for administering complex educational systems. Study of concepts related to bureaucracy, organizational design, decision making, power and control, leadership, motivation, and organizational communication. Three lecture hours a week for one semester. Educational Administration 382M and Educational Leadership and Policy 390R may not both be counted. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

**ELP 390S. Social and Cultural Contexts of Education.**

Examines the relationship of contemporary educational institutions, both public school and higher education, to their social setting. Three lecture hours a week for one semester. Educational Administration 388M and Educational Leadership and Policy 390S may not both be counted. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

**ELP 390V. Ethics and Values in Educational Leadership.**

Examination, from the point of view of various ethical systems, of issues of equity, distributive justice, codes of ethics in educational professions, treatment of students, and other issues that face administrators of educational systems. Designed to sensitize prospective educational leaders to the ethical content of educational decisions. Three lecture hours a week for one semester. Educational Administration 388V and Educational Leadership and Policy 390V may not both be counted. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

**ELP 391P. Quantitative Research Design and Analysis.**

Introduction to the knowledge base in measurement theory and quantitative research designs, including research designs appropriate to different research contexts; and analyzing, interpreting, and representing statistical data to scholarly and practitioner audiences. Three lecture hours a week for one semester. Educational Administration 381P and Educational Leadership and Policy 391P may not both be counted. Offered on the letter-grade basis only. Prerequisite: Graduate standing and Educational Leadership and Policy 391E.

**ELP 391Q. Qualitative Research Design and Analysis.**

Introduction to the utilization of theoretical frames; research questions or focus, and literature reviews; ethical issues; research design; research methods; data analysis; representations of data; interpretation of data; trustworthiness; implications; and strengths and limitations in the conduct of qualitative research. Three lecture hours a week for one semester. Educational Administration 381Q and Educational Leadership and Policy 391Q may not both be counted. Offered on the letter-grade basis only. Prerequisite: Graduate standing and Educational Leadership and Policy 391E.

**ELP 392E, 692E. Program Evaluation Methods.**

Covers designing and implementing educational program evaluations; collect, analyze, and interpret quantitative and qualitative evaluation data; create and use communications and reports to engage key stakeholders; The primary emphasis is on the theory, issues, topics, and applications of program evaluation in educational environments. For each semester hour of credit earned, one lecture hour a week for one semester. Educational Administration 383, 683 (Topic 17) and Educational Leadership and Policy 392E, 692E may not both be counted. Offered on the letter-grade basis only. Prerequisite: Graduate standing and Educational Leadership and Policy 391E.

**ELP 392P. Advanced Quantitative Design and Analysis.**

Integrated coverage of advanced quantitative methods for education research. A conceptual approach with an emphasis on reading and writing research results sections. Subjects include missing data techniques and statistical procedures, such as linear regression, multiple regression, ANCOVA, logistic regression, and exploratory factor analysis, among other topics. Three lecture hours a week for one semester. Educational Administration 383 (Topic: ADV QUANTITATIVE RSCH AND ANLY) and Educational Leadership and Policy 392P may not both be
counted. Offered on the letter-grade basis only. Prerequisite: Graduate standing, Educational Leadership and Policy 391E and 391P.

**ELP 392Q. Advanced Qualitative Research Design and Analysis.**

Examines in-depth exemplary qualitative studies and considers critical issues that have been raised in qualitative research. Three lecture hours a week for one semester. Educational Administration 381S and Educational Leadership and Policy 392Q may not both be counted. Offered on the letter-grade basis only. Prerequisite: Graduate standing; Educational Leadership and Policy 391E and 391Q.

**ELP 392S. Survey Research Methods in Educational Research.**

Focus on the knowledge, design, planning, implementation, and interpretations of survey research methods. Covers information on purposes of survey research, theoretical and/or empirical basis for survey research, and development of different types of questionnaire items. Methods of selecting a sample and instrument validity and reliability are included, along with statistical procedures to review and interpret survey results. Three lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Graduate standing, and Educational Leadership and Policy 391E and 391P.

**ELP 393D. Law and Disabilities.**

Issues of law and policy associated with serving people with disabilities; with emphasis on federal legislation. Three lecture hours a week for one semester. Educational Administration 393D and Educational Leadership and Policy 393D may not both be counted. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

**ELP 193N, 393N, 693N, 993N. Graduate Internship.**

Supervised practice in a professional position. For each semester hour of credit earned, one lecture hour a week for one semester. Only one of the following may be counted: Educational Administration 397P, 697P, 997P, 397Q, 697Q, 997Q, Educational Leadership and Policy 193N, 393N, 693N, 993N. May be repeated for credit. Prerequisite: Graduate standing and consent of instructor.

**ELP 193P, 393P, 693P, 993P. Individual Projects.**

For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. Educational Administration 383, 683 (Topic 1) and Educational Leadership and Policy 193P, 393P, 693P, 993P may not both be counted. May be repeated for credit. Prerequisite: Consent of instructor.

**ELP 193R, 393R, 693R, 993R. Research Apprenticeship.**

Group and individual projects in research design, research methodologies, and research execution. For each semester hour of credit earned, one lecture hour a week for one semester. Only one of the following may be counted: Educational Administration 196, 296, 396, Educational Leadership and Policy 193R, 393R, 693R, 993R. Prerequisite: Graduate standing and consent of instructor.

**ELP 193S, 393S. Superintendent Practicum.**

Enrollment in the Cooperative Superintendency Program (CSP) in educational leadership and policy. Group and individual studies of research literature; execution of investigative projects and reports of research. For every hour of credit earned, one lecture hour a week for one semester. Educational Administration 383 (Topic: PRACT IN PUBLIC SCH ADMIN-CSP) and Educational Leadership and Policy 193S, 393S may not both be counted. Prerequisite: Graduate standing.

**ELP 193T, 393T, 693T, 993T. Directed Research in Educational Leadership and Policy.**

Investigation of assigned problems under direction of a Graduate Studies Committee member; development and demonstration of competence in research design and execution; production of acceptably written reports of a technical character. Conference course. Only one of the following may be counted: Educational Administration 396T, Educational Leadership and Policy 193T, 393T, 693T, 993T and 199P, 399P, 699P and 999P. May be repeated for credit. Prerequisite: Consent of instructor.

**ELP 394C, 694C. School District Administrative Functions I.**

Enrollment in the Cooperative Superintendency Program (CSP) in educational leadership and policy. Focus on school district governance and the in depth the relationship of the superintendent and board of trustees and their respective roles according to the Texas Education Code. Investigates school facility planning and plant management, including the financing of facilities and the most up to date designs that enhances learning. Explores the function of human resources with a focus on recruitment, selection, and professional development of school district staff as well as important legal implications affecting district personnel. For each semester hour of credit earned, one lecture hour a week for one semester. Only one of the following may be counted: Educational Administration 385, 685 (Topic 6), and Educational Leadership and Policy 694C, 994C. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

**ELP 394D, 694D. School District Administrative Functions II.**

Enrollment in the Cooperative Superintendency Program (CSP) in educational leadership and policy. Focus on three areas of the superintendents' job: first, external and internal communications; second, hands-on practice in the area school finance, including state and local funding strategies and budgeting; third, the use of technology in today's school setting. Includes the study of school district safety and security practices, student transportation planning and requirements, and school district child nutrition operations. For each semester hour of credit earned, one lecture hour a week for one semester. Educational Administration 385, 685 (Topic 6) and Educational Leadership and Policy 394D, 694D may not both be counted. Offered on the letter-grade basis only. Prerequisite: Graduate standing, Educational Leadership and Policy 394C, and 694C.

**ELP 394E. Capstone: Policy Research Problems.**

Advanced seminar designed to help students develop research plans specifically for either a research proposal or a long-range research agenda. Three lecture hours a week for one semester. Educational Administration 395K and Educational Leadership and Policy 394E may not both be counted. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

**ELP 394F. Special Education Leadership and Policy.**

Advanced study of special education policies and practices focused on school leadership and school improvement for inclusive and high-quality schools. Three lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

**ELP 394K. Topics in K-12 in Educational Leadership and Policy.**

Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.
**ELP 394N. School District Instructional Leadership.**
Enrollment in the Cooperative Superintendency Program (CSP) in educational leadership and policy. Connects educational leadership theories with teachers, teaching and student learning, understanding moral and ethical leadership, and building cultural competencies and practices across the school district. Explores common core standards, instructional frameworks, and content-specific instructional practices; differentiated instruction; and assessments of student learning. Three lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

**ELP 394P. Personnel Administration: Managing Instructional Resources.**
Enrollment in the Cooperative Superintendency Program (CSP) in educational leadership and policy. Functions of school personnel offices. Subjects include development of personnel administration; job descriptions; planning for personnel needs; recruitment, selection, and evaluation of personnel; and management of the personnel office. Three lecture hours a week for one semester. Educational Administration 394P and Educational Leadership and Policy 394P may not both be counted. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

**ELP 394R. School District Restructuring and Renewal.**
Enrollment in the Cooperative Superintendency Program (CSP) in educational leadership and policy. Critical examination of school restructuring, renewal research, and systemic change processes since 1975. Study and evaluation of school restructuring and renewal processes, and their underlying research bases, in conjunction with the influence patterns of teachers, principals, superintendents, school boards, parents, and state and national policy makers on the development and use of such concepts and processes. Three lecture hours a week for one semester. Educational Administration 383 (Topic: SCH RESTRUCTURING/RENEWAL-CSP) and Educational Leadership and Policy 394R may not both be counted. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

**ELP 394S. Superintendent Seminar.**
Enrollment in the Cooperative Superintendency Program (CSP) in educational leadership and policy. Involves completion of a final portfolio that demonstrates knowledge, skills, and dispositions required of district level leaders. Students will draft a Professional Development Plan (PDP), considering their own progress in leadership development as determined by completing an Administrative Leadership Inventory and their unique practicum experiences. Students will address perceived program/personal professional gaps and address means to close them, and participate in further development experiences. Students will develop a working mentor relationship with a superintendent or district-level staff person to advance knowledge, skills, and practice emphasizing those areas of perceived need. Three lecture hours a week for one semester. Educational Administration 395 (Topic: SUPERINTENDENCY SEMINAR-CSP) and Educational Leadership and Policy 394S may not both be counted. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

**ELP 394T, 694T. Administrative Theory.**
Enrollment in the Cooperative Superintendency Program (CSP) in educational leadership and policy. Covers leadership theory and models from multidisciplinary perspectives. Outlines the tasks associated with the role of the superintendent, along with processes, and relationships expected of the role. For each semester hour of credit earned, one lecture hour a week for one semester. Educational Administration 695 (Topic: ADVANCED ADMIN THRY & PRAC-CSP) and Educational Leadership and Policy 394T, 694T may not both be counted. Offered on the letter-grade basis only. Prerequisite: Graduate standing.
ELP 395C. Capstone: Advanced Issues in Higher Education.
Develop research questions within an established area of study, prepare a problem statement and rationale for a proposed area of study, critically review the literature on a proposed area, and develop a proposed methodology for answering the research questions. Three lecture hours a week for one semester. Educational Administration 391F and Educational Leadership and Policy 395C may not both be counted. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

ELP 395E. Research on College Students.
A study of both theoretical and practical issues related to research with, of, and on college students. Focus on applied research methods and strategies appropriate for most student affairs/services professionals. Three lecture hours a week for one semester. Only one of the following may be counted: Educational Administration 391K (Topic: Research on College Students), 391K (Topic 20), and Educational Leadership and Policy 395E. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

ELP 395H. History of Higher Education.
The development of higher education since the Middle Ages, with emphasis on the development of higher education in the United States. Three lecture hours a week for one semester. Educational Administration 391S and Educational Leadership and Policy 395H may not both be counted. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

ELP 395K. Topics in Higher Education in Educational Leadership and Policy.
Administrative organization, functions, and practices within colleges and universities; roles of the administrator and principles of effective administrative practice; intensive study in selected areas of college operation. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

- **Topic 1: Comparative Higher Education.** Examination of the higher education systems and institutions of selected countries. Educational Administration 391C and Educational Leadership and Policy 395K (Topic 1) may not both be counted.
- **Topic 2: Leadership in Higher Education.** Examination of foundational theories, leadership strategies in higher education, personal leadership values and qualities, and application of leadership theories to contemporary contexts. Educational Administration 391G and Educational Leadership and Policy 395K (Topic 2) may not both be counted. Additional prerequisite: Completion of at least two semesters of doctoral coursework in educational leadership and policy or consent of instructor.
- **Topic 3: Community Colleges.** History of the values, purpose, and mission of community colleges, with an overview of major functions such as transfer, workforce development, adult basic education, and continuing education. Explores various models of community college governance, funding sources, and alternative funding models. Educational Administration 391K (Topic 1) and Educational Leadership and Policy 395K (Topic 3) may not both be counted.
- **Topic 4: Gender in Higher Education.** Examination of gender within higher education contexts. Educational Administration 391K (Topic 15) and Educational Leadership and Policy 395K (Topic 4) may not both be counted.
- **Topic 5: Equity and Diversity in Higher Education.** Examines the legal, educational and public policy issues related to college access, educational equity, and racial/ethnic diversity in American higher education. Educational Administration 391K (Topic 17) and Educational Leadership and Policy 395K (Topic 5) may not both be counted.

Topic 6: Legislative Issues in Higher Education. Focus on legislative and policy issues in Texas higher education, with an attendant focus on the national policy context. Provides an overview of the state-level policy making process and addresses various policy issues related to higher education access, equity, finance, governance, diversity, and more. Educational Administration 391K (Topic 19) and Educational Leadership and Policy 395K (Topic 6) may not both be counted.

- **Topic 7: Gender and Adult Development.** Utilizes historical, stage, sociocultural, narrative, and psychosocial approaches to examine adult development, primarily within a higher education context. Theories discussed include sexual identity, gender identity, racial/ethnic identity, cognitive development, psychological development, and moral development; plus the general development of women and men. Educational Administration 395 (Topic: Gender and Adult Development) and Educational Leadership and Policy 395K (Topic 7) may not both be counted.

- **Topic 8: Technology and Innovation in Higher Education.** Examines big ideas pertaining to technology and innovation in higher education with a particular focus on developing the ability to design strategic interventions aimed at educational improvement on American college and university campuses. Explores theories of innovation, the adoption of innovation, and process of designing and creating innovative solutions to contemporary problems in higher and post-secondary education. Only one of the following may be counted: Educational Administration 391K (Topic 7), 391K (Topic 23), Educational Leadership and Policy 395K (Topic 8).

- **Topic 9: Multicultural Modes of Mentoring.** Examines literature of developmental relationships and concepts such as sponsorship, coaching, and role modeling with an emphasis on mentoring in higher educational settings. Participants will engage in self-reflective exercises pertaining to their own developmental relationships. Explores prominent mentoring programs on both on campus and in the larger Austin community. Only one of the following may be counted: Educational Administration 391K (Topic 8), 391K (Topic 24), Educational Leadership and Policy 395K (Topic 9).

- **Topic 10: Problems of College Teaching and Learning.** Hands-on, project-based. Explores problems of college teaching and learning through a past, present, and future lens. Survey of the full ecosystem of the college campus as opposed to just the traditional classroom. Covers investigating and designing interventions for pedagogical and learning problems within various units on college or university campuses. Only one of the following may be counted: Educational Administration 391K (Topic: Problems of College Teaching), 391K (Topic 3), Educational Leadership and Policy 395K (Topic 10).

- **Topic 11: Critical Consciousness in Higher Education.** Introduction to foundational historical and theoretical issues for the critical study of higher education diversity work. Examines the ways institutions of higher education and student affairs areas enact change around issues of difference, identity, oppression, and social justice. Integrates questions of identity with those of social justice, and explores understanding self and others. Educational Administration 391K (Topic 5) and Educational Leadership and Policy 395K (Topic 11) may not both be counted.

- **Topic 12: Higher Education Budgeting and Finance.** An overview of higher education finance, including the economics of higher education, the principles and practices of financing higher education, the costs of higher education, and higher education budgeting concepts as they apply to institutions and to states.

- **Topic 13: Administrative Leadership in Higher Education.** Educational Administration 391K (Topic 2) and Educational Leadership and Policy 395K (Topic 13) may not both be counted.

- **Topic 14: Institutional Research and Planning.** Study of the ways planning and governance are informed by data collection, analysis, and information-use strategies in order to improve institutions of higher education. Institutional research and planning functions in
colleges and universities. Educational Administration 391D and Educational Leadership and Policy 395K (Topic 14) may not both be counted.

**Topic 15: The American Professorate.** Educational Administration 391K (Topic 14) and Educational Leadership and Policy 395K (Topic 15) may not both be counted.

**Topic 16: Policy Issues in Higher Education.** Educational Administration 391K (Topic 9) and Educational Leadership and Policy 395K (Topic 16) may not both be counted.

**Topic 17: Assessment in Higher Education.** Focus on the administrative and educational requirements for assessing student learning outcomes in higher education. Covers methodologies, basic approaches, politics, ethics and other concerns related to college student assessment. Analyzes the variety of learning outcomes for a diverse set of programs and services (i.e., counseling, health, judicial affairs, first-year student programs, career services) as well as understand the administrative components of an effective assessment program within a higher education setting. Educational Administration 391K (Topic 18) and Educational Leadership and Policy 395K (Topic 17) may not both be counted.

**Topic 18: Ethical Leadership and Governance.** Restricted to students in the Executive Doctoral Education Program. Examine levels of governance in higher education, issues of equity, codes of ethics in educational professions, treatment of students, and other issues that face administrators of educational systems from the point of view of various ethical systems. Prepare leaders for the ethical dimensions of educational decisions and governance, study foundational theories of ethics, and the strategies required for effective higher education leaders. Refine personal leadership values and qualities, and application of leadership theories to contemporary contexts. Additional prerequisite: Consent of instructor.

**Topic 19: Leadership for Social Justice, Equity and Inclusion.** Course restricted to students in the Executive Doctoral Education Program. Build critical consciousness, capacity to lead for equity and excellence, social justice, and anti-racism within integrated settings. Explore foundational and current issues related to research-based knowledge on equity, social justice, and inclusion in higher education. Investigate the concept of equity from different theoretical perspectives and obtain an understanding of inequality from a structural, organizational, and individual level. Additional prerequisite: Consent of instructor.

**Topic 20: Research Design Theories and Literature Review.** Restricted to students in the Executive Doctoral Education Program. An introduction to the design of educational research with a focus on literature reviews and research theories. Explore how to identify research sources; organize, summarize, and synthesize information in writing; and prepare and utilize effective research questions. Study theoretical perspectives of research design, principles of data collection, analysis and drawing conclusions from data. Additional prerequisite: Consent of instructor.

**Topic 21: LGBTQ+ Histories, Identities, and Contexts in Higher Education.** Explore historical, institutional, and systemic relationships between lesbian, gay, bisexual, transgender, and queer(+) people and higher education. Examine scholarship and practice in both educational policy and student affairs.

**Topic 22: Educational Crises and Emergency Response.** Examine multiple perspectives on campus crises, including institutional and individual impact to administrator and community response and disaster relief. Explore social nuances of crises, including campus racial incidents, student loss, mental health, and the impact of politics in and on education.

**Topic 23: College Student Governance and Involvement.** From organizations as involvement to governing in campus-level and elected leadership capacities, explore historical origins and current events and literature to build deeper context for higher education and student affairs scholars and practitioners. Educational Leadership and Policy 395K (Topic: College Stu Governance and Inv) and 395K (Topic 23) may not both be counted.

**Topic 24: Synthesizing Research Literature.** Explore the nuances associated with writing an academic literature review, including understanding purpose and argument, and responding to topical questions with relevant scholarship and literature.

**ELP 395L. Higher Education Law.**
Examine the most pressing legal issues that confront colleges and universities today and understand how administrators and lawyers can respond to advance the mission of higher education institutions, including priorities around equity and inclusion. Three lecture hours a week for one semester. Educational Administration 391T and Educational Leadership and Policy 395L may not both be counted. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

**ELP 395S. Systems of Higher Education.**
Introduction to the systems of American higher education. Overview of literature on historical and contemporary issues facing the system of American higher education. Three lecture hours a week for one semester. Educational Administration 390S and Educational Leadership and Policy 395S may not both be counted. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

**ELP 396. Topics in P2O Education.**
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

**ELP 197, 297, 397. Educational Policy and Planning Seminar.**
Restricted to Master’s and doctoral students in the Educational Leadership and Policy Program. Provide professional development and advising tailored to PhD students in educational policy and planning. Build community, creating spaces for more interaction with faculty in the program area and with other students; socializes students into the culture of academia; and provides critical information to students regarding job opportunities, funding graduate education, and creating a professional identity. For each semester hour of credit earned, one lecture hour a week for one semester. May be repeated for credit. Prerequisite: Consent of instructor.

**ELP 399K, 699K, 999K. Treatise.**
For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. Educational Administration 399K, 699K, 999K and Educational Leadership and Policy 399K, 699K, 999K may not both be counted. Offered on the credit/no credit basis only. Prerequisite: Admission to candidacy for the doctoral degree. Prior to registering, students must obtain University of Texas at Austin Institutional Review Board approval for research involving human subjects.

**ELP 399L, 699L, 999L. Treatise.**
For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. Educational Administration 399L, 699L, 999L and Educational Leadership and Policy 399L, 699L, 999L may not both be counted. May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Educational Administration 399K, 699K, 999K or Educational Leadership and Policy 399K, 699K, 999K.

**ELP 399W, 699W, 999W. Dissertation.**
Educational Administration 399W, 699W, 999W and Educational Leadership and Policy 399W, 699W, 999W may not both be counted. May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Admission to candidacy for the doctoral degree.
Professional Courses

EMA - Energy Management

Energy Management: EMA

Lower-Division Courses

Upper-Division Courses

Graduate Courses

Meet with leading energy experts from industry and academia to discuss recent developments in technology, policy, law, and business. Conference course. For each hour of credit earned, the equivalent of one hour a week for one semester. May be repeated for credit. Prerequisite: Graduate standing.

EMA 182, 282, 382. Topics in Economics.
For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing; additional prerequisites vary with the topic.

Topic 1: Environmental Economics. Explore economic theory and public policy as they apply to environmental problems. Includes the role of market failure in explaining the existence of pollution, alternative strategies for pollution control and environmental management, and global environmental issues.

Topic 2: Managerial Economics. Explore energy fundamentals through a detailed examination of the history, structure, and functioning of the modern energy industry. Includes models of supply, demand, and transportation; market structure; game theoretic strategies and risk management; environmental issues; and policy and regulation.

Topic 9: Advanced Economics.

EMA 184, 284, 384. Topics in Finance.
For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

Topic 1: Energy Markets and Risk Management. Study how firms manage their financial risk exposures and how they use derivative securities.

Topic 3: Investments. Analyze the investment decision-making process, including asset allocation, security analysis, risk and expected return measurement, asset-pricing models, and international investment.

Topic 4: Advanced Corporate Finance. Investigate advanced corporate financial management in the global marketplace, including valuation concepts, optimal capital structure, risk management, corporate control and restructuring, and mergers and acquisitions.

Topic 5: Private Equity Mergers and Acquisitions. Examine the application of advanced corporate finance concepts in the private equity markets and mergers and acquisitions.

Topic 6: Energy and Environmental Markets. Explore the business and public policy issues that these changes have raised in energy markets, and in the environmental markets to which they are closely tied using tools from economics and finance. Includes the development and application of advanced corporate finance concepts in the private equity markets and mergers and acquisitions.

EMA 186, 286, 386. Topics in Accounting.
For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

Topic 7: Environmental, Social, and Governance Investments. Explore a conceptual and theoretical foundation for corporate ESG (Environmental, Social and Governance) policies and actions and investors’ preferences regarding such policies and actions including how such policies and actions affect firm performance and investor reactions.

Topic 8: Corporate Finance. Explore principles of finance, with application to all aspects of the energy firm; particular attention to cost of capital, investment decisions, management of assets, and procurement of funds.

topics vary. Prerequisite: Graduate standing.

**EMA 190, 290, 390. Topics in Quantitative Analysis.**

For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate Standing.

**Topic 1: Decision Analysis.** Study decision-making under risk and with multiple criteria. Focus on strategic decisions and operational decisions using decision trees, simulation and other quantitative tools.

**Topic 2: Supply Chain.** Investigate the operations or production functions, and the skills required for analyzing and solving related problems.

**Topic 3: Project Management.** Explore project management through a proven framework for leading and directing projects and teams to deliver project results within constraints such as schedule, budget, and available resources.

**Topic 4: Getting Product to Market and Trading.** Provide students a basic understanding of the various aspects of the energy supply chain covering the crude oil, natural gas and electric power supply chains with a focus on how energy products are transported from where they are produced to their ultimate markets.

**Topic 5: Optimization.** Frame, formulate, and apply quantitative optimization and descriptive models to management decisions, using spreadsheets and other software.

**Topic 6: Information Technology.** Explore the in-depth treatment of business data processing concerns such as database management, telecommunications, and the development of commercial systems.

**Topic 7: Analytics.** Investigate methods used to model and analyze data. Explore regression models and time-series models and their application in the area of energy.

**Topic 8: Operations and Supply Chain.** Investigate the operations or production functions, and the skills required for analyzing and solving related problems. Explore the use of developed predictive dynamic models in operations planning and operations decision making.

**Topic 9: Advanced Analytics.**

**EMA 192, 292, 392. Topics in Marketing.**

For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

**Topic 1: Energy Consumer Behavior.** Examine the acquisition and consumption of goods, services, time, and ideas by individuals and groups in the energy industry, including normative and descriptive theories.

**Topic 2: Consumer Analysis.** Introduction to the data and tools used to analyze the business environment and enable marketing decision making. Use real-world data and problems to evaluate strategic market opportunities and assess the impact of marketing decisions in the marketplace.

**EMA 194, 294, 394. Topics in Law.**

For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

**Topic 1: Law and Agreements.** Explore contracts and transfers by oil and gas lessees such as assignments, farmouts, operating agreements, purchase and sale agreements, and master service agreements. Consider the oil and gas development on federal, state, and American Indian lands as well as environmental regulation of the petroleum industry.

**Topic 2: Real Estate Law and Contracts.** Explore the legal framework of commercial real estate finance and development, including basic real estate law concepts, legal aspects of financing techniques and instruments, subdivision land-use controls, and the environmental regulation of real estate development.

**Topic 3: Domestic Petroleum Transactions.** Explore the practical aspects of the U.S. oil and gas legal regime, focusing on the relationship between energy companies and regulatory authorities. Investigate bankruptcy, energy finance, and land use control, as well as purchase of domestic oil and gas assets by foreigners.

**Topic 4: International Petroleum Transactions.** Explore international petroleum transactions in the context of a single industry. Includes the various participants and transactions that take place at each stage of the industry, from acquisition of development rights through exploration and production to transportation and marketing.

**Topic 5: Environmental Law.** Introduction to environmental thinking in the context of scarce publicly and privately owned natural resources. Explore the public trust doctrine, relevance of the Tenth Amendment to environmental protection, the National Endowment Policy Act, the Endangered Species Act, and the Fish and Wildlife Coordination Act.

**Topic 6: Law and Policy.** An introduction to the legal and regulatory regimes governing the energy industry, as well as the important economic and political concerns that underlie the regulation of the production and sale of energy.

**Topic 9: Advanced Law.**

**EMA 196, 296, 396. Topics in Engineering and Science.**

For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

**Topic 1: Oil and Gas Capstone.** Reinforce the interdisciplinary nature of developing petroleum assets. Includes the key stages of project development, such as: acquisition, exploration, development, production, abandonment, and exit.

**Topic 2: Electricity Capstone.** Reinforce the interdisciplinary nature of developing electricity generation assets. Explore the key stages of project development, including site selection, life-cycle analysis, due diligence, permitting, contracting, and financing.

**Topic 3: Energy Technology and Policy.** Explore the understanding of the broad context of energy production and consumption in the U.S. and the world. Discuss past energy trends and fundamentals of energy and power, including fossil fuels and renewable energy sources and technologies. Explore different energy resources, environmental impacts, and societal uses of energy. Evaluate future energy technology options.

**Topic 4: Electricity Systems.** Explore the locational marginal pricing (or nodal) model of organized or centralized day-ahead and real-time electricity markets. Investigate the solution of power flow, formulate optimal dispatch as an optimization problem, consider offer-based economic dispatch, transmission and unit commitment issues. Discuss pricing rules and incentives in markets, particularly in the context of transmission limits. Examine energy and transmission price risk hedging, network models, and capacity adequacy.

**Topic 5: Petroleum Systems.** Introduction to the petroleum system, including source rocks and reservoirs, maturation and migration of hydrocarbons, traps and seals, rock properties, basin, play and prospect risking and assessment and tools for subsurface analysis (wells and seismic) for nontechnical personnel. Examine prospecting strategies and leasing.

**Topic 6: Petroleum Engineering.** Introduction to drilling, reservoir engineering, surface facilities and processing, pipelines, and project abandonment for nontechnical personnel.
Topic 7: Energy Networks. Introduction to analysis, design and management of complex integrated systems typically in midstream oil and gas processes and electric grids.

Topic 8: Advanced Electricity Systems.

Topic 10: Technology and Policy. Investigate the broad context of energy production and consumption in the U.S. and the world. Discuss past energy trends and fundamentals of energy and power, including fossil fuels and renewable energy sources and technologies. Explore different energy resources, environmental impacts, and societal uses of energy, and evaluate future technology options.

Topic 11: Financial Strategies for Energy Firms. Perform an integrated analysis of the interaction between the investment and operating policies of a corporation and its financial strategies, with special emphasis on firms in the energy industry.

Focus on the economics, strategy, business valuation, technology, science, policy and finance specific to the energy industry. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. May be repeated for credit. Prerequisite: Graduate standing and consent of instructor.

Professional Courses

ENM - Engineering Management

Engineering Management: ENM

Lower-Division Courses

Upper-Division Courses

Graduate Courses

ENM 380E. Topics in Management of People, Processes, Projects, and Organizations.
Restricted to students in the engineering management degree program. Explore engineering management processes and how these processes are used by administrators and managers. The equivalent of three lecture hours a week for one semester. May be repeated for credit when the topics vary. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

Topic 1: Managing People and Organizations. Introduction to frameworks from the social sciences that are useful for understanding what effective leaders do when working with others. Engineering Management 380 (Topic 1) and 380E (Topic 1) may not both be counted. Offered on the letter-grade basis only.

Topic 2: Engineering Project Management. Explore methods for organizing, coordinating, and controlling resources to minimize risk and conflict, and to maintain budgets and schedules. Discuss the evaluation of competing alternatives, organization of a project, scheduling of tasks and resources, and the role of management. Engineering Management 380E (Topic 2) and 383 (Topic 1) may not both be counted. Offered on the letter-grade basis only.

ENM 381E. Topics in Business Foundations.
Restricted to students in the engineering management degree program. Survey important topics and foundational ideas in business, as applied within an engineering environment. The equivalent of three lecture hours a week for one semester. May be repeated for credit when the topics vary. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

Topic 1: Marketing and Negotiation. Explore major marketing concepts and variables, their interrelationships, and their implications for policy making, problem solving, and strategy formulation. Examine the development of sophisticated strategies and tactics to pursue mutually beneficial solutions. Only one of the following may be counted: Engineering Management 380 (Topic 2), 380 (Topic 3), 380 (Topic 4), 381E (Topic 1). Offered on the letter-grade basis only.

Topic 2: Legal Issues and Technology Management. Examine legal considerations in the practice of engineering management. Explore management disciplines to create maximum value from technology. Engineering Management 381 (Topic 1) and 381E (Topic 2) may not both be counted. Offered on the letter-grade basis only.

Topic 3: Finance and Accounting for Engineering Managers. Introduction to fundamental concepts in finance and accounting with application. Explore how to evaluate investment and financing opportunities in a corporation. Engineering Management 381E (Topic 3) and 384 may not both be counted. Offered on the letter-grade basis only.

ENM 382E. Topics in Decision Making.
Restricted to students in the engineering management degree program. Explore methods to make high-quality decisions in an engineering environment. The equivalent of three lecture hours a week for one semester. May be repeated for credit when the topics vary. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

Topic 1: Analytics for Engineering Managers. Explore theory and tools that allow the engineering manager to draw correct inferences from data and include those inferences in the decision-making process. Examine descriptive, predictive, and prescriptive analytics and statistics. Offered on the letter-grade basis only.

Topic 2: Strategic Decision and Risk Analysis. Explore tools and methods for making high-quality decisions in the face of uncertainty, applied within an engineering context. Learn how to frame and analyze major decisions and how to overcome the biases that can degrade these decisions. Engineering Management 382E (Topic 2) and 383 (Topic 2) may not both be counted. Offered on the letter-grade basis only.

ENM 385C. Projects in Engineering Management I.
Restricted to students in the engineering management program. First course in a two-semester sequence that concludes with Engineering Management 385D. Independent project carried out under the supervision of an engineering management faculty member. Individual instruction. Engineering Management 385C and 397P may not both be counted. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

ENM 385D. Projects in Engineering Management II.
Restricted to students in the engineering management program. Continuation of Engineering Management 385C or 397P. Independent project carried out under the supervision of an engineering management faculty member. Individual instruction. Offered on the letter-grade basis only. Prerequisite: Graduate standing and Engineering Management 385C or 397P.

ENM 397K. Engineering Management Seminar.
Current topics in engineering management. Conference course. May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Graduate standing and admission to the engineering management degree program.

**Professional Courses**

**ENS - Ensemble**

**Ensemble: ENS**

**Lower-Division Courses**

**ENS 101L. Longhorn Singers.**
Three laboratory hours a week for one semester, with additional hours to be arranged. May be repeated for credit. Prerequisite: Open to any University student who can qualify by audition.

**ENS 101S. University Chorus: Sopranos and Altos.**
Open to any University student who can qualify by audition. Three laboratory hours a week for one semester, with additional hours to be arranged. May be repeated for credit. Prerequisite: Qualify by audition.

**ENS 101T. University Chorus: Tenors and Basses.**
Open to any University student who can qualify by audition. Three laboratory hours a week for one semester, with additional hours to be arranged. May be repeated for credit. Prerequisite: Qualify by audition.

**ENS 101U. University Chorus.**
Three laboratory hours a week for one semester, with additional hours to be arranged. May be repeated for credit. Prerequisite: Open to any University student who can qualify by audition.

**ENS 102S. Symphony Orchestra.**
Six laboratory hours a week for one semester, with additional hours to be arranged. May be repeated for credit. Prerequisite: Open to any University student who can qualify by audition.

**ENS 102U. University Orchestra.**
Two laboratory hours a week for one semester, with additional hours to be arranged. May be repeated for credit. Prerequisite: Open to any University student who can qualify by audition.

**ENS 103C. Symphony Band.**
Six laboratory hours a week for one semester, with additional hours to be arranged. May be repeated for credit. Prerequisite: Open to any University student who can qualify by audition.

**ENS 103P. Butler Opera Center Ensemble.**
Open to any University student who can qualify by audition. Instruction and performance in operatic acting, vocal coaching, and stage direction. Four laboratory hours a week for one semester, with additional laboratory hours as required. May be repeated for credit.

**ENS 103S. Wind Symphony.**
Six laboratory hours a week for one semester, with additional hours to be arranged. May be repeated for credit. Prerequisite: Open to any University student who can qualify by audition.

**ENS 103W. Wind Ensemble.**
Six laboratory hours a week for one semester, with additional hours to be arranged. May be repeated for credit. Prerequisite: Open to any University student who can qualify by audition.

**ENS 105. Sight-Reading.**
Designed to develop and improve sight-reading skills in piano performance. Three laboratory hours a week for one semester. May be repeated for credit. Open to any University student who can qualify by audition.

**ENS 105C. Jazz Combos.**
Two laboratory hours a week for one semester, with additional hours to be arranged. May be repeated for credit. Prerequisite: Open to any University student who can qualify by audition.

**ENS 105E. Jazz Ensemble.**
Two laboratory hours a week for one semester, with additional hours to be arranged. May be repeated for credit. Prerequisite: Open to any University student who can qualify by audition.

**ENS 105M. Alternate Improvisation Music Ensemble.**
Two laboratory hours a week for one semester, with additional hours to be arranged. May be repeated for credit. Prerequisite: Open to any University student who can qualify by audition.

**ENS 106C. Conjunto Ensemble.**
Two laboratory hours a week for one semester, with additional hours to be arranged. May be repeated for credit. Prerequisite: Open to any University student who can qualify by audition.

**ENS 106F. African American Vocal Ensemble.**
Three laboratory hours a week for one semester, with additional laboratory hours as required. May be repeated for credit. Prerequisite: Open to any University student who can qualify by audition.

**ENS 106J. Javanese Gamelan Ensemble.**
Two laboratory hours a week for one semester, with additional hours to be arranged. May be repeated for credit. Prerequisite: Open to any University student who can qualify by audition.

**ENS 106K. Hispanic Caribbean Ensemble.**
Two laboratory hours a week for one semester, with additional hours to be arranged. May be repeated for credit. Prerequisite: Open to any University student who can qualify by audition.

**ENS 106L. Mariachi Laboratory Ensemble.**
Prepare for mariachi ensemble. Open to any University student who can qualify by audition. Two laboratory hours a week for one semester, with additional hours to be arranged. May be repeated for credit. Prerequisite: Qualify by audition.

**ENS 106M. Mariachi Ensemble.**
Two laboratory hours a week for one semester, with additional hours to be arranged. May be repeated for credit. Prerequisite: Open to any University student who can qualify by audition.

**ENS 106N. North Indian Music Ensemble.**
Two laboratory hours a week for one semester, with additional hours to be arranged. May be repeated for credit. Prerequisite: Open to any University student who can qualify by audition.
ENS 106T. Middle Eastern Ensemble.
Two laboratory hours a week for one semester, with additional hours to be arranged. May be repeated for credit. Prerequisite: Open to any University student who can qualify by audition.

Designed for pianists to improve ensemble playing and to give training in the technique of instrumental accompanying. One and one-half laboratory hours a week for one semester, with additional hours to be arranged. May be repeated for credit. Prerequisite: Open to any University student who can qualify by audition.

ENS 106V. Beginning Accompanying: Vocal.
Open to any music majors whose major instrument is piano. An introductory course for pianists designed to teach the basic skills involved in vocal accompanying. Students who want to continue study in vocal accompanying after completing Ensemble 106V should register for Ensemble 106W. One and one-half laboratory hours a week for one semester, with additional hours to be arranged.

Restricted to music majors whose major instrument is piano. An advanced skills for pianists designed to continue to train students in vocal accompanying through more difficult repertoire. One and one-half laboratory hours a week for one semester, with additional hours to be arranged. May be repeated for credit. Prerequisite: Ensemble 106V or consent of instructor.

ENS 107E. Undergraduate Instrumental or Vocal Ensemble.
Open to any University student who can qualify by audition. Two laboratory hours a week for one semester, with additional hours to be arranged. May be repeated for credit when the topics vary. Prerequisite: Qualify by audition.

ENS 107J. Jazz Orchestra.
Advanced jazz ensemble. Six laboratory hours a week for one semester, with additional laboratory hours as required. May be repeated for credit. Open to any University student who can qualify by audition.

ENS 107K. Large Instrumental Ensemble.
Offered under various topics according to instrumentation, including Symphony Band, Symphony Orchestra, and Wind Ensemble. Six laboratory hours a week for one semester, with additional laboratory hours as required. May be repeated for credit. Open to any University student who can qualify by audition.

ENS 107L, 207L. Longhorn Band.
In the spring semester, this organization divides into multiple performing ensembles. For each semester hour of credit earned, the equivalent of three lab hours a week for one semester. May be repeated for credit. Prerequisite: Open to any University student who can qualify by audition.

ENS 107N. New Music Ensemble.
Two laboratory hours a week for one semester, with additional hours to be arranged. May be repeated for credit. Prerequisite: Open to any University student who can qualify by audition.

ENS 107S. Small Instrumental Ensemble.
Offered under various topics according to instrumentation. Two laboratory hours a week for one semester, with additional laboratory hours as required. May be repeated for credit. Open to any University student who can qualify by audition.

ENS 108C. Texas Concert Band.
One of several Longhorn Band ensembles offered in spring semesters. Three laboratory hours a week for one semester, with additional laboratory hours as required. May be repeated for credit. Open to any University student who can qualify by audition.

ENS 108D. Tower Concert Band.
One of several Longhorn Band ensembles offered in spring semesters. Three laboratory hours a week for one semester, with additional laboratory hours as required. May be repeated for credit. Open to any University student who can qualify by audition.

ENS 108E. Longhorn Concert Band.
One of several Longhorn Band ensembles offered in spring semesters. Three laboratory hours a week for one semester, with additional laboratory hours as required. May be repeated for credit. Open to any University student who can qualify by audition.

ENS 108F. Orange Concert Band.
One of several Longhorn Band ensembles offered in spring semesters. Three laboratory hours a week for one semester, with additional laboratory hours as required. May be repeated for credit. Open to any University student who can qualify by audition.

ENS 108G. Longhorn Band Jazz Ensemble.
One of several Longhorn Band ensembles offered in spring semesters. Three laboratory hours a week for one semester, with additional laboratory hours as required. May be repeated for credit. Open to any University student who can qualify by audition.

One of several Longhorn Band ensembles offered in spring semesters. Three laboratory hours a week for one semester, with additional laboratory hours as required. May be repeated for credit. Open to any University student who can qualify by audition.

ENS 108I. Longhorn Band Color Guard Ensemble.
One of several Longhorn Band ensembles offered in spring semesters. Three laboratory hours a week for one semester, with additional laboratory hours as required. May be repeated for credit. Open to any University student who can qualify by audition.

ENS 108J. Longhorn Band Pep Band.
Two laboratory hours a week for one semester, with additional hours to be arranged. May be repeated for credit. Prerequisite: Open to any University student who can qualify by audition.

ENS 108K. University Saxophone Ensemble.
Open to any University student who can qualify by audition. Two laboratory hours a week for one semester, with additional hours to be arranged. May be repeated for credit. Prerequisite: Qualify by audition.

ENS 108L. Percussion Ensemble.
Two laboratory hours a week for one semester, with additional hours to be arranged. May be repeated for credit. Prerequisite: Open to any University student who can qualify by audition.

ENS 108M. Harp Ensemble.
Two laboratory hours a week for one semester, with additional hours to be arranged. May be repeated for credit. Prerequisite: Open to any University student who can qualify by audition.
ENS 109G. Guitar Ensemble.
Two laboratory hours a week for one semester, with additional hours to be arranged. May be repeated for credit. Prerequisite: Open to any University student who can qualify by audition.

ENS 109K. Chamber Singers.
Six laboratory hours a week for one semester, with additional laboratory hours as required. May be repeated for credit. Open to any University student who can qualify by audition.

ENS 109L. Concert Chorale.
Six laboratory hours a week for one semester, with additional laboratory hours as required. May be repeated for credit. Open to any University student who can qualify by audition.

ENS 109N. Saxophone Choir.
Two laboratory hours a week for one semester, with additional hours to be arranged. May be repeated for credit. Prerequisite: Open to any University student who can qualify by audition.

ENS 109Q. Non-Jazz Organ Improvisation.
Restricted to music majors whose primary instrument is organ. Two laboratory hours a week for one semester, with additional hours to be arranged. May be repeated for credit.

Performing and recording pop vocal ensemble. Three laboratory hours a week for one semester, with additional hours to be arranged. May be repeated for credit. Prerequisite: Open to any University student who can qualify by audition.

ENS 109T. Trombone Choir.
Two laboratory hours a week for one semester, with additional hours to be arranged. May be repeated for credit. Prerequisite: Open to any University student who can qualify by audition.

ENS 109U. University of Texas Steel Pan Ensemble.
Two laboratory hours a week for one semester, with additional hours to be arranged. May be repeated for credit. Prerequisite: Open to any University student who can qualify by audition.

Upper-Division Courses
Graduate Courses
ENS 180E. Graduate Instrumental or Vocal Ensemble.
One lecture hour and three laboratory hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing in music, or graduate standing and consent of instructor.

ENS 180S. University Chorus: Sopranos and Altos.
Three laboratory hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing and qualify by audition.

ENS 180T. University Chorus: Tenors and Basses.
Three laboratory hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing and qualify by audition.

ENS 180U. University Chorus.
Three laboratory hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing and qualify by audition.

ENS 181C. Concert Chorale.
One lecture hour and three laboratory hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing in music, or graduate standing and consent of instructor.

ENS 181S. Chamber Singers.
One lecture hour and three laboratory hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing in music, or graduate standing and consent of instructor.

ENS 182S. Symphony Orchestra.
One lecture hour and three laboratory hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing in music, or graduate standing and consent of instructor.

ENS 182U. University Orchestra.
One lecture hour and three laboratory hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing in music, or graduate standing and consent of instructor.

ENS 183C. Symphony Band.
One lecture hour and three laboratory hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing in music, or graduate standing and consent of instructor.

ENS 183S. Wind Symphony.
One lecture hour and three laboratory hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing in music, or graduate standing and consent of instructor.

ENS 183W. Wind Ensemble.
One lecture hour and three laboratory hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing in music, or graduate standing and consent of instructor.

ENS 184C. Longhorn Concert Band.
One lecture hour and three laboratory hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing in music, or graduate standing and consent of instructor.

ENS 184G. Color Guard Ensemble.
One lecture hour and three laboratory hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing in music, or graduate standing and consent of instructor.

ENS 184L. Longhorn Band.
In the spring semester, this organization divides into multiple performing ensembles. Six laboratory hours a week for one semester, with additional hours to be arranged. May be repeated for credit. Prerequisite: Graduate standing in music, or graduate standing and consent of instructor.

ENS 184P. Longhorn Band Percussion Ensemble.
One lecture hour and three laboratory hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing in music, or graduate standing and consent of instructor.
ENS 184R. Orange Concert Band.
One lecture hour and three laboratory hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing in music, or graduate standing and consent of instructor.

ENS 184T. Texas Concert Band.
One of several Longhorn Band ensembles offered in spring semesters. One lecture hour and three laboratory hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing in music, or graduate standing and consent of instructor.

ENS 184W. Tower Concert Band.
One lecture hour and three laboratory hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing in music, or graduate standing and consent of instructor.

ENS 185C. Jazz Combos.
One lecture hour and three laboratory hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing in music, or graduate standing and consent of instructor.

ENS 185E. Jazz Ensemble.
One lecture hour and three laboratory hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing in music, or graduate standing and consent of instructor.

ENS 185J. Jazz Orchestra.
One lecture hour and three laboratory hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing in music, or graduate standing and consent of instructor.

ENS 185M. Alternate Improvisation Music Ensemble.
One lecture hour and three laboratory hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing in music, or graduate standing and consent of instructor.

ENS 185R. Recording Arts Ensemble.
Performing and recording pop vocal ensemble. One lecture hour and three laboratory hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing in music, or graduate standing and consent of instructor.

ENS 186C. Conjunto Ensemble.
One lecture hour and three laboratory hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing in music, or graduate standing and consent of instructor.

ENS 186E. Early Music Ensemble.
One lecture hour and three laboratory hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing in music, or graduate standing and consent of instructor.

ENS 186J. Java Gamelan Ensemble.
One lecture hour and three laboratory hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing in music, or graduate standing and consent of instructor.

ENS 186K. Hispanic Caribbean Ensemble.
One lecture hour and three laboratory hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing in music, or graduate standing and consent of instructor.

ENS 186L. Mariachi Laboratory Ensemble.
Prepare for mariachi ensemble. One lecture hour and three laboratory hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing in music, or graduate standing and consent of instructor.

ENS 186M. Mariachi Ensemble.
One lecture hour and three laboratory hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing in music, or graduate standing and consent of instructor.

ENS 186N. North Indian Music Ensemble.
One lecture hour and three laboratory hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing in music, or graduate standing and consent of instructor.

ENS 186T. Middle Eastern Ensemble.
One lecture hour and three laboratory hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing in music, or graduate standing and consent of instructor.

ENS 186V. African American Vocal Ensemble.
One lecture hour and three laboratory hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing in music, or graduate standing and consent of instructor.

ENS 187N. New Music Ensemble.
One lecture hour and three laboratory hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing in music, or graduate standing and consent of instructor.

ENS 188P. Butler Opera Productions.
Six laboratory hours a week for one semester, with additional hours to be arranged. May be repeated for credit. Prerequisite: Graduate standing in music, or graduate standing and consent of instructor.

ENS 188S. Opera Studio.
One lecture hour and three laboratory hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing in music, or graduate standing and consent of instructor.

ENS 189G. Guitar Ensemble.
One lecture hour and three laboratory hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing in music, or graduate standing and consent of instructor.

ENS 189H. Harp Ensemble.
One lecture hour and three laboratory hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing in music, or graduate standing and consent of instructor.

ENS 189N. Saxophone Choir.
One lecture hour and three laboratory hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing in music, or graduate standing and consent of instructor.

ENS 189P. Percussion Ensemble.
One lecture hour and three laboratory hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing in music, or graduate standing and consent of instructor.

ENS 189T. Trombone Choir.
One lecture hour and three laboratory hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing in music, or graduate standing and consent of instructor.
**ESL 501R. English Language Reading.**
Restricted to international exchange students. Focus on improving reading skills with an emphasis on understanding and discussing a variety of texts, using effective reading strategies, developing vocabulary, and increasing reading speed. Five lecture hours a week for one semester. With consent of instructor, may be repeated for credit. May not be counted toward any University of Texas at Austin degree. Prerequisite: English as a second language placement test and consent of instructor.

**ESL 501S. English Language Speaking.**
Restricted to international exchange students. Focus on improving listening and speaking through activities such as note-taking, conversation practice, and participating in discussions. Emphasis on speaking in a variety of contexts; developing appropriate pronunciation, pitch, rhythm, and stress; increasing fluency; and expanding spoken vocabulary. Five lecture hours a week for one semester. With consent of instructor, may be repeated for credit. May not be counted toward any University of Texas at Austin degree.

**ESL 501W. English Language Writing.**
Restricted to international exchange students. Focus on improving writing skills by increasing writing fluency and accuracy at the sentence, paragraph, and essay levels. Emphasis on structure, organization, and development of ideas. Five lecture hours a week for one semester. With consent of instructor, may be repeated for credit. May not be counted toward any University of Texas at Austin degree.

**ESL 302S. Academic Listening and Speaking.**
Restricted to international students. Focuses on the English language skills necessary for understanding lectures, taking notes, participating in and leading discussions, and giving effective presentations. Three lecture hours a week for one semester. With consent of instructor, may be repeated for credit. May not be counted toward any University of Texas at Austin degree.

**ESL 302W. Academic Reading and Writing.**
Restricted to international students. Focuses on the English language skills necessary for reading and discussing academic texts, using new vocabulary, composing short papers, and writing research projects. Three lecture hours a week for one semester. With consent of instructor, may be repeated for credit. May not be counted toward any University of Texas at Austin degree.

**Upper-Division Courses**

**ESL 388S. Oral Communication.**
Restricted to international students. Practicum in speaking skills. Focuses on pronunciation, fluency, grammatical accuracy, vocabulary development, formal presentations, and graduate-level discussions. Three lecture hours a week for one semester. With consent of instructor, may be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Graduate standing and consent of instructor.

**ESL 388T. Basic Speaking Skills.**
Restricted to international students. Preparation for the International Teaching Assistant Oral English Proficiency Assessment. Practice focuses on the five tasks required in the assessment: summary, vocabulary list, reading, concept and graph explanations, and personal introduction. Three lecture hours a week for one semester. With consent of instructor, may be repeated for credit. Offered on the credit/no credit basis only.

**Professional Courses**

**ESL - English as a Second Language**

English as a Second Language: ESL

**Lower-Division Courses**

**ESL 501G. English Language Grammar.**
Restricted to international exchange students. Focus on improving understanding and use of English grammar in speaking and writing, as well as an introduction to American idioms. Five lecture hours a week for one semester. With consent of instructor, may be repeated for credit. May not be counted toward any University of Texas at Austin degree. Prerequisite: English as a second language placement test and consent of instructor.

**ESL 096C. Conjunto Ensemble.**
One lecture hour and three laboratory hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing and consent of instructor.

**ESL 096E. Early Music Ensemble.**
One lecture hour and three laboratory hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing and consent of instructor.

**ESL 096J. Java Gamelan Ensemble.**
One lecture hour and three laboratory hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing and consent of instructor.

**ESL 096K. Hispanic Caribbean Ensemble.**
One lecture hour and three laboratory hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing and consent of instructor.

**ESL 096L. Mariachi Laboratory Ensemble.**
Prepare for mariachi ensemble. One lecture hour and three laboratory hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing and consent of instructor.

**ESL 096M. Mariachi Ensemble.**
One lecture hour and three laboratory hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing and consent of instructor.

**ESL 096N. North Indian Music Ensemble.**
One lecture hour and three laboratory hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing and consent of instructor.

**ESL 096T. Middle Eastern Ensemble.**
One lecture hour and three laboratory hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing and consent of instructor.

**ESL 096V. African American Vocal Ensemble.**
One lecture hour and three laboratory hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing and consent of instructor.
basis only. Offered on the credit/no credit basis only. Prerequisite: Graduate standing and consent of instructor.

**ESL 388W. Academic Writing.**

Restricted to international students. Practicum in writing skills. Focuses on basic syntax and sentence structure, paragraph and essay writing, and basic research writing. Three lecture hours a week for one semester. With consent of instructor, may be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Graduate standing and consent of instructor.

**ESL 389S. Advanced Oral Communication.**

Restricted to international students. Focuses on accuracy and development of the speaking skills needed in academic contexts. Three lecture hours a week for one semester. With consent of instructor, may be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Graduate standing and consent of instructor.

**ESL 389T. Communication and Teaching Culture.**

Restricted to international students. Focuses on pronunciation, presenting and summarizing information, and relevant topics in intercultural communication. Three lecture hours a week for one semester. With consent of instructor, may be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Graduate standing and consent of instructor.

**ESL 389W. Advanced Academic Writing.**

Restricted to international students. Focuses on the writing skills needed for qualifying exams, research, and conference papers. Three lecture hours a week for one semester. With consent of instructor, may be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Graduate standing and consent of instructor.

**Professional Courses**

**EUS - European Studies**

**European Studies: EUS**

**Lower-Division Courses**

**EUS 302. Introductory Interdisciplinary Topics in European Studies.**

Analysis of various aspects of European culture, science, and technology. Three lecture hours a week for one semester. Only one of the following may be counted unless the topics vary: European Studies 302, 306, 307, 308. May be repeated for credit when the topics vary. Prerequisite: Varies with the topic.

**EUS 305. Introduction to European Studies.**

The myths, ideas, and sociopolitical realities that underpin the intellectual and cultural construction of Europe. Three lecture hours a week for one semester.

**EUS 306. Introductory Topics in European Anthropology, Geography, History, and Sociology.**

Three lecture hours a week for one semester. Only one of the following may be counted unless the topics vary: European Studies 302, 306, 307, 308. May be repeated for credit when the topics vary. Prerequisite: Varies with the topic.

**Topic 1: Race and Gender Stereotypes in Germany.** Same as German, Scandinavian, and Dutch Studies 311D. Examination of pseudoscientific popular theories of "race" and gender that developed in Germany and elsewhere in Europe in the nineteenth century, and how these affected the lives of millions and shaped current thinking about "racial" and gender differences. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 306 (Topic: Bad Blood), 306 (Topic 1), German, Scandinavian, and Dutch Studies 311D, Germanic Civilization 301 (Topic: Bad Blood).

**Topic 2: Introduction to the History and Culture of Spain.** Same as Ancient History and Classical Civilization 310 (Topic 1) and History 306N (Topic 13). The history of Spain from its beginnings in the stone age through the great social and economic upheavals of the twentieth century. Three lecture hours a week for one semester. Only one of the following may be counted: Ancient History and Classical Civilization 310 (Topic: Introduction to the History and Culture of Spain), 310 (Topic 1), European Studies 306 (Topic: Introduction to the History and Culture of Spain), 306 (Topic 2), History 306N (Topic: Introduction to the History and Culture of Spain), 306N (Topic 13).

**Topic 4: Jewish Civilization: 1492 to the Present.** Same as History 306N (Topic 11), Jewish Studies 304N, and Religious Studies 313N. Subjects may include trends toward secularization, the emancipation of European Jewry, the emergence of American Jewry, the Holocaust, the establishment of the State of Israel, and the Arab-Israeli conflict. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 306 (Topic: Jewish Civilization: 1492 to the Present), 306 (Topic 4), History 306N (Topic 11), Jewish Studies 304N, 311 (Topic: Jewish Civilization: 1492 to the Present), Religious Studies 313 (Topic: Jewish Civilization: 1492 to the Present), 313N.

**Topic 6: Luther's World.** Same as German, Scandinavian, and Dutch Studies 311G, History 304Q, and Religious Studies 315M. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 306 (Topic: Luther's World), 306 (Topic 6), German, Scandinavian, and Dutch Studies 310 (Topic: Luther's World), 311G, History 304Q, 306N (Topic: Luther's World), Religious Studies 315 (Topic: Luther's World), 315M.

**EUS 307. Introductory Topics in European Culture, Literature, Art, Music, and Media.**

Three lecture hours a week for one semester. Only one of the following may be counted unless the topics vary: European Studies 302, 306, 307, 308. May be repeated for credit when the topics vary. Prerequisite: Varies with the topic.

**Topic 1: The Vampire in Slavic Cultures.** Same as Comparative Literature 305 (Topic 2) and Russian, East European, and Eurasian Studies 302 (Topic 1). Examines the vampire in the cultures of Russia and Eastern Europe, including manifestations in literature, religion, art, film, and common practices from its origins to present. Only one of the following may be counted: Comparative Literature 305 (Topic: The Vampire in Slavic Cultures), 305 (Topic 2), European Studies 307 (Topic: The Vampire in Slavic Cultures), 307 (Topic 1), Russian, East European, and Eurasian Studies 302 (Topic: The Vampire in Slavic Cultures), 302 (Topic 1), Slavic 301 (Topic: The Vampire in Slavic Cultures), 301 (Topic 1).

**Topic 2: Introduction To Czech History and Culture: Puppets, Pubs, And Polyglots.** Same as Russian, East European, and Eurasian Studies
302 (Topic 3). Survey of Czech history and culture from the middle ages to the present day. Subjects include the culture of daily life, literature, history, philosophy, and the arts. Only one of the following may be counted: Czech 301K (Topic: Puppets, Pubs And Polyglotvs: Introduction To Czech History and Culture), 301K (Topic 3), European Studies 307 (Topic: Puppets, Pubs And Polyglotvs: Introduction To Czech History and Culture), 307 (Topic 2), Russian, East European, and Eurasian Studies 302 (Topic: Puppets, Pubs And Polyglotvs: Introduction To Czech History and Culture), 302 (Topic 3).

**Topic 3: Introduction to the Study of Northern Europe.** Same as German, Scandinavian, and Dutch Studies 301. Introduces significant moments in and monuments from the cultural histories of the German-speaking, Scandinavian, and Dutch nations from their beginnings to the present. Designed to discuss representative problems in research and analysis in cultural studies and the humanities. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 307 (Topic: Introduction to the Study of Northern Europe), 307 (Topic 3), German, Scandinavian, and Dutch Studies 301.

**Topic 4: Movies Go To War.** Same as American Studies 315C, Comparative Literature 305 (Topic 3), and German, Scandinavian, and Dutch Studies 311C. A comparison of films from various nations about major twentieth century wars to the historical facts of the conflicts as practicum in critical comparative analysis of histories as representations. Only one of the following may be counted: American Studies 315 (Topic: Movies Go to War, World War I to Vietnam), 315C, Comparative Literature 305 (Topic: Movies Go to War, World War I to Vietnam), 305 (Topic 3), European Studies 307 (Topic: Movies Go to War, World War I to Vietnam), 307 (Topic 4), German, Scandinavian, and Dutch Studies 311C, Germanic Civilization 311 (Topic 2: Movies Go to War, World War I to Vietnam).

**Topic 5: Grimm's Fairy Tales.** Same as Comparative Literature 305 (Topic 4) and German, Scandinavian, and Dutch Studies 311E. Reading and discussion of tales from the Grimm's collection, as well as some of the relevant secondary literature. Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 305 (Topic: Grimm's Fairy Tales), 305 (Topic 4), European Studies 307 (Topic: Grimm's Fairy Tales), 307 (Topic 5), German, Scandinavian, and Dutch Studies 310 (Topic: Grimm's Fairy Tales), 311E.

**Topic 6: Cuisine and Culture of Central and Eastern Europe.** Same as History 306C and Russian, East European, and Eurasian Studies 302C. An in-depth survey of the culinary traditions, history, and practices of Central and Eastern Europe. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 307 (Topic: Cuisine and Culture of Central and Eastern Europe), 307 (Topic 6), History 306C, Russian, East European, and Eurasian Studies 302 (Topic: Cuisine and Culture of Central and Eastern Europe), 302C.

**Topic 9: War in Comics and Photography: Southeast Europe.** Same as Russian, East European, and Eurasian Studies 302E. Examine different ways to show and tell stories of armed conflict and state-sponsored violence, drawing on a variety of modern media forms - such as comics, cinema, novels, and photography - as well as contemporary digital platforms including social media. Focus on the 1990s conflicts in the former Yugoslavia (Bosnia, Croatia, and Serbia). Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 307 (Topic: War in Comics/Photo: SE Eur), 307 (Topic 9), Russian, East European, and Eurasian Studies 302 (Topic: War in Comics/Photo: SE Eur), 302E, Women's and Gender Studies 301 (Topic: War in Comics/Photo: SE Eur).

**Topic 10: Dissent in Twentieth-Century Ukraine.** Same as Comparative Literature 305C and Russian, East European, and Eurasian Studies 302F. Survey Ukrainian authors from the 1920s to the present, examining writings from "Executed Renaissance," underground literature, and postmodernism. Focus specifically on works that challenge the paradigm of socialist realism by discussing forbidden subjects (famine, religion, Gulag) or accentuating themes that are not considered "major" (personal life). Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 305 (Topic: Dissent 20th-Cent Ukraine), 305C, European Studies 307 (Topic: Dissent 20th-Cent Ukraine), 307 (Topic 10), Russian, East European, and Eurasian Studies 302 (Topic: Dissent 20th-Cent Ukraine), 302F.

**Topic 11: Sweden: Innovating for the World.** Same as German, Scandinavian, and Dutch Studies 311I. Using case studies, trace Sweden's long history with innovation, starting with classic innovations produced with direct governmental support in the eighteenth century and continuing into present day with innovations like Spotify and Swish leading the way. Three lecture hours a week for one semester. European Studies 307 (Topic 11) and German, Scandinavian, and Dutch Studies 311I may not both be counted.

**EUS 307M. An Introduction to Western Music.**

Same as Music 302L. Introduction to musical styles in the Euro-American art music tradition between the Middle Ages and the present day. Designed to foster critical listening and thinking about music, and deepen understanding of the vital role that music has played and continues to play in society and in individual lives. Three lecture hours a week for one semester, with one laboratory hour a week as required. Only one of the following may be counted: European Studies 307 (Topic: Introduction to Western Music), 307M, Music 302L.

**EUS 308. Introductory Topics in European Economics, Government, Business, and Policy.**

Three lecture hours a week for one semester. Only one of the following may be counted unless the topics vary: European Studies 302, 306, 307, 308. May be repeated for credit when the topics vary. Prerequisite: Varies with the topic.

**Topic 1: Germany and Globalization.** Same as American Studies 315 (Topic 8) and German, Scandinavian, and Dutch Studies 311F. Three lecture hours a week for one semester. Only one of the following may be counted: American Studies 315 (Topic: Germany and Globalization), 315 (Topic 8), European Studies 308 (Germany and Globalization), 308 (Topic 1), German, Scandinavian, and Dutch Studies 310 (Topic: Germany and Globalization), 311F.

**EUS 113. Preparation for Study Abroad in Europe.**

One lecture hour a week for one semester. May not be counted by students who have previously taken an international learning seminar. Offered on the pass/fail basis only.

**EUS 318Q. Supervised Research.**

Individual instruction.

**EUS 119S, 219S, 319S, 419S, 519S, 619S, 719S, 819S, 919S. Topics in European Studies.**

This course is used to record credit the student earns while enrolled at another institution in a program administered by the University's Study Abroad Office. Credit is recorded as assigned by the study abroad adviser in the Center for European Studies. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.
Upper-Division Courses

Topics in European Studies.

This course is used to record credit the student earns while enrolled at another institution in a program administered by the University's Study Abroad Office. Credit is recorded as assigned by the study abroad advisor in the Center for European Studies. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

EUS 340M. Continuity and Change in Modern France.

Same as French Civilization 340M. Focuses on various social, political, and cultural crises in France from the revolution of 1789 to the present time. Three lecture hours a week for one semester. European Studies 340M and French Civilization 340M may not both be counted. May not be counted toward fulfillment of the foreign language requirement for any bachelor's degree. Prerequisite: Upper-division standing.

EUS 346. Topics in European Anthropology, Geography, History, and Sociology.

Three lecture hours a week for one semester. Only one of the following may be counted unless the topics vary: European Studies 346, 347, 348, 363. May be repeated for credit when the topics vary. Prerequisite: Upper-division standing.

Topic 1: History of Britain from 1783 through World War I. Same as History 358M. Surveys the political, social, economic, and intellectual history of Great Britain from the years preceding the outbreak of the French Revolution to the conclusion of World War I. Three lecture hours a week for one semester. European Studies 346 (Topic 1) and History 358M may not both be counted. Additional prerequisite: Upper-division standing.

Topic 2: Great Discoveries in Archaeology. Same as Anthropology 326F. The stories, myths, and people behind some of the great archaeological discoveries. Only one of the following may be counted: Anthropology 324L (Topic: Great Discoveries in Archaeology), Anthropology 326F, European Studies 346 (Topic 2). Prerequisite: Upper-division standing.

Topic 4: Law and Society in Early Modern Europe. Same as History 350L (Topic 57: Law and Society in Early Modern Europe) and Women's and Gender Studies 340 (Topic 13: Law and Society in Early Modern Europe). Research seminar on how historians have explored the significance of law, criminal and civil, in the lives of early modern Europeans. Topics include infanticide, forcification, drunkenness, theft, debt, slander, and family disputes. Only one of the following may be counted: European Studies 346 (Topic 4), History 350L (Topic 57), Women's and Gender Studies 340 (Topic 13).

Topic 5: Vienna: Memory and the City. Same as American Studies 370 (Topic 41), History 362C, and Urban Studies 322C. Examines the ways in which cultural memory has shaped, and continues to shape, urban life in Vienna, Austria. Three lecture hours a week for one semester. Only one of the following may be counted: American Studies 370 (Topic 41), European Studies 346 (Topic 5), Geography 356T (Topic: Vienna: Memory and the City), Germanic, Scandinavian, and Dutch Studies 360 (Topic: Vienna: Memory and the City), History 362C, 362G (Topic 2), Urban Studies 322C, 354 (Topic 7). Additional prerequisite: Upper-division standing.

Topic 7: Globalization. Same as Sociology 340C. A sociological analysis of the interrelated economic, political, and cultural aspects of globalization. Examines the consequences of globalization for nations around the world and for groups within these nations. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 346 (Topic: Globalization), 346 (Topic 7), Sociology 321K (Topic: Globalization), 340C. Additional prerequisite: Upper-division standing.

Topic 8: Heretics and Freedom Fighters, 1350-1650. Same as German, Scandinavian, and Dutch Studies 360 (Topic 3), History 362T, and Religious Studies 357F. Explores the theologies, politics, and personal identities that emerged and passed away in this era. Three lecture hours a week for one semester. Only one of the following may be counted: Czech 324 (Topic 4), European Studies 346 (Topic 8), German, Scandinavian, and Dutch Studies 360 (Topic 3), History 362G (Topic 12), 362T, Religious Studies 357 (Topic 12), 357F, Russian, East European, and Eurasian Studies 325 (Topic 28). Additional prerequisite: Upper-division standing.

Topic 9: Northern Lands and Cultures. Same as Geography 356T (Topic 4) and Russian, East European, and Eurasian Studies 345 (Topic 6). Develops geographical understanding of the Circumpolar region of the North, an ancient human habitat, home to distinct millennia-old civilizations. Only one of the following may be counted: European Studies 346 (Topic: Northern Lands and Cultures), 346 (Topic 9), Geography 356T (Topic: Northern Lands and Cultures), 356T (Topic 4), Russian, East European, and Eurasian Studies 345 (Topic: Northern Lands and Cultures), 345 (Topic 6). Additional prerequisite: Upper-division standing.

Topic 10: Women and the Holocaust. Same as Comparative Literature 323 (Topic 19), German, Scandinavian, and Dutch Studies 341F, Jewish Studies 363 (Topic 11), and Women's and Gender Studies 340 (Topic 50). Introduction to both the history of Jewish and German women during World War II and the Holocaust, and to women's narratives and self-representations of this period. Historical sources, memoirs, films, and interviews will be used as source material. Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic: Women's Narratives of the Holocaust and World War II), 323 (Topic 19), European Studies 346 (Topic: Women's Narratives of the Holocaust and World War II), 346 (Topic 10), German, Scandinavian, and Dutch Studies 341F, Germanic Civilization 323E (Topic: Women's Narratives of the Holocaust and World War II), Jewish Studies 363 (Topic 11), Women's and Gender Studies 340 (Topic: Women's Narratives of the Holocaust and World War II), 340 (Topic 50). Additional prerequisite: Upper-division standing.

Topic 11: The Spanish Inquisition. Same as History 350L (Topic 77), Jewish Studies 364 (Topic 5), and Religious Studies 357L. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 346 (Topic 11), History 350L (Topic 77), Jewish Studies 364 (Topic 5), Religious Studies 357 (Topic 10), 357L. Additional prerequisite: Upper-division standing.

Topic 12: World War II in Eastern Europe. Same as History 350L (Topic 79), Jewish Studies 364 (Topic 11), and Russian, East European, and Eurasian Studies 335 (Topic 19). Examines the war in Eastern Europe with a particular emphasis on occupation, collaboration, and resistance; the Holocaust; and the connection between ethnic cleansing, population transfer, and the establishment of communism in postwar Eastern Europe. Only one of the following may be counted: European Studies 346 (Topic: World War II in Eastern Europe), 346 (Topic 12), History 350L (Topic: World War II in Eastern Europe), History 350L (Topic 79), Jewish Studies 364 (Topic: World War II in Eastern Europe), 364 (Topic 11), Russian, East European, and Eurasian Studies 335 (Topic: World War II in Eastern Europe), 335 (Topic 19).

Topic 13: Creation. Same as History 350L (Topic 80) and Religious Studies 373F. Explores the writings of premodern authors as related to creation and early developments in western theology, science,
and philosophy. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 346 (Topic 13), History 350L (Topic 80), Religious Studies 373 (Topic 5), 373F. Additional prerequisite: Upper-division standing.

Topic 14: Enlightenment and Revolution. Same as Core Texts and Ideas 375 (Topic 3) and History 350L (Topic 81). Examines the relationship between the intellectual project of the Enlightenment and the political and social transformations that unfolded in western Europe and North America from the beginnings of the Dutch Revolt in the 1560s to the decade following the Paris Commune of 1871. Only one of the following may be counted: Core Texts and Ideas 375 (Topic: Enlightenment and Revolution), 375 (Topic 3), European Studies 346 (Topic: Enlightenment and Revolution), 346 (Topic 14), History 350L (Topic: Enlightenment and Revolution), 350L (Topic 81). Additional prerequisite: Upper-division standing.

Topic 15: Early Western Colonialism. Same as History 362E. An examination of the phenomenon of colonialism, with an emphasis on the European expansion across the globe that began at the end of the Western Middle Ages and continued throughout the early modern period. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 346 (Topic: Early Western Colonialism), 346 (Topic 15), History 362E, 362G (Topic: Early Western Colonialism), 362G (Topic 5). Additional prerequisite: Upper-division standing.

Topic 16: Eastern Europe in the Twentieth Century. Same as History 362Q and Russian, East European, and Eurasian Studies 335 (Topic 16). Examines the major political, social, and cultural events that shaped Eastern European society in the twentieth century. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 346 (Topic 16), History 362G (Topic 7), 362Q, Russian, East European, and Eurasian Studies 335 (Topic 16). Additional prerequisite: Upper-division standing.

Topic 17: Introduction to the Holocaust. Same as History 362D, Jewish Studies 364 (Topic 6), and Russian, East European, and Eurasian Studies 335 (Topic 17). Examines the mass killing of Jews and other victims in the context of Nazi Germany’s quest for race and space during World War II. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 346 (Topic: Introduction to the Holocaust), 346 (Topic 17), History 362D, 362G (Topic: Introduction to the Holocaust), 362G (Topic 3), Jewish Studies 364 (Topic: Introduction to the Holocaust), 364 (Topic 6), Russian, East European, and Eurasian Studies 335 (Topic: Introduction to the Holocaust), 335 (Topic 17). Additional prerequisite: Upper-division standing.

Topic 18: Southeast Europe in the Twentieth Century. Same as History 362S, Jewish Studies 364 (Topic 8), and Russian, East European, and Eurasian Studies 335 (Topic 18). Explores the key events and developments of Southeastern Europe, the region commonly referred to as the Balkans, in the twentieth century. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 346 (Topic 18), History 362G (Topic 9), 362S, Jewish Studies 364 (Topic 8), Russian, East European, and Eurasian Studies 335 (Topic 18). Additional prerequisite: Upper-division standing.

Topic 19: Regions and Cultures of Europe. Same as Geography 326 and Russian, East European, and Eurasian Studies 345 (Topic 2). Spatial patterns in Europe, with emphasis on cultural, historical, and political geography. Only one of the following may be counted: European Studies 346 (Topic: Regions and Cultures of Europe), 346 (Topic 19), Geography 326, Russian, East European, and Eurasian Studies 345 (Topic 2). Additional prerequisite: Upper-division standing.

Topic 20: Protest, Revolt, and Revolution in West Germany. Same as German, Scandinavian, and Dutch Studies 361J. Explores pivotal political and cultural movements in post-1945 West Germany, including the student movement, terrorism, feminism, the Green movement, and the anti-nuclear movement. Students engage with a wide array of primary and secondary sources ranging from literature and films to essays, newspaper articles, and speeches in order to examine the roots and results of protest, revolt, and revolution during this period of German history. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 346 (Topic: Protest, Revolt, and Revolution in Postwar Germany), 346 (Topic 20), German, Scandinavian, and Dutch Studies 360 (Topic: Protest, Revolt, and Revolution in Postwar Germany), 361J, Germanic Civilization 360E (Topic: Protest, Revolt, and Revolution in Postwar Germany). Additional prerequisite: Upper-division standing.

Topic 21: Spinoza and Modernity. Same as Core Texts and Ideas 321F, History 362P, Jewish Studies 364 (Topic 9), and Religious Studies 357M. Introduction to the core of Spinoza’s writings and the diverse reactions they have elicited. Examines Spinoza’s refusal of mind-body dualism, as well as a transcendent god or ideal as a way of understanding Spinoza’s concepts and ideas. Three lecture hours a week for one semester. Only one of the following may be counted: Core Texts and Ideas 321F, European Studies 346 (Topic 21), 347 (Topic: Spinoza and Modernity), History 362P, Jewish Studies 364 (Topic 9), Philosophy 354 (Topic 7), Religious Studies 357 (Topic 8), 357M. Additional prerequisite: Upper-division standing.

Topic 22: German Nationalisms. Same as German, Scandinavian, and Dutch Studies 361K, Government 368T, and Russian, East European, and Eurasian Studies 335 (Topic 20). History of diverse views and movements regarding German national identity within their respective contexts, 1800-present. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 346 (Topic 22), German, Scandinavian, and Dutch Studies 361K, Government 365N (Topic 6), 365N (Topic 19), 368T, Russian, East European and Eurasian Studies 335 (Topic 20). Additional prerequisite: Upper-division standing.

Topic 23: Holocaust Aftereffects. Same as Comparative Literature 323 (Topic 40), German, Scandinavian, and Dutch Studies 360 (Topic 1), Jewish Studies 365 (Topic 14), Religious Studies 357V, and Women’s and Gender Studies 340 (Topic 66). Explores the historical, political, psychological, theological, and cultural fallout of the Holocaust, as well as literary and cinematic responses in Europe and the United States. Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic 40), European Studies 346 (Topic 23), German, Scandinavian, and Dutch Studies 360 (Topic 1), Jewish Studies 365 (Topic 14), Liberal Arts Honors 350 (Topic: Holocaust Aftereffects), 351Q, Religious Studies 357 (Topic 18), 357V, Women’s and Gender Studies 340 (Topic: Holocaust Aftereffects), 340 (Topic 66). Additional prerequisite: Upper-division standing.

Topic 24: Europe since 1919. Same as History 323L. Survey course emphasizing the impact of the two world wars on European social, political, and cultural life in the twentieth century. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 346 (Topic: Europe since 1919), 346 (Topic 24), History 323L. Additional prerequisite: Upper-division standing.

Topic 25: The French Revolution and Napoleon. Same as Core Texts and Ideas 363 and History 353. Analysis of the social, political, and economic origins and outcomes of the French Revolution and Napoleon’s empire. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 346 (Topic: French Revolution and Napoleon), 346 (Topic 25), Core Texts and Ideas 363, 375 (Topic: French Revolution and Napoleon), History 353. Additional prerequisite: Upper-division standing.

Topic 26: History of Britain from the Restoration to 1783. Same as History 362P and Core Texts and Ideas 321F, and Core Texts and Ideas 321L. Survey course examining the history of Britain from the English Restoration to 1783. Three lecture hours a week for one semester. Only one of the following may be counted: Core Texts and Ideas 321F, European Studies 346 (Topic 21), 347 (Topic: Enlightenment and Revolution), History 362P, Jewish Studies 364 (Topic 9), Philosophy 354 (Topic 7), Religious Studies 357 (Topic 8), 357M. Additional prerequisite: Upper-division standing.

For more information, please refer to the General Information 2023-2024 section.
Independence in 1783. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 346 (Topic: History of Britain from the Restoration to 1783), 346 (Topic 26), History 334J. Additional prerequisite: Upper-division standing.

**Topic 28: The Church and the Jews.** Same as History 361D, Jewish Studies 364 (Topic 10), and Religious Studies 357O. Examination of the complex relationship between the Western Church and Jews over two millennia. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 346 (Topic: The Church and the Jews), 346 (Topic 28), History 361D, 362G (Topic 14), Jewish Studies 364 (Topic 10), Religious Studies 357 (Topic 9), 3570. Additional prerequisite: Upper-division standing.

**Topic 29: Anti-Semitism in History and Literature.** Same as Comparative Literature 323 (Topic 2), German, Scandinavian, and Dutch Studies 361L, and Jewish Studies 364 (Topic 1). Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 346 (Topic: Anti-Semitism in History and Literature), 346 (Topic 29), Comparative Literature 323 (Topic: Anti-Semitism in History and Literature), 323 (Topic 42), German, Scandinavian, and Dutch Studies 360 (Topic: Anti-Semitism in History and Literature), 361L, Jewish Studies 361 (Topic: Anti-Semitism in History and Literature), 364 (Topic 1). Additional prerequisite: Upper-division standing.

**Topic 30: Marx and Marxist Theory.** Same as Core Texts and Ideas 335M, History 332R, and Philosophy 342M. Introduction to the writings of Karl Marx as well as to those of his intellectual successors in Europe and around the globe in the nineteenth and twentieth centuries. Three lecture hours a week for one semester. Only one of the following may be counted: Core Texts and Ideas 335 (Topic: Marx and Western Marxism), 335M, European Studies 346 (Topic: Marx and Western Marxism), 346 (Topic 30), History 332R, 362G (Topic: Marx and Western Marxism), Philosophy 334K (Topic: Marx and Western Marxism), 342M. Additional prerequisite: Upper-division standing.

**Topic 31: The Sacred and the Secular in Modern European Thought.** Same as Core Texts and Ideas 332, History 361G, and Religious Studies 357S. Introduces key themes and methodologies of intellectual history and social theory by exploring the competing approaches to secularization and sacralization in modern European thought. Three lecture hours a week for one semester. Only one of the following may be counted: Core Texts and Ideas 332, 335 (Topic: Sacred and Secular in Modern European Thought), 335 (Topic 7), European Studies 346 (Topic: Sacred and Secular in Modern European Thought), 346 (Topic 32), History 361G, 362G (Topic: Sacred and Secular in Modern European Thought), 362G (Topic 19), Religious Studies 357 (Topic: Sacred and Secular in Modern European Thought), 357 (Topic 20), 357S. Additional prerequisite: Upper-division standing.

**Topic 33: European Immigration to Texas in the Nineteenth Century.** Same as American Studies 321K and German, Scandinavian, and Dutch Studies 361S. Three lecture hours a week for one semester. Only one of the following may be counted: American Studies 321 (Topic: European Immigration to Texas in the Nineteenth Century), 321K, European Studies 346 (Topic: European Immigration to Texas in the Nineteenth Century), 346 (Topic 33), German, Scandinavian, and Dutch Studies 360 (Topic: European Immigration to Texas in the Nineteenth Century), 361S. Additional prerequisite: Upper-division standing.

**Topic 34: German Scholars: US Exile.** Same as American Studies 321L, German, Scandinavian, and Dutch Studies 361Q, and Philosophy 334Q. Examine the migration of established European intellectuals into the US, due to the Second World War. Explore how they worked against their persecutors for their own cultural heritage and to influence US intellectual life. Investigate the ethical dilemmas faced in transplanting their lives and projects into new contexts. Three lecture hours a week for one semester. Only one of the following may be counted: American Studies 321 (Topic: German Scholars: US Exile), 321L, Comparative Literature 323 (Topic: German Scholars: US Exile), 323 (Topic 56), European Studies 346 (Topic: German Scholars: US Exile), 346 (Topic 34), German, Scandinavian, and Dutch Studies 360 (Topic: German Scholars: US Exile), 361Q, Philosophy 334Q, 354 (Topic: German Scholars: US Exile). Additional prerequisite: Upper-division standing.

**Topic 35: Restitution and Restorative Justice after the Holocaust.** Same as History 366E, Jewish Studies 364 (Topic 17), and Middle Eastern Studies 343 (Topic 17). Examine attempts to find a measure of justice after the Holocaust. Explore themes of human rights and international law. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 346 (Topic: Holocaust/Restitution/Justice), 346 (Topic 35), History 366E, 366N (Topic: Holocaust/Restitution/Justice), Jewish Studies 364 (Topic: Holocaust/Restitution/Justice), 364 (Topic 17), Middle Eastern Studies 343 (Topic: Holocaust/Restitution/Justice), 343 (Topic 17). Additional prerequisite: Upper-division standing.

**Topic 36: Stuart England, 1603-1689.** Same as History 375L. Topical lecture course focusing on the most significant political, religious, social, economic, and cultural developments in seventeenth-century England. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 346 (Topic: Stuart England, 1603-1689), 346 (Topic 36), History 375L. Additional prerequisite: Upper-division standing.

**Topic 37: Tudor England, 1485-1603.** Same as History 375K. Exploration of the most important political, religious, social, economic, and intellectual changes that occurred in England between the accession of Henry VII and the death of Elizabeth I. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 346 (Topic: Tudor England, 1485-1603), 346 (Topic 37), History 375K. Additional prerequisite: Upper-division standing.

**Topic 38: The Crusades.** Same as Ancient History and Classical Civilization 330 (Topic 5), History 344S, and Religious Studies 375S (Topic 8). An exploration of the religious encounters between eastern and western Christians, Christian heretics, Jews, Muslims, and polytheists; political, military, and cultural changes of the high middle ages; and the ways that crusading ideas and symbols have been reused in contemporary politics and popular culture. Three lecture hours a week for one semester. Only one of the following may be counted: Ancient History and Classical Civilization 330 (Topic: The Crusades), 330 (Topic 5), European Studies 346 (Topic: The Crusades), 346 (Topic 38), History 344S, 350L (Topic: The Crusades), Religious Studies 375S (Topic: The Crusades), 375S (Topic 8). Additional prerequisite: Upper-division standing.

**Topic 39: The World of the Victorians.** Same as History 361C. Introduction to the main contours of social and cultural British history, both in Britain and in its burgeoning empire. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 346 (Topic: The World of the Victorians), 346 (Topic 39), History 361C, 362G (Topic 13). Additional prerequisite: Upper-division standing.

**Topic 41: Europe Via Ethnography.** Same as Anthropology 326G. Develop a geographical and historical orientation to Europe and examine the cultural complexity of Europe via ethnography. Three lecture hours a week for one semester. Only one of the following may be counted: Anthropology 325L (Topic: Europe via Ethnography), 325L (Topic 20), 326G, European Studies 346 (Topic: Europe via Ethnography), 346 (Topic 41). Additional prerequisite: Upper-division standing.

**Topic 42: Memories of War.** Same as American Studies 321W, German, Scandinavian, and Dutch Studies 362D, and Government 362S. Consider the ways the wars of the twentieth and twenty-first century are being remembered in Germany and the United States - from poems, novels and films to monuments and the controversial debates about military conflicts that the two countries have been involved in. Utilize theories of social memory, and concepts of individual and social mourning, to analyze how war affects individual lives, how societies mourn, and how remembering war impacts national identity and politics. Three lecture hours a week for one semester. Only one of the following may be counted: American Studies 321 (Topic: Memories of War), 321W, European Studies 346 (Topic: Memories of War), 346 (Topic 42), German, Scandinavian, and Dutch Studies 360 (Topic: Memories of War), 362D, Government 362S. Additional prerequisite: Upper-division standing.

**EUS 347. Topics in European Culture, Literature, Art, Music, and Media.**

Three lecture hours a week for one semester. Only one of the following may be counted unless the topics vary: European Studies 346, 347, 348, 363. May be repeated for credit when the topics vary. Prerequisite: Varies with the topic.

**Topic 1: Italian Civilization.** Same as Italian Civilization 360. Survey of the social, political, and cultural history of Italy. Taught in English. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 347 (Topic 1), Italian Civilization 360. With consent of the undergraduate adviser in the Department of French and Italian, may be counted toward a major in Italian. Additional prerequisite: Upper-division standing.

**Topic 3: Introduction to Germanic Religion and Myth.** Same as German, Scandinavian, and Dutch Studies 361C and Religious Studies 357T. Survey of the sources and main features of Germanic religion and of the transition from paganism to Christianity in northern Europe and the Germanic territories of western Europe. Subjects include cosmogonic myths; the origin of man and of society; the concept of the soul; gods and goddesses and their mythology; and the organization of worship. Three lecture hours a week for one semester. Only one of the following may be counted: English 322 (Topic 2), European Studies 347 (Topic 3), German, Scandinavian, and Dutch Studies 361C, Religious Studies 365 (Topic 2), Religious Studies 357 (Topic 17), 357T. Additional prerequisite: Upper-division standing.

**Topic 7: The European Novel.** Same as English 356. Selected masterpieces of continental fiction in English translation; representative novelists of the nineteenth and twentieth centuries. Three lecture hours a week for one semester. English 356 and European Studies 347 (Topic 7) may not both be counted. Additional prerequisite: One of the following: Comparative Literature 315, English 303D, 316L, 316M, 316N, 316P or Tutorial Course 303D.

**Topic 12: Social Dramas of Henrik Ibsen.** Same as Comparative Literature 323 (Topic 17), German, Scandinavian, and Dutch Studies 341D, and Women’s and Gender Studies 345 (Topic 14). A detailed introduction to Ibsen’s social dramas (1877-1899), emphasizing their unity as a prolonged commentary on the society of his era and the variety of its human problems. Special emphasis on subjects such as: the family and the home; the public world of reputation, work, and citizenship; the predicaments of men and women in a male-dominated society; and the motives of our interventions into the lives of others. Only one of the following may be counted: Comparative Literature 323 (Topic: Social Dramas of Henrik Ibsen), 323 (Topic 17), English 322 (Topic 17), European Studies 347 (Topic: Social Dramas of Henrik Ibsen), 347 (Topic 12), German, Scandinavian, and Dutch Studies 341D, Women’s and Gender Studies 345 (Topic 14). Additional prerequisite: Upper-division standing.

**Topic 13: Films of Ingmar Bergman.** Same as Comparative Literature 323 (Topic 11) and German, Scandinavian, and Dutch Studies 331C. An introduction to the films of Ingmar Bergman. Only one of the following may be counted: Comparative Literature 323 (Topic: Films of Ingmar Bergman), 323 (Topic 11), English 322 (Topic 18), European Studies 347 (Topic: Films of Ingmar Bergman), 347 (Topic 9), German, Scandinavian, and Dutch Studies 331C, Scandinavian 327 (Topic 9). Additional prerequisite: Upper-division standing.

**Topic 14: Hans Christian Andersen.** Same as Comparative Literature 323 (Topic 12) and German, Scandinavian, and Dutch Studies 341E. An introduction to such Hans Christian Andersen tales as "The Little Mermaid," "The Ugly Duckling," and "The Emperor's New Clothes." Examination of their author and the romantic period in which they were written, as well as their historical, philosophical, and literary context. Only one of the following may be counted: Comparative Literature 323 (Topic: Hans Christian Andersen), 323 (Topic 12), English 322 (Topic 19), European Studies 347 (Topic: Hans Christian Andersen), 347 (Topic 14), German, Scandinavian, and Dutch Studies 341E. Germanic Civilization 323E (Topic 4), Scandinavian 373 (Topic 4). Additional prerequisite: Upper-division standing.

**Topic 15: Isak Dinesen/Karen Blixen.** Same as Comparative Literature 323 (Topic 14), German, Scandinavian, and Dutch Studies 341G, and Women’s and Gender Studies 345 (Topic 13). An introduction to the twentieth-century Danish author Karen Blixen, focusing on her major themes such as gender and destiny, and examining her role as a literary figure. Only one of the following may be counted: Comparative Literature 323 (Topic: Isak Dinesen/Karen Blixen), 323 (Topic 14), European Studies 347 (Topic: Isak Dinesen/Karen Blixen), 347 (Topic 15), German, Scandinavian, and Dutch Studies 341G, Women’s and Gender Studies 345 (Topic 13). Additional prerequisite: Upper-division standing.

**Topic 16: Contemporary Scandinavian Stories.** Same as Comparative Literature 323 (Topic 10) and German, Scandinavian, and Dutch Studies 341J. An analysis of contemporary Scandinavian literature and films, how they reflect Scandinavian reality, and how Scandinavian identity is created through sports, food, and politics. Only one of the following may be counted: Comparative Literature 323 (Topic: Contemporary Scandinavian Stories), 323 (Topic 10), European Studies 347 (Topic: Contemporary Scandinavian Stories), 347 (Topic 16), German, Scandinavian, and Dutch Studies 341J, Germanic Civilization 323E (Topic: Contemporary Scandinavian Stories), Scandinavian 373 (Topic: Contemporary Scandinavian Stories). Additional prerequisite: Upper-division standing.

**Topic 17: The Scandinavian Contribution to World Literature.** Same as Comparative Literature 323 (Topic 16) and German, Scandinavian, and Dutch Studies 341K. Close readings of the most influential Scandinavian texts, including works by Nobel Prize-winning authors such as Knut Hamsun and Selma Lagerlof, as well as the playwrights August Strindberg and Henrik Ibsen while addressing important themes caused by the revolutionary transition.
to modernity in Scandinavia around 1900, including emancipation of women and sexuality. Only one of the following may be counted: Comparative Literature 323 (Topic: The Scandinavian Contribution to World Literature), 322 (Topic 16), European Studies 347 (Topic: The Scandinavian Contribution to World Literature), 347 (Topic 17), German, Scandinavian, and Dutch Studies 341K, Germanic Civilization 323E (Topic: The Scandinavian Contribution to World Literature), Scandinavian 373 (Topic: The Scandinavian Contribution to World Literature). Additional prerequisite: Upper-division standing.

**Topic 18: Medieval Women Mystics.** Same as German, Scandinavian, and Dutch Studies 361D, Religious Studies 357U, and Women's and Gender Studies 340 (Topic 51). The life and writings of Saint Birgitta of Sweden, fourteen-century visionary, religious reformer, and pilgrim, examined and compared with her predecessor Hildegard of Bingen (Germany), her successor Margery Kempe (England), as well as Margery's mentor, Julian of Norwich. Social and historical contexts for all four of these women mystics will be explored in depth. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 347 (Topic 18), German, Scandinavian, and Dutch Studies 361D, Germanic Civilization 327E (Topic 10), Religious Studies 357 (Topic 15), 357U, Scandinavian 373 (Topic 8), Women's and Gender Studies 340 (Topic 51). Additional prerequisite: Upper-division standing.

**Topic 19: Tolerance in Dutch Culture.** Same as German, Scandinavian, and Dutch Studies 361E and Women's and Gender Studies 340 (Topic 37). The historical roots of Dutch "tolerance" and how it plays a role in current Dutch culture and attitudes towards religious, gender, and sexual differences, as well as drug use, prostitution, and euthanasia. Exploration of the stereotypes and the actuality of these Dutch attitudes and policies from an international comparative perspective. Only one of the following may be counted: European Studies 347 (Topic: Dutch Culture: Too tolerant?), 347 (Topic 19), German, Scandinavian, and Dutch Studies 361E, Germanic Civilization 327E (Topic: Dutch Culture: Too tolerant?), Women's and Gender Studies 340 (Topic: Dutch Culture: Too tolerant?), 340 (Topic 37). Additional prerequisite: Upper-division standing.

**Topic 20: Squaring the Vienna Circle.** Same as Comparative Literature 323 (Topic 18), German, Scandinavian, and Dutch Studies 361F, and Philosophy 329F. Traces the origin of the Vienna Circle of Logical Empiricism in nineteenth-century Europe, and introduces central texts and problems of intellectual history and historical epistemology at the roots of today's analytic philosophy. Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic: Squaring the Vienna Circle), 323 (Topic 18), European Studies 347 (Topic: Squaring the Vienna Circle), 347 (Topic 20), German, Scandinavian, and Dutch Studies 361F; Germanic Civilization 326E (Topic: Squaring the Vienna Circle), Philosophy 327 (Topic: Squaring the Vienna Circle), 329F, 354 (Topic: Squaring the Vienna Circle). Additional prerequisite: Upper-division standing.

**Topic 23: Dante.** Same as Core Texts and Ideas 344D, English 366D, and Italian Civilization 348. Three lecture hours a week for one semester. Only one of the following may be counted: Core Texts and Ideas 344D, 345 (Topic: Dante), English 322 (Topic 23), 366D, European Studies 347 (Topic: Dante), 347 (Topic 23), Italian Civilization 348, 349 (Topic 2). Additional prerequisite: Upper-division standing.

**Topic 24: Feminism and Film: Women Filmmakers in Northern and Central Europe.** Same as Comparative Literature 323 (Topic 33), German, Scandinavian, and Dutch Studies 331D, and Women's and Gender Studies 340 (Topic 65). An introduction to the work of women filmmakers from Scandinavia, Germany, as well as to the viewing and interpretation of films in general. Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic: Women Filmmakers in Northern and Central Europe), 323 (Topic 33), European Studies 347 (Topic: Women Filmmakers in Northern and Central Europe), 347 (Topic 24), German, Scandinavian, and Dutch Studies 330 (Topic: Women Filmmakers in Northern and Central Europe), 331D, Women's and Gender Studies 340 (Topic: Women Filmmakers in Northern and Central Europe), 340 (Topic 65). Additional prerequisite: Upper-division standing.

**Topic 25: Art in the Lives of Ordinary Romans.** Same as Art History 327R. Art and architecture from the archaeological sites of Pompeii, Herculaneum, and Ostia as indices of Roman culture, 100 BC to AD 250. Three lecture hours a week for one semester. Only one of the following may be counted: Art History 327R, European Studies 347 (Topic: Art in the Lives of Ordinary Romans), 347 (Topic 26).

**Topic 27: Northern Renaissance Art, 1350-1500.** Same as Art History 332K and Religious Studies 357J. Northern European art from the International Style to van Eyck and Hieronymus Bosch. Three lecture hours a week for one semester. Only one of the following may be counted: Art History 332K, European Studies 347 (Topic: Northern Renaissance Art, 1350-1500), 347 (Topic 27), Religious Studies 357 (Topic: Northern Renaissance Art, 1350-1500), 357 (Topic 7), 357J.

**Topic 28: Romanesque Art and Architecture.** Same as Art History 329R. Form and function of religious art in twelfth-century Europe. Three lecture hours a week for one semester. Only one of the following may be counted: Art History 329R, European Studies 347 (Topic: Romanesque Art and Architecture), 347 (Topic 28).

**Topic 29: Early Italian Renaissance Art to 1470.** Same as Art History 331K and Religious Studies 357Q. An examination of the cathedral at Amiens, its meaning, structure, political and financial contexts, and sculptural programs, as well as its influence on other buildings in France and Germany. Three lecture hours a week for one semester. Only one of the following may be counted: Art History 331K, Core Texts and Ideas 352D, 357 (Topic: Early Italian Renaissance Art to 1470), European Studies 347 (Topic: Early Italian Renaissance Art to 1470), 347 (Topic 29).

**Topic 30: Gothic Cathedral: Amiens.** Same as Art History 330J and Religious Studies 357Q. An examination of the cathedral at Amiens, its meaning, structure, political and financial contexts, and sculptural programs, as well as its influence on other buildings in France and Germany. Three lecture hours a week for one semester. Only one of the following may be counted: Art History 330J, 347 (Topic: Gothic Cathedral: Amiens), European Studies 347 (Topic: Gothic Cathedral: Amiens), 347 (Topic 30), Religious Studies 357 (Topic 14), 357Q.

**Topic 31: The Age of Rembrandt and Rubens: Northern Baroque Art.** Same as Art History 333L and Religious Studies 357R. Northern European art in the seventeenth century, stressing the Netherlands and Flanders. Three lecture hours a week for one semester. Only one of the following may be counted: Art History 333L, European Studies 347 (Topic: The Age of Rembrandt and Rubens: Northern Baroque Art), 347 (Topic 31), Religious Studies 357 (Topic 11), 357R.

**Topic 32: Northern Renaissance Art, 1500-1600.** Same as Art History 332L and Religious Studies 357K. Art and cultural development in the sixteenth century; artists include Duerer, Gruenewald, Holbein, and Brueghel. Three lecture hours a week for one semester. Only one of the following may be counted: Art History 332L, European Studies 347 (Topic: Northern Renaissance Art, 1500-1600), 347 (Topic 32), Religious Studies 357 (Topic: Northern Renaissance Art, 1500-1600), 357 (Topic 6), 357K.

**Topic 33: Art and the City in Renaissance Italy.** Same as Art History 331P and Core Texts and Ideas 375 (Topic 4). Art, architecture, and emerging civic identity in Florence, Siena, Venice, and other Italian Renaissance city-states. Three lecture hours a week for one semester. Only one of the following may be counted: Art History 331P, 364 (Topic: Art and the City in Renaissance Italy), Core Texts and Ideas 375 (Topic: Art and the City in Renaissance Italy), 375 (Topic 4), European Studies 347 (Topic: Art and the City in Renaissance Italy), 347 (Topic 33), Italian Civilization 349 (Topic: Art and the City in Renaissance Italy).
Italy), Western Civilization 320 (Topic: Art and the City in Renaissance Italy).

**Topic 35: Vikings and Their Literature.** Same as Comparative Literature 323 (Topic 43) and German, Scandinavian, and Dutch Studies 341L. Three lecture hours a week for one semester. Only one of the following may be counted: Anthropology 324L (Topic: Vikings and Their Literature), Comparative Literature 323 (Topic: Vikings and Their Literature), 323 (Topic 43), English 322 (Topic: Vikings and Their Literature), European Studies 347 (Topic: Vikings and Their Literature), 347 (Topic 35), German, Scandinavian, and Dutch Studies 340 (Topic: Vikings and Their Literature), 341L. Additional prerequisite: Upper-division standing.

**Topic 36: Scandinavian Cinema Since 1980.** Same as Comparative Literature 323 (Topic 50) and German, Scandinavian, and Dutch Studies 331E. Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic: Scandinavian Cinema Since 1980), 323 (Topic 50), European Studies 347 (Topic: Scandinavian Cinema Since 1980), 347 (Topic 36), German, Scandinavian, and Dutch Studies 330 (Topic: Scandinavian Cinema Since 1980), 331E. Additional prerequisite: Upper-division standing.

**Topic 37: Arendt and de Beauvoir.** Same as Comparative Literature 323 (Topic 45), German, Scandinavian, and Dutch Studies 341M, and Women’s and Gender Studies 340 (Topic 61). Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic: Arendt And De Beauvoir), 323 (Topic 45), European Studies 347 (Topic: Arendt And De Beauvoir), 347 (Topic 37), German, Scandinavian, and Dutch Studies 340 (Topic: Arendt And De Beauvoir), 341M, Women’s and Gender Studies 340 (Topic: Arendt And De Beauvoir), 340 (Topic 61). Additional prerequisite: Upper-division standing.

**Topic 38: Nobel Prizes: Literature and Politics.** Same as Comparative Literature 323 (Topic 48) and German, Scandinavian, and Dutch Studies 341N. An introduction to Nobel Prize winning authors from northern Europe in the context of literary prizes and the politics of literary reputation. Analyze and compare literary works, set novels into historical context, investigate what popular and scholarly reviews do, and research in both popular and scholarly sources. Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic: Nobel Prizes: Literature and Politics), 323 (Topic 48), European Studies 347 (Topic: Nobel Prizes: Literature and Politics), 347 (Topic 38), German, Scandinavian, and Dutch Studies 340 (Topic: Nobel Prizes: Literature and Politics), 341N. Additional prerequisite: Upper-division standing.

**Topic 39: Northern European Children’s Literature.** Same as Comparative Literature 323 (Topic 47) and German, Scandinavian, and Dutch Studies 341P. Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic: Northern European Children’s Literature), 323 (Topic 47), European Studies 347 (Topic: Northern European Children’s Literature), 347 (Topic 39), German, Scandinavian, and Dutch Studies 340 (Topic: Northern European Children’s Literature), 341P. Additional prerequisite: Upper-division standing.

**Topic 40: Northern European Comics.** Same as Comparative Literature 323 (Topic 49) and German, Scandinavian, and Dutch Studies 341Q. A study of graphic novels from Scandinavia, Germany, and Holland to understand the art form of comics and the influence of the cultures in which they were produced. Readings, all in English, cover various genres and time periods. Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic: Northern European Comics), 323 (Topic 49), European Studies 347 (Topic: Northern European Comics), 347 (Topic 40), German, Scandinavian, and Dutch Studies 340 (Topic: Northern European Comics), 340 (Topic 1), 341Q. Additional prerequisite: Upper-division standing.

**Topic 41: Exhibitions and Public Spectacle.** Same as Comparative Literature 323 (Topic 46), Geography 320N, and German, Scandinavian, and Dutch Studies 361N. Investigate exhibits, world’s fairs, museum, monuments, theme parks, and historical reconstructions from Europe and the US, with attention to images of how their sponsoring nations or other entities want to be seen. Examine evidence for both the good and bad sides of national pride and identity. Explore examples of how large-scale culture projects and the public interact. Consider the lasting marks left on the cities and countries sponsoring them. Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic: Exhibitionism and Public Spectacle), 323 (Topic 46), European Studies 347 (Topic: Exhibitionism and Public Spectacle), 347 (Topic 41), Geography 320N, 356T (Topic: Exhibitionism and Public Spectacle), German, Scandinavian, and Dutch Studies 360 (Topic: Exhibitionism and Public Spectacle), 361N. Additional prerequisite: Upper-division standing.

**Topic 42: Viking Language: Runes and Sagas.** Same as Comparative Literature 323 (Topic 51) and German, Scandinavian, and Dutch Studies 361R. Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic: Viking Language: Runes and Sagas), 323 (Topic 51), European Studies 347 (Topic: Viking Language: Runes and Sagas), 347 (Topic 42), German, Scandinavian, and Dutch Studies 360 (Topic: Viking Language: Runes and Sagas), 361R. Additional prerequisite: Upper-division standing.

**Topic 44: Women and Resistance in Contemporary Eastern Europe.** Same as Russian, East European, and Eurasian Studies 325 (Topic 36) and Women’s and Gender Studies 340 (Topic 60). Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 347 (Topic: Women and Resistance in Contemporary Eastern Europe), 347 (Topic 44), Russian, East European, and Eurasian Studies 325 (Topic: Women and Resistance in Contemporary Eastern Europe), 325 (Topic 36), Women’s and Gender Studies 340 (Topic: Women and Resistance in Contemporary Eastern Europe), 340 (Topic 60). Additional prerequisite: Upper-division standing.

**Topic 45: Art at Court: The Gothic Period.** Same as Art History 330G. Changing manifestations of Gothic art and architecture at selected court centers, 1140 to 1400. Three lecture hours a week for one semester. Only one of the following may be counted: Art History 330G, European Studies 347 (Topic: Art at Court: The Gothic Period), 347 (Topic 45).

**Topic 46: Twentieth-Century European Art to 1940.** Same as Art History 337K. Major movements in the development of modern European painting and sculpture. Three lecture hours a week for one semester. Only one of the following may be counted: Art History 337K, European Studies 347 (Topic: Twentieth-Century European Art to 1940), 347 (Topic 46).

**Topic 47: Punks and Divas in Southeast Europe.** Same as Russian, East European, and Eurasian Studies 325 (Topic 38) and Women’s and Gender Studies 345D. Examine popular music and its role in political struggle and collective identity formation in the Balkans. Analyze music genres in this region in the context of the historical changes it underwent in the twentieth and twenty-first centuries, including the fall of Communism and -- in the case of former Yugoslavia -- the formation of seven new nation-states through a series of bloody
and brutal wars. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 347 (Topic: Punks/Divas in SE Europe), 347 (Topic 47), Russian, East European, and Eurasian Studies 325 (Topic: Punks/Divas in SE Europe), 325 (Topic 38), Women’s and Gender Studies 345 (Topic: Punks/Divas in SE Europe), 345D. Additional prerequisite: Upper-division standing.

Topic 49: Art in the Age of Dante and Giotto. Same as Art History 329T. Examine the art of the later Middle Ages in Italy (1200-1400), including work by Giotto, Duccio, Nicola and Giovanni Pisano, and Arnolfo di Cambio. Three lecture hours a week for one semester. Only one of the following may be counted: Art History 329T, Art History 363 (Topic: Art in the Age of Dante/Giotto), European Studies 347 (Topic: Art in the Age of Dante/Giotto), European Studies 347 (Topic 49).

Topic 51: Italian Television Advertising. Same as Italian Civilization 338 and Women’s and Gender Studies 340 (Topic 92). Analysis of Italian television commercials in order to identify changes that have taken place at the level of language, with some attention to socio-cultural dynamics. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 347 (Topic: Itl TV Ads: Fashion/Food/Cars), 347 (Topic 51), Italian Civilization 338, 349 (Topic: Itl TV Ads: Fashion/Food/Cars), Women’s and Gender Studies 340 (Topic: Itl TV Ads: Fashion/Food/Cars), 340 (Topic 92). Additional prerequisite: Upper-division standing.

Topic 52: Italian Masterpieces. Same as Core Texts and Ideas 344M and Italian Civilization 337. Study of representative texts in visual arts, film, literature, and opera, from the Renaissance to the present, in their historical context. Three lecture hours a week for one semester. Only one of the following may be counted: Core Texts and Ideas 344M, 375 (Topic: Italy Masters: Lit/Film/Art), European Studies 347 (Topic: Italy Masters: Lit/Art), 347 (Topic 52), Italian Civilization 337, 349 (Topic: Italy Masters: Lit/Film/Art). Additional prerequisite: Upper-division standing.

Topic 53: Cultural Translation. Same as Comparative Literature 323 (Topic 77), Middle Eastern Studies 342 (Topic 69), and Russian, East European, and Eurasian Studies 325 (Topic 47). Examine theoretical readings and concrete examples of how translation politics, translation-induced reconstruction of literary systems, censorship, manipulation, and market dynamics affect the production, distribution, and reception of translated products in the realm of arts and entertainment, news media and politics, and various academic disciplines in the Middle East, United States, and beyond. Only one of the following may be counted: Comparative Literature 323 (Topic 77), European Studies 347 (Topic 53), Middle Eastern Studies 342 (Topic: Cultural Translation), 342 (Topic 69), Russian, East European, and Eurasian Studies 325 (Topic 47). Additional prerequisite: Upper-division standing.

Topic 54: Americans in Paris. Same as American Studies 341C and French Civilization 341P. Examine major social and political trends, events, and debates that have informed the works of artists living and working both at the margins of Parisian society as well as in its most celebrated salons. Interpret texts as artifacts that reflect the historical, social, and cultural circumstances of the environment that inspired their creation and reflect upon their role in the cultural symbiosis between America and France. Three lecture hours a week for one semester. Only one of the following may be counted: American Studies 341C, European Studies 347 (Topic: Americans in Paris), 347 (Topic 54), French Civilization 341 (Topic: Americans in Paris), 341P. Additional prerequisite: Upper-division standing.

Topic 55: Queer Eastern Europe. Same as Comparative Literature 323 (Topic 74), Russian, East European, and Eurasian Studies 325 (Topic 46), and Women’s and Gender Studies 335 (Topic 26). Explore LGBTQI stories and political struggles in Eastern Europe with a focus on the region’s queer culture: literature, cinema, and the arts. Only one of the following may be counted: Comparative Literature 323 (Topic 74), European Studies 347 (Topic 55), Russian, East European, and Eurasian Studies 325 (Topic: Queer Narr Eastern Europe), 325 (Topic 46), Women’s and Gender Studies 335 (Topic 26). Additional prerequisite: Upper-division standing.

Topic 56: Radical Chic: Revolutions from Europe. Same as American Studies 321M and German, Scandinavian, and Dutch Studies 362G. Explore innovative European ideas that reshaped United States history and society: Freud and settlement houses, models for education (from Switzerland to Dewey at the University of Chicago), and the labor movement (Marx to Eugene V. Debs and Mother Jones) Three lecture hours a week for one semester. Only one of the following may be counted: American Studies 321M, European Studies 347 (Topic 56), German, Scandinavian, and Dutch Studies 362G. Additional prerequisite: Upper-division standing.

Three lecture hours a week for one semester. Only one of the following may be counted unless the topics vary: European Studies 346, 347, 348, 363. May be repeated for credit when the topics vary. Prerequisite: Varies with the topic.

Topic 1: Governments and Politics of Eastern Europe. Same as Government 324J and Russian, East European, and Eurasian Studies 335 (Topic 2: Governments and Politics of Eastern Europe). Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 348 (Topic 1), Government 324J, Russian, East European, and Eurasian Studies 335 (Topic 2). Additional prerequisite: Six semester hours of lower-division coursework in government.

Topic 3: European Environmental Politics. Same as Government 365U. The history of environmental politics in both the member states of the European Union and the EU itself, including conceptual treatment of general environmental politics and policies, history of European environmentalism, and institutional responses at important “traditional” and new EU member states. Also examines EU environmental policies themselves, such as the EU Emissions Trading System, chemicals policy, and GMO policy. Only one of the following may be counted: European Studies 348 (Topic: European Environmental Politics), 348 (Topic 3), Government 365N (Topic: European Environmental Politics), 365N (Topic 20) 365U. Additional prerequisite: Six semester hours of lower-division coursework in government.

Topic 4: Comprehensive Notions of European Security. Same as Government 365V. Examines the conceptual and practical aspects of European comprehensive security via the institutions charged with implementing it: the European Union (EU), the North Atlantic Treaty Organization (NATO), and the Organization for Security and Cooperation in Europe (OSCE). Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 348 (Topic: Comprehensive Notions of European Security),

**Topic 5: The European Union and Regional Integration.** Same as Government 348C. Designed to provide a detailed introduction to the European Union, one of America’s major economic and political partners and one of the major actors in contemporary international relations. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 348 (Topic: European Union and Regional Integration), 348 (Topic 5), Government 348C, 365N (Topic: European Union and Regional Integration), 365N (Topic 25). Additional prerequisite: Upper-division standing.

**Topic 6: Hegel and the Formation of Modern European Identity.** Same as Core Texts and Ideas 335E and Government 335E. An in-depth study of how Hegel identifies the social conditions necessary for personal self-realization but also for freedom by means of political community. Three lecture hours a week for one semester. Only one of the following may be counted: Core Texts and Ideas 335 (Topic: Hegel and the Formation of Modern European Identity), 335 (Topic 3), 335E, European Studies 348 (Topic: Hegel and the Formation of Modern European Identity), 348 (Topic 6), Government 335E, 335M (Topic: Hegel and the Formation of Modern European Identity), 335M (Topic 13). Additional prerequisite: Upper-division standing and six semester hours of lower-division coursework in government.

**Topic 7: Germany and Immigration.** Same as German, Scandinavian, and Dutch Studies 360 (Topic 5). Only one of the following may be counted: European Studies 348 (Topic: Germany and Immigration), 348 (Topic 7), German, Scandinavian, and Dutch Studies 360 (Topic: Germany and Immigration), 360 (Topic 5). Additional prerequisite: Upper division standing.

**Topic 8: Sports and Politics in Germany.** Same as German, Scandinavian, and Dutch Studies 361P. Explore how fascism, communism, liberal democracy, and the current nationalist backlash against immigration have all used the popularity of sports to achieve their strategic goals, from the 1936 Nazi Olympics to Germany’s 2014 World Cup victory and beyond. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 348 (Topic: Sports and Politics in Germany), 348 (Topic 8), German, Scandinavian, and Dutch Studies 360 (Topic: Sports and Politics in Germany), 361P. Additional prerequisite: Upper division standing.

**Topic 10: Nazi Culture and Politics.** Same as German, Scandinavian, and Dutch Studies 361V, Government 368V, and History 361R. Explore fundamental questions about the unique role of culture in modern democracies and dictatorships by taking an overview of culture and politics in the Third Reich. Examine questions about the relationship between political propaganda and modern entertainment, mass media and authoritarianism, political aesthetics and ideology, and the dynamics of oppression, resistance, and consent. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 348 (Topic: Nazi Culture and Politics), 348 (Topic 10), German, Scandinavian, and Dutch Studies 360 (Topic: Nazi Culture and Politics), 361V, Government 365N (Topic: Nazi Culture and Politics), 368V, History 361R, 362G (Topic: Nazi Culture and Politics). Additional prerequisite: Upper-division standing.

**Topic 12: Populism in Central and Eastern Europe.** Same as Government 324D and Russian, East European, and Eurasian Studies 335 (Topic 34). Survey the political nature, profile, and patterns of populism in selected post-communist democracies of Central and Eastern Europe. Examine populism in terms of impact on agenda setting, political process, and governance of the region in focus at specific national and European Union-wide levels. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 348 (Topic 12), Government 324D, 360N (Topic: Populism Central/E Europe), Russian, East European, and Eurasian Studies 335 (Topic: Populism Central/E Europe), 335 (Topic 34). Additional prerequisite: Upper-division standing.

**Topic 13: Security and Policy in Eastern Europe and Russia.** Same as Government 362U and Russian, East European, and Eurasian Studies 335 (Topic 31). Examine key contemporary security issues and policy dilemmas through the perspective of post-communist Eastern European countries in the context of European Union (EU) enlargement waves, and in the framework of their membership in supranational organizations. Consider the transformation of regional states’ national security strategies, threat perception, and priorities transitioning from former Warsaw pact to full-fledged EU and NATO membership in shaping their respective national security priorities. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 348 (Topic 13), Government 362U, 365N (Topic: Security/Policy E Eur/Rus), Russian, Eastern Europe, and Eurasian Studies 335 (Topic: Security/Policy E Eur/Rus), 335 (Topic 31). Additional prerequisite: Upper-division standing.

**Topic 15: Switzerland and Globalization.** Same as German, Scandinavian, and Dutch Studies 361T and Government 363U. Investigate how the small European country of Switzerland positions itself in a globalized world and how it competes and thrives in it. Explore the questions of how globalization impacts a small, affluent country and how its economy copes with globalization. Consider Swiss history, and its development of direct democracy, to understand Swiss exceptionalism, its response to contemporary issues, and its influence abroad. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 348 (Topic: Switzerland/GLOBALIZATION), 348 (Topic 15), German, Scandinavian, and Dutch Studies 360 (Topic: Switzerland/GLOBALIZATION), 361T, Government 365N (Topic: Switzerland/GLOBALIZATION), 363U. Additional prerequisite: Upper-division standing.

**Topic 16: Political Ideologies and Manifestos.** Same as Government 324C, Religious Studies 335C, and Russian, East European, and Eurasian Studies 335 (Topic 33). Survey major political ideologies like socialism, capitalism, and fascism; as well as the more recent so-called “Fourth Political Theory” of Russian ideologue Aleksandr Dugin, (variable) popular ideologies, and internet manifestos. Explore each ideology through original texts and utopian/dystopian representations in popular culture (e.g., literature, film, music, graphic art, architecture, design). Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 348 (Topic 16), Government 324C, Religious Studies 335C, Russian, East European, and Eurasian Studies 335 (Topic: Polit Ideologies/Manifestos), 335 (Topic 33). Additional prerequisite: Upper-division standing.

**Topic 18: Globalization and the Coronavirus Pandemic.** Same as German, Scandinavian, and Dutch Studies 362C, Government 362C, and Sociology 323G. Examine the modern globalization process that also incorporates a description of the current Coronavirus pandemic as a phenomenon that is inextricably linked with modern globalization. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 348 (Topic: Glblizatn/Coronavirus Pandemic), 348 (Topic: Glblizatn/Coronavirus Pandemic), 323G.
Pan), 348 (Topic 18), German, Scandinavian, and Dutch Studies 360
(Topic: Globalization/Coronavirus Pandemic), 360 (Topic: Globalization/
Coronavirus Pandemic), 362C, Government 355M (Topic: Globalization/
Coronavirus Pandemic), 355M (Topic: Globalization/Coronavirus Pandemic),
362C, Sociology 321K (Topic: Globalization/Coronavirus Pandemic), 321K
(Topic: Globalization/Coronavirus Pandemic), 323K. Additional prerequisite:
Upper-division standing.

**Topic 19: Intelligence and Espionage in the Eastern Bloc.** Same as
Government 324E and Russian, East European, and Eurasian Studies
335 (Topic 36). Examine the specific national approaches to foreign
and domestic intelligence and espionage of former Communist bloc
countries from early twentieth century to the collapse of communism
in Eastern Europe. Three lecture hours a week for one semester. Only
one of the following may be counted: European Studies 348 (Topic
19), Government 324E, Russian, East European, and Eurasian Studies

**EUS 350. Governments and Politics of Western Europe.**
Same as Government 324L. Comparative study of peoples, institutions,
parties, interest groups, and bureaucracy in the countries of Western
Europe, concentrating on the major political systems of Britain, France,
Germany, and Italy. Three lecture hours a week for one semester.
European Studies 350 and Government 324L may not both be counted.
Prerequisite: Six semester hours of lower-division coursework in
government.

**EUS 356. Germany and Europe since 1945.**
Restricted to students participating in the summer program in
Wuerzburg, Germany. The equivalent of three lecture hours a week for
one semester. Prerequisite: Upper-division standing and consent of
instructor.

**EUS 358Q. Supervised Research.**
Individual instruction. Prerequisite: Upper-division standing.

**EUS 362. Independent Research in European Studies.**
Tutorially directed research on a modern European topic. Conference
course. Required for the concentration in European studies. May be
repeated for credit. Prerequisite: Upper-division standing, admission to
the European studies program, and consent of instructor.

**EUS 363. Interdisciplinary Topics in European Studies.**
An analysis of various aspects of European culture, science, and
technology. Three lecture hours a week for one semester. Only one of
the following may be counted unless the topics vary: European Studies
346, 347, 348, 363. May be repeated for credit when the topics vary.
Prerequisite: Varies with the topic.

**EUS 375. Capstone Research in European Studies.**
Supervised research on a modern European topic chosen in consultation
with the student's adviser and culminating in a full-length thesis.
Individual instruction. Prerequisite: Upper-division standing, admission to
the European studies program, major, and consent of instructor.

**Graduate Courses**

**EUS 381. Advanced Topics in European Studies.**
Examination of recent developments in Europe, with emphasis on the
role of the European Union in political, cultural, economic, and security
matters. Three lecture hours a week for one semester or as required by
the topic. May be repeated for credit when the topics vary. Prerequisite:
Graduate standing; additional prerequisites vary with the topic.

**Professional Courses**
EVE 177K, 277K, 377K. Topics in Environmental Engineering.
Various specified topics or conference course. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Varies with the topic.

Topic 7: Independent Study. Restricted to environmental engineering majors. Independent research with a tenure track faculty member in the Department of Civil, Architectural, and Environmental Engineering. Prepare a project proposal and a final report, each of which is evaluated by the faculty supervisor. Environmental Engineering 377K (Topic: Independent Study) and 177K, 277K, 377K (Topic 7) may not both be counted. Additional prerequisite: Consent of instructor.

EVE 177R. Internship.
The equivalent of one lecture hour a week for one semester. May be repeated for credit. Offered on the pass/fail basis only.

Graduate Courses
Professional Courses
EVS - Environmental Science

Environmental Science: EVS

Lower-Division Courses
EVS 311. Field Seminar in Sustainability.
Restricted to environmental science majors. Introduces field observation and analysis of environmental processes and sustainability issues. Subjects include ecology, hydrogeology, marine science, climate science, energy, and campus sustainability. Two lecture hours and four laboratory or field laboratory hours a week for one semester. Prerequisite: Consent of instructor.

Upper-Division Courses
EVS 121. Research Methods.
Restricted to students pursuing a Bachelor of Science in Environmental Science. Overview of the methods involved in research projects designed to help prepare students in independent research projects or internships. One lecture hour and one workshop hour a week for one semester. Offered on the letter-grade basis only. Prerequisite: Environmental Science 311 with a grade of at least C-.

Restricted to environmental science majors. Subjects include experimental design, statistical analysis and modeling, and ethics. Students develop and conduct an independent research project during the laboratory portion of the course. Two lecture hours and four laboratory or field laboratory hours a week for one semester. Prerequisite: Environmental Science 311 with a grade of at least C-.

EVS 141. Environmental Science Professionalism I.
Restricted to environmental science majors. Examines the fundamental, nontechnical aspects of environmental science and sustainability practices through the use of case studies and projects that use interdisciplinary approaches. Subjects may include the importance of interdisciplinary collaboration in addressing and assessing environmental science processes, the development of professional opportunities across disciplines, understanding professional responsibilities, applying ethical principles, the balance of multidisciplinary demands in professional practice, and the need for lifelong learning. One lecture hour a week for one semester. Prerequisite: Senior standing, Environmental Science 311, and 121 with a grade of at least C- in each.

EVS 151. Environmental Science Professionalism II.
Restricted to environmental science majors. Examines the fundamental, nontechnical aspects of environmental science and sustainability practices. Focuses on the use of interdisciplinary communication for addressing and assessing environmental science processes, the challenges posed by communicating across disciplines, the development of professional communication and public speaking skills, effective presentation of research, the ethics and practices of peer research review, and effective communication of the effects of environmental science in a global society. One lecture hour a week for one semester. Prerequisite: Environmental Science 141.

Restricted to environmental science majors. Supervised study of selected topics in environmental science by individual arrangement with the instructor. Conference course. May be repeated for credit when the topics vary. Prerequisite: Consent of instructor.

Restricted to seniors in the Bachelor of Science in Environmental Science degree program. Work towards an understanding of the broader literature on a topic, identify hypothesis of interest, design an experiment to test the hypothesis, develop a budget, and write a research proposal. For each semester hour of credit earned, one lecture hour a week for one semester, with additional hours to be arranged as needed. Offered on the letter-grade basis only. Prerequisite: Upper-division standing, Biology 373, 373L, and Environmental Science 121, with a grade of at least C- in each.

EVS 172D, 272D, 372D, 472D. Senior Research in Environmental Science.
Restricted to seniors pursuing the Bachelor of Science in Environmental Science degree. Continuation of Environmental Science 172C, 272C, 372C, or 472C. Perform proposed experiment, collect and analyze data, present results, and write a final report. For each semester hour of credit earned, one hour of field work and one and one-half laboratory hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Environmental Science 172C, 272C, 372C, or 472C with a grade of at least C- and consent of instructor.

Graduate Courses
Professional Courses
F A - Fine Arts

Fine Arts: F A

Lower-Division Courses
F A 103. Introduction to Teaching Fine Arts.
Explores concepts in teaching art, dance, music, or theatre in Texas public schools. One lecture hour a week for one semester. Students enrolled in UTeach Fine Arts may not count this course towards their degree. Offered on the pass/fail basis only. Prerequisite: For non-College of Fine Arts students, consent of department.

F A 105, 205, 305. Fine Arts Success Seminar.
Designed for first-year College of Fine Arts undergraduates. Explore college success and personal and professional growth in a creative context. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. Offered on the pass/fail basis only.
FA 005C. Success Seminar.
Build community and get an in-depth student support experience via academic support, community building, professional development, and general student advocacy related subjects. May be repeated for credit. Offered on the pass/fail basis only.

FA 306. Career Development in the Arts.
Restricted to students in the College of Fine Arts or students pursuing the Arts Management and Administration minor. Examine career exploration, professional documents (resumes and cover letters), networking, job and internship search, and career attainment. Create a career plan and perform specific assignments exploring career possibilities that are congruent with personal values, interests, personality, and skills. Three lecture hours a week for one semester.

FA 308. Arts Integrations for Multidisciplinary Connections.
Same as Theatre and Dance 302S. Through readings, videos, in-class activities, discussion, field trips, micro-teaching, and written reflection, designed to develop a practical understanding of the techniques and skills associated with integrating the arts into various contexts. Provides experience in each art content area (dance, music, theatre arts, and visual arts) to develop an introductory understanding of each of these disciplines. Three lecture hours a week for one semester. Fine Arts 308 and Theatre and Dance 302S may not both be counted. Offered on the letter-grade basis only.

FA 309. Creative Leaders Seminar I.
Designed for first-year College of Fine Arts undergraduates. Introduction to college success and personal and professional growth in a creative context. One lecture hour a week for one semester. May be taken four times for credit. May be repeated for credit. Offered on the pass/fail basis only.

FA 309Q, 219Q, 319Q, 419Q, 519Q, 619Q, 719Q, 819Q, 919Q. Topics in Fine Arts.
This course is used to record credit the student earns while enrolled at another institution in a program administered by the University's Study Abroad Office. Credit is recorded as assigned by the study abroad adviser in the College of Fine Arts. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

Upper-Division Courses

FA 320. Exploring the Fine Arts.
Restricted to non-College of Fine Arts students. An interdisciplinary introduction to the fine arts: their basic concepts, meaning, aesthetics, and role in society. Three lecture hours a week for one semester, with field trips as required. May not be counted toward a degree in the College of Fine Arts. Prerequisite: Upper-division standing.

FA 325. Career Development in the Arts.
Restricted to students in the College of Fine Arts or students pursuing the arts management and administration minor. Examine career planning, professional documents (resumes and cover letters), networking, job and internship search, and career attainment. Three lecture hours a week for one semester.

Restricted to students participating in a May Term Education Abroad program. Discussion of various issues related to the academic, cultural, and personal aspects of completing work in international locations. For each semester hour of credit earned, one lecture hour a week for one semester. Fine Arts 329, 229, 339, 429, 529, 629 and Undergraduate Studies 119 may not both be counted unless the topics vary. May be repeated for credit when the topics vary. Offered on the letter-grade basis only. Prerequisite: Upper-division standing.

FA 129Q, 229Q, 329Q, 429Q, 529Q, 629Q, 729Q, 829Q, 929Q. Topics in Fine Arts.
This course is used to record credit the student earns while enrolled at another institution in a program administered by the University's Study Abroad Office. Credit is recorded as assigned by the study abroad adviser in the College of Fine Arts. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

Restricted to students in the College of Fine Arts. Designed to establish the academic foundations of an internship in the fine arts. Integrate knowledge derived from academic studies with the experience gained in an internship setting. For each semester credit hour earned, a total of fifty hours of onsite work per semester. May be repeated for credit. Offered on the letter-grade basis only. Prerequisite: Upper-division standing; a University grade point average of at least 2.50; and consent of instructor.

FA 345. Leadership and Urban Engagement.
Same as Communication 340, Liberal Arts 340, and Management 340. Restricted to students accepted to the UT in New York Program. Explore leadership skills and goals in the urban context. Read and discuss
leadership challenges that arise when stakeholders come together to plan, make decisions, and take action in organizational and community settings. Three lecture hours a week for one semester. Only one of the following may be counted: Communication 340, Fine Arts 345, Liberal Arts 325 (Topic: Leadership/Urban Engagement), 340, Management 340.

F A 346. Inside the Arts of New York City.
Restricted to students in the UT in New York (UTNY) Program. Explore art practice and scholarship as defined and shaped by the city itself. Visit major art institutions - both historic and those considered more experimental. Learn from guest speakers, including practicing artists and art scholars. Three lecture hours a week for one semester. Fine Arts 346 and Fine Arts 371 (Topic: Inside the Arts of New York City) may not both be counted. Prerequisite: Consent of instructor.

F A 150, 250, 350. Special Topics in the Fine Arts.
Special interdisciplinary studies within the fine arts or including the fine arts and other areas. For each semester hour of credit earned, the equivalent of one class hour a week for one semester. May be repeated for credit when the topics vary.

Topic 1: Managing Performing Arts Organizations. Restricted to students in the College of Fine Arts; other students may contact the department for permission to register for this class. Focuses on the business aspect of performing arts and, in particular, nonprofit, mission-based arts organizations with an emphasis on organizational structure; budget development and management; strategic planning; trustee development; trustee/staff relations; fundraising; marketing and publicity; audience development, development of outreach programming; box-office management; operations and human resources; and collective bargaining agreements/labor relations, and contract negotiation. Fine Arts 150, 250, 350 (Topic: Managing Performing Arts Organizations) and 150, 250, 350 (Topic 1) may not both be counted.

Explore the unique perspective of the female entrepreneur’s journey in contemporary society with a parallel examination of gender dynamics and diversity in the entrepreneurial sphere. Examine the process of creating and launching a new venture with female mentors and speakers. Three lecture hours a week for one semester. Only one of the following may be counted: Fine Arts 355, 371 (Topic: Women in Entrepreneurship), Integrated Design 333. Prerequisite: Upper-division standing.

Advanced interdisciplinary studies within the fine arts or including the fine arts and other areas. For each semester hour of credit earned, the equivalent of one class hour a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Upper-division standing.

Restricted to students who are pursuing the Minor in Arts Management and Administration or students in the College of Fine Arts. Overview of issues in the management of contemporary arts organizations in both internal functions and relations with external constituencies. Explores organizational creation, leadership, mission development, funding, audience development, evaluation, community relations, and the policy environment. Three lecture hours a week for one semester. Only one of the following may be counted: Fine Arts 362, 381 (Topic: Foundations of Arts Management), 383. Offered on the letter-grade basis only.

F A 363. Arts Entrepreneurship and New Venture Creation.
Introduction to arts entrepreneurship with particular attention to the creation of new enterprises, and key components and formulation of a business plan. Three lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Upper-division standing.

F A 364. Developing and Reaching Audiences.
Focus on central issues faced by arts and organizations with respect to audience development and engagement. Explores different models and techniques adopted by organizations with respect to audience and community engagement, and fundamentals of marketing for arts organizations. Three lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Upper-division standing.

F A 365. Fundraising in the Arts.
Survey of strategies involved in generating contributed income for arts organizations from private individuals, foundations, corporations, businesses and government agencies, and focus on how the process is related to marketing tickets to the same patrons. Three lecture hours a week for one semester. Only one of the following may be counted: Fine Arts 365, 381 (Topic: Fundraising in the Arts), 385. Offered on the letter-grade basis only. Prerequisite: Upper-division standing.

F A 366. Managing Arts Organizations.
Focuses on the business aspect of managing arts with emphasis on non-profit, mission-based, performing, and visual arts organizations. Explores organizational structure and development, budget development and management, strategic planning, trustee development, trustee/staff relations, fundraising, marketing and publicity, audience development, development of community engagement programming, ticketing and admission management, operations, human resources, collective bargaining/labor relations, and contract negotiation. Three lecture hours a week for one semester. Only one of the following may be counted: Fine Arts 366, 381 (Topic 1: Managing Performing Arts Organizations), 381 (Topic: Managing Performing Arts Organizations), 386. Offered on the letter-grade basis only. Prerequisite: Upper-division standing.

Examines sources, characteristics, and consequences of cultural philanthropy in the United States. Explores practical implications of how private philanthropy works for those engaged in seeking and awarding support. Focus on select exercises and cases to translate broad themes to practical issues related to formulating and implementing strategies for seeking resources and supporting arts and culture. Three lecture hours a week for one semester. Only one of the following may be counted: Fine Arts 367, 381 (Topic 2: Philanthropy And The Arts), 381 (Topic: Philanthropy And The Arts), 387. Offered on the letter-grade basis only. Prerequisite: Upper-division standing, or consent of instructor.

F A 368. Cultural Policy and Participation.
Examines governmental and private policies, and structures that impact cultural production and participation. Considers rationales for and against public support for culture, how policies have both promoted and impeded cultural producers and consumers, advocacy efforts by organizations in the cultural sector, and relations between governmental policy and private initiative. Three lecture hours a week for one semester. Only one of the following may be counted: Fine Arts 368, 381 (Topic: Cultural Policy and Participation), 388. Offered on the letter-grade basis only. Prerequisite: Upper-division standing.

F A 170, 270, 370. Longhorn Startup Seminar.
Focus on skill development and mentoring in start-up formation, technology development, market validation, marketing, sales, operations, human resources, program management, and finance. Includes discussion of intellectual property, social issues in design, as well as ethical and safety considerations. Emphasis on written and oral presentation of start-up activities. For each semester hour of credit
earned, one lecture hour a week for one semester. Only one of the following may be counted: Biomedical Engineering 177T, 277T, 377T (Topic: Longhorn Startup Seminar), Computer Science 178, 378 (Topic: Longhorn Startup Seminar), Engineering Studies 277, 377, 377 (Topic: Longhorn Startup Seminar), 177, 277, 377 (Topic 1), Fine Arts 160, 260, 360 (Topic: Longhorn Startup Seminar), 170, 270, 370, Management 137, 237, 337 (Topic: Longhorn Startup Seminar), Communication 125, 225, 325 (Topic: Longhorn Startup Seminar). Offered on the letter-grade basis only. Prerequisite: Consent of instructor.

**F A 171, 271, 371. Special Topics in Arts Management and Administration.**

Focused and in-depth study of selected topics in the management and administration of artistic ventures in the commercial, not-for-profit, and/or public sectors. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. May be repeated for credit when the topics vary. Offered on the letter-grade basis only.

- **Topic 1: Subjects in Arts Management.** Focused and in-depth study of selected subjects in the management of artistic ventures in the commercial, not-for-profit, and/or public sectors. Offered on the letter-grade basis only.
- **Topic 2: Subjects in Arts Administration.** Focused and in-depth study of selected subjects in the administration of artistic ventures in the commercial, not-for-profit, and/or public sectors. Offered on the letter-grade basis only.

**F A 175, 375, 675. Independent Studies: Art, Drama, or Music.**

Independent study or research within the fine arts or between the fine arts and other disciplines. Individual instruction. May be repeated for credit. Prerequisite: Upper-division standing, a grade point average of at least 3.00, consent of instructor, and consent of the dean of the College of Fine Arts.

**Graduate Courses**

**F A 381. The Arts.**

Topics within the fine arts, or including the fine arts and other areas. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

**F A 382. Independent Studies: Art, Drama, or Music.**

Study or research in art, drama, or music, or among these areas, or between these areas and other disciplines. Individual instruction. May be repeated for credit. Prerequisite: Graduate standing and consent of instructor and of the dean of the College of Fine Arts.

**F A 383. Foundations of Arts Management.**

Overview of issues in the management of contemporary arts organizations in both internal functions and relations with external constituencies. Explores organizational creation, leadership, mission development, funding, audience development, evaluation, community relations, and the policy environment. Three lecture hours a week for one semester. Only one of the following may be counted: Fine Arts 362, 381 (Topic: Foundations of Arts Management), 383. Prerequisite: Graduate standing.

**F A 184, 284, 384. Graduate Fine Arts Internship.**

Restricted to students in the College of Fine Arts. Designed to establish the academic foundations of an internship course in the fine arts. Integration of knowledge derived from academic studies will combine with the experiences gained in an internship setting. Requires completion of a minimum of fifty hours of satisfactory on-site work per credit hour earned. A minimum of fifty hours of satisfactory on-site work per credit hour earned. May be repeated for credit. Offered on the letter-grade basis only. Prerequisite: Graduate standing, a University grade point average of at least 2.50, and consent of instructor.

**F A 385. Fundraising in the Arts.**

Survey of strategies involved in generating contributed income for arts organizations from private individuals, foundations, corporations, businesses and government agencies, and focus on how the process is related to marketing tickets to the same patrons. Three lecture hours a week for one semester. Only one of the following may be counted: Fine Arts 365, 381 (Topic: Fundraising in the Arts), 385. Prerequisite: Graduate standing.

**F A 386. Managing Arts Organizations.**

Focuses on the business aspect of managing arts with emphasis on non-profit, mission-based, performing, and visual arts organizations. Explores organizational structure and development, budget development and management, strategic planning, trustee development, trustee/staff relations, fundraising, marketing and publicity, audience development, development of community engagement programming, ticketing and admission management, operations, human resources, collective bargaining/labor relations, and contract negotiation. Three lecture hours a week for one semester. Only one of the following may be counted: Fine Arts 366, 381 (Topic 1: Managing Performing Arts Organizations), 381 (Topic: Managing Performing Arts Organizations), 386. Prerequisite: Graduate standing.

**F A 387. Philanthropy and Arts Organizations.**

Examines sources, characteristics, and consequences of cultural philanthropy in the United States. Explores practical implications of how private philanthropy works for those engaged in seeking and awarding support. Focus on select exercises and cases to translate broad themes to practical issues related to formulating and implementing strategies for seeking resources and supporting arts and culture. Three lecture hours a week for one semester. Only one of the following may be counted: Fine Arts 367, 381 (Topic 2: Philanthropy And The Arts), 381 (Topic: Philanthropy And The Arts), 387. Prerequisite: Graduate standing.

**F A 388. Cultural Policy and Participation.**

Examines governmental and private policies, and structures that impact cultural production and participation. Considers rationales for and against public support for culture, how policies have both promoted and impeded cultural producers and consumers, advocacy efforts by organizations in the cultural sector, and relations between governmental policy and private initiative. Three lecture hours a week for one semester. Only one of the following may be counted: Fine Arts 368, 381 (Topic: Cultural Policy and Participation), 388. Prerequisite: Graduate standing.

**Professional Courses**

**F C - French Civilization**

**French Civilization: F C**

**Lower-Division Courses**

**Topics in French Civilization.**

This course is used to record credit the student earns while enrolled at another institution in a program administered by the University's Study Abroad Office. Credit is recorded as assigned by the study abroad adviser in the Department of French and Italian. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated study program. May be repeated for credit when the topics vary.
Upper-Division Courses

F C 320. The French Heritage.
Introduction to French civilization: architecture, painting, music, and social and political history. Given in English; requires no knowledge of French. Three lecture hours a week for one semester. May not be counted toward a major or minor in French. May not be counted toward fulfillment of the foreign language requirement for any bachelor's degree. Prerequisite: Upper-division standing.

Topics in French Civilization.
This course is used to record credit the student earns while enrolled at another institution in a program administered by the University’s Study Abroad Office. Credit is recorded as assigned by the study abroad adviser in the Department of French and Italian. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

F C 336. Vamps, Stars, and The Diva.
Same as European Studies 347 (Topic 50) and Italian Civilization 336. Examine French and Italian films through the lens of stardom. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 347 (Topic: Vamps, Stars, and The Diva), 347 (Topic 50), French Civilization 336, 345 (Topic: Vamps, Stars, and The Diva), Italian Civilization 336, 349 (Topic: Vamps, Stars, and The Diva), Women’s and Gender Studies 345 (Topic: Vamps, Stars, and The Diva). Prerequisite: Upper-division standing.

F C 339. The Development of the French Film.
Films in French, with subtitles in English; lectures in English. Three lecture hours a week for one semester. May not be counted toward fulfillment of the foreign language requirement for any bachelor's degree. English 322 (Topic 20: The Development of the French Film) and French Civilization 339 may not both be counted. Prerequisite: Upper-division standing.

F C 340M. Continuity and Change in Modern France.
Same as European Studies 340M. Focuses on various social, political, and cultural crises in France from the revolution of 1789 to the present time. Three lecture hours a week for one semester. European Studies 340M and French Civilization 340M may not both be counted. May not be counted toward fulfillment of the foreign language requirement for any bachelor’s degree. Prerequisite: Upper-division standing.

F C 341. Topics in French Studies.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Upper-division standing.

F C 341F. Arab Francophonie.
Same as Middle Eastern Studies 342 (Topic 82). Explore French-language cultural production by authors of Arab origin in France and across France's former colonial and mandate territories. Examine the fraught relationship many of these authors have with French language, literature, and culture, in dialogue with postcolonial theory. Three lecture hours a week for one semester. Only one of the following may be counted: French Civilization 341 (Topic: Arab Francophonie), 341F, or Middle Eastern Studies 342 (Topic 82). Prerequisite: Upper-division standing.

F C 341P. Americans in Paris.
Same as American Studies 341C and European Studies 347 (Topic 54). Examine major social and political trends, events, and debates that have informed the works of artists living and working both at the margins of Parisian society as well as in its most celebrated salons.

Graduate Courses

F C 342. French Through Coding.
Three lecture hours a week for one semester. Prerequisite: French 317C with a grade of at least C.

FIN - Finance

Finance: FIN

Lower-Division Courses

Upper-Division Courses

FIN 320F. Foundations of Finance.
Restricted to non-McCombs School of Business majors. Principles of effective financial management, including planning, organization, and control; financial intermediaries; securities markets; evaluating alternative assets, debt, and capital structures. Three lecture hours a week for one semester. Prerequisite: Forty-five semester hours of college coursework and one of the following: Accounting 310F; Accounting 311 or 311H, and Accounting 312 or 312H; 6 semester hours of accounting coursework.

FIN 321K. Intermediate Microeconomics for Business.
Restricted to students in a business major. Explore microeconomic analysis of consumer theory, producer theory, decision-making under uncertainty, and market equilibrium. Examine game theory, monopoly and oligopoly behavior, and the principal-agent problem. Consider the application of these ideas to decisions made by business leaders in real-world settings. Three lecture hours a week for one semester. Only one of the following may be counted: Finance 321K, Economics 420K, 420S, 421K. Prerequisite: Mathematics 408Q, 408D, 408L, or 408S with a grade of at least C.

FIN 322F. Foundations of Personal Finance.
Restricted to non-McCombs School of Business majors. Explore an overview from the individual and family perspectives of financial planning tools, cash management, consumer credit, and basic tax preparation, insurance selection, investment and retirement planning. Includes application of knowledge to hypothetical situations and case studies. The equivalent of three lecture hours a week for one semester. Human Development and Family Sciences 322 and Finance 322F may not both be counted. Prerequisite: Upper-division standing.

FIN 134M, 234M, 334M. Current Issues in Global Sustainability.
Restricted to students pursuing the Leadership in Global Sustainability minor. Through discussions and guest speakers, explore the most recent issues in the everchanging landscape of sustainability. For each semester hour of credit earned, one lecture hour a week for one semester.

FIN 137, 237, 337. Special Topics in Finance.
For each semester hour of credit earned, one lecture hour a week for one semester. May be repeated for credit when the topics vary.
**Topic 1: Valuing Natural Resources.** Restricted to students pursuing the Energy Management minor. Apply economic analysis to sedimentary basin analysis to create exploration and development scenarios. Investigate first principles of sedimentation, stratigraphy and basin formation as the drivers of economic accumulations of petroleum in many different types of environments of deposition and basins globally including conventional and unconventional petroleum resources. Examine mining, minerals and other exhaustible resources.

**Topic 2: Energy Finance.** Restricted to students pursuing the Energy Management minor. Apply economic and financial analysis to energy projects and firms. Examine discounted cashflow; multiples valuation, NAV analysis, decision and risk analysis, real options, energy economics and risk management.

**Topic 3: Global Business Sustainability.** Restricted to students pursuing the Leadership in Global Sustainability minor. Explore the role of sustainability in the corporate sector; how businesses partner with others for sustainability goals; how to value sustainable business practices; and reporting on corporate sustainability. Three lecture hours a week for one semester. Only one of the following may be counted: Accounting 378 (Topic: Global Busn Sustainability), 378 (Topic 7), Finance 337 (Topic 3), or Business, Government, and Society 370 (Topic 5).

**Topic 4: Electricity Systems and Markets.** Restricted to students pursuing the Energy Management minor. Analyze energy and power systems in regulated and competitive environments and implications on business decisions for firms in these industries. Examine mechanisms of energy markets; comparative market systems; determination of prices under different market structures; gas, oil, coal, and electricity market architecture; electricity market design; dispatch and new build decisions; smart grid and renewable energy in electricity markets; risk and risk management in energy including demand and price volatility and use of financial derivatives; and the impact of financial market trends and current and proposed policies on the energy industry.

**FIN 140S, 240S, 340S, 440S, 540S, 640S, 740S, 840S, 940S. Topics in Finance.**

This course is used to record credit the student earns while enrolled at another institution in a program administered by the University’s Study Abroad Office, or the school’s BBA Exchange Programs. Credit is recorded as assigned by the study abroad adviser in the Department of Finance. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. May be repeated for credit when the topics vary.

**FIN 357. Business Finance.**

Restricted to students in the McCombs School of Business. Principles of finance, with application to all aspects of the business firm; particular attention to cost of capital, investment decisions, management of assets, and procurement of funds. Three lecture hours a week for one semester. Finance 357 and 357H may not both be counted. Offered on the letter-grade basis only. Prerequisite: Credit or registration for the following: Accounting 312 or 312H; and Business Administration 324 or 324H; and Statistics 371G or 371H, or Statistics 235 or 235H and Decision Science 235 or 235H.

**FIN 357H. Business Finance: Honors.**

Restricted to students in the McCombs School of Business Honors Program. An investigation of the principles of finance, with application to all aspects of the business firm; particular attention to cost of capital, investment decisions, management of assets, and procurement of funds. Three lecture hours a week for one semester. Finance 357 and 357H may not both be counted. Offered on the letter-grade basis only. Prerequisite: Economics 304K and 304L, and credit or registration for the following: Accounting 312H; and Business Administration 324H; and Statistics 371H, or Statistics 235H and Decision Science 235H.

**FIN 164P, 264P, 364P. Global Sustainability Practicum.**

Restricted to students pursuing the Leadership in Global Sustainability minor. Apply concepts and tools learned in other courses to practical projects solving sustainability challenges for companies or nonprofits. For each semester hour of credit earned, one lecture hour a week for one semester.

**FIN 165P, 365P. Energy Finance Practicum.**

Restricted to students accepted to the Helios Challenge. Students apply skills in the energy industry and focus on additional project management skills through group projects conducted in a professional setting. Students may work with a private or a public enterprise. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. May not be used to satisfy the professional, business related internship or practicum course degree requirement for the Bachelor of Business Administration. Prerequisite: Consent of instructor.

**FIN 366P. Finance Practicum.**

Restricted to students accepted to the Financial Analyst Program or Real Estate Investment Trust Program. Students apply skills in their major area and focus on additional project management skills through group projects conducted in a professional setting. Students may work with a private or a public enterprise. The equivalent of three lecture hours a week for one semester. Prerequisite: Forty-five semester hours of college coursework and consent of instructor.

**FIN 367. Investment Management.**

Restricted to students in a business major. Investment theory, alternatives, and decision making under differing uncertainties and constraints; formulation of objectives and strategies; development of conceptual managerial perspectives and philosophies for investment environments. Three lecture hours a week for one semester. Prerequisite: Finance 357 or 357H.

**FIN 370. Integrative Finance.**

Restricted to students in a business major. Integrates financial decision making in functional areas of finance; utilizes various concepts to promulgate strategies, policies, and procedures in managing funds to achieve objectives. Three lecture hours a week for one semester. Finance 370 and 370H may not both be counted. Prerequisite: Senior standing; Finance 357 or 357H, and 367 (or 367Q); credit or registration for one of the following: Business Administration 353, 366P Accounting 366P; Business Analytics 366P; International Business 366P; Finance 364P, 365P, 366P Management 347P, 366P, 367P, 369P Management Information Systems 366P Marketing 366P Operations Management 366P, and three additional semester hours of coursework in finance or real estate.

**FIN 370H. Integrative Finance: Honors.**

Restricted to students admitted to the McCombs School of Business Honors Program. Integrates financial decision making in functional areas of finance; utilizes various concepts to promulgate strategies, policies, and procedures in managing funds to achieve objectives. Three lecture hours a week for one semester. Finance 370 and 370H may not both be counted. Offered on the letter-grade basis only. Prerequisite: Senior standing; Finance 357H and 367 (or 367Q); credit or registration for one of the following: Accounting 353J, 366P; Business Administration 353, 353H, Finance 353, 366P; Management 347P; 353, 366P, 367P 369P Management Information Systems 353, 366P, Marketing 353, 366P;
Operations Management 353, or 366P; and three additional semester hours of coursework in finance or real estate.

**FIN 371M. Money and Capital Markets.** Restricted to students in a business major. Development of modern financial markets, with emphasis on the factors that determine interest rates; institutional characteristics and pricing mechanisms of various interest-sensitive securities. Three lecture hours a week for one semester. Prerequisite: Finance 357 or 357H.

**FIN 172, 272, 372. Advanced Topics in Finance.** Restricted to students in a business major. Advanced topics in finance. For each semester hour of credit earned, one lecture hour a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Credit or registration for Finance 357 or 357H; additional prerequisites may vary with the topic.

**Topic 1: Environmental, Social, and Governance Investing.** A critical assessment of the actions of investors and corporations with regard to environmental, social, and governance policies, including the potential motivations and resulting consequences. Finance 372 (Topic: Environmental, Social, and Governance Investing) and 172 (Topic 1), 272 (Topic 1), 372 (Topic 1) may not both be counted. Additional prerequisite: Credit or registration for Finance 367.

**Topic 2: Valuation of Energy Investment.** Restricted to business majors. Explores the evaluation and financing of energy investments with a focus on upstream oil and gas projects. Emphasis on developing financial modeling skills, from detailed discounted cash flow models to advanced option pricing models, using various computational approaches. Three lecture hours a week for one semester. Finance 372 (Topic: Valuation of Energy Investment) and 172 (Topic 2), 272 Topic 2), 372 (Topic 2) may not both be counted. Additional prerequisite: Finance 374C.

**Topic 3: Financial Planning for Wealth Management.** Introduction to basic concepts of personal wealth management and financial planning, including insurance and risk management, investment management, tax planning, estate planning and retirement planning. Designed for upper-level finance and accounting majors interested in a career in financial services or students pursuing master in professional accounting with interest in this area of the accounting profession. Only one of the following may be counted: Accounting 378 (Topic: Financial Planning for Wealth Management), 178 (Topic 3), 278 (Topic 3), 378 (Topic 3), 180K (Topic 24), 280K (Topic 24), 380K (Topic 24), Finance 172 (Topic 3), 272 (Topic 3), 372 (Topic 3), 377 (Topic: Financial Planning for Wealth Management). Additional prerequisite: Accounting 311 or 311H, and 312 or 312H, with a grade of at least C-in each; credit or registration for Accounting 364 is recommended.

**Topic 4: Quantitative Investment Management.** Restricted to students in a business major. Examine the economic, statistical, and computing frameworks behind quantitative approaches to evaluating and implementing investment strategies, as well as the empirical evidence on their performance in multiple asset classes. Apply the quantitative big-data approach by developing, pitching, and backtesting an original trading strategy. Only one of the following may be counted: Business Analytics 372 (Topic 14), Finance 372 (Topic: Quant Investment Management), 372 (Topic 4). Additional prerequisite: Finance 367.

**Topic 5: Financial Technology.** Restricted to business majors. Explore an overview of the most recent technological advances that are changing the financial services industry and how these technological breakthroughs offer new ways for people to save, invest, borrow, and transact. Analyze how new technologies create value in the financial industry, from reducing unit cost, increasing transparency, increasing competition, creating network effects, leveraging economies of scales, and lowering asymmetric information. Examine the competitive landscape and the market opportunities and threats for incumbents and new entrants. Only one of the following may be counted: Finance 372 (Topic: Financial Technology), 372 (Topic 5), Business Analytics 372 (Topic 5).

**Topic 6: Optimization Method in Finance.** Explores quantitative methods and techniques in optimization and simulation, and their use in financial decision making. Discusses theory and application in portfolio selection, options and other derivative pricing, index tracking, risk measures, volatility estimating. Specific subjects will include linear, quadratic, nonlinear, and integer programming; dynamic programming; robust optimization; Monte Carlo methods and variance reduction techniques. Emphasis will be placed on problem solving with advanced computational programming languages. Only one of the following may be counted: Finance 372 (Topic: Optimization Method in Finance), 372 (Topic 6), Statistics 372 (Topic 6), Business Analytics 372 (Topic 6), Decision Science 372 (Topic 6).

**Topic 8: Corporate Finance Fellows.** Restricted to students admitted to the Corporate Finance Fellows program. Practicum in the application of finance tools and methods to corporate finance problems. Finance 372 (Topic: Corporate Finance Fellows) and 172, 272, 372 (Topic 18) may not both be counted. Additional prerequisite: Consent of instructor.

**FIN 373. Research Topics in Finance.** Restricted to students in a business major. The equivalent of three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Finance 357 or 357H, and consent of instructor.

**Topic 1: Advanced Studies in International Finance.** Students work in small research groups to write academic papers on topics in international finance and business. Designed to develop critical thinking skills, writing skills, sophisticated use of technology, and experience working across different cultures.

**FIN 374C. Valuation.** Restricted to students in a business major. An in-depth study of theory and practice of corporate financial management in establishing major financial and investment policies; techniques for analysis, evaluation, and control. Three lecture hours a week for one semester. Prerequisite: Finance 357 or 357H.

**FIN 374S. Entrepreneurial Finance.** Restricted to students in a business major. Development, implementation, and control of financial plans, strategies, and policies by owner-managers of small and medium-sized firms; analysis of alternatives and decision making. Three lecture hours a week for one semester. Prerequisite: Finance 357 or 357H.

**FIN 376. International Finance.** Same as International Business 376. Restricted to students in a business major. Explore the international financial environment, with emphasis on the factors affecting exchange rates and how exchange rate changes affect the firm. Three lecture hours a week for one semester. Finance 376 and International Business 376 may not both be counted. Prerequisite: Finance 357 or 357H.
FIN 377. Advanced Investment Analysis.
Second course in investments, with emphasis on quantitative applications and the underlying theory in the analysis and management of securities and portfolios. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Finance 357 or 357H; additional prerequisites vary with the topic.

Topic 1: Portfolio Analysis and Management. Restricted to students in a business major. Additional prerequisite: Finance 367 or 367Q.
Topic 3: Security Analysis. Restricted to students accepted to the Financial Analyst Program. Additional prerequisite: Credit or registration for Finance 367 or 367Q, and consent of instructor.
Topic 4: Financial Analysis. Restricted to students in a business major. Application of fundamental analysis and valuation techniques. Additional prerequisite: Credit or registration for Finance 367 or 367Q.
Topic 6: Fixed Income Analysis. Restricted to students in a business major. Explore the role of fixed income securities, and methods of economic and financial analysis relevant to their markets. Finance 377 (Topic: Fixed Income Analysis) and 377 (Topic 6) may not both be counted. Additional prerequisite: Credit or registration for Finance 367 or 367Q.
Topic 7: Security Market Policy. Restricted to students in a business major. Analyze current developments in financial market innovation and regulation to understand their effects on capital creation, investor welfare, market efficiency, and financial stability. Explore new financial products, securities fraud and misconduct, shadow banking, technological disruptions, market failures, systemic risk, and policy trade-offs in securities markets regulation. Finance 377 (Topic: Security Market Policy) and 377 (Topic 3) may not both be counted. Additional prerequisite: Upper-division standing; Finance 367 or 367Q.

FIN 377L. Portfolio Analysis and Management.
Restricted to students in a business major. An exploration of quantitative applications and the underlying theory in the analysis and management of securities and portfolios; designed for students with career goals in investment. Three lecture hours a week for one semester. Prerequisite: Finance 367 or 367Q.

Restricted to students in a business major. Conference course. Only one of the following may be counted: Accounting 179C, 379C, Business, Government, and Society 179, 379, Finance 179C, 379C, International Business 179C, 379C, Legal Environment of Business 179, 379, Management 179C, 379C, Management Information Systems 179, 379, Marketing 179C, 379C, Operations Management 179, 379, Risk Management 179, 379. Prerequisite: Eighteen semester hours of coursework in business and economics, six of which must be upper-division; Finance 357 or 357H with a grade of at least C-; and consent of instructor. A student registering for this course must obtain written approval from the department chair's office, on forms provided for that purpose, before the first meeting of the course.

Graduate Courses
FIN 281F. Financial Technology for Executives.
Restricted to students in the Executive MBA Program. Analyze the effect technology has on the delivery of financial services and products in the areas of lending, clearing, and trading. Two lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

Restricted to students enrolled in the Master of Science Program. Explore valuation theory, corporate finance theory, asset management, applied valuation and capital markets, and empirical finance. Examine theory, practice, and institutional applications. For each semester hour of credit earned, the equivalent of one lecture hour for one week. Offered on the letter-grade basis only. Prerequisite: Graduate standing; Finance 194, and a strong background in Python, probability and statistics, and regression and machine learning techniques.

Restricted to students in the Master of Science in Business Analytics program. Utilize traditional financial datasets (e.g., financial statements, ratio analysis, credit and fixed income information, stock returns) from a variety of data sources and platforms, including WRDS/Compustat/CRSP, Bloomberg, and Compustat. Explore more advanced techniques designed to yield insights from alternative and unstructured datasets (e.g., text and sentiment analysis of earnings conference calls; SEC filings like 10K’s, 10Q’s, and 8-Ks; message and discussion boards; marketing/customer feedback; and other big data sources). For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. Offered on the letter-grade basis only. Prerequisite: Graduate standing. Finance 394 and 397, and a strong background in Python, probability and statistics, and regression and machine learning techniques, and consent of instructor.

FIN 286, 386. Valuation.
Study of subjects such as financial modeling, derivatives in corporate finance, business valuation, and value-based management. For each semester hour of credit earned, one lecture hour a week for one semester. Prerequisite: Graduate standing and Business Administration 285T or 385T.

FIN 286C. Valuation for Executives.
Restricted to students in the Executive MBA Program. Explore debt and equity valuation, financial markets, firms’ cost of capital, and capital structure decisions in greater detail. Two lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

For each semester hour of credit earned, one lecture hour a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing, Business Administration 285T or 385T, Finance 286, and credit or registration for Finance 394 (Topic 1: Advanced Corporate Finance) and 397 (Topic 1: Investment Theory and Practice).

Topic 2: Special Topics in Capital Markets and Financial Institutions. Study of issues and topics in the capital markets and financial institutions that are not covered in other courses.

For each semester hour of credit earned, one lecture hour a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and Business Administration 285T or 385T.

Topic 2: Financial Strategies. An integrated analysis of the interaction between the investment and operating policies of a corporation and its financial strategies. Additional prerequisite: Finance 286, 394 (Topic 1), and credit or registration for Finance 397 (Topic 1: Investment Theory and Practice).

Topic 5: Financial Technology. Analyzes the effect technology has on the delivery of financial services and products in the areas of lending, clearing and trading. Finance 294 (Topic: FINANCIAL TECHNOLOGY) and 294, 394 (Topic 5) may not both be counted.

Topic 6: Special Topics in Corporate Finance.

Topic 7: Raising Capital. An analysis of the decision to raise capital, including sources of debt and equity, financial distress, restructuring, and financing acquisitions. Prerequisite: Finance 286, 394 (Topic 1), and credit or registration for Finance 397 (Topic 1).

Topic 8: Financial Strategies for Energy Firms. An integrated analysis of the interaction between the investment and operating policies of a corporation and its financial strategies, with special emphasis on firms in the energy industry. Prerequisite: Finance 286, 394 (Topic 1), and credit or registration for Finance 397 (Topic 1).

Topic 9: Advanced Valuation and Financial Modeling for Energy Firms. Construction and use of financial models for valuation and decision-making, with applications to the energy industry. Prerequisite: Finance 286, 394 (Topic 1), and 397 (Topic 1).

Topic 10: New Venture Finance. Explore the process to building a new venture from idea to liquidation event from the perspectives of both the founders as well as sophisticated venture investors. Develop a common financial framework to parse financial instruments through which we can demonstrate the salient points of a new venture's value proposition to its stakeholders. Use this framework to scale the model to express managerial controls, confidence, and ultimately the core values such that the founding team could reasonably expect to raise sophisticated capital. Finance 394 (Topic: New Venture Finance) and 294, 394 (Topic 10) may not both be counted.

Topic 11: Private Equity. An examination of the application of advanced corporate finance concepts in the private equity markets. Additional prerequisite: Finance 286, 394 (Topic 1: Advanced Corporate Finance), and credit or registration for Finance 397 (Topic 1: Investment Theory and Practice).

Topic 12: Energy Development and Corporate Strategies. Introduction to the legal, engineering, business, and financial aspects of energy development and operations. Additional prerequisite: Finance 286 and credit or registration for Finance 394 (Topic 1: Advanced Corporate Finance).

Topic 13: Valuation of Energy Investments. Covers the theory and practice of the evaluation and financing of energy investments with a focus on application to upstream oil and gas projects. Develop financial modeling skills, from detailed discounted cash flow models to advanced option pricing models utilizing a variety of computational approaches. Finance 294 (Topic: VALUTN OF ENERGY INVMNTSTS) and 294, 394 (Topic 13) may not both be counted. Additional prerequisite: Finance 286.

Topic 14: Venture Capital Fellows Program. Additional prerequisite: Credit or registration for Finance 286 and 394 (Topic 1).

Topic 15: Energy Finance Practicum. Additional prerequisite: Credit or registration for Finance 286.

Topic 16: Corporate Finance and Financial Markets. Restricted to students admitted to the McCombs School of Business.

Topic 18: Corporate Finance Fellows I. Restricted to students admitted to the Corporate Finance Fellows program. Only one of the following may be counted: Finance 394 (Topic: Corporate Finance Fellows), 294 (Topic 18), 394 (Topic 18).

Topic 19: Economic Principles of Managerial Decisions. Study of how economic principles are used to think strategically about business decisions. Only one of the following may be counted: Finance 394 (Topic: Economic Principals of Managerial Decision), 294 (Topic 19), 394 (Topic 19).

Topic 20: Corporate Finance Fellows II. Restricted to students admitted to the Corporate Finance Fellows program.

Topic 21: Advanced Valuation Techniques for Consulting. Examine financial reporting, the application of various valuation techniques (to measure the fair value of intangible assets), contingent consideration, valuation of synergy, the impact of geography on value, and the effect of environmental, social, and governance (ESG) policies on company valuations. Offered on the letter-grade basis only.

Restricted to students in the Executive MBA Program. Examine the application of advanced corporate finance concepts in the private equity markets. For each semester hour of credit earned, one lecture hour a week for one semester. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of instructor.

Topic 4: Empirical Methods in Asset Pricing. In-depth study of existing empirical work in asset pricing, including econometric and statistical methods.

Topic 6: Current Research Topics in Finance. Restricted to doctoral students in finance.

Topic 7: Summer Research Topics. Restricted to doctoral students in finance. Provides an opportunity for students to develop and conduct original research projects.

Topic 8: Special Topics in Finance Theory.

Topic 9: Applied Finance Research. Restricted to doctoral students in finance. Provides an opportunity for students to develop and conduct original research.

For each semester hour of credit earned, one lecture hour a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and Business Administration 285T or 385T.

**Topic 1: Investment Theory and Practice.** Analysis of the investment decision-making process, asset allocation, security analysis, risk and expected return measurement, asset-pricing models, and international investment. Additional prerequisite: Credit or registration for Finance 286.

**Topic 2: Portfolio Management and Security Analysis.** Modern practices in managing investment portfolios, portfolio optimization methods, asset management for individual and institutional investors, and valuation of equity securities. Additional prerequisite: Finance 286 and 397 (Topic 1), and credit or registration for Finance 394 (Topic 1: Advanced Corporate Finance).

**Topic 4: Financial Risk Management.** Studies how firms manage their financial risk exposures and how they use derivative securities. Additional prerequisite: Finance 286 and 397 (Topic 1), and credit or registration for Finance 394 (Topic 1: Advanced Corporate Finance).

**Topic 5: Fixed Income Analysis.** Comprehensive analysis of debt securities and the techniques used to value these instruments. Additional prerequisite: Finance 286 and 397 (Topic 1), and credit or registration for Finance 394 (Topic 1: Advanced Corporate Finance).

**Topic 6: Special Topics in Investments.** Issues and topics in the investment area that are not covered in other courses. Additional prerequisite: Finance 286 and 397 (Topic 1), and credit or registration for Finance 394 (Topic 1: Advanced Corporate Finance).

**Topic 7: Derivative Securities.** Analysis and pricing of derivative securities, including forwards, futures, and options. Prerequisite: Finance 286 and 397 (Topic 1).

**Topic 8: Energy Derivatives.** Analysis and pricing of derivative securities, including forwards, futures, and options, with emphasis on derivatives related to the energy industry. Prerequisite: Finance 286 and 397 (Topic 1).

**Topic 9: Alternative Investments.** Overview of alternative investments, including hedge funds, private equity, and real estate. Prerequisite: Finance 286 and 397 (Topic 1).

**Topic 10: Environmental, Social, and Governance Investing.** A critical assessment of the actions of investors and corporations with regard to environmental, social, and governance policies, including the potential motivations and resulting consequences. Finance 397 (Topic: ENVIR/SOCIAL/GOV INVESTING) and Finance 297, 397 (Topic 10) may not both be counted.

**Topic 11: Quantitative Trading Strategies.** Examine statistical analyses that can be used in a variety of application areas, including energy trading, and provide a cutting edge perspective on technical trading and valuation.

FIN 297P, 397P. Investments Practicum.
Project-based study with a focus on the application of finance principles to practical investment problems. For 297P, at least twelve lecture hours and forty-eight hours of project work scheduled throughout the semester. For 397P, at least fifteen lecture hours and sixty hours of project work scheduled throughout the semester. Prerequisite: Graduate standing.

FIN 698. Thesis.
The equivalent of three lecture hours a week for two semesters. Offered on the credit/no credit basis only. Prerequisite: For 698A, graduate standing in finance and consent of the graduate adviser; for 698B, Finance 698A.

FIN 398R. Master’s Report.
Preparation of a report to fulfill the requirement for the master’s degree under the report option. The equivalent of three lecture hours a week for one semester. Offered on the credit/no credit basis only. Prerequisite: Graduate standing in finance and consent of the supervising faculty member and the graduate adviser.

May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Admission to candidacy for the doctoral degree.

**Professional Courses**

**FLE - Foreign Language Education**

**Foreign Language Education: FLE**

**Lower-Division Courses**

**Upper-Division Courses**

**Graduate Courses**

FLE 397P. Internship.
Internship in teaching English as a second or foreign language. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Offered on the credit/no credit basis only. Prerequisite: Graduate standing in foreign language education and consent of the graduate adviser.

FLE 197V, 297V, 397V. Conference Course.
For each semester hour of credit earned, one lecture hour a week for one semester. May be taken five times for credit. May be repeated for credit. Prerequisite: Graduate standing in foreign language education and consent of graduate adviser.

The equivalent of three lecture hours a week for two semesters. Offered on the credit/no credit basis only. Prerequisite: For 698A, graduate standing in foreign language education, admission to a field of specialization, completion of nine semester hours of coursework toward the degree, and consent of the graduate adviser; for 698B, Foreign Language Education 698A.

FLE 398R. Master’s Report.
Preparation of a report to fulfill the requirement for the master’s degree under the report option. The equivalent of three lecture hours a week for one semester. Offered on the credit/no credit basis only. Prerequisite: Graduate standing in foreign language education, admission to a field of specialization, completion of nine semester hours of coursework toward the degree, and admission to a field of specialization.

May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Admission to candidacy for the doctoral degree.

**French Courses**

**FR - French**

French: FR

**Lower-Division Courses**

FR 301. French for Graduate Students in Other Departments.
No auditors permitted. Intensive reading course for graduate students, emphasizing basic grammar and vocabulary with translation practice. Three lecture hours a week for one semester. The symbol CR fulfills the foreign language requirement for the Doctor of Philosophy degree in some departments. May not be used to fulfill the foreign language
FR 601C. Beginning French.
An intensive beginning course with an emphasis on basic skills: listening, speaking, reading, and writing. Six lecture hours a week for one semester. Only one of the following may be counted: French 601C, 604, 406, 506. Only one of the following may be counted: French 601C, 604, 407, 507, 508K.

FR 604. Accelerated First-Year French.
Designed for students of high motivation. A six-hour course comparable to French 506 and 507. Six lecture hours a week for one semester. Only one of the following may be counted: French 601C, 604, 406, 506. Only one of the following may be counted: French 601C, 604, 407, 507, 508K.

FR 406, 506. Introductory French I.
Emphasis on basic skills: listening, speaking, reading, and writing at the novice level of proficiency. Designed for students with no prior coursework in French. For each semester hour of credit earned, one lecture hour a week for one semester. Only one of the following may be counted: French 406 or 506 with a grade of at least C.

FR 407, 507. Introductory French II.
Emphasis on basic skills: listening, speaking, reading, and writing at the novice to intermediate levels of proficiency. Designed novice level proficiency and prior French coursework. For each semester hour of credit earned, one lecture hour a week for one semester. Only one of the following may be counted: French 406 or 506 with a grade of at least C.

FR 508K. Alternate First-Year French II.
An accelerated review of material covered in French 506, followed by study of new material covered in French 507. Five lecture hours a week for one semester. Only one of the following may be counted: French 506, 604, 407, 507, 508K. Prerequisite: Transfer credit or credit by examination for French 506; or credit for French 506 earned at the University more than one calendar year prior to registering, with a grade of at least C.

FR 611C. Intermediate French.
An intensive intermediate course with emphasis on basic skills: listening, speaking, reading, and writing. Does not meet the prerequisite requirements for French 320E or 324L. Six lecture hours a week for one semester. Only one of the following may be counted: French 611C, 612, 312K, 412K. Prerequisite: French 601C, 604, 407, or 508K with a grade of at least C.

Designed for students of high motivation. A six-hour course comparable to French 312K and 312L combined. Six lecture hours a week for one semester. Only one of the following may be counted: French 611C, 612, 312K, 412K. Prerequisite: French 604, 507, or 508K with a grade of at least C.

Emphasis on basic skills: listening, speaking, reading, and writing at the Intermediate level of proficiency. Designed for students with Novice level proficiency and a prior beginning French course. For each semester hour of credit earned, one lecture hour a week. Only one of the following may be counted: French 611C, 612, 312K, 412K. Prerequisite: French 407 or 507 with a grade of at least C.

Listening, speaking, reading, and writing at the advanced, second-year level. Three lecture hours a week for one semester. French 312L and 317C may not both be counted. Prerequisite: French 312K with a grade of at least C.

FR 317C. Enhancing French Skills.
Listening, speaking, reading, and writing course designed to provide additional preparation for upper-division French courses. Three lecture hours a week for one semester. French 312L and 317C may not both be counted. Prerequisite: French 312K or 412K or 611C with a grade of at least C.

FR 118L. Practice in Spoken French.
Designed to be taken concurrently with French 317C. Two lecture hours a week for one semester. May not be counted toward fulfillment of the foreign language requirement for any bachelor's degree. Prerequisite: French 611C or 312K with a grade of at least C.

This course is used to record credit the student earns while enrolled at another institution in a program administered by the University's Study Abroad Office. Credit is recorded as assigned by the study abroad adviser in the Department of French and Italian. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

Upper-Division Courses
FR 320E. Advanced French I.
Designed to develop the listening, speaking, reading, and writing skills needed for the analysis of literary and cultural readings in the French-speaking world. Three lecture hours a week for one semester. Prerequisite: French 312L or 317C with a grade of at least C.

FR 120M. Advanced Practice in Spoken French I.
Two lecture hours a week for one semester. May not be counted toward fulfillment of the foreign language requirement for any bachelor's degree. Prerequisite: French 612, 312L, (312N), or 317C with a grade of at least C.

FR 120N. Advanced Practice in Spoken French II.
Two lecture hours a week for one semester. May not be counted toward fulfillment of the foreign language requirement for any bachelor's degree. Prerequisite: Completion of at least one upper-division French course, or equivalent proficiency.

FR 322E. Advanced French II.
Continuation of French 320E. Designed to develop the listening, speaking, reading, and writing skills needed to analyze literary and cultural readings in the French-speaking world. Three lecture hours a week for one semester. Prerequisite: French 320E with a grade of at least C.

FR 324L. Practical Phonetics.
A thorough review of French phonetics, with emphasis on improving production and understanding of spoken French. Three lecture hours a week for one semester. Prerequisite: French 320E with a grade of at least C.

FR 325C. Crisis and Conflict.
Focus on reading and interpreting texts dealing with historical and social conflicts as manifested in moments of crisis in French or francophone
FR 325D. Self and Society.
Focus on reading and interpreting texts involving confrontations between the narrative "I" and representations of various social groups. Three lecture hours a week for one semester. Prerequisite: French 320E with a grade of at least C.

FR 325E. Representing Difference.
Focus on reading and interpreting texts involving representation of difference (gender, religious, cultural, political, economic, social). Three lecture hours a week for one semester. Prerequisite: French 320E with a grade of at least C.

FR 326K. Introduction to French Literature I: From the Middle Ages through the Eighteenth Century.
Introduction to the reading and analysis of representative texts, with some attention to cultural and historical background. Three lecture hours a week for one semester. Prerequisite: French 320E.

FR 326L. Introduction to French Literature II: From the French Revolution to the Present.
Introduction to the reading and analysis of representative texts, with some attention to cultural and historical background. Three lecture hours a week for one semester. Prerequisite: French 320E.

FR 327C. French through Cuisine.
A refinement of reading, writing, speaking, and listening skills in French through the context of gastronomy. Three lecture hours a week for one semester. Prerequisite: French 320E with a grade of at least C.

FR 328C. French through Film.
A refinement of reading, writing, speaking, and listening skills in French through the context of French and francophone cinema. Three lecture hours a week for one semester. Prerequisite: French 320E with a grade of at least C.

FR 329C. French through Music.
A refinement of reading, writing, speaking, and listening skills in French through the context of French and francophone music. Three lecture hours a week for one semester. Prerequisite: French 320E with a grade of at least C.

Topics in French.
This course is used to record credit the student earns while enrolled at another institution in a program administered by the University's Study Abroad Office. Credit is recorded as assigned by the study abroad adviser in the Department of French and Italian. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

FR 130D. French across Disciplines.
Students read and discuss French language materials related to the subject matter of another designated course. One lecture hour a week for one semester. Prerequisite: Upper-division standing and three semester hours of upper-division coursework in French.

Engage with special features of the French language that make it fascinating and fun. Build upon this foundation of enjoyment to enhance French speaking, reading, writing, and cultural proficiencies, and utilize new techniques for analyzing French in film, music, and literary texts. Three lecture hours a week for one semester. French 330J and 330K (Topic: The Joy of French) may not both be counted. Prerequisite: French 320E.

Topics with a focus on language or culture. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: French 320E.

The general political history of France, from the nation's inception to its current existence as part of the European Community. Three lecture hours a week for one semester. Prerequisite: French 322E.

An introduction to life in France and francophone regions through the study of contemporary society and culture. Three lecture hours a week for one semester. Prerequisite: French 322E.

FR 342C. French for Business.
Development of the ability to function in French in business-related situations, both orally and in writing. Three lecture hours a week for one semester. Prerequisite: French 320E.

FR 348. French Drama Workshop.
Intensive analysis of one or several plays or short literary texts, with emphasis on diction, delivery of lines, acting and staging; public performance of one play. Three lecture hours a week for one semester. Prerequisite: French 320E.

FR 349P. French Internship.
Provides the opportunity to apply language skills by using French in a professional setting such as a business or agency. Three lecture hours a week for one semester. Prerequisite: French 320E and consent of the department.

FR 350F. Francophone Literature and Culture.
Explore the francophone world through novels, poetry, theater, and film. Three lecture hours a week for one semester. Prerequisite: Upper-division standing and one of the following with a grade of at least C: French 325C, 325D, or 325E.

FR 351C. Topics in French Studies.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: French 322E.

FR 351N. Narrating the Multilingual Self.
Explore the stories of multilingual francophones, including those of language learners, through mediums such as language memoir excerpts, poems, songs, interviews, podcasts, and films that narrate the experiences of multilinguals from many different French-speaking regions (e.g. Europe, North America, Africa, and Asia). Three lecture hours a week for one semester. French 351C (Topic: Narrating...
Multilingual Self) and 351N may not both be counted. Prerequisite: French 322E.

**FR 357C. French New Wave in Context.**
Three lecture hours a week for one semester. French 357 (Topic: French New Wave in Context) and 357C may not both be counted. Prerequisite: Six semester hours of upper-division coursework in French with a grade of at least C.

**FR 358C. French Cinema and Memory.**
Analyze French films through the lens of memory. Examine themes including the relationship between the cinematic medium and memory, the portrayals of personal memory versus historical memory, and the influence of film on our conception of memory. Three lecture hours a week for one semester. French 358 (Topic: French Cinema and Memory) and 358C may not both be counted. Prerequisite: Six semester hours of upper-division coursework in French with a grade of at least C.

**FR 358Q. Supervised Research.**
Individual instruction. May be repeated for credit. Prerequisite: French 325C, or 325D, or 325E, or 326K, or 326L.

**FR 363L. French Through the Media.**
Focus on how the French language is used today to discuss current and cultural topics in the French media. Three lecture hours a week for one semester. French 359 (Topic: French Through the Media) and 363L may not both be counted. Prerequisite: At least six semester hours of upper-division coursework in French.

**FR 364L. Introduction to French Linguistics.**
Introduction to the syntactic, phonological, morphological, lexical, historical, and applied aspects of French linguistics. Three lecture hours a week for one semester. Prerequisite: At least six semester hours of upper-division coursework in French.

**FR 165K, 265K, 365K. Conference Course.**
Supervised individual study of selected problems in French language and literature. Prerequisite: French 325C, or 325D, or 325E, or 326K, or 326L.

**FR 371L. Advanced Written and Oral Composition.**
Designed to guide students toward smooth and effective written and oral expression; weekly compositions on assigned subjects; periodic oral presentations. Three lecture hours a week for one semester. Prerequisite: French 322E.

**FR 372. Comparative Stylistics.**
Comparison of contemporary French and English syntax and style; study and practice in the technical difficulties of English-to-French and French-to-English translation. Three lecture hours a week for one semester. Prerequisite: French 322E.

**FR 379H. Honors Tutorial Course.**
Supervised individual research on a literary, linguistic, or cultural topic, and writing and defense of a thesis under the direction of a committee of two faculty members. Conference course. Prerequisite: Admission to the French Honors Program.

**Graduate Courses**

**FR 380C. French for Graduate Students in Other Departments.**
No auditors permitted. Intensive reading course, emphasizing basic grammar and vocabulary with translation practice. Three lecture hours a week for one semester. The symbol CR fulfills the foreign language requirement for the Doctor of Philosophy degree in some departments.

**FR 380L. History of the French Language.**
An analysis of the evolution of the French language since its origin. Three lecture hours a week for one semester. Prerequisite: Graduate standing in French, or graduate standing and six semester hours of upper-division coursework in French.

**FR 380R. Reference Works and Research Methodologies.**
Three lecture hours a week for one semester. Offered on the credit/no credit basis only. Prerequisite: Graduate standing.

**FR 380W. Doctoral Writing Workshop.**
Restricted to students in the French and Italian Doctor of Philosophy program. Acquire the crucial skills for writing a cogent prospectus, dissertation, or article, and complete the prospectus, dissertation chapter, or article. Three lecture hours a week for one semester. Offered on the credit/no credit basis only. Prerequisite: Graduate standing.

**FR 381. Old French Language.**
Three lecture hours a week for one semester. Prerequisite: Graduate standing and twelve semester hours of upper-division coursework in French.

**FR 381J. Topics in French Studies.**
Designed for students in other departments; taught in English with optional reading in French. Three lecture hours a week for one semester. Graduate students in French may count only one topic toward the degree. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

**FR 381M. Critical Approaches to Literature.**
Introduction to various modern approaches to literary criticism, stressing both theory and practical application. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

**FR 381N. Studies in Language and Style.**
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

**FR 381P. Old Provencal.**
An introduction to Old Provencal through analysis of literary texts. Three lecture hours a week for one semester. Prerequisite: Graduate standing and twelve semester hours of upper-division coursework in French.

**FR 382L. Studies in the Civilization of the French-Speaking World.**
Studies in various aspects of the cultures of France, Quebec, Francophone Africa, the French Caribbean, and other areas. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of the graduate adviser.
FR 383K. Structure of French: Phonology and Morphology.
Three lecture hours a week for one semester. Prerequisite: Graduate standing in French, or graduate standing in linguistics and six semester hours of upper-division coursework in French.

Three lecture hours a week for one semester. Prerequisite: Graduate standing in French, or graduate standing in linguistics and six semester hours of upper-division coursework in French.

An introductory survey of the main fields of French linguistics: phonology, syntax, sociolinguistics, historical linguistics, and applied linguistics. Three lecture hours a week for one semester. Fulfills linguistics requirement for doctoral candidates in French literature. May not be counted toward a graduate degree in French linguistics or Romance linguistics. Prerequisite: Graduate standing.

FR 385L. Conference Course in French Language and Literature.
For students needing specialized courses not normally or not often included in the regular course offerings. Three lecture hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing and written consent of the graduate adviser.

FR 385T. Graduate Teaching Practicum.
Restricted to students in the French and Italian Doctor of Philosophy program. Engage in mentorship and pedagogical training by working one-on-one with a faculty member to develop and design an undergraduate, upper-division level course in an area of specialization. The equivalent of three lecture hours a week for one semester. Offered on the credit/no credit basis only. Prerequisite: Graduate standing and French or Italian Assistant Instructor experience.

FR 390K. Studies in French Literature through the Renaissance.
Intensive study of particular writers or literary movements. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and twelve semester hours of upper-division coursework in French.

FR 390L. Studies in French Literature of the Seventeenth and Eighteenth Centuries.
Intensive study of particular writers or literary movements. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and twelve semester hours of upper-division coursework in French.

FR 390M. Studies in French Literature from the Nineteenth Century to the Present.
Intensive study of particular writers or literary movements. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and twelve semester hours of upper-division coursework in French.

FR 390N. Studies in Francophone Literature.
Studies in the literatures of Quebec, Francophone Africa, the French Caribbean, and other areas. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

Topic 1: Reading the Maghreb. Same as African and African Diaspora Studies 385C (Topic 1) and Middle Eastern Studies 386 (Topic 22). Examine Maghrebi literature and film of both French and Arabic expression, along with works of psychoanalytic and postcolonial theory. Only one of the following may be counted: African and African Diaspora Studies 385C (Topic 1), French 390N (Topic: Reading the Maghreb), 390N (Topic 1), Middle Eastern Studies 386 (Topic: Reading the Maghreb), 386 (Topic 22).

FR 391K. Studies in Criticism and Literary Genres.
Intensive study of critical theory or of the evolution of a genre. Topics: Le Voyage: themes, genres, structure; French short fiction since 1650; the theatre of the absurd; and others. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and twelve semester hours of upper-division coursework in French.

Topic 10: French-German Philosophy and Theory. Same as German 382N (Topic 1) and Philosophy 380N. Explore core philosophical texts from the nineteenth and twentieth century that ground post-World War II French post-structuralism. Only one of the following may be counted: French 391K (Topic 10), German 382N (Topic 1), Philosophy 380N. Additional prerequisite: Graduate standing.

Examination of specific issues in theoretical, applied, descriptive, or historical linguistics. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and twelve semester hours of upper-division coursework in French.

FR 395L. Comprehensive Examination Preparation.
Restricted to doctoral students in the Department of French and Italian. Supervised preparation for the comprehensive examination for the doctoral degree. The equivalent of three lecture hours a week for one semester. May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Graduate Standing, consent of the graduate adviser, and satisfactory completion of all course requirements for the doctoral degree.

FR 396K. Comparative Romance Linguistics.
General survey of the development of spoken Latin in Italy, Spain, Portugal, and France; main traits of phonology, morphology, and syntax in each modern derivative language. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing in languages and consent of instructor and the graduate adviser.

Topic 1: Introduction to Romance Linguistics. Same as Italian 396K (Topic 1: Introduction to Romance Linguistics), Linguistics 383 (Topic 3: Introduction to Romance Linguistics), Portuguese 396K (Topic 2: Introduction to Romance Linguistics), and Spanish 396K (Topic 2: Introduction to Romance Linguistics).

FR 197T. Practicum in Teaching College French.
Designed to train first-year teaching assistants to observe, describe, and evaluate foreign language instruction and testing. Practical aspects of teaching to be studied include organization of class time; treatment of vocabulary and grammar; speaking and pronunciation; listening and reading comprehension; evaluating and creating tests; testing language content and language skills. One lecture hour a week for one semester. Prerequisite: Graduate standing.

The equivalent of three lecture hours a week for two semesters. Offered on the credit/no credit basis only. Prerequisite: For 698A, graduate standing in French and consent of the graduate adviser; for 698B, French 698A.
FR 398R. Master's Report.  
Preparation of a report to fulfill the requirement for the master's degree under the report option. The equivalent of three lecture hours a week for one semester. Offered on the credit/no credit basis only. Prerequisite: Graduate standing in French and consent of the graduate adviser.

FR 398T. Supervised Teaching in French.  
Teaching under the close supervision of the course instructor for two semesters; weekly group meetings with the instructor, individual consultations, and reports throughout the teaching period. Three lecture hours a week for one semester. Prerequisite: Graduate standing and appointment as a teaching assistant.

May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Admission to candidacy for the doctoral degree.

Professional Courses  
G E - General Engineering  

General Engineering: G E  

Lower-Division Courses  
G E 102E, 202E. Supplemental Instruction for Electrical and Computer Engineering 302.  
Restricted to engineering majors. Development of problem-solving skills in the material covered in Electrical and Computer Engineering 302. For each semester hour of credit earned, two hours of supplemental instruction a week for one semester. May not be counted toward any engineering degree. Offered on the pass/fail basis only. Prerequisite: Concurrent enrollment in Electrical and Computer Engineering 302.

G E 104J, 204J. Supplemental Instruction for Mathematics 427J.  
Restricted to engineering majors. Development of problem-solving skills in the material covered in Mathematics 427J. For each semester hour of credit earned, two hours of supplemental instruction a week for one semester. May not be counted toward any engineering degree. Offered on the pass/fail basis only. Prerequisite: Concurrent enrollment in Mathematics 427J.

G E 105G. Supplemental Instruction for Mathematics 305G.  
Restricted to engineering majors. Development of problem-solving skills in the material covered in Mathematics 305G. For each semester hour of credit earned, two hours of supplemental instruction a week for one semester. May not be counted toward any engineering degree. Offered on the pass/fail basis only. Prerequisite: Concurrent enrollment in Mathematics 305G.

G E 106D, 206D. Supplemental Instruction for Chemistry 301.  
Restricted to engineering majors. Development of problem-solving skills in the material covered in Chemistry 301. For each semester hour of credit earned, two hours of supplemental instruction a week for one semester. May not be counted toward any engineering degree. Offered on the pass/fail basis only. Prerequisite: Concurrent enrollment in Chemistry 301.

G E 106E, 206E. Supplemental Instruction for Chemistry 302.  
Restricted to engineering students. Development of problem-solving skills in the material covered in Chemistry 302. For each semester hour of credit earned, two hours of supplemental instruction a week for one semester. May not be counted toward any engineering degree. Offered on the pass/fail basis only. Prerequisite: Concurrent enrollment in Chemistry 302.

G E 107C, 207C. Supplemental Instruction for Mathematics 408C.  
Restricted to engineering majors. Development of problem-solving skills in the material covered in Mathematics 408C. For each semester hour of credit earned, two hours of supplemental instruction a week for one semester. May not be counted toward any engineering degree. Offered on the pass/fail basis only. Prerequisite: Concurrent enrollment in Mathematics 408C.

G E 107D, 207D. Supplemental Instruction for Mathematics 408D.  
Restricted to engineering majors. Development of problem-solving skills in the material covered in Mathematics 408D. For each semester hour of credit earned, two hours of supplemental instruction a week for one semester. May not be counted toward any engineering degree. Offered on the pass/fail basis only. Prerequisite: Concurrent enrollment in Mathematics 408D.

G E 107E. Supplemental Instruction for Mathematics 340L.  
Restricted to engineering students. Development of problem-solving skills in the material covered in Mathematics 340L. Two two-hour discussion sections a week for one semester. May not be counted toward any engineering degree. Offered on the pass/fail basis only. Prerequisite: Concurrent enrollment in Mathematics 340L.

G E 107K. Supplemental Instruction for Mathematics 427K.  
Restricted to engineering students. Development of problem-solving skills in the material covered in Mathematics 427K. Two two-hour discussion sections a week for one semester. May not be counted toward any engineering degree. Offered on the letter-grade basis only. Prerequisite: Concurrent enrollment in Mathematics 427K.

G E 107L. Supplemental Instruction for Mathematics 427L.  
Restricted to engineering students. Development of problem-solving skills in the material covered in Mathematics 427L. Two two-hour discussion sections a week for one semester. May not be counted toward any engineering degree. Offered on the pass/fail basis only. Prerequisite: Concurrent enrollment in Mathematics 427L.

G E 107R. Supplemental Instruction for Mathematics 408K.  
Restricted to engineering students. Four lecture hours a week for one semester. May not be counted toward any engineering degree. Offered on the pass/fail basis only. Prerequisite: Concurrent enrollment in Mathematics 408K.

G E 107S. Supplemental Instruction for Mathematics 408L.  
Restricted to engineering students. Four lecture hours a week for one semester. May not be counted toward any engineering degree. Offered on the pass/fail basis only. Prerequisite: Concurrent enrollment in Mathematics 408L.

G E 107T. Supplemental Instruction for Mathematics 408M.  
Restricted to engineering students. Four lecture hours a week for one semester. May not be counted toward any engineering degree. Offered on the pass/fail basis only. Prerequisite: Concurrent enrollment in Mathematics 408M.

G E 108K, 208K. Supplemental Instruction for Physics 303K.  
Restricted to engineering majors. Development of problem-solving skills in the material covered in Physics 303K. For each semester hour of credit earned, two hours of supplemental instruction a week for one semester.
May not be counted toward any engineering degree. Offered on the pass/fail basis only. Prerequisite: Concurrent enrollment in Physics 303K.

**G E 108L, 208L. Supplemental Instruction for Physics 303L.**
Restricted to engineering majors. Development of problem-solving skills in the material covered in Physics 303L. For each semester hour of credit earned, two hours of supplemental instruction a week for one semester. May not be counted toward any engineering degree. Offered on the pass/fail basis only. Prerequisite: Concurrent enrollment in Physics 303L.

**G E 209. Supplemental Instruction for Engineering Courses.**
Restricted to engineering students. Development of problem-solving skills in the material covered in selected engineering courses. Two two-hour discussion sections a week for one semester. May not be counted toward any engineering degree. May be repeated for credit when the topics vary. Offered on the letter-grade basis only. Prerequisite: Varies with the topic.

Restricted to engineering majors. Development of problem-solving skills in the material covered in Engineering Mechanics 306. For each semester hour of credit earned, two hours of supplemental instruction a week for one semester. May not be counted toward any engineering degree. May be repeated for credit. Offered on the pass/fail basis only. Prerequisite: Concurrent enrollment in Engineering Mechanics 306 and consent of instructor.

**G E 109D, 209D. Supplemental Instruction for Engineering Mechanics 319.**
Restricted to engineering majors. Development of problem-solving skills in the material covered in Engineering Mechanics 319. For each semester hour of credit earned, two hours of supplemental instruction a week for one semester. May not be counted toward any engineering degree. May be repeated for credit. Offered on the pass/fail basis only. Prerequisite: Concurrent enrollment in Engineering Mechanics 319 and consent of instructor.

**G E 212. Supplemental Instruction for Electrical Engineering 312.**
Restricted to engineering students. Development of problem-solving skills in the material covered in Electrical Engineering 312. Two two-hour discussion sections a week for one semester. May not be counted toward any engineering degree. Offered on the pass/fail basis only. Prerequisite: Concurrent enrollment in Electrical Engineering 312.

**G E 119, 219, 319. Topics in Engineering.**
Restricted to engineering students. Topics to supplement lower-division engineering curriculum. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. Engineering Studies 119, 219, 319 and General Engineering 119, 219, 319 may not both be counted unless the topics vary. May be repeated for credit when the topics vary. Offered on the pass/fail basis only. Prerequisite: Varies with the topic.

**Upper-Division Courses**

**G E 222. Topics in Professional Development.**
Restricted to engineering students. Small-group seminar involving reading, discussion, and oral reports. Two lecture hours a week for one semester. Only one of the following may be counted unless topics vary: Engineering Studies 122, 222, 322, 321G (or 322G), General Engineering 222. May be repeated for credit when the topics vary. Offered on the pass/fail basis only.

**Graduate Courses**

**Professional Courses**

**GEO - Geological Sciences**

**Geological Sciences: GEO**

**Lower-Division Courses**

**GEO 401 (TCCN: GEOL 1403). Physical Geology.**
Registration priority given to environmental science and geological sciences majors. Nature, properties, and distribution of crustal materials; surficial processes; internal processes; origin of continents, oceans, and ocean basins; mineral and fuel resources. Three lecture hours and two hours of laboratory or fieldwork a week for one semester. Only one of the following may be counted: Geological Sciences 401, 303, 420H.

**GEO 302C. Climate: Past, Present, and Future.**
Designed for non-geological sciences majors. Principal factors that determine Earth’s climate, evidence of climate change, causes of climate change, natural climatic variations and human-induced changes, prediction of climate in the next one hundred years, and uncertainties in climate prediction. Three lecture hours and one and one-half laboratory hours a week for one semester.

**GEO 302D. Age of Dinosaurs.**
An exploration of the general principles of natural history, focusing on the natural history of dinosaurs. An introduction to the basics of geology, anatomy, paleontology, and evolutionary theory, followed by the application of this knowledge, in tracing the evolutionary history of Dinosauria. Three lecture hours and one and one-half laboratory hours a week for one semester. May not be counted toward a degree in environmental or geological sciences.

**GEO 302E. Earth, Wind, and Fire.**
Designed for non-geological sciences majors. Geologic phenomena that affect everyday life, including global warming, earthquakes, volcanism, desertification, river and coastline flooding and erosion, groundwater, mineral resources, and plate tectonics. Three lecture hours and one and one-half laboratory hours a week for one semester. May not be counted toward a degree in environmental science or geological sciences.

**GEO 302F. Earth Science and Sustainability.**
Inquiry-based; explores grand challenges in earth science that affect sustainability and society, including climate change, energy production, soil erosion and agriculture, water availability, and natural hazards risk assessment and prediction. Activities include authentic data, simple models and maps used in geoscience gathering, and analysis and real-world application. The equivalent of three lecture hours a week for one semester. Geological Sciences 302K (Topic: Earth Science/ Sustainability) and 302G may not both be counted.

**GEO 302J. Crisis of Our Planet.**
Designed for nonscience majors. Explores the interactions between humans and the Earth system by investigating the different time and spatial scales of the natural hazards that the planet presents, and exploring the societal and economic implications of civilizations co-existing with an evolving planet. Discussion of both long-term and punctuated catastrophic hazards, focusing on those from volcanoes, hurricanes, and earthquakes, using a combination of systems level exploration of the driving mechanisms as well as case histories. Discussion of issues related to risk, mitigation, and resilience for humans facing the vast array of natural hazards. Three lecture hours a week for one semester.
Designed for nonscience majors. The impact of geological processes on human activity; geologic topics of popular interest. Three lecture hours and one-and-one-half laboratory hours a week for one semester. May be repeated for credit when the topics vary.

GEO 302M. The Age of Mammals.
Introductory-level course on paleontology and natural history for nonscience majors. Basic geological processes, fossilization, and the fossil record. Overview of the "tree of life." Summary of the evolution and diversification of mammals, an introduction to interactions between physical and biological processes, and the impact of climate change and human activities on mammalian communities. Laboratory component focuses on the mammalian skeleton and common Texas mammals. Three lecture hours and one and one-half laboratory hours a week for one semester. May not be counted toward a degree in environmental or geological sciences.

GEO 302N. Geology of National Parks.
Explore the geology of the US National Park System through a detailed examination of its rocks, landscapes, climate, hydrology, natural resources, and environmental impacts. Examine particular national parks which exhibit specific Earth processes. Includes threats posed to the park system: environmental tourism, encroaching development, water and air quality, air pollution, and natural hazards. The equivalent of three lecture hours a week for one semester.

Restricted to freshmen and sophomores. Explores the interactions between humans and the Earth system by investigating the different time and spatial scales of the natural hazards that the planet presents, and exploring the societal and economic implications of civilizations co-existing with an evolving planet. Discussion of both long-term and punctuated catastrophic hazards, focusing on those from volcanoes, hurricanes, and earthquakes, using a combination of systems level exploration of the driving mechanisms as well as case histories. Discussion of issues related to risk, mitigation, and resilience for humans facing the vast array of natural hazards. Three lecture hours and one and one-half laboratory hours a week for one semester. May not be counted toward a degree in geological sciences.

GEO 302Q. Gems and Gem Minerals.
Examine crystallography, occurrence, and identification of gem minerals and materials; artificial gems; simple cutting and polishing; and the history of gems and gemology. Three lecture hours and two laboratory hours a week for one semester. Only one of the following may be counted: Geological Sciences 302Q, 302K (Topic: Gems and Gem Minerals), 347K.

GEO 303. Introduction to Geology.
Registration priority given to environmental science, geological sciences, and petroleum and geosystems engineering majors. Mineral and rock composition of the earth; measurement of geologic time; origin and evolution of life; earth's interior; plate tectonics; depositional environments and processes; ancient climates; humans, earth resources, and the environment. Two lecture hours and two laboratory hours a week for one semester. Only one of the following may be counted: Geological Sciences 401, 303, 420H.

GEO 303C. Introduction to the Solar System.
Examines the origin and evolution of our solar system; how processes such as volcanism and impacts have shaped planet surfaces, as well as the workings of planetary interiors; the unique properties of Earth that allowed life to arise and evolve; the prospects for seeking life on other planets in our own solar system and beyond; and the history of planetary exploration and the methods scientists use to explore fundamental questions regarding our place in the universe. Three lecture hours a week for one semester. Geological Sciences 303C and 310C (Topic: Introduction to the Solar System) may not both be counted. May not be counted towards a degree in environmental science, geological sciences, or geosystems engineering and hydrogeology.

GEO 303E. Earth in 2100.
Restricted to non-geological science majors. In a self-paced format, investigate Earth's physical climate system, how humans have contributed to climate change, what the Earth may look like in 2100, and how society can stop climate change. The equivalent of three lecture hours a week for one semester.

GEO 405 (TCCN: GEOL 1404). Life through Time.
The history and development of life, and the processes of change from the early Precambrian era to the present. Three lecture hours and two laboratory hours a week for one semester. Geological Sciences 404 and 405 may not both be counted. Prerequisite: Geological Sciences 401, 303, or 420H with a grade of at least C.

GEO 305E. Energy and the Environment.
A survey of all forms of current and potential sources of energy, and how these might impact the earth's environment. Three lecture hours and one and one-half laboratory hours a week for one semester. May not be counted toward a degree in environmental science, geological sciences, or geosystems engineering and hydrogeology.

GEO 306P. Geology and Sustainability.
Restricted to environmental science entry-level majors. Examines sustainability and environmental science from an interdisciplinary perspective. Three lecture hours and one and one-half laboratory hours a week for one semester. Prerequisite: Written consent of instructor.

GEO 110C, 210C, 310C. Conference Course.
Supervised study of selected topics in geological sciences, by individual arrangement with the instructor. Conference course. May not be substituted for any required geological sciences course. May be repeated for credit when the topics vary. Prerequisite: Consent of instructor.

GEO 110T, 210T, 310T. Undergraduate Topics in Geological Sciences.
Selected undergraduate topics in geological sciences. For each semester hour of credit earned, one lecture hour a week for one semester. May be repeated for credit when the topics vary. Offered on the letter-grade basis only.

GEO 211. Emerging Scholars in Geological Sciences.
Introduction to research areas in the geological sciences, with emphasis on the skills needed for success in graduate school and the professional workplace. Four laboratory hours a week for one semester. May not be substituted for any required geological sciences course. Prerequisite: Consent of instructor.

GEO 012N. JSG Geosciences Mentors Program - First-year.
Restricted to first-year students in the Jackson School of Geosciences. Introduction to the various geosciences disciplines and corresponding degree programs and research areas. Emphasis on the skills needed for success in graduate school and the professional workplace, such as interactive sessions with the Jackson School of Geosciences Career Center to address internships, career planning, and job search skills. One lecture hour a week for one semester. May not be counted toward a
degree in geological sciences or environmental sciences. Offered on the pass/fail basis only. Prerequisite: Consent of instructor.

**GEO 114G. Geophysics Colloquium.**
Open to non-geological sciences majors, but registration priority is given to geological sciences majors. Introduction to geophysics to examine applications and discover career opportunities. Two lecture hours a week for one semester, and at least one weekend field trip. Geological Sciences 110C (Topic: Geophysics Colloquium) and 114G may not both be counted. May be repeated for credit. Offered on the pass/fail basis only.

**GEO 315L. Earth From Lab to Planet.**
Explore the physical laws that explain the dynamical changes observed on the surface and interior of our planet, from tectonic to generational timescales. Examine different earth behaviors using hands-on experiments, in the lab and on the computer, to illuminate particular geodynamical processes. Discuss abstractions from these experiments to understand how those processes can be scaled up to understand Earth dynamics, from sedimentation to regional groundwater transport to global mantle convection. Three lecture hours a week for one semester. Offered on the letter-grade basis only.

**GEO 416E. Solid Earth Processes.**
Study the physical and chemical processes governing Earth and planetary evolution from the deep interior to lithosphere and surface. Explore the societal relevance of geological processes such as natural hazards and resources. Address why solid Earth dynamics is critical to sustain life and civilization at the surface. Three lecture and two laboratory hours a week for one semester. Offered on the letter-grade basis only.

**GEO 416K. Earth Materials.**
Introduction to minerals, mineral study techniques, igneous and metamorphic rocks and ore deposits, and formation processes. Three lecture hours and four laboratory hours a week for one semester. Prerequisite: The following with a grade of at least C- in each: Chemistry 301, 302; and Geological Sciences 401, 303, or 420H.

**GEO 416M. Sedimentary Rocks.**
Description and interpretation of sedimentary rocks in hand specimen and thin section; characteristics of sedimentary rocks deposited in different environments. Three lecture hours and four laboratory hours a week for one semester, with two additional one-day field trips to be arranged. Prerequisite: Geological Sciences 401, 303, or 420H with a grade of at least C-.

**GEO 316P. Sedimentary Rocks.**
Registration priority given to petroleum and geosystems engineering majors and Energy and Management Certificate Program students. Examines the fundamentals of sedimentary rocks, including siliciclastic grain parameters and mineralogy, sediment transport and sedimentary structures; and carbonate mineralogy and geochemistry, grain and matrix constituents, modern facies, and classification. Reviews the principal siliciclastic and carbonate depositional systems, their process of formation and facies architecture and the role of process and architecture in petrophysical patterns, distribution of permeability and porosity, flow units, reservoir heterogeneities, and hydrogen recovery. Three lecture hours a week for one semester. May not be counted toward any degree in environmental science or geological sciences. Prerequisite: Geological Sciences 401, 303, or 420H with a grade of at least C-.

**GEO 416S. Earth and Planetary Processes Through Time.**
Explore modern physical, chemical, and biological processes through the prism of Texas's changing rivers and coastlines. Examine geologic times since the last Ice Age, deep geological time by looking at the Permian age, and the interpretation of planetary systems with an emphasis on underlying tenets of the history of life, geologic time, and surface processes. Three lecture and two laboratory hours a week for one semester. Offered on the letter-grade basis only.

**GEO 416W. Climate, Water, and the Environment.**
Introduction to climate system science through quantitative exploration of the processes that control Earth’s water and carbon cycles. Discuss how the geosphere, atmosphere, ocean, cryosphere, and biosphere interact to govern the movement of water and the evolution of climate and weather conditions throughout Earth’s history and in the present day. Explore current issues in climate change, water resources, and environmental sustainability. Three lecture hours and two laboratory hours a week for one semester. Offered on the letter-grade basis only.

This course is used to record credit the student earns while enrolled at another institution in a program administered by the University’s Study Abroad office. Credit is recorded as assigned by the study abroad adviser in the Department of Geological Sciences. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

**Upper-Division Courses**

**GEO 420F. Classic Geology in Scotland.**
Introduction to the founding concepts of geology. Students use advanced field technologies while studying the geology of Scotland on all scales of size. The equivalent of four lecture hours a week for one semester, including field exercises in a variety of geological settings. Prerequisite: Geological Sciences 303, 401 or 420H with a grade of at least C-.

**GEO 420H. Honors Introductory Geology.**
An accelerated introductory course on the composition, structure, and history of the earth. Three lecture hours and two laboratory hours a week for one semester, and several all-day field trips. Only one of the following may be counted: Geological Sciences 401, 303, 420H. Prerequisite: Consent of instructor.

**GEO 420K. Introduction to Field and Stratigraphic Methods.**
Restricted to Jackson School of Geosciences majors. Field observation of geological processes and study of the mineralogy, petrology, stratigraphy, paleontology, and structural geology of central Texas. Two lecture hours and three laboratory hours a week for one semester, and six weekend field trips. Geological Sciences 420K and 320L may not both be counted. Prerequisite: For general geology majors: Geological Sciences 416K and 416M with a grade of at least C- in each, and credit or registration in Geological Sciences 426P with a grade of at least C-. For others: Geological Sciences 416K and 416M with a grade of at least C- in each.

**GEO 320L. Introductory Field Geology.**
Designed for non-geological sciences majors. Study of geologic features and processes in the field; emphasizes regional geology of central Texas and techniques of geologic mapping. The equivalent of three lecture hours a week for one semester. Geological Sciences 420K and 320L may not both be counted. May not be counted toward a degree in environmental science, geological sciences, or geosystems engineering and hydrogeology. Prerequisite: Geological Sciences 401 or 303 with a grade of at least C-.
GEO 322E. Scientific Research Design.
Examine principles of experimental design including formulation of target questions and method choice in an interdisciplinary, community context. Three lecture hours a week for one semester. Geosciences 322E and 371T (Topic: Scientific Research Design) may not both be counted.

GEO 322J. Transitions in the History of Life.
Introduction to major perturbations in the history of life; specifically, mass extinctions and carbon-cycle perturbations (e.g. ocean anoxic events, hyperthermals, and acidification events). Addresses key mechanisms (e.g. glaciations, impacts, large igneous provinces) and the subsequent environmental perturbations and ecological ramifications. Covers biotic crises in the past, with an eye to future ecosystem collapse, as well as the environmental and paleobiological responses to these events. Three lecture hours a week for one semester. Geological Sciences 322J and 371T (Topic: Transitions in the History of Life) may not both be counted. May be repeated for credit. Prerequisite: Upper-division standing; Geological Sciences 405 with a grade of at least C-, or consent of instructor.

GEO 422K. Paleobiology.
Registration priority given to environmental science and geological sciences majors. Systematics, biostratigraphy, paleoecology, and evolution of fossil organisms. Three lecture hours and four laboratory hours a week for one semester, with two additional one-day field trips to be arranged. Prerequisite: Biology 311D, Geological Sciences 404C or 405, and 416M with a grade of at least C- in each.

GEO 322S. Development and Evolution of the Vertebrate Skeleton.
Registration priority given to environmental science and geological sciences majors. Introduction to the organization and development of the vertebrate skeleton; survey of vertebrate history. Three lecture hours and two laboratory hours a week for one semester. Prerequisite: Consent of instructor.

GEO 022T. JSG Geosciences Mentors Program - Transfer.
Restricted to first semester transfer students in the Jackson School of Geosciences. Introduction to the various geosciences disciplines and corresponding degree programs and research areas. Emphasis on the skills needed for success in graduate school and the professional workplace, such as interactive sessions with the Jackson School of Geosciences Career Center to address internships, career planning, and job search skills. One lecture hour a week for one semester. May not be counted toward a degree in geological sciences or environmental sciences. Offered on the pass/fail basis only. Prerequisite: Consent of instructor.

GEO 322V. Morphology of the Vertebrate Skeleton.
Identification of skeletal elements from the major vertebrate taxa, and aspects of skeletal functional morphology, with emphasis on extant taxa. Subjects include the skeletal systems of fish, amphibians, reptiles, birds, and mammals. Three lecture hours and four laboratory hours a week for one semester. Prerequisite: Biology 311C and Geological Sciences 404C or 405 with a grade of at least C- in each, and consent of instructor.

GEO 325C. Continuum Mechanics.
Explore the foundation for the modeling of fluids and solids in geological and geophysical phenomena, such as mantle convection, glaciology, rock mechanics, and climate dynamics. Examine tensor analysis, the kinematics of motion, forces, and stresses. Discuss basic balance (conservation) laws for mass, momentum, and energy, and constitutive laws for fluids and solids. Develop governing equations to geodynamics, glaciology, seismology, and geophysical fluid dynamics. Three lecture hours a week for one semester. Geosciences 325C and 371T (Topic: Continuum Mechanics) may not both be counted. Offered on the letter-grade basis only. Prerequisite: Upper-division standing, Mathematics 427J with a grade of at least C-, and credit or registration in Mathematics 427L.

GEO 325G. Computational Applications in the Geosciences.
An introduction to programming in MATLAB and applications to simulation of physical processes and data analysis in the geosciences. Two lecture hours and two laboratory hours a week for one semester. Geological Sciences 325G and 325J may not both be counted. Prerequisite: Geological Sciences 303 or 401, Mathematics 408D or 408M, and Physics 301 or 303K with a grade of at least C- in each.

GEO 325J. Programming in FORTRAN and MATLAB.
FORTRAN for students without knowledge of a computer programming language: survey of all variable types, loops, arrays, subroutines, and functions; overview of UNIX and MATLAB. Two lecture hours and two laboratory hours a week for one semester. Geological Sciences 325G and 325J may not both be counted. Prerequisite: Mathematics 427J or 427K with a grade of at least C-.

GEO 325K. Computational Methods.
Sampling and aliasing. Review of sinusoids and wave terminology, complex numbers and complex sinusoids, vectors and matrices, the discrete Fourier transform, convolution, the convolution theorem, linear digital filters and transfer functions, random variable concepts and statistics, and least squares estimation. MATLAB is used for homework problems and examples. Two lecture hours and two laboratory hours a week for one semester. Prerequisite: The following with a grade of at least C- in each: Geological Sciences 325J or 325G; Mathematics 427J or 427K; Physics 301 and 316 or Physics 303K and 303L.

GEO 325M. Numerical Modeling in the Geosciences.
Covers numerical solution of dynamical problems arising in the solid earth geosciences. Entails development of individual codes in Matlab and application of codes to understanding heat transfer, wave propagation, elastic, and viscous deformations. Requires familiarity with Matlab. Two lecture hours and two laboratory hours a week for one semester. Prerequisite: Upper-division standing; Geological Sciences 325G, and Mathematics 427J and 427L with a grade of at least C-; or consent of instructor.

Introduction to the modeling of flow and transport in porous media with focus on basic dynamic phenomena that occur during single-phase flow and solute transport in heterogeneous porous media. Discussion of the numerical solution of both the elliptic equations governing the flow of groundwater and the hyperbolic equations governing solute transport. Includes a programming project which requires writing a functional numerical simulator. Three lecture hours and one-and-one-half laboratory hours a week for one semester. Prerequisite: Upper-division standing and one of the following with a grade of at least C: Civil Engineering 311K; Computational Engineering 301; Geological Sciences 325G or 325J; Mathematics 408D or 427L and Mathematics 427J or 427K; Mechanical Engineering 318M; Petroleum and Geosystems Engineering 310.

GEO 326D. Earth in Deep Time.
Examine the causes and consequences of significant changes in Earth's surface environment and tectonic processes over the past 4.5 billion years. Discuss the initial Earth accretion, the Faint Young Sun problem, the rise of oxygen in Earth's atmosphere and general requirements for planetary habitability and how interactions between Earth's interior, the surface, and biosphere have shaped planetary evolution. Three lecture hours a week for one semester. Offered on the letter-grade basis only.
GEO 426P. Igneous and Metamorphic Petrology.
Mineralogy, geochemistry, and processes of magmatism and metamorphism. Three lecture hours and four laboratory hours a week for one semester. Prerequisite: Geological Sciences 416K with a grade of at least C-; credit with a grade of at least C- or registration for Physics 301 and 101L, or 303K and 103M.

GEO 327G. Geographic Information System and Global Positioning System Applications in Earth Sciences.
Restricted to environmental science and geological sciences majors. Theory and practice of geographic information system (GIS) and Global Positioning System (GPS) technologies, and their applications to problems in earth sciences. Laboratories and field trips provide hands-on experience with the collection, mapping, and analysis of geologic and other field data using GPS equipment and GIS software. Topics include map projections; datums and reference frames; cartographic principles; remotely sensed data (satellite and aerial photos, image radar); vector- and raster-based image formats; geospatial data resources; GIS software applications; surveying principles; GPS constellation and data structure; differential GPS; data logging schemes; GPS postprocessing software; integration of GPS and GIS in mapmaking; extant GIS applications in geology and hydrogeology. Three lecture hours and two laboratory hours a week for one semester, and two weekend field trips. Geological Sciences 327G and 371C (Topic: Geographic Information System and Global Positioning System Applications in Earth Sciences) may not both be counted. Prerequisite: Geological Sciences 420K with a grade of at least C-.

GEO 428. Structural Geology.
Description, classification, and origin of Earth structures. Solution of problems by descriptive geometry, geologic maps, and contouring. Three lecture hours and three laboratory hours a week for one semester. Prerequisite: The following with a grade of at least C-: Geological Sciences 420K; Mathematics 408C or 408L; and Physics 301 and 101L, or Physics 303K and 103M.

GEO 328W. Vadose Zone Hydrology.
Introduction to hydrologic processes occurring in the vadose zone (unsaturated zone), the subsurface region between the ground surface and groundwater. Focus on the physical processes that govern the movement of water in variably saturated porous media, and the exchange of mass and energy at Earth's surface. Explore theoretical and applied aspects, measurement techniques and computational tools, and environmental challenges of the vadose zone. Three lecture hours a week for one semester. Geological Sciences 328W and 371T (Topic: Vadose Zone Hydrology) may not both be counted. Prerequisite: Geological Sciences 346C, 476K, or 376S with a grade of at least C-.

This course is used to record credit the student earns while enrolled at another institution in a program administered by the University's Study Abroad Office. Credit is recorded as assigned by the study abroad adviser in the Department of Geological Sciences. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

GEO 329W. Hydrogeology Cooperative (Geological Sciences).
Restricted to environmental science and geological sciences majors. Covers the work period of geological sciences students in the Cooperative Education program, which provides supervised work experience by arrangement with the employer and the supervising instructor. Required submission of a final report to the supervising instructor at the conclusion of the program. Forty laboratory hours a week for one semester. The student must repeat the course each work period and must take it twice to receive credit toward the degree; at least one of these registrations must be during a long-session semester. No more than three semester hours may be counted toward the major requirement; no more than six semester hours may be counted toward the degree. The student's first registration must be on the pass/fail basis. May be repeated for credit. Prerequisite: Application to become a member of the Hydrogeology Cooperative (Geological Sciences) Program, and consent of the Associate Dean for Academic Affairs.

Covers the fundamental elements of the petroleum system, including the origin of source rocks and reservoirs, rock properties, migration of hydrocarbons, and correlation methods for rock formations. During the final weeks of the course, students form exploration teams and work up real subsurface data from the Gulf of Mexico in order to participate in a simulated lease sale. Two lecture hours and two laboratory hours a week for one semester. Prerequisite: The following with a grade of at least C- in each: Geological Sciences 416M; and Physics 303L and 103N, or Physics 316 and 116L.

GEO 331K. Petrology and Plate Tectonics.
Registration priority given to environmental science and geological sciences majors. Sedimentation, metamorphism, igneous activity, and deformation patterns at rift zones, subduction zones, and transform margins. Three lecture hours a week for one semester. Offered irregularly, as shown in the Course Schedule. Prerequisite: Geological Sciences 428 with a grade of at least C-.

GEO 335. Geology and Mineral Resources of Texas.
Geologic history of the region; local rocks, fossils, and mineral resources; influence of physiography, surface and subsurface water supplies, and energy and mineral resource production on the state economy. Three lecture hours and two laboratory hours a week for one semester. May not be counted toward the Bachelor of Science in Geological Sciences: Option I (General Geology), Option II (Geophysics), or Option III (Hydrogeology). Prerequisite: The following with a grade of at least C-: Geological Sciences 401, 303, or 420H; and 405.

GEO 135J. Jackson Scholars Seminar.
Discuss professional development skills, scholarship, research, and outreach. One lecture hour a week for one semester. May be repeated for credit. Offered on the letter-grade basis only. Prerequisite: Consent of instructor.

GEO 338J. Marine Geology.
A survey of the field of marine geology by exploring the structure and evolution of the ocean basins, oceanic islands, and island arcs, the chemistry of the oceans, the sediments in the marine environments, the products and processes of the land-air-sea interface, and the history of the oceans over geologic time. Three lecture hours a week for one semester. Geological Sciences 338J and 371C (Topic: Marine Geology) may not both be counted. Prerequisite: Upper-division standing.

GEO 338T. Marine Tectonics.
Tectonic processes within the dynamic Earth, with a focus on oceanic structures. Subjects may include fundamentals of plate tectonics; plate motion, driving forces, and mantle convection; evolution of triple junction and plate margins; plate reconstructions; earthquakes and focal mechanisms; structure and geochemistry of the Earth's interior; mantle structure and tomography; rheology and deformation mechanisms in mantle and crust; heat flow, gravity, the geoid, and paleomagnetism; hotspots and mantle plumes; seafloor spreading and oceanic spreading ridges; oceanic transform faults and fracture zones; and subduction.
zones, volcanic island arcs, and marginal seas. Three lecture hours a week for one semester. Geological Sciences 338T and 371C (Topic: Tectonics I) may not both be counted. Prerequisite: Geological Sciences 428 with a grade of at least C+.

GEO 338W. Paleoclimate.
Introduction to paleoclimatology, the study of Earth’s past climate. Examine a broad spectrum of geological archives of climate change including those from the oceans, the land, and the cryosphere. Three lecture hours a week for one semester. Geological Sciences 338W and 371T (Topic: Paleoclimate) may not both be counted. Prerequisite: Consent of instructor.

GEO 339T. Continental Tectonics.
Tectonic processes, with a focus on continental lithospheric structures. Subjects may include convergent margins, subduction zones, magmatic arcs, and foreland structures; collisional orogenesis, arc-continent collisions, continent-continent collision, and mountain building; formation of supercontinents; uplift and exhumation; orogenic collapse and extensional tectonics; continental rifting and passive margins; transform margins; and the effect of tectonics on climate and oceanic circulation. Three lecture hours a week for one semester. Geological Sciences 339T and 371C (Topic: Tectonics II) may not both be counted. Prerequisite: Geological Sciences 428 with a grade of at least C- or consent of instructor.

GEO 340T. Geoclimatology.
Examination of the climate records encoded in sedimentary archives through geologic time. Three lecture hours a week for one semester. Geological Sciences 340T and 371C (Topic: Geoclimatology) may not both be counted. May not be substituted for any required geological sciences course. Prerequisite: Chemistry 302, Geological Sciences 416K, and 416M with a grade of at least C-.

Registration priority given to majors in the Jackson School of Geosciences. Nature and origin of mineral resources; their discovery, extraction, and uses; and their relationship to global history, economics, and the environment. Three lecture hours and one laboratory hour a week for one semester. Prerequisite: Geological Sciences 416K with a grade of at least C-.

GEO 341F. Microstructures and Rock Rheology.
Focuses on processes of deformation operative in the crust and upper mantle, with an emphasis on distinguishing these processes using microstructural analysis and describing them using basic constitutive relationships from rock mechanics. Three lecture hours a week for one semester. Prerequisite: Geological Sciences 428 with a grade of B or higher.

GEO 341G. Geomicrobiology.
Registration priority given to majors in the Jackson School of Geosciences. Geologic and hydrologic controls on subsurface microbial growth, metabolism, and community structure; the geochemical consequences of microbial processes in subsurface settings; and the influence of geology on microbial ecology. Three lecture hours a week for one semester. Geological Sciences 341G and 381G may not both be counted. May not be substituted for any required geological sciences course. Prerequisite: Upper-division standing and consent of instructor.

Explores inductively coupled plasma mass spectrometry (ICP-MS) for trace, minor and major element measurement, and applications in analytical fields. Discussion of fundamentals of technique, applications, and capabilities of ICP-MS through hands-on lab experience. Two lecture hours and one-and-one-half laboratory hours a week for one semester. Geological Sciences 343Q and 371C (Topic: Fundamentals and Applications of ICP-MS) may not both be counted. Prerequisite: Upper-division standing.

GEO 344K. Marine Mining and Minerals.
Same as Marine Science 344K. Overview of seafloor mineral deposits, their exploration, and mining. Three lecture hours a week for one semester. May not be counted toward the Bachelor of Science in Geological Sciences or the Bachelor of Science in Environmental Sciences degrees. Prerequisite: Geological Sciences 401 or 303, 416K, and 416M.

GEO 344U. Quantitative Seismic Interpretation.
Seismic inversion, a tool for reservoir characterization, post- and pre-stack modeling, rock physics and fluid replacement modeling, wavelet estimation and post-stack inversion, AVO and pre-stack inversion, multiattribute regression and neural network, and net pay estimation. Extensive hands-on training with three-dimensional seismic and well-log data. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

GEO 145E. Professional Ethics in Geosciences.
Registration priority is given to majors in the Jackson School of Geosciences. Supervised study devoted to the subject of professional ethics and personal integrity in the sciences, with specific subject matter designed to evolve with the science and our society. One lecture hour a week for one semester. Geological Sciences 145E and 171C (Topic: Professional Ethics in Geosciences) may not both be counted. Offered on the letter-grade basis only. Prerequisite: For non-Jackson School of Geosciences majors, consent of instructor.

GEO 346C. Introduction to Physical and Chemical Hydrogeology.
Basic concepts of fluid flow, surface and subsurface hydrology, aqueous geochemistry, and fluid-rock interaction. Additional subjects include isotope hydrogeology, evolution of seawater, and mineral-solution equilibrium. Three lecture hours a week for one semester. Prerequisite: Chemistry 302 with a grade of at least C- or consent of instructor.

GEO 347D. Global Warming.
Discussion of the fundamental sciences of global warming, including an active investigation of contemporary climate change issues. Three lecture hours a week for one semester. Geological Sciences 347D and 371C (Topic: Global Warming) may not both be counted. Offered on the letter-grade basis only. Prerequisite: Upper-division standing.

GEO 347G. Climate System Modeling.
Studies the basic theory of weather/climate system modeling using state-of-the-art regional climate models in a variety of applications. Includes instruction on how to run models on the TACC supercomputers for scientific applications. Subjects may include paleoclimate, contemporary, and/or future climate prediction based on changes in greenhouse gas concentrations. Three lecture hours a week for one semester. Only one of the following may be counted: Geological Sciences 347G, 371C (Topic: Climate System Modeling), 387G, 391 (Topic: Climate System Modeling). May not be substituted for any required geological sciences course. Prerequisite: Upper-division standing.

GEO 347K. Gems and Gem Minerals.
Crystallography, occurrence, and identification of gem minerals and materials; artificial gems; simple cutting and polishing; history of gems and gemology. Three lecture hours and two laboratory hours a week for
GEO 347P. Climate System Physics.
Discussion of first-order principles and processes that govern the
thermodynamical structure and energy distribution of the atmosphere,
onland, and cryosphere and their interaction with the dynamic
aspect of the climate system. Three lecture hours a week for one
semester. Only one of the following may be counted: Geological Sciences 347P, 371C (Topic: Climate System Physics). May not be substituted for
any required geological sciences course. Prerequisite: Upper-division standing; Mathematics 408D or 408M, and Physics 303K with a grade of
at least C- in each.

GEO 348K. Marine Geology and Geophysics Field Course.
Hands-on, team-based instruction in the collection and processing
of marine geological and geophysical data along the Gulf of Mexico
cost. For Marine Science 148, one lecture hour and one laboratory hour
a week for one semester. For Geological Sciences 348K and Marine
Science 348, one lecture hour and four laboratory hours a week for one
semester with additional hours to be arranged. Only one of the following
may be counted: Geological Sciences 348K, 397F, Marine Science 348
(Topic 2). Fulfills the field experience requirement for some geological
sciences degree programs. Students should contact the Department
of Geological Sciences before registering. Prerequisite: For geological
ciences majors, Geological Sciences 420K or 320L with a grade of at
least C-, and consent of instructor; Geological Sciences 416M and 465K
are recommended; for others, Marine Science 307 and 354F with a grade of
at least C- in each, and consent of instructor.

GEO 348P. Field Methods in Planetary Geology.
Restricted to geological sciences majors. Field studies combined with
remote sensing to support studies of remote imagery from planetary
missions. Two lecture hours and two laboratory hours a week for one
semester. Three week field trip to the Southwestern United States also
required. Geological Sciences 348P and 371C (Topic: Field Methods
Planetary Geology) may not both be counted. May not be substituted
for any required geological sciences course. Prerequisite: Upper-division standing and consent of instructor.

GEO 349C. Introduction to the Cryosphere.
Restricted to students in a geosciences major and students pursuing
a minor in geosciences. A survey of the cryospheric sciences. Three
lecture hours a week for one semester. Geological Sciences 349C and
371T (Topic: Introduction to the Cryosphere) may not both be counted.
Prerequisite: Upper-division standing; and the following with a grade of
at least C- in each: Chemistry 204, Geological Sciences 401 or 303,
Mathematics 408D or 408M; and Physics 303L and 103N or Physics 316
and 116L.

GEO 350D. Ice Dynamics.
Physics of ice motion, basal processes, glacial hydrology, and
unstable flow. Three lecture hours a week for one semester. Geological Sciences 350D and 371C (Topic: Glaciology) may not both be counted.
Prerequisite: Upper-division standing; and the following with a grade of
at least C-: Chemistry 204, Geological Sciences 401 or 303, and 349C;
Mathematics 408D or 408M; and Physics 303L and 103N, or 316 and
116L.

GEO 350L. Topics in Lithosphere and Deep Earth.
Three lecture hours a week for one semester. May be repeated for credit
when the topics vary. Prerequisite: Upper-division standing.

Topic 1: Tectonic Geodynamics. Examine dynamic processes that
govern plate tectonics and lithospheric deformation, combining
tectonics, structural geology, and geodynamics from the ground
up. Geological Sciences 350L (Topic 1) and 371T (Topic: Tectonic
Geodynamics) may not both be counted.
Topic 2: Geophysics Seminar I.
Topic 3: Geophysics Seminar II. Three lecture hours a week for one
semester.

GEO 350S. Topics in Subsurface, Surface, and Life.
Three lecture hours a week for one semester. May be repeated for credit
when the topics vary. Prerequisite: Upper-division standing.

GEO 350W. Topics in Water, Climate, and Environment.
Three lecture hours a week for one semester. May be repeated for credit
when the topics vary. Prerequisite: Upper-division standing.

Topic 1: Dynamics of Polar Systems. Examine the fundamental
physics that govern dynamics of ice sheets, oceans, and sea ice from
a theoretical viewpoint that is supported with as many observations
as possible. Geological Sciences 350W (Topic 1) and 371T (Topic:
Dynamics of Polar Systems) may not both be counted.
Topic 4: Statistical Data Analysis. Examine the statistical, scientific,
and computational approaches used to test hypotheses concerning
the physics governing observed changes in the Earth System. Explore
concepts in linear algebra and statistics such as regression, least-
squares inversion, singular spectral analysis, Bayesian inference,
Markov Chain Monte Carlo sampling, and test statistics to survey the
existence of a discernable influence of humanity on the observational
record of climate.

GEO 352P. Python for Geoscience Research.
Explore the Python 3 programming language and its application to
scientific research. Examine basic Python and common scientific Python
libraries such as numpy, pandas, matplotlib, datetime. Three lecture
hours a week for one semester. Geological Sciences 352P and 371T
(Topic: Python in Geoscience Research) may not both be counted.

GEO 354. Physics of Earth.
Examines the kinematics and dynamics of the solid Earth as well as its
evolution through time. Observations from multiple geophysical
 techniques are reviewed and applied towards understanding the planet.
Three lecture hours a week for one semester. Prerequisite: The following
with a grade of at least C- in each: Mathematics 427J or 427K, and
Physics 315 and 115L.

GEO 355G. Geodynamics of the Lithosphere and Mantle.
Explores continuum dynamics problems that can serve to form a
physical understanding of the tectonic and convective processes that
shape our planet. Geared toward all undergraduate majors and graduate
students from the Earth sciences and related fields in the natural
sciences including physics, computer science, and engineering. The
equivalent of two lecture hours and one-and-one-half laboratory hours
a week for one semester. Geological Sciences 355G and 371T (Topic:
Geodynamics of the Lithosphere and Mantle) may not both be counted.

GEO 355S. Topics in Subsurface, Surface, and Life.
Three lecture hours a week for one semester. May be repeated for credit
when the topics vary. Prerequisite: Upper-division standing.

Topic 1: Dynamics of Polar Systems. Examine the fundamental
physics that govern dynamics of ice sheets, oceans, and sea ice from
a theoretical viewpoint that is supported with as many observations
as possible. Geological Sciences 350W (Topic 1) and 371T (Topic:
Dynamics of Polar Systems) may not both be counted.
Topic 2: Geophysics Seminar I.
Topic 3: Geophysics Seminar II. Three lecture hours a week for one
semester.
one semester. Geological Sciences 455S and 471T (Topic: Intro Remote Sensing Geosci) may not both be counted. Prerequisite: Upper-division standing.

GEO 356S. Ins and Outs of Subduction Zones.
Explore an overview of subduction zones, including sites of lithospheric scale recycling, critical to understanding the chemical evolution of the Earth’s crust and mantle, volcanism, earthquakes, and orogenesis. Includes the thermal and seismic structure of subduction zones, volatile and geochemical cycling, seismicity, mantle wedge dynamics, and volcanism. Three lecture hours a week for one semester. Geological Sciences 356S and 371T (Topic: Ins & Outs of Subduction Zones) may not both be counted. Prerequisite: Upper-division standing and consent of instructor.

GEO 358K. Volcanology.
Registration priority given to majors in the Jackson School of Geosciences. Ash deposits, lava flows, eruption processes; prediction and mitigation of volcanic hazards. Three lecture hours and one laboratory hour a week for one semester. Prerequisite: Geological Sciences 416K with a grade of at least C-, or consent of instructor.

GEO 660. Field Geology.
Restricted to geological sciences majors. Methods of geologic mapping with topographic maps and aerial photographs. Field studies include measuring sections, interpretation of stratigraphy, structure, environments of deposition of various sedimentary rocks, and the origin and petrology of igneous and metamorphic rocks. Students must register for this course during the first summer registration period. Given for six weeks each summer in Colorado, New Mexico, and other western states. Prerequisite: Geological Sciences 420K and 428 with a grade of at least C- in each.

GEO 360G. Construction and Interpretations of 3-D Stratigraphy.
From Earth surface to subsurface, examines three-dimensional volumes of basin-filling stratigraphy to explore how depositional landscapes are preserved in the sedimentary record and how sedimentary deposits can be analyzed to produce quantitative reconstructions of past environmental states. Data includes both laboratory and industry-grade volumes of stratigraphy. Intended for Earth scientists requiring a quantitative understanding of how the structure of depositional landscapes is translated into subsurface stratigraphy. Three lecture hours and one laboratory hour a week for one semester. Geological Sciences 360G and 371C (Topic: Construction and Interpretation of 3-D Stratigraphy) may not both be counted. May not be substituted for any required geological sciences or environmental sciences course. Prerequisite: Upper-division standing; Geological Sciences 416K or 354 with a grade of at least C- in each.

GEO 661. Geophysics Field Camp.
Restricted to geophysics majors. Field studies for geophysics majors, including seismic, magnetic, electrical, gravity, and other techniques; related data processing and interpretation. Each half requires three consecutive weeks of fieldwork. Geological Sciences 661A is offered either between the spring semester and the summer session or in the summer session; Geological Sciences 661B is offered in the summer session. Students may take Geological Sciences 661 for University credit while enrolled in the Los Alamos National Laboratory SAGE program. May be used in place of Geological Sciences 660 to fulfill the requirements for the Bachelor of Science in Geological Sciences (Option II: Geophysics). Prerequisite: Upper-division standing and consent of instructor.

GEO 363S. Sedimentary Basin Analysis.
Quantitative and applied analysis of basin subsidence and sediment accumulation. Consider theoretical basin evolution due to flexural, thermal, dynamic, and fault-related subsidence. Analyze selected basin systems. Three lecture hours a week for one semester. Geological Sciences 363S and 371T (Topic: Sedimentary Basin Analysis) may not both be counted. Offered on the letter-grade basis only. Prerequisite: Upper-division standing.

GEO 364P. Physical Oceanography.
Basic concepts for understanding and describing the large-scale circulation of the ocean. Covers measurement methods, properties of seawater, description of the global ocean’s mean state and variability, introductory dynamics including balanced motions, wind-driven and abyssal circulation, wave motions, air-sea interactions, sea level science, and the ocean’s role in climate. Three lecture hours a week for one semester. Geological Sciences 364P and 371T (Topic: Physical Oceanography) may not both be counted. May not be substituted for any required geological sciences course. Offered on the letter-grade basis only. Prerequisite: Upper-division standing and consent of instructor.

GEO 465K. Seismic Exploration.
Seismic theory, including body and surface waves, attenuation, rays, reflection and transmission coefficients, principles of synthetic seismogram calculations, seismic imaging principles, reflection data processing methods, rock physics overview, seismic attributes overview, and seismic exploration field methods. Three lecture hours and two laboratory hours a week for one semester. Prerequisite: Mathematics 427L; and Physics 315 and 115L.

GEO 365N. Seismic Data Processing.
Reduction of seismic data from field records to final geologic images, using real data sets and open-source data analysis software. Two lecture hours and two laboratory hours a week for one semester. Prerequisite: Upper-division standing; and Geological Sciences 325K and 465K with a grade of at least C- in each.

GEO 365P. Potential Field Applications in Geophysics.
Introduction to the theory, measurement, and application of gravity and magnetic electric fields to exploration and global-scale problems. Three lecture hours a week for one semester. Prerequisite: Upper-division standing; and Geological Sciences 325K and 465K with a grade of at least C- in each.

GEO 365Q. Geomorphology Process and Form.
Explores how Earth surface processes combine to shape landscapes through erosion and deposition. Includes discussion of open channel flow, sediment transport, fluvial and hillslope processes, and tectonic controls on landscape evolution. Three lecture hours a week for one semester, with several field trips to be arranged. Geological Sciences 365Q and 371C (Topic: Geomorphology: Landscape Process, Form, and Evolution) may not both be counted. May not be substituted for any required geological sciences course. Prerequisite: Upper-division standing, and Mathematics 408C or 408L with a grade of at least C-.

GEO 366M. Mathematical Methods in Geophysics.
A survey of mathematics for geoscientists that includes infinite series, complex variables, linear algebra, integral transforms, ordinary and partial differential equations, tensor analysis, and probability and statistics. Three lecture hours a week for one semester. Prerequisite: Mathematics 427L with a grade of at least C-.

GEO 366P. Planetary Geology and Geophysics.
Introduction to planetary geology, with an emphasis on geophysical observations of terrestrial planets in our solar system. Discussion of
missions, instruments, and techniques, and incorporation of mission
data in student projects. Includes field trip to study planetary analog
sites. The equivalent of three lecture hours a week for one semester.
Geological Sciences 366P and 371C (Topic: Planetary Geology &
Geophysics) may not both be counted. Offered on the letter-grade basis
only. Prerequisite: Upper-division standing and consent of instructor.

GEO 367M. Morphodynamics and Quantitative Stratigraphy.
Explores development of numerical tools to quantitatively understand
sediment transport and stratigraphic development in sedimentary
basins. Focus on applications of principles in fluid mechanics, sediment
transport, and depositional mechanics to one-dimensional and quasi-
two dimensional numerical modeling of sediment morphodynamics
in depositional settings such as river deltas, carbonate platforms,
and submarine fans. Requires development of geometrical and
morphodynamic models as research tools to understand gathered data.
Three lecture hours per week for one semester. Geological Sciences
367M and 371T (Topic: Morphodynamics and Quantitative Stratigraphy)
may not both be counted. Prerequisite: Geological Sciences 416M with a
grade of at least C-.

GEO 468K. Geophysics for Geological Sciences Majors.
Registration priority given to majors in the Jackson School of
Geosciences. A survey of seismic, magnetic, gravitational, and other
goophysical tools and their application to exploration and global-scale
problems. Three lecture hours and two laboratory hours a week for
one semester. May not be counted toward the Bachelor of Science in
Geological Sciences, Option II: Geophysics. Prerequisite: Mathematics
408D; and Physics 303L and 103N, or 316 and 116L with a grade of at
least C- in each.

GEO 369E. Evolution of Reef Ecosystems.
Introduction to the paleobiology, sedimentology, and oceanography
of reef ecosystems throughout the geological record as well as the
environmental and evolutionary factors that controlled the expansion
and collapse of the carbonate ecosystems (and others). Explore ocean
chemistry, how organisms biomineralize a skeleton, symbiosis, ecology,
mass extinctions, and both current and future threats to reef health.
Three lecture hours a week for one semester. Geological Sciences
369E and 371T (Topic: Evolution of Reef Ecosystems) may not both be
counted. Prerequisite: Upper-division standing; Geology 405 with a
grade of at least C- or consent of instructor.

GEO 370E. Ecohydrology and Biometeorology.
Study the terrestrial biosphere and the ways ecosystems influence the
water cycle. Investigate water, carbon, and energy fluxes within the Earth
system from a hands-on experimental approach and through exposure
to land-surface and climate models. Includes hydrology, Earth science,
environmental engineering, ecology, biology, and climatology. Three
lecture hours a week for one semester. Geological Sciences
370E and 371T (Topic: Ecohydrology/Biometeorology) may not both be
counted. Prerequisite: Upper-division standing.

GEO 370K. Sedimentology.
Registration priority given to majors in the Jackson School of
Geosciences. Processes of sediment formation, transportation, and
deposition; textures, structures, and facies of sedimentary rocks. Three
lecture hours a week for one semester, and two one-day field trips.
Offered irregularly. Prerequisite: Geological Sciences 420K with a grade
of at least C-.

GEO 370Q. Morphodynamics and Quantitative Stratigraphy.
Explore numerical tools useful for quantitatively assessing sediment
transport and stratigraphic development in sedimentary basins. Apply
principles in fluid mechanics, sediment transport, and depositional
mechanics to one-dimensional and quasi-two-dimensional numerical
modeling of sediment morphodynamics in various depositional
settings such as river deltas, carbonate platforms, and submarine fans.
Develop geometrical and morphodynamic models as research tools to
understand data collected from laboratory experiments and in the field.
Three lecture hours a week for one semester. Geological Sciences 370Q
and 371C (Topic: Morphodynamics) may not both be counted. Offered on
the letter-grade basis only. Prerequisite: Upper-division standing.

Restricted to majors in the Jackson School of Geosciences. Supervised
study of selected topics in geological sciences, by individual
arrangement with the department and instructor. Conference course.
May not be substituted for any required geological sciences course.
May be repeated for credit when the topics vary. Prerequisite: Consent of
instructor.

GEO 171H. Honors Research Methods I.
Restricted to students in the Geological Sciences Honors Program.
Preparation for independent research projects through exposure to
current research programs, facilities, personnel, and projects in the
Jackson School of Geosciences. Includes selecting research topics,
mentors, and supervisors; preparing research proposals; conducting
research activities; and presenting research results. One lecture hour a
week for one semester.

Restricted to geological sciences majors. Supervised research project
completed in collaboration with faculty supervisor and related research
group members either as a one-semester research activity in preparation
for a senior thesis project. Three lecture hours a week for one semester,
with additional hours to be arranged. Offered on the letter-grade basis
only. Prerequisite: Upper-division standing; Geological Sciences 416K,
416M, and 420K with a grade of at least C-.

GEO 171T, 271T, 371T, 471T, 571T, 671T. Undergraduate
Seminar in Geological Sciences.
For each semester hour of credit earned, the equivalent of one lecture
hour a week for one semester; additional hours may be required for
some topics. May not be substituted for any required geological
sciences courses. May be repeated for credit when the topics vary.
Prerequisite: Upper-division standing and consent of instructor;
additional prerequisites may vary with the topic.

GEO 172H. Honors Research Methods II.
Restricted to students in the Geological Sciences Honors Program.
Preparation for independent research projects through exposure to
current research programs, facilities, personnel, and projects in the
Jackson School of Geosciences. Includes selecting research topics,
mentors, and supervisors; preparing research proposals; conducting
research activities; and presenting research results. One lecture hour a
week for one semester. Prerequisite: Geological Sciences 171H with a
grade of at least B-.

GEO 372S. Geochemical Problem Solving with Atoms and
Ions.
Discussion of mass spectrometers, which are analytical balances that
operate at molecular and atomic levels, used for gathering compositional
data (both isotopic and elemental). Explores conversion of sample
molecules into charged particles (ions), and measurement according
to mass-to-charge ratio to assess chemical identity and abundance.
Introduction to inorganic mass spectrometry methods and applications
to the Earth sciences, surveying key modalities: TIMS, ICP-MS, LA-ICP-
MS, MC-ICP-MS, and IRMS. Examines techniques in generating and
critically evaluating high-quality data, and research. Two lecture hours
and three lab hours per week for one semester. Geological Sciences 372S and 371T (Topic: Geochemical Problem Solving with Atoms and Ions) may not both be counted. Prerequisite: Upper-division standing and consent of instructor.

GEO 173H. Honors Research Methods III.
Restricted to students in the Geological Sciences Honors Program. Preparation for independent research projects through exposure to current research programs, facilities, personnel, and projects in the Jackson School of Geosciences. Includes selecting research topics, mentors, and supervisors; preparing research proposals; conducting research activities; and presenting research results. One lecture hour a week for a week for one semester. Prerequisite: Geological Sciences 171H and 172H with a grade of at least B- in each.

GEO 376C. Isotope Geology.
Overview of the principles of stable and radiogenic isotope geochemistry. Subjects include mass spectrometry, geochronology and thermochronology, cosmogenic nuclides, radiogenic geochemistry, isotopic fractionation, traditional and non-traditional stable isotope geochemistry and its applications to the hydrologic cycle, low-temperature geochemistry, magmatic and metamorphic processes, thermometry, fluid-rock interactions, tectonics, crust-mantle evolution, and extraterrestrial materials. Three lecture hours a week for one semester. Only one of the following may be counted: Geological Sciences 371C (Topic: Isotope and Environmental Geochemistry Research), 376C, 388L. Prerequisite: Chemistry 302, and Mathematics 408D or 408M with a grade of at least C- in each, and consent of instructor.

GEO 376E. Environmental Isotope Geochemistry.
Restricted to students in the Jackson School of Geosciences. The application of the isotope and trace element geochemistry of natural waters and sediments to studies of the hydrologic cycle. Stable, radiogenic, and cosmogenic isotopes are used as tracers of the evolution of groundwater, surface water, and ocean water. Three lecture hours a week for one semester, with additional laboratory hours to be arranged. Prerequisite: Chemistry 302, 204, Geological Sciences 416K, 416M, 346C; Mathematics 408D or 408M; and Physics 303L and 103N with at least a C- in each.

GEO 476K. Groundwater Hydrology.
Registration priority given to majors and minors in the Jackson School of Geosciences. Introduction to subsurface hydrology, emphasizing geological controls on groundwater flow; quantitative methods of analyzing aquifer systems; regional hydrology; water quality and pollution. Three lecture hours and one and one-half laboratory hours a week for one semester, with several local field trips to be arranged. Prerequisite: Geological Sciences 346C, Mathematics 408D, or Mathematics 408M with a grade of at least C-.

GEO 476L. Field Methods in Groundwater Hydrology.
Registration priority given to hydrogeology majors. Introduction to field methods, including geophysics, pump tests, stream gauging, well logging, water sampling, and mapping. Students must register for this course during the first summer registration period. An intensive three-week course meeting eight hours a day, Monday through Friday, and four hours on Saturday: lectures, laboratory exercises, and field exercises; nightly homework involving map exercises, reduction of field data, report preparation; Saturdays devoted to report presentation, review sessions, and local field trips. Offered between the spring semester and the summer session. Prerequisite: Geological Sciences 476K with a grade of at least C-.

GEO 476M. Aqueous Geochemistry.
An introduction to aqueous geochemistry and contaminant hydrogeochemistry; topics include basic thermodynamics, kinetics, rock-water interactions, and solute transport. Three lecture hours and two laboratory hours a week for one semester. Prerequisite: Geological Sciences 346C, 476K, or 376S with a grade of at least C- in each.

GEO 376S. Physical Hydrology.
Modern conceptual and methodological approaches to hydrological science: qualitative assessment of hydrological processes, quantitative representation, approaches to measurement, and treatment of uncertainty. Major components of the hydrological cycle: precipitation, snow and snowmelt, infiltration, soil moisture, evapotranspiration, and runoff and their link to the coupled-earth system. Three lecture hours a week for one semester. Prerequisite: Geological Sciences 346C; or Mathematics 408D or 408M with a grade of at least C-.

GEO 376T. High-Temperature Geochemistry.
Study of the composition, origin, and chemical and physical evolution of the earth and its interior. Examines the links between the fields of geochemistry and tectonics, igneous petrology, geophysics, and other areas of inquiry. Three lecture hours a week for one semester. Prerequisite: Upper-division standing; Geological Sciences 416K or 426P with a grade of at least C-; or consent of instructor.

GEO 476W. Hydrogeophysics.
Application of geophysical methods in hydrogeology. Modules include method theory and hydrogeological applications; using instruments in the field; and analysis of data, interpretation, and hydrogeological insights. Class discussions; field exercises and written field exercise summaries; individual and group reports. Previous coursework and/or experience in hydrogeology and geophysics is recommended. Four lecture hours a week for one semester; with field work hours to be arranged. Geological Sciences 371C (Topic: Hydrogeophysics) and 476W may not both be counted. May not be substituted for any required geological sciences course. Prerequisite: Consent of instructor.

GEO 377K. Applied Karst Hydrogeology.
The study of karst landforms, processes, flow systems, and water resources. Geologic controls, natural resources, aquifer recharge and discharge, system evolution, geochemistry/water quality, tracing methodologies, geophysical methods, and modeling are covered with an emphasis on collecting and interpreting field data. Three lecture hours a week for one semester, with additional fieldwork hours to be arranged. Course fulfills three hours of field course requirement for Bachelor of Science in Geological Sciences (Option III: Hydrogeology) degree program. Geological Sciences 371C (Topic: Applied Karst Hydrogeology) and 377K may not both be counted.

GEO 377P. Physical Climatology.
Investigates the nature of earth’s climate and examines the physical processes that maintain the climate system. Three lecture hours and two laboratory hours a week for one semester. Prerequisite: Upper-division standing, Computer Science 303E, Geography 301K, Mathematics 408D or 408M, and Physics 303K with a grade of at least C- in each.

GEO 378D. Introduction to Machine Learning and Geosciences.
Explore an overview of commonly used machine learning algorithms for Geosciences applications. Three lecture hours a week for one semester. Prerequisite: Knowledge of basic calculus, linear algebra and statistics, and python programming; or consent of instructor.
GEO 679G. Special Studies in Geophysics Research, Fieldwork, or Internship.
Restricted to geophysics majors. Special research projects, field studies, or geophysical/industrial internship. Assigned reading with written and oral report. Three lecture hours a week for two semesters. May be used instead of Geological Sciences 660 in fulfilling the requirements for the Bachelor of Science in Geological Sciences (Option II: Geophysics). Prerequisite: Consent of instructor.

Restricted to students in the Geological Sciences Honors Program. Supervised research project resulting in a thesis with an oral defense. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. May be counted as three of the six geological sciences senior elective hours. Prerequisite: Geological Sciences 171H, 172H, and 173H with a grade of at least B- in each.

GEO 679J. Internship in Hydrogeology.
Restricted to hydrogeology majors. Special hydrogeological studies under the joint supervision of industry professionals and faculty members. Students present a written report. Forty hours a week for one semester. May be used in place of Geological Sciences 660 in fulfilling the requirements for the Bachelor of Science in Geological Sciences (Option III: Hydrogeology). Prerequisite: Geological Sciences 476K with a grade of at least C, and consent of instructor.

Special emphasis on recent developments in geosciences. Conference course. May be repeated for credit when the topics vary. Prerequisite: Consent of instructor.

GEO 479M. Mammalogy.
Restricted to biology, geological sciences, and anthropology majors. Surveys the biology and evolutionary history of mammals. Introduction to the diversity of living mammals through the study of mammalian ecology, behavior, morphology, and taxonomy. Laboratory work focuses on the characters diagnosing the major mammalian clades and identifying the common recent mammals of Texas using skins and recent osteological specimens. Fossils and the fossil record of mammals. Three lecture hours and three laboratory hours a week for one semester. Prerequisite: Upper-division standing.

GEO 379N, 679N. Geosciences Internship.
Restricted to geological sciences and environmental science majors. Work experience in geological sciences under the joint supervision of industry professionals (the employer) and a supervising faculty member. Requires submission of a final report to the supervising faculty member at the end of the semester. Internship position must be on file with JSG Career Services. For 379N, twenty laboratory hours a week for one semester. For 679N, forty laboratory hours a week for one semester. Prerequisite: Consent of instructor.

GEO 379S. Geological Sciences Senior Thesis.
Restricted to geological sciences majors. Second course in a two-semester sequence focused on supervised student research and preparation of a final report on research activities. Three lecture hours a week for one semester, with additional hours to be arranged. Offered on the letter-grade basis only. Prerequisite: Upper-division standing, and Geological Sciences 371S with a grade of at least C.

Graduate Courses

GEO 380C. Advanced Structural Geology.
Origin of earth structures, solution of advanced structural problems, newest techniques, field techniques, and field problems. Three lecture hours a week for one semester. Prerequisite: Graduate standing and consent of instructor.

GEO 380F. Seismology II.
Basic seismology theory and its application to the study of the interior of the Earth (crust, mantle, and core), earthquakes, and plate tectonics. Three lecture hours a week for one semester. Prerequisite: Graduate standing, and Mathematics 408C or the equivalent.

GEO 380G. Construction and Interpretation of 3-D Stratigraphy.
Uses three-dimensional volumes of basin-filling stratigraphy to explore how depositional landscapes are preserved in the sedimentary record and how sedimentary deposits can be analyzed to produce quantitative reconstructions of past environmental states. Four lecture hours a week for one semester. Prerequisite: Graduate standing.

GEO 380N. Sequence Stratigraphy.
Organization and interpretation of stratigraphic successions in time-bounded units of genetically related strata. Sequence stratigraphy, as a predictive branch of stratigraphic analysis, provides insight into the origin of the entire spectrum of silicilastic, carbonate, and evaporite sediments from shallow to deep settings. Laboratory component involves the interpretation of sequences using outcrop measured sections, core data, wireline log sections, field trips, and 2D and 3D seismic data from modern and ancient settings. Three lecture hours and one and one-half laboratory hours a week for one semester. Prerequisite: Graduate standing, and Geological Sciences 416M and 465K or their equivalents.

GEO 380P. Advanced Reservoir Characterization: Carbonates.
Advanced instruction in the integration of geologic and engineering methods for building 3-D reservoir models of carbonate reservoirs. Four lecture hours a week for one semester. Offered in alternate years. Geological Sciences 380P and 391 (Topic: Advanced Reservoir Characteristics: Carbonates) may not both be counted. Prerequisite: Graduate standing.

GEO 380R. Dynamics of Sedimentary Systems I.
Explores the fundamental concepts of transport systems at the Earth’s surface, focusing on principles and quantitative aspects of fluid flow, sediment transport, and bedforms, as well as atmospheric and oceanic circulation, complex systems, and the integration of small-scale processes in developing quantitative stratigraphic models. Four lecture hours a week for one semester. Prerequisite: Graduate standing.

GEO 380S. Dynamics of Sedimentary Systems II.
Explores the fundamental concepts of transport systems at the Earth’s surface, focusing on principles and quantitative aspects of fluid flow, sediment transport, and bedforms, as well as atmospheric and oceanic circulation, complex systems, and the integration of small-scale...
processes in developing quantitative stratigraphic models. Four lecture hours a week for one semester. Prerequisite: Graduate standing and Geological Sciences 380R.

GEO 380T. Geoclimatology.
Examines climate records encoded in sedimentary archives through geologic time. Three lecture hours a week for one semester. Prerequisite: Graduate standing or consent of instructor.

GEO 381C. Structural Petrology.
Deformation processes from atomic to macroscopic level, resultant textures and fabrics, and conditions required to produce such deformation. Three lecture hours and three laboratory hours a week for one semester. Prerequisite: Graduate standing and an undergraduate course in structural geology and petrology.

GEO 381E. Brittle Structure.
Quantitative analysis of folding, faulting, and fracturing at all scales in the upper crust, with emphasis on cross-section construction, subsurface mapping, and fracture analysis. Three lecture hours a week for one semester, and several field trips. Prerequisite: Graduate standing and a course in structural geology.

GEO 381F. Microstructures and Rock Rheology.
Focuses on processes of deformation operative in the crust and upper mantle, with an emphasis on distinguishing these processes using microstructural analysis and describing them using basic constitutive relationships from rock mechanics. Three lecture hours a week for one semester. Prerequisite: Graduate standing and an undergraduate course in structural geology and petrology.

GEO 381G. Geomicrobiology.
Geologic and hydrologic controls on subsurface microbial growth, metabolism, and community structure; the geochemical consequences of microbial processes in subsurface settings; and the influence of geology on microbial ecology. Three lecture hours a week for one semester. Prerequisite: Graduate standing in geological sciences, or graduate standing and consent of instructor.

GEO 381J. Marine Geology.
Survey of the field of marine geology by exploring the structure and evolution of the ocean basins, oceanic islands, and island arcs, the chemistry of the oceans, the sediments in the marine environments, the products and processes of the land-air-sea interface, and the history of the oceans over geologic time. Three lecture hours a week for one semester. Geoscience 381J and 391 (Topic: Marine Geology) may not both be counted. Prerequisite: Graduate standing.

GEO 381P. Plate Margins.
Study of the tectonics of the earth. Topics include history of early concepts, ocean spreading ridges and ophiolites, rifting, core complexes, passive margins, subduction zones, trenches, volcanic arcs, collisional orogenesis, and transform margins. Three lecture hours a week for one semester. Geological Sciences 381P and 391 (Topic: Plate Margins) may not both be counted. Prerequisite: Graduate standing in geological sciences.

GEO 381R. Regional Studies in Mineral Resources Geology.
Geologic evolution of a region, with emphasis on factors that control the origin of selected mineral resources. Study area varies according to the interests of participants and other factors. Three lecture hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing and consent of instructor.

GEO 381S. Tectonic Problems.
Explore the origin of regional structural features, complex and controversial structures, and the tectonic control of ore deposits. Three lecture hours a week for one semester. Prerequisite: Graduate standing in geological sciences and consent of instructor.

GEO 381T. Marine Tectonics.
Tectonic processes within the dynamic Earth, with a focus on oceanic structures. Subjects may include fundamentals of plate tectonics; plate motion, driving forces, and mantle convection; evolution of triple junction and plate margins; plate reconstructions; earthquakes and focal mechanisms; structure and geochemistry of the Earth’s interior; mantle structure and tomography; rheology and deformation mechanisms in mantle and crust; heat flow, gravity, the geoid, and paleomagnetism; hotspots and mantle plumes; seafloor spreading and oceanic spreading ridges; oceanic transform faults and fracture zones; and subduction zones, volcanic island arcs, and marginal seas. Three lecture hours a week for one semester. Geological Sciences 388T and 371C (Topic: Tectonics I) may not both be counted. May not be substituted for any required geological sciences course. Prerequisite: Graduate standing in geological sciences, or graduate standing and consent of instructor.

GEO 382C. Groundwater Field Methods.
Basic field methods used in evaluation of groundwater conditions, with emphasis on field interpretation and on hands-on experience with geophysical, geochemical, stream-gauging, and pump test methods. Forty-five hours of field and laboratory work in a three-week period. Prerequisite: Graduate standing, and Geological Sciences 391C or consent of instructor.

GEO 382D. Crustal Geofluids.
Designed to provide a technical foundation for exploring how fluids drive fundamental geologic processes in sedimentary basins. Includes characterizing pressure and stress in sedimentary basins, exploring the origin of overpressure through theory and characterization, and examining how pressure and stress couple. Problems include how sedimentation generates overpressure, how hydrocarbons are trapped in the subsurface, how mud volcanoes form, how submarine landslides are generated, and the origin of methane hydrates. Three lecture hours per week for one semester, with a four-day field trip to be arranged. Geological Sciences 382D and 391 (Topic: Crustal Fluids) may not both be counted. Prerequisite: Graduate standing.

GEO 382E. Scientific Research Design.
Explore the principles of experimental design including formulation of target questions and method choice in an interdisciplinary, community context. Three lecture hours a week for one semester. Geosciences 382E and 391 (Topic: Scientific Research Design) may not both be counted. Prerequisite: Graduate Standing.

GEO 382F. Fractured Rock Hydrology and Mechanics.
Introduction to the physics of flow in fractured rocks and soils, fracture mechanics, fracture skins, analysis of solute transport, and methods of characterizing and modeling fractured systems. Class field trips are an integral part of the class. Three lecture hours a week for one semester, with additional hours to be arranged. Prerequisite: Graduate standing and consent of instructor; previous coursework in advanced calculus (differential equations, vector spaces and Fourier series), and groundwater.
GEO 382G. Fluid Physics for Geologists.
Restricted to students in the Department of Geological Sciences. Flow and transport phenomena within an earth science context. Includes extensive use of Maple, MATLAB, and COMSOL Multiphysics. Three lecture hours a week for one semester. Prerequisite: Graduate standing, previous coursework in advanced calculus (differential equations, vector spaces and Fourier series), and Geological Sciences 391C, 383D or 383E; non-majors also require consent of instructor.

GEO 382M. Programming in FORTRAN and MATLAB.
FORTRAN for students without knowledge of a computer programming language: survey of all variable types, loops, arrays, subroutines, and functions; overview of UNIX and MATLAB. Two lecture hours and two laboratory hours a week for one semester. Geological Sciences 382M and 391 (Topic: Programming in FORTRAN and MATLAB) may not both be counted. Prerequisite: Graduate standing, and Mathematics 408D or the equivalent.

GEO 382P. Physical Oceanography.
Basic concepts for understanding and describing the large-scale circulation of the ocean. Covers measurement methods, properties of seawater, description of the global ocean’s mean state and variability, introductory dynamics including balanced motions, wind-driven and abyssal circulation, wave motions, air-sea interactions, sea level science, and the ocean’s role in climate. Three lecture hours a week for one semester. Geological Sciences 382P and 391 (Topic: Physical Oceanography) may not both be counted. Prerequisite: Graduate standing.

GEO 382S. Physical Hydrology.
Comprehensive treatment of modern conceptual and methodological approaches to hydrological science. Combines qualitative understanding of hydrological processes with quantitative representation, approaches to measurement, and treatment of uncertainty. Major components of the hydrological cycle. Three lecture hours and two laboratory hours a week for one semester. Prerequisite: Graduate standing in geological sciences, or graduate standing and consent of instructor.

GEO 382T. Continental Tectonics.
Tectonic processes, with a focus on continental lithospheric structures. Subjects may include convergent margins, subduction zones, magmatic arcs, and foreland structures; collisional orogenesis, arc-continent collisions, continent-continent collision, and mountain building; formation of supercontinents; uplift and exhumation; orogenic collapse and extensional tectonics; continental rifting and passive margins; transform margins; and the effect of tectonics on climate and oceanic circulation. Three lecture hours a week for one semester. Geological Sciences 382T and 391 (Topic: Tectonics II) may not both be counted. May not be substituted for any required geological sciences course. Prerequisite: Graduate standing in geological sciences, or graduate standing and consent of instructor.

River-, wave-, tide-, and gravity-driven processes are examined in modern depositional systems and considered in relation to sediment-flux, base-level, and autogenic changes. Application to the development of dynamic facies models and alluvial-shoreline-shelf-deepwater transitions in stratigraphic data. The equivalent of four lecture hours a week for one semester, including a four to five day field seminar. Prerequisite: Graduate standing in geological sciences.

GEO 383C. Geology and Hydrology.
Study of the interaction of fluids with the rock matrix, with emphasis on the role of hydrology in geologic processes and the role of geology in affecting hydrologic processes. Three lecture hours a week for one semester, and several field trips. Offered irregularly. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and a course in hydrogeology or hydrology.

A survey of geophysical data analysis methods, with a focus on time series, including sampling and aliasing, convolution and correlation, statistics, linear digital filters, properties and applications of the discrete Fourier transform, and least squares. Instruction in MATLAB and Fortran and solution of data analysis problems using these two languages. Two lecture hours and two laboratory hours a week for one semester. Prerequisite: Graduate standing.

Applications of mathematical software to earth science problems, with emphasis on hydrogeologic problems. Includes a brief introduction to numerical methods. Three lecture hours a week for one semester. Prerequisite: Graduate standing, previous coursework in advanced calculus (differential equations, vector spaces and Fourier series), and Geological Sciences 391C.

Investigation of the broad range of depositional environments of the Caicos Platform through mapping exercises using state of the art digital imagery and lidar datasets, lab exercises, core workshops and a week-long field trip. Study of the evolution of the Caicos Platform carbonate system from modern sediments to complex stratigraphic records including grain types, sedimentary structures, and facies successions from the tidal flats, salinas, high-energy shoreline, and grainy back reef environments. Two lecture hours and two laboratory hours a week for one semester; field trip to Caicos Platform also required. Geological Sciences 383F and 291 (Topic: Sedimentol of Caicos Platform) may not both be counted. Prerequisite: Graduate standing, and Geological Sciences 383M or 383N.

GEO 383G. Geochemistry of Sedimentary Rocks.
The hydrologic cycle, the early diagenesis, carbonate sediments, chemical sediments, and burial processes. Three lecture hours a week for one semester, with laboratory hours to be arranged. Offered irregularly. May be repeated for credit. Prerequisite: Graduate standing.

GEO 383K. Paleoeocology.
Relationships of fossil animals and plants to their environments and to the sedimentary deposits in which they occur. Three lecture hours a week for one semester, with one optional field trip. Prerequisite: Graduate standing.

GEO 383L. Petrography of Sandstones.
Interpretation of microscale features of sandstones to decipher the paleogeographic, tectonic, and postdepositional controls on sandstone...
composition and texture. Examines the effects of chemical and mechanical processes in the subsurface on sandstone properties, including porosity. Two lecture hours and three laboratory hours a week for one semester. Offered irregularly. Prerequisite: Graduate standing in geological sciences.

GEO 383M. Petrology of Carbonates and Evaporites.
Description and interpretation of carbonate and evaporite rock deposition and paragenesis. Essentials of petrology; petrography, including identification of grain types, cement types, recrystallization, and dolomitization; and porosity evolution. Global geochemical signals in carbonate sediments, and geochemical processes of early and late diagenesis. Three lecture hours and two laboratory hours a week for one semester. Offered irregularly. Prerequisite: Graduate standing.

GEO 383N. Depositional Systems: Carbonates and Evaporites.
Analysis of carbonate and evaporite depositional systems from sedimentary structures, faunal and ichnofaunal associations, grain types, vertical and lateral facies successions within time-significant packages, and sediment body geometries. Three lecture hours and three laboratory hours a week for one semester. Offered irregularly. Prerequisite: Graduate standing and consent of instructor.

GEO 383P. Potential Field Applications in Geophysics.
Introduction to the theory, measurement, and application of gravity and magnetic and electric fields to exploration and global-scale problems. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

GEO 383R. Reservoir Geology and Advanced Recovery.
Analysis of geologic controls on architecture of oil and gas reservoirs, with emphasis on reservoir heterogeneity resulting from depositional and diagenetic processes. Geological and petrophysical determinants of fluid flows and behavior. Three lecture hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing; and credit or registration for Geological Sciences 380N, 383, and 383N, or consent of instructor.

GEO 383S. Sedimentary Basin Analysis.
Quantitative and applied study of basin subsidence and sediment accumulation. The first half of the course considers theoretical basin evolution due to flexural, thermal, dynamic, and fault-related subsidence. The second half of the course involves analysis of selected basin systems and includes student research projects and presentations on assigned topics. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

GEO 383T. Tectonic and Climatic Interactions in Foreland Basins.
Integration of recent advances in foreland basins and adjacent orogenic belts, with emphasis on sedimentation, quantitative basin models, regional and global climate change, and the geometry and kinematics of fold-thrust belts. Three lecture hours a week for one semester. Prerequisite: Graduate standing and consent of instructor.

GEO 383U. Dynamic Field Stratigraphy.
Field-based evaluation of the dynamics of the stratigraphic record, with implications for sedimentary, tectonic, and climatic processes. Three lecture hours per week for one semester. Geological Sciences 383U and 391 (Topic: Dynamic Field Stratig: Andes) may not both be counted. Prerequisite: Graduate standing and consent of instructor.

GEO 383C. Seismology I.
Seismic, gravity, magnetic, electrical, and electromagnetic methods of exploration for petroleum and minerals. Three lecture hours and two laboratory hours a week for one semester. Prerequisite: Graduate standing.

GEO 384D. Physics of Earth.
Geophysics of the whole Earth: seismic methods of inferring Earth structure, chemical makeup of Earth, tides and rotational variations, geomagnetism, heat flow, earthquakes, and seismicity. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

GEO 384E. Seismic Migration and Inversion.
Use of the acoustic or elastic wave equation to construct subsurface images in seismic processing. Different methods of solution and data domains employed in routine applications. Investigates integral, implicit, and explicit finite differences and Fourier methods for the imaging and inversion of seismic reflection data. Three lecture hours a week for one semester. Offered irregularly. Prerequisite: Graduate standing in geological sciences.

GEO 384F. Finite Element Methods in Geophysics.
Numerical methods for solution of partial differential equations arising in continuum geophysics and geodynamics. Focuses on finite element methods and their application to heat conduction, viscous flow, wave propagation, and transport problems in geophysics. Four lecture hours a week for one semester. Geological Sciences 384F and 391 (Topic: Computational Methods for Geophysics) may not both be counted. Prerequisite: Graduate standing and consent of instructor.

GEO 384G. Subsurface Mapping and Petroleum Workstations.
Introduction to basin analysis, subsurface mapping, and petroleum exploration using a workstation. Subjects may include common tectonic settings of petroleum basins, seismic stratigraphy, structural styles, and petroleum systems. Workstation techniques include well log editing, lithology interpretation, correlation of tectonic events, integration of seismic and subsurface well data, interpretation of two- and three-dimensional seismic reflection data and structure, and isopach and seismic attribute mapping. Four lecture hours a week for one semester. Geological Sciences 384G and 391 (Topic: Introduction to Petroleum Workstations) may not both be counted. Prerequisite: Graduate standing and consent of instructor.

GEO 384H. Multidimensional Data Analysis in Geosciences.
Extracting multidimensional patterns from data, data reconstruction and registration, signal and noise separation. Elements of geostatistics, linear estimation, image analysis, and multidimensional sparsity-promoting transforms with applications to large-scale geoscientific data. Three lecture hours a week for one semester. Geological Sciences 384H and 391 (Topic: Multidimensional Data Analysis) may not both be counted. Prerequisite: Graduate standing.

GEO 384M. Inverse Theory.
Vector spaces; model parameter estimation methods from inaccurate, insufficient, and inadequate measurements; linear, quasi-linear, and highly non-linear problems; local and global optimization methods. Emphasis on practical problem solving. Three lecture hours and two laboratory hours a week for one semester. Prerequisite: Graduate standing and knowledge of linear algebra, basic calculus, and statistics.

GEO 384N. Rock Physics.
Focuses on how rocks, pore fluids, and physical conditions of temperature, stress, diagenesis, and geological processes impact wave propagation, with an emphasis on how laboratory and theoretical
results can be applied to field data. Presentation of case studies that outline strategies for seismic interpretation, site characterization, and recovery monitoring. Upscaling seismic and rock properties from the laboratory scale to borehole and reservoir scales. Multidisciplinary approaches to combination of geostatistical and stochastic methods, seismic-to-rock property transforms, and geologic information for reservoir characterization. Three lecture hours a week for one semester. Geological Sciences 384N and 391 (Topic: Rock Physics) may not both be counted. Prerequisite: Graduate standing.

GEO 384R. Geophysical Time Series Analysis.
Surveys the following topics in time series analysis with geophysical applications: Fourier transforms, linear digital filters and their design, frequency domain analysis methods (power and coherence spectrum estimation), least squares and related methods with time series applications. MATLAB is used extensively. Three lecture hours a week for one semester. Prerequisite: Graduate standing, and Geological Sciences 325K or 383D or the equivalent.

GEO 384S. Seismic Data Processing.
Reduction of seismic data from field records to final geologic images, using real data sets and open-source data analysis software. Three lecture hours and two laboratory hours a week for one semester. Prerequisite: Graduate standing, and Geological Sciences 384R.

GEO 384T. Seismic Lithology.
How seismic waves propagating through earth materials respond to relevant rock, reservoir, and fluid properties in the subsurface, and how seismic data recorded on the surface are used to describe, discriminate, and estimate these rock, reservoir, and fluid properties in the subsurface. Three lecture hours and one and one-half laboratory hours a week for one semester. Geological Sciences 384T and 391 (Topic: Seismic Lithology and Exploration Geophysics) may not both be counted. Prerequisite: Graduate standing.

GEO 384U. Quantitative Seismic Interpretation.
Seismic inversion, a tool for reservoir characterization, post- and pre-stack modeling, rock physics and fluid replacement modeling, wavelet estimation and post-stack inversion, AVO and pre-stack inversion, multiattribute regression and neural network, and net pay estimation. Extensive hands-on training with three-dimensional seismic and well-log data. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

GEO 384W. Seismic Imaging.
Seismic reflection imaging for visualizing the interior of Earth's upper crust. Study of fundamental imaging concepts from a unified geometrical point of view. Hands-on practical experience with imaging seismic data in an open-source software environment. Three lecture hours and one laboratory hour a week for one semester. Geological Sciences 384W and 391 (Topic: Wavefield Imaging) may not both be counted. Prerequisite: Graduate standing; programming experience and familiarity with seismology are helpful.

GEO 185G. Geophysics Colloquium.
Open to non-geological sciences majors, but registration priority is given to geological sciences majors. Exploration of a variety of problems in modern geophysics. Two lecture hours a week for one semester, and at least one weekend field trip. Geological Sciences 185G and 194 (Topic: Geophysics Colloquium) may not both be counted. May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Graduate standing.

GEO 385Q. Geomorphology Process and Form.
Explores how Earth surface processes combine to shape landscapes through erosion and deposition. Emphasis on open channel flow, sediment transport, fluvial and hillslope processes, and tectonic controls on landscape evolution. Three lecture hours a week for one semester, with several field trips to be arranged. Geological Sciences 385Q and 391 (Topic: Geomorphology: Landscape Process, Form, and Evolution) may not both be counted. May not be substituted for any required geological sciences course. Prerequisite: Graduate standing in geological sciences.

GEO 485S. Introduction to Remote Sensing for Geoscientists.
Examine the fundamentals of acquiring, processing, and interpreting remote sensing data. Explore the development of skills in the use and analysis of remote sensing data. Survey the physics of electromagnetic radiation and its interaction with geologic materials; common techniques for remote sensing; science goals and instruments onboard ongoing and planned remote sensing missions; and techniques for analysis of remote sensing data. Three lecture hours and two laboratory hours a week for one semester. Geological Sciences 485S and 491 (Topic: Intro Remote Sensing Geosci) may not both be counted. Prerequisite: Graduate standing.

GEO 386. Metamorphic Petrology.
Metamorphism as a record of processes in the Earth's deep crust; phase equilibria among minerals and fluids at elevated temperatures and pressures; tectonometamorphic regimes; petrographic interpretation of metamorphic mineral assemblages and textures; and secular evolution of metamorphic patterns during Earth's history. Three lecture hours and three laboratory hours a week for one semester. Prerequisite: Graduate standing and consent of instructor.

GEO 386D. Earth in Deep Time.
Examine the causes and consequences of significant changes in Earth’s surface environment and tectonic processes over the past 4.5 billion years. Discuss the initial Earth accretion, the Faint Young Sun problem, the rise of oxygen in Earth's atmosphere and general requirements for planetary habitability and how interactions between Earth's interior, the surface, and biosphere have shaped planetary evolution. Three lecture hours a week for one semester. Offered on the letter-grade basis only.

GEO 386E. Economic Geology.
Origin of economic mineral concentrations within the context of their overall geologic settings; geologic aspects of economic evaluation, mining, and mineral processing; and mineral exploration. Three lecture hours and two laboratory hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing and consent of instructor.

GEO 386G. Geographic Information System and Global Positioning System Applications in Earth Sciences.
Theory and practice of geographic information system (GIS) and Global Positioning System (GPS) technologies, and their applications to problems in earth sciences. Laboratories and field trips provide hands-on experience with the collection, mapping, and analysis of geologic and other field data using GPS equipment and GIS software. Subjects include map projections; datums and reference frames; cartographic principles; remotely sensed data (satellite and aerial photos, image radar); vector- and raster-based image formats; geospatial data resources; GIS software applications; surveying principles; GPS constellation and data structure; differential GPS; data logging schemes; GPS postprocessing software; integration of GPS and GIS in mapmaking; extant GIS applications in geology and hydrogeology. Three lecture hours and two laboratory hours a week for one semester, and two weekend field trips. Offered in the fall semester only. Geological Sciences 386G and 391 (Topic: Geographic
Information System and Global Positioning System Applications in Earth Sciences) may not both be counted. Prerequisite: Graduate standing.

**GEO 386K. Igneous Petrology.**
Origin, differentiation, and crystallization of igneous rocks. Three lecture hours and three laboratory hours a week for one semester. Offered in alternate years. May be repeated for credit. Prerequisite: Graduate standing, and Geological Sciences 390M or the equivalent.

**GEO 386L. Isotope Geology.**
Overview of the principles of stable and radiogenic isotope geochemistry. Covers mass spectrometry, geochronology and thermochronology, cosmogenic nuclides, radiogenic geochemistry, isotopic fractionation, traditional and non-traditional stable isotope geochemistry and its applications to the hydrologic cycle, low-temperature geochemistry, magmatic and metamorphic processes, thermometry, fluid-rock interactions, tectonics, crust-mantle evolution, and extraterrestrial materials. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

**GEO 387G. Climate System Modeling.**
Studies the basic theory of weather/climate system modeling using state-of-the-art regional climate models in a variety of applications. Includes instruction on how to run models on the TACC supercomputers for scientific applications. Subjects may include paleoclimate, contemporary, and/or future climate prediction based on changes in greenhouse gas concentrations. Three lecture hours a week for one semester. Only one of the following may be counted: Geological Sciences 347G, 371C (Topic: Climate System Modeling), 387G, 391 (Topic: Climate System Modeling). May not be substituted for any required geological sciences course. Prerequisite: Graduate standing, basic knowledge of Unix, and programming experience in Fortran.

**GEO 387H. Physical Climatology.**
Investigates the nature of Earth's climate and examines the physical processes that maintain the climate system. Topics include the energy balance, the hydrological cycle, general atmosphere circulation, and how they all interact and vary at various spatial and temporal scales. Discusses human-induced modifications to the climate system, such as urbanization, anthropogenic global warming, desertification, and tropical deforestation. Focuses on descriptive, analytical, programming, and modeling skills. Three lecture hours a week for one semester. Prerequisite: Graduate standing and Computer Science 303E, Geography 301K, Mathematics 408D, and Physics 303K.

**GEO 387P. Climate System Physics.**
Discussion of first-order principles and processes that govern the thermodynamical structure and energy distribution of the atmosphere, ocean, land, and cryosphere and their interaction with the dynamic aspect of the climate system. Three lecture hours a week for one semester. Geological Sciences 387P and 391 (Topic: Climate System Physics) may not both be counted. May not be substituted for any required geological sciences course. Prerequisite: Graduate standing.

**GEO 388G. Global Biogeochemical Cycles.**
Examination of the major reservoirs, fluxes, and processes controlling the distribution of biologically active chemical constituents of the earth. The importance of these biogeochemical cycles in the geologic past and the effects of human perturbation of these cycles. Three lecture hours a week for one semester. Geological Sciences 388G and 391 (Topic: Global Biogeochemical Cycles) may not both be counted. Prerequisite: Graduate standing in geological sciences, or graduate standing and consent of instructor.

**GEO 388H. Environmental Isotope Geochemistry.**
The application of the isotope and trace element geochemistry of natural waters and sediments to studies of the hydrologic cycle. Stable, radiogenic, and cosmogenic isotopes are used as tracers of the evolution of groundwater, surface water, and ocean water. Three lecture hours a week for one semester, with laboratory hours to be arranged. May be repeated for credit. Prerequisite: Graduate standing and consent of instructor.
GEO 388P. Paleontological Laboratory Techniques.
Overview and application of laboratory techniques used for in-depth investigation of the systematics of vertebrates. Three lecture hours a week for one semester. Geological Sciences 388P and 391 (Topic: Paleontological Laboratory Techniques) may not both be counted. Prerequisite: Graduate standing in geological sciences.

GEO 388R. Radiogenic Isotopes and Tectonic Processes.
Application of radiogenic isotopes to tectonic problems. Particular attention is given to methods and tools in thermochronology and geochronology for understanding thermal histories, uplift rates, slip rates, timing relationships, landform development, and provenance. Three lecture hours a week for one semester. Offered in alternate years. Prerequisite: Graduate standing in geological sciences.

GEO 388T. High-Temperature Geochemistry.
An introduction to the application of isotope and trace element geochemistry in the modern geological sciences, with emphasis on problems related to the origin and evolution of the Earth's interior. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

GEO 389E. Evolution of Reef Ecosystems.
Introduction to the paleobiology, sedimentology, and oceanography of reef ecosystems throughout the geological record as well as the environmental and evolutionary factors that controlled the expansion and collapse of the carbonate ecosystems (and others). Explore ocean chemistry, how organisms biomineralize a skeleton, symbiosis, ecology, mass extinctions, and both current and future threats to reef health. Three lecture hours a week for one semester; required field trip date(s) to be arranged. Geological Sciences 389E and 391 (Topic: Evolution of Reef Ecosystems) may not both be counted. Prerequisite: Graduate standing.

GEO 389J. Transitions in the History of Life.
Exploration of the transitions in the history of life, including mass extinctions, climactic perturbations, and environmental changes and their impact on the Earth's biota. Three lecture hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing.

GEO 389K. Paleontologic Nomenclature and Techniques.
Rules of nomenclature: preparation, illustration, and description of Paleozoic invertebrate fossils. Three lecture hours a week for one semester. Prerequisite: Graduate standing in geological sciences and consent of instructor.

GEO 389M. Vertebrate Paleontology: Mammals.
Comparative osteology and phylogenetic history of the living and extinct mammals. Two lecture hours and four laboratory hours a week for one semester. Offered in alternate years. Prerequisite: Graduate standing in geological sciences and Geological Sciences 389V.

GEO 389P. Digital Methods in Morphology.
The use of digital multimedia for analysis of paleontological problems, with emphasis on three-dimensional high-resolution CT data. One lecture hour and three laboratory hours a week for one semester. Prerequisite: Graduate standing in geological sciences.

Identification of skeletal elements from the major vertebrate taxa, and aspects of skeletal functional morphology, with emphasis on extant taxa. Topics include the skeletal systems of fishes, amphibians, reptiles, birds, and mammals. Three lecture hours and four laboratory hours a week for one semester. Prerequisite: Graduate standing in geological sciences, and Geological Sciences 405 or the equivalent; or consent of instructor.

GEO 389S. Systematics and Paleontology.
Seminar course focusing on current issues in digital/instructional technologies. Provides students with an opportunity to explore, discuss, and demonstrate issues designing, acquiring, manipulating, authoring, and publishing digital content. Students work toward completing a specific project. Three lecture hours a week for one semester. Offered in alternate years. Geological Sciences 389S and 391 (Topic: Systematics and Paleontology) may not both be counted. Prerequisite: Graduate standing in geological sciences and consent of instructor.

GEO 389V. Vertebrate Paleontology.
Comparative osteology and phylogenetic history of the living and extinct fishes, amphibians, and reptiles. Two lecture hours and four laboratory hours a week for one semester. Prerequisite: Graduate standing in geological sciences, and Biology 349 or the equivalent.

GEO 390D. Seismology III.
Advanced treatment of elastic wave propagation in heterogeneous anisotropic media, vectors and tensors, Christoffel equation, group and phase velocities, invariant embedding (reflectivity), finite difference, finite elements, and spectral elements. Three lecture hours a week for one semester. Prerequisite: Graduate standing, and Geological Sciences 380F or the equivalent.

GEO 390E. Ecohydrology and Biometeorology.
Study the terrestrial biosphere and the ways ecosystems influence the water cycle. Investigate water, carbon, and energy fluxes within the Earth system from a hands-on experimental approach and through exposure to land-surface and climate models. Includes hydrology, Earth science, environmental engineering, ecology, biology, and climatology. Three lecture hours a week for one semester. Geological Sciences 390E and 391 (Topic: Ecohydrology/Biometeorology) may not both be counted. Prerequisite: Graduate standing.

GEO 390M. Thermodynamics of Geologic Processes.
Applications of physical chemistry to natural systems; interactions of minerals, solutions, and the atmosphere. Three lecture hours a week for one semester. Offered in alternate years. Prerequisite: Graduate standing and consent of instructor.

GEO 390Q. Morphodynamics and Quantitative Stratigraphy.
Explore numerical tools useful for quantitatively assessing sediment transport and stratigraphic development in sedimentary basins. Apply principles in fluid mechanics, sediment transport, and depositional mechanics to one-dimensional and quasi-two-dimensional numerical modeling of sediment morphodynamics in various depositional settings such as river deltas, carbonate platforms, and submarine fans. Develop geometrical and morphodynamic models as research tools to understand data collected from laboratory experiments and in the field. Three lecture hours a week for one semester. Geological Sciences 390Q and 391 (Topic: Morphodynamics) may not both be counted. Offered on the credit/no credit basis only. Prerequisite: Graduate standing.

An introduction to electron-microbeam instruments and their applications in the earth sciences. Lectures on relevant theory and concepts are supplemented by hands-on experience. Two lecture hours and three laboratory hours a week for one semester. Prerequisite: Graduate standing in geological sciences or graduate standing and consent of instructor.

GEO 390T. Tectonic Problems.
Restricted to students in the Jackson School of Geosciences. Explore cutting-edge and debated concepts and processes governing plate
tectonics, the unifying concept of solid Earth Sciences, in both the marine and continental realms. Investigate and test the validity of processes-oriented concepts in subduction, rift, and collision tectonics settings. Study regional and global tectonic problems through an interdisciplinary structural, petrological, geochemical, sedimentological, and geophysical approach. Three lecture hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing and consent of instructor.

For each semester hour of credit earned, the equivalent of one class hour a week for one semester; additional hours may be required for some topics. Offered irregularly. May be repeated for credit when the topics vary. Prerequisite: Graduate standing in geological sciences; additional prerequisites vary with the topic.

GEO 391C. Physical Hydrogeology.
Geological controls on groundwater resources; evaluation of aquifers, geothermal systems, and contamination problems; natural hazards caused by human use of groundwater. Three lecture hours a week for one semester, with discussion hours to be arranged. Prerequisite: Graduate standing and concurrent enrollment in Geological Sciences 191W.

GEO 391D. Regional Tectonics.
Development of tectonic theory culminating in the new global tectonics, and application of theory to selected orogenic areas. Three lecture hours a week for one semester. Offered irregularly. Prerequisite: Graduate standing in geological sciences.

GEO 391K. Applied Karst Hydrogeology.
The study of karst landforms, processes, flow systems, and water resources. Geologic controls, natural resources, aquifer recharge and discharge, system evolution, geochemistry/water quality, tracing methodologies, geophysical methods, and modeling are covered with an emphasis on collecting and interpreting field data. Three lecture hours a week for one semester, with additional fieldwork hours to be arranged. Geological Sciences 391 (Topic: Applied Karst Hydrogeology) and 391K may not both be counted. Prerequisite: Graduate standing, and Geological Sciences 391C or consent of instructor.

GEO 391Q. Topics in Quaternary Geology.
Interdisciplinary analysis of Quaternary chronology, environments, climatic changes, and erosional-depositional processes. Three lecture hours a week for one semester. Offered irregularly. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

GEO 391S. Current Topics in Paleobiology.
Seminar reviewing recent publications on evolutionary and ecologic theories applied to the fossil record. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

GEO 191W. Aquifer Testing.
Techniques of aquifer evaluation, including pumping tests, laboratory techniques, field mapping, and numerical analysis. Two laboratory hours a week for one semester. Geological Sciences 191 (Topic: Aquifer Testing) and 191W may not both be counted. Prerequisite: Graduate standing, and concurrent enrollment in Geological Sciences 391C or consent of instructor.

GEO 392F. Fundamentals and Applications of ICP-MS.
Explores inductively coupled plasma mass spectrometry (ICP-MS) for trace, minor and major element measurement, and applications in analytical fields. Covers fundamentals of technique, applications, and capabilities of ICP-MS through hands-on lab experience. Two lecture hours and one-and-one-half laboratory hours a week for one semester. Geological Sciences 391 (Topic: Fundamentals/Applic of ICP-MS) and 392F may not both be counted. Prerequisite: Graduate standing; and working knowledge of MS Excel, including manipulation of rows and columns of data, application of basic algebraic functions to derive statistics, sorting and filtering of data.

GEO 392M. Modern Geological Sciences.
General discussion of the entire spectrum of geological sciences. Three lecture hours a week for one semester. Offered in the fall semester only. Geological Sciences 391 (Topic: Modern Geological Sciences) and 392M may not both be counted. Offered on the credit/no credit basis only. Prerequisite: Graduate standing in geological sciences, or graduate standing and consent of instructor.

GEO 392P. Python for Geoscience Research.
Explore Python 3 programming language for application to scientific research. Examine basic Python and common scientific Python libraries such as numpy, pandas, matplotlib, datetime. Three lecture hours a week for one semester. Geological Sciences 391 (Topic: Python in Geosci Resrch) and 392P may not both be counted. Prerequisite: Graduate standing.

GEO 392S. Geochemical Problem Solving with Ions Atoms.
Overview of mass spectrometers, which are analytical balances that operate at molecular and atomic levels, used for gathering compositional data (both isotopic and elemental). Explores conversion of sample molecules into charged particles (ions), and measurement according to mass-to-charge ratio to assess chemical identity and abundance. Introduction to inorganic mass spectrometry methods and applications to the Earth sciences, surveying key modalities: TIMS, ICP-MS, LA-ICP-MS, MC-ICP-MS, and IRMS. Examines techniques in generating and critically evaluating high-quality data, and research. Two lecture hours and three laboratory hours a week for one semester. Prerequisite: Graduate standing; and for non-geological sciences majors, consent of instructor.

Attendance required of all graduate students in geological sciences. Two lecture hours a week for one semester. Additional hours may be required. May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Graduate standing.

GEO 393D. 3D Analysis of Volumetric Data.
Explore the theory and practice of acquiring and utilizing volume image data, predominantly from X-ray computed tomography (CT). Examine CT data instrumentation and acquisition, as well as 3D data processing, visualization, and quantification using a range of methods, including machine learning approaches. Geosciences 391 (Topic: 3D Analysis of Volumetric Data) and 393D may not both be counted. Prerequisite: Graduate standing and consent of instructor.

Restricted to graduate students in geological sciences. For each semester hour of credit earned, the equivalent of one class hour a week for one semester. Offered every semester. May be repeated for credit when the topics vary. Offered on the credit/no credit basis only. Prerequisite: Graduate standing in geological sciences.

Introduction to the modeling of flow and transport in porous media with focus on basic dynamic phenomena that occur during single-phase flow and solute transport in heterogeneous porous media. Discuss the numerical solution of both the elliptic equations governing the flow of...
groundwater and the hyperbolic equations governing solute transport. Includes a programming project which requires writing a functional numerical simulator. Three lecture hours and one and one-half laboratory hours per week for one semester. Prerequisite: Mathematics 408D or 427L, Mathematics 427J or 427K; one of the following with a grade of at least C: Petroleum and Geosystems Engineering 310, Civil Engineering 311K, Mechanical Engineering 318M, Computational Engineering 301, or Geological Sciences 325G or 325J.

GEO 395D. Ice Dynamics.
Physics of ice motion, basal processes, glacial hydrology, and unstable flow. Three lecture hours a week for one semester. Geological Sciences 391 (Topic: Ice Dynamics) and 395D may not both be counted. Prerequisite: Graduate standing.

GEO 395S. Seismic Structural Analysis.
Addresses interpretation of 2D and 3D seismic reflection data for unraveling the geometry and kinematic evolution of crustal structures, principally in sedimentary rocks. Foundational subjects include understanding how structures manifest themselves in seismic data, and approaches to effective interpretation and kinematic analysis. Covers structural systems including extensional, fold and thrust belts, salt tectonics, and inversion. Applied subjects include computer workstation interpretation and analysis approaches, determination of geologic and basin history, fault system analysis, fault permeability structure, and geomechanical evaluations such as in situ stress determination and application to induced seismicity risking. Three lecture hours per week for one semester. Only one of the following may be counted: Geological Sciences 191, 391 (Topic: Seismic Structural Analysis), 395S Seismic Structural Analysis. Prerequisite: Graduate standing.

GEO 397F. Marine Geology and Geophysics Field Course.
Hands-on, team-based instruction in the collection and processing of marine geological and geophysical data along the Gulf of Mexico coast. Includes classroom, laboratory, and field components in Austin and at sea. Offered between the spring semester and the summer session; limited class meetings may begin in the spring semester. Only one of the following may be counted: Geological Sciences 348K, 397F, Marine Science 348 (Topic 2: Marine Geology and Geophysics Field Course). Prerequisite: Graduate standing.

GEO 397L. Transitions in the History of Life.
Introduction to major perturbations in the history of life; specifically, mass extinctions and carbon-cycle perturbations (e.g. ocean anoxic events, hyperthermals, and acidification events). Examine kill mechanisms (e.g. glaciations, impacts, large igneous provinces) and the subsequent environmental perturbations and ecological ramifications. Explore biotic crises in the past, with an eye to future ecosystem collapse, as well as the environmental and paleobiological responses to these events. Three lecture hours a week for one semester. Geological Sciences 391 (Topic: Transitions in the History of Life) and 397L may not both be counted. Prerequisite: Graduate standing.

GEO 397M. Morphodynamics and Quantitative Stratigraphy.
Covers development of numerical tools to quantitatively understand sediment transport and stratigraphic development in sedimentary basins. Focus on applications of the principles in fluid mechanics, sediment transport, and depositional mechanics to one-dimensional and quasi-two dimensional numerical modeling of sediment morphodynamics in various depositional settings such as river deltas, carbonate platforms, and submarine fans. Requires development of geometrical and morphodynamic models as research tools to understand gathered data. Three lecture hours per week for one semester. Geological Sciences 397M and 391 (Topic: Morphodynam/Quant Stratigraphy) may not both be counted. Prerequisite: Graduate standing.

GEO 397P. Field Methods in Planetary Geology.
Field studies combined with remote sensing to support studies of remote imagery from planetary missions. Two lecture hours and two laboratory hours a week for one semester; three week field trip to the Southwestern United States also required; offered in summer session only. Geological Sciences 391 (Topic: Field Methods Planetary Geology) and 397P may not both be counted. Prerequisite: Graduate standing.

GEO 297Q. Preparing Future Faculty.
Examine the academic and research career track, including a number of different career paths. Participate in a workshop covering all application materials for these kinds of jobs. Two lecture hours a week for one semester. Geological Sciences 297Q and 291 (Topic: Preparing Future Faculty) may not both be counted. Prerequisite: Graduate standing.

GEO 698. Thesis.
The equivalent of three lecture hours a week for two semesters. Offered on the credit/no credit basis only. Prerequisite: For 698A, graduate standing in geological sciences and consent of the graduate adviser; for 698B, Geological Sciences 698A.

GEO 398C. Continuum Mechanics.
Explore the foundation for the modeling of fluids and solids in geological and geophysical phenomena, such as mantle convection, glaciology, rock mechanics, and climate dynamics. Examine tensor analysis, the kinematics of motion, forces, and stresses. Discuss basic balance (conservation) laws for mass, momentum, and energy, and constitutive laws for fluids and solids. Develop governing equations to geodynamics, glaciology, seismology, and geophysical fluid dynamics. Three lecture hours a week for one semester. May be repeated for credit. Offered on the letter-grade basis only. Prerequisite: Graduate standing and consent of instructor.

GEO 398D. Topics in Machine Learning Data Analytics.
Restricted to geological sciences students. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing; additional prerequisites vary with the topic.

**Topic 1: Introduction to Machine Learning and Geosciences.** Explore an overview of commonly used machine learning algorithms for Geosciences applications. Additional prerequisite: Knowledge of basic calculus, linear algebra and statistics, and python programming; or consent of instructor.

**Topic 2: Applications of Data Analysis, Visualization, and Machine Learning.** Examine computational approaches to take advantage of complex data. Explore addressing real-world geoscience challenges using the Python programming language and Jupyter computational notebooks. Discuss techniques in data analysis, modeling, and machine learning for subsurface characterization applicable to resource assessment and geomorphology and stratigraphy applicable to hazard assessment.

**Topic 3: Data Analytics and Geostatistics.** Explore data analytics and geostatistics for geosciences applications. Additional prerequisite: Knowledge of basic calculus, linear algebra and statistics, and python programming; or consent of instructor.

**Topic 4: Subsurface Machine Learning.** Explore problem formulation, feature engineering, and inferential and predictive machine learning algorithms for geosciences applications. Additional prerequisite: Knowledge of basic calculus, linear algebra and statistics, and python programming; or consent of instructor.
**GEO 398G. Geodynamics of the Lithosphere and Mantle.**
Explores continuum dynamics problems that can serve to form a physical understanding of the tectonic and convective processes that shape our planet. Geared toward graduate students from the Earth sciences and related fields in the natural sciences including physics, computer science, and engineering. The equivalent of two lecture hours and one-and-one-half laboratory hours a week for one semester. Prerequisite: Graduate standing.

**GEO 398L. Topics in Lithosphere and Deep Earth.**
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

**Topic 1: Tectonic Geodynamics.** Examine dynamic processes that govern plate tectonics and lithospheric deformation, combining tectonics, structural geology, and geodynamics from the ground up. Geological Sciences 391 (Topic: Tectonic Geodynamics) and 398L (Topic 1) may not both be counted.

**GEO 398M. Numerical Modeling in the Geosciences.**
Covers numerical solution of dynamical problems arising in the solid earth geosciences. Entails development of individual codes in Matlab and application of codes to understanding heat transfer, wave propagation, elastic, and viscous deformations. Requires familiarity with Matlab. Two lecture hours and two laboratory hours a week for one semester. Prerequisite: Graduate standing and knowledge of programming in Matlab, vector calculus, and ordinary differential equations.

**GEO 398P. Planetary Geology and Geophysics.**
Introduction to planetary geology, with an emphasis on geophysical observations of terrestrial planets in our solar system. Discussion of missions, instruments, and techniques, and incorporation of mission data in student projects. Includes field trip to study planetary analog sites. The equivalent of three lecture hours a week for one semester. Geological Sciences 391 (Topic: PLANETARY GEOLOGY/GEOPHYSICS) and 398P may not both be counted.

**GEO 398R. Master’s Report.**
Preparation of a report to fulfill the requirement for the master’s degree under the report option. The equivalent of three lecture hours a week for one semester. Offered on the credit/no credit basis only. Prerequisite: Graduate standing in geological sciences and consent of the graduate adviser.

**GEO 398S. Topics in Subsurface, Surface, and Life.**
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

**GEO 298T, 398T. Supervised Teaching in Geological Sciences.**
Open to graduate students engaged in laboratory instruction under close supervision of the course instructors. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. Offered on the credit/no credit basis only. Prerequisite: Graduate standing.

**GEO 398W. Topics in Water, Climate, and Environment.**
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

**Topic 1: Vadose Zone Hydrology.** Introduction to hydrologic processes occurring in the vadose zone (unsaturated zone), the subsurface region between the ground surface and groundwater. Focus on the physical processes that govern the movement of water in variably saturated porous media, and the exchange of mass and energy at Earth's surface. Explore theoretical and applied aspects, measurement techniques and computational tools, and environmental challenges of the vadose zone. Geological Sciences 391 (Topic: Vadose Zone Hydrology) and 398W (Topic 1) may not both be counted.

**Topic 2: Paleoclimate.** Introduction to paleoclimatology, the study of Earth’s past climate. Examine a broad spectrum of geological archives of climate change including those from the oceans, the land, and the cryosphere. Geological Sciences 398W (Topic 2) and 391 (Topic: Paleoclimatology) may not both be counted.

**Topic 3: Dynamics of Polar Systems.** Examine the fundamental physics that govern dynamics of ice sheets, oceans, and sea ice from a theoretical viewpoint that is supported with as many observations as possible. Geological Sciences 398W (Topic 3) and 391 (Topic: Dynamics of Polar Systems) may not both be counted.

**Topic 4: Statistical Data Analysis.** Examine the statistical, scientific, and computational approaches used to test hypotheses concerning the physics governing observed changes in the Earth System. Explore concepts in linear algebra and statistics such as regression, least-squares inversion, singular spectral analysis, Bayesian inference, Markov Chain Monte Carlo sampling, and test statistics to survey the existence of a discernable influence of humanity on the observational record of climate. Geological Sciences 391 (Topic: Statistical Data Analysis) and 398W (Topic 4) may not both be counted.

**GEO 399W, 699W, 999W. Dissertation.**
May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Admission to candidacy for the doctoral degree.

**Professional Courses**

**GER - German**

**German: GER**

**Lower-Division Courses**

**GER 604. Accelerated First-Year German.**
Six lecture hours a week for one semester, with optional laboratory available. Only one of the following may be counted: German 601C, 604, 506. Only one of the following may be counted: German 601C, 604, 507, 507R, 508K.

**GER 506. First-Year German I.**
Basic training in grammatical patterns and usage of modern German. Five lecture hours a week for one semester. Only one of the following may be counted: German 601C, 604, 506.

**GER 507. First-Year German II.**
Advanced training in grammatical patterns and usage of modern German. Five lecture hours a week for one semester. Only one of the following may be counted: German 601C, 604, 507, 507R, 508K. Prerequisite: German 506 with a grade of at least C.

**GER 612. Accelerated Second-Year German: Readings in Modern German.**
Grammar review, composition, readings and recitation, discussion of literary works, and German culture. Six lecture hours a week for one semester. Only one of the following may be counted: German 611C, 612, 312K, 312R, 312V. Only one of the following may be counted: German...
GER 312K (TCCN: GERM 2311). Second-Year German I: Readings in Humanities and Social Sciences.
Three lecture hours a week for one semester. Only one of the following may be counted: German 611C, 612, 312L, 312R, 312V. Prerequisite: German 604, 507, or 508K with a grade of at least C.

GER 312L (TCCN: GERM 2312). Second-Year German II: Readings in Humanities and Social Sciences.
Three lecture hours a week for one semester. Only one of the following may be counted: German 611C, 612, 312L, 312S, 312W. Prerequisite: German 312K or 312V with a grade of at least C.

GER 312V. Second-Year German I: Business German.
German 312V covers the same material as 312K, but with readings, discussions, and exercises that focus on the business world. Emphasis on practical, career-oriented competence. Three lecture hours a week for one semester. Only one of the following may be counted: German 611C, 612, 312K, 312R, 312V. Prerequisite: German 604, 507, or 508K with a grade of at least C.

GER 312W. Second-Year German II: Business German.
German 312W covers the same material as 312L, but with readings, discussions, and exercises that focus on the business world. Emphasis on practical, career-oriented competence. Three lecture hours a week for one semester. Only one of the following may be counted: German 611C, 612, 312L, 312S, 312W. Prerequisite: German 312K or 312V with a grade of at least C.

This course is used to record credit the student earns while enrolled at another institution in a program administered by the University’s Study Abroad Office. Credit is recorded as assigned by the study abroad adviser in the Department of Germanic Studies. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

Upper-Division Courses
GER 322D. Conversation and Composition: Individuals and Society.
Explore the individual in contemporary German-speaking society through contemporary textual and media sources. Discuss popular culture, school and university life, and work. Examine a practical and pragmatic review of German grammar with a substantial emphasis on conversation and composition. Three lecture hours a week for one semester. German 322D and 328 may not both be counted. Prerequisite: German 612, 312L, or 312W.

GER 322E. Conversation and Composition: Contemporary Controversies.
Explore social, political, and cultural issues in contemporary German-speaking countries. Discuss the German political system, reunification, and immigration. Examine a practical review of German grammar while emphasizing more advanced conversational and compositional proficiencies. Three lecture hours a week for one semester. Only one of the following may be counted: German 322E, 330C, 331L. Prerequisite: German 612, 312L, or 312W with a grade of at least C.

GER 328. Advanced German Grammar.
Description of German sounds, grammatical structures, pronunciation, word formation. Three lecture hours a week for one semester. German 322D and 328 may not both be counted. Prerequisite: German 310, 612, 312L, 312S, 312W, or 317C with a grade of at least C.

This course is used to record credit the student earns while enrolled at another institution in a program administered by the University’s Study Abroad Office. Credit is recorded as assigned by the study abroad adviser in the Department of Germanic Studies. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

GER 330C. Advanced Conversation and Composition: Culture.
German cultural material from print and visual media provides the basis for advanced conversation and composition, with considerable practice in the writing of short essays in German. Three lecture hours a week for one semester. Only one of the following may be counted: German 322E, 330C, 331L. Prerequisite: German 310, 612, 312L, 312S, 312W, or 317C with a grade of at least C.

GER 130D. German across Disciplines.
Students read and discuss German language materials related to the subject matter of another designated course. One lecture hour a week for one semester. May be repeated for credit. Prerequisite: Three semester hours of upper-division coursework in German with a grade of at least C.

GER 331L. Advanced Conversation and Composition: Literature.
German literary material from print and visual media provides the basis for advanced conversation and composition, with considerable practice in the writing of short essays in German. Three lecture hours a week for one semester. Only one of the following may be counted: German 322E, 330C, 331L. Prerequisite: German 310, 612, 312L, 312S, 312W, or 317C with a grade of at least C.

GER 340C. Historical Backgrounds of German Civilization.
Cultural, social, and literary history of German-speaking Europe of the Middle Ages. Studies humanism, the Reformation, absolutism, and the early Enlightenment (between 1200 and 1750). Taught in German. Three lecture hours a week for one semester. German 340C and 342K may not both be counted. Prerequisite: Three semester hours of upper-division coursework in German with a grade of at least C.

GER 342K. Middle Ages-Early Modern Era Cultural History.
Explore the cultural, social, and literary history of German-speaking Europe from the Middle Ages to the Early Modern period. Focus on central themes from the periods of humanism, the Reformation, absolutism, and early Enlightenment (between 1200 and 1750) in German-speaking Europe. Three lecture hours a week for one semester. German 340C and 342K may not both be counted. Prerequisite: Three semester hours of upper-division coursework in German with a grade of at least C.

GER 343C. Contemporary German Civilization.
Cultural, social, and literary history of Germany between 1900 and reunification. Taught in German. Three lecture hours a week for one semester. German 343C and 344K may not both be counted. Prerequisite: Three semester hours of upper-division coursework in German with a grade of at least C.

GER 343K. Enlightenment to 1900 Cultural History.
Explore cultural, social, and literary history of German-speaking Europe between 1750 and 1900. Focus on central themes in the literary and
cultural movements from the Enlightenment through Naturalism and
the history of German-speaking Europe from absolutism through the
formation of the German state. Three lecture hours a week for one
semester. German 343K and 346L may not both be counted. Prerequisite:
Three semester hours of upper-division coursework in German with a
grade of at least C.

GER 344K. Twentieth Century Cultural History.
Explore cultural, social, and literary history of German-speaking Europe
in the twentieth century. Focus on central themes in the literary and
cultural movements from Modernism to Postmodernism and the history
of German-speaking Europe from the lead-up to World War I through
the end of the Cold War. Three lecture hours a week for one semester.
German 343K and 344K may not both be counted. Prerequisite: Three
semester hours of upper-division coursework in German with a grade
of at least C.

GER 346L. German Literature between the Enlightenment
and the Present.
Cultural, social, and literary history of German-speaking Europe between
1750 and 1900. Taught in German. Three lecture hours a week for one
semester. German 343K and 346L may not both be counted. Prerequisite:
Three semester hours of upper-division coursework in German with a
grade of at least C.

GER 347L. Language and Society in the German-speaking
Countries.
Uses language and linguistics to study the culture and society of the
German-speaking countries. Taught in German. Three lecture hours a
week for one semester. Prerequisite: Three semester hours of upper-
division coursework in German with a grade of at least C.

GER 348D. German Play: Student Production.
Discussion, staging, and production of a German play. Three hours of
lecture or laboratory a week for one semester. Prerequisite: One of the
following with a grade of at least C: German 612 or 312L.

GER 149T, 249T, 349T. Introduction to Teaching German.
Supervised individual instruction designed to offer students an
introduction to principles of foreign language education and the
opportunity to teach German in local elementary schools. Weekly class
meetings for four weeks, followed by one, two, or three student teaching
hours a week for eight weeks. Additional class meetings may also
be required. May be repeated for credit, but no more than three semester
hours may be counted toward a degree in the College of Liberal Arts.
May not be counted toward a major in German. Prerequisite: Credit or
registration for German 312L or the equivalent.

GER 363K. Topics in German Culture.
Study of selected aspects of Germanic civilization, such as science
and philosophy, fine arts, film, history, social institutions. Conducted in
German. Three lecture hours a week for one semester. May be repeated
for credit when the topics vary. Prerequisite: Six semester hours of upper-
division coursework in German.

GER 369 (Topic 1) and Linguistics 373 (Topic 6: The Structure of the German Language)
may not both be counted. Additional prerequisite: Three semester
hours of upper-division coursework in German or linguistics.

GER 369. Topics in Germanic Languages.
Introduction to the phonology, morphology, syntax, dialectology, or
lexicography of individual Germanic languages. Three lecture hours a
week for one semester. May be repeated for credit when the topics vary.
Prerequisite: Varies with the topic.

GER 373. Topics in Germanic Literature.
Three lecture hours a week for one semester. May be repeated for credit
when the topics vary. Prerequisite: Six semester hours of upper-division
coursework in German.

GER 373 (Topic: German Cinema Since 1933) and 363K (Topic 1)
may not both be counted.

GER 373 (Topic: Classics of German Cinema). An introduction to German
cinema through its most innovative, influential, and important films
and filmmakers. German 363K (Topic: German Cinema Since 1933)
and 363K (Topic 1) may not both be counted.

GER 373 (Topic: German Travel Literature). Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Six semester hours of upper-division coursework in German.

GER 373 (Topic: German Science Fiction) and 373 (Topic 4) may not both be counted.

GER 373 (Topic: The Structure of the German Language) and Linguistics 373 (Topic 6: The Structure of the German Language) may not both be counted. Additional prerequisite: Three semester
hours of upper-division coursework in German or linguistics.

GER 373 (Topic: Translation I) and Linguistics 373 (Topic 9: The Structure of the German Language) may not both be counted. Additional prerequisite: Three semester
hours of upper-division coursework in German or linguistics.

GER 179, 279, 379. Conference Course in Germanic
Language or Literature.
Supervised individual instruction course in which students engage in
special studies necessary to expand their acquaintance with any subject
in Germanic languages or literature. Conference course. May be repeated
for credit. Prerequisite: Six semester hours of upper-division coursework in German.

GER 679H. Honors Tutorial Course.
Supervised individual research on a literary or linguistic problem,
culminating in an honors paper of some length. Conference course for two semesters. Prerequisite: For 679HA, upper-division standing, six semester hours of upper-division German, a University grade point average of at least 3.00, a grade point average in German of at least 3.50, and admission to the Germanic Studies Honors Program; for 679HB, German 679HA.

Graduate Courses
GER 380C. German for Graduate Students in Other
Departments.
No auditors permitted. Intensive reading course, emphasizing basic
grammar and vocabulary with translation practice. Three lecture hours a
week for one semester. German 301 and 380C may not both be counted.
GER 381. Studies in Germanic Linguistics and Philology.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing or consent of instructor.

GER 382M. Topics in Cultural History.
Study of various political, intellectual, artistic, and social movements in the cultures of Germanic countries. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing or consent of instructor.

GER 382N. Topics in Intellectual History.
An interdisciplinary investigation of the significance of ideological structures of thought in historical contexts. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing or consent of instructor.

Additional prerequisite: Graduate standing.

An introduction to the critical and technical procedures used in Germanic studies, especially bibliographical aids. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing or consent of instructor.

GER 392. Seminar in Germanic Literature and Culture.
Study of problems, topics, writers, genres, and movements in Germanic literature and culture. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing or consent of instructor.

GER 385, 285, 385. Conference Course in Germanic Languages or Literature.
Conference course. May be repeated for credit. Prerequisite: Graduate standing and consent of instructor.

GER 386. Periods in Germanic Literature.
Thorough survey of the principal periods of Germanic literature. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing or consent of instructor.

Additional prerequisite: Graduate standing.

An introduction to the critical and technical procedures used in Germanic studies, especially bibliographical aids. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing or consent of instructor.

An introduction to the critical and technical procedures used in Germanic studies, especially bibliographical aids. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing or consent of instructor.

An introduction to the critical and technical procedures used in Germanic studies, especially bibliographical aids. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing or consent of instructor.

GER 392. Seminar in Germanic Literature and Culture.
Study of problems, topics, writers, genres, and movements in Germanic literature and culture. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing or consent of instructor.

Additional prerequisite: Graduate standing.

GER 385. Periods in Germanic Literature.
Thorough survey of the principal periods of Germanic literature. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing or consent of instructor.

Additional prerequisite: Graduate standing.

GER 386. Periods in Germanic Literature.
Thorough survey of the principal periods of Germanic literature. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing or consent of instructor.

Additional prerequisite: Graduate standing.

An introduction to the critical and technical procedures used in Germanic studies, especially bibliographical aids. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing or consent of instructor.

An introduction to the critical and technical procedures used in Germanic studies, especially bibliographical aids. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing or consent of instructor.

An introduction to the critical and technical procedures used in Germanic studies, especially bibliographical aids. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing or consent of instructor.

GER 392. Seminar in Germanic Literature and Culture.
Study of problems, topics, writers, genres, and movements in Germanic literature and culture. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing or consent of instructor.

Additional prerequisite: Graduate standing.

GER 385. Periods in Germanic Literature.
Thorough survey of the principal periods of Germanic literature. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing or consent of instructor.

Additional prerequisite: Graduate standing.

GER 386. Periods in Germanic Literature.
Thorough survey of the principal periods of Germanic literature. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing or consent of instructor.

Additional prerequisite: Graduate standing.

An introduction to the critical and technical procedures used in Germanic studies, especially bibliographical aids. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing or consent of instructor.

An introduction to the critical and technical procedures used in Germanic studies, especially bibliographical aids. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing or consent of instructor.

An introduction to the critical and technical procedures used in Germanic studies, especially bibliographical aids. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing or consent of instructor.

GER 392. Seminar in Germanic Literature and Culture.
Study of problems, topics, writers, genres, and movements in Germanic literature and culture. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing or consent of instructor.

Additional prerequisite: Graduate standing.

GER 385. Periods in Germanic Literature.
Thorough survey of the principal periods of Germanic literature. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing or consent of instructor.

Additional prerequisite: Graduate standing.

GER 386. Periods in Germanic Literature.
Thorough survey of the principal periods of Germanic literature. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing or consent of instructor.

Additional prerequisite: Graduate standing.
GER 393K. Seminar in Germanic Linguistics and Philology.
Study of linguistic topics in Germanic languages, such as grammar, morphology, phonology, dialectology, syntax, lexicology, sociolinguistics. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing or consent of instructor.

Topic 1: German Syntax. Same as Linguistics 384 (Topic 4).
Topic 3: The Acquisition of German. Special problems in the acquisition of German or another Germanic language as a first or second language. German 381 (Topic: The Acquisition of German) and 393K (Topic 3) may not both be counted.

Topic 4: Synchronic Linguistics: German Morphology.
Topic 6: Sociolinguistics: Language Contact and Death.
Topic 7: Sociolinguistics: Texas German Dialect.
Topic 8: Sociolinguistics: German Dialectology.
Topic 10: Older Germanic Languages and Cultures: Old Norse.
Topic 11: Older Germanic Languages and Cultures: Gothic.
Topic 12: Older Germanic Languages and Cultures: Old High German.
Topic 13: Older Germanic Languages and Cultures: Middle High German.
Topic 14: Older Germanic Languages and Cultures: Old Saxon.
Topic 15: Frame Semantics. Same as Linguistics 393S (Topic 3).
Explore theories and applications frame semantics within linguistics. Only one of the following may be counted: German 393K (Topic: Frame Semantics), 393K (Topic 15), Linguistics 393 (Topic: Frame Semantics), 393S (Topic 3). Additional prerequisite: Graduate standing.

Topic 16: Landmarks of Linguistic Thought. Explore the development of linguistic thought through readings of historically important essays. Only one of the following may be counted: Anthropology 393 (Topic: Landmarks Linguistics Thought), German 393K (Topic: Landmarks Linguistic Thought), 393K (Topic 16). Additional prerequisite: Graduate standing.

GER 394C. Topics in Comparative, Cultural, or Theoretical Studies.
Topics with a substantial Germanic component or application that fall outside of national-language literary and linguistic studies. May include comparative national approaches to genre, culture, or society; interdisciplinary studies; and surveys or focused studies on approaches to theory or methodology that apply to Germanic studies. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing or consent of instructor.

Topic 1: Multimodality in Nineteenth-Century Print Culture. Examine theories and examples of image and text relations in nineteenth-century print culture as multimodal book culture. Additional prerequisite: Graduate standing.
Topic 2: Intersectionality: Identity and Politics. Same as Philosophy 387C. Examine current theories of identity and identity politics from the US and Europe, deriving from theories of economic and class-based origins of identity. Only one of the following may be counted: Comparative Literature 382 (Topic: Identity/Politics), German 394C (Topic 2), Philosophy 387 (Topic: Identity/Politics), 387C, Women's and Gender Studies 393 (Topic: Identity/Politics). Additional prerequisite: Graduate standing.
Topic 3: Cold War Cultures. Examine Cold War political and threat narratives and cultures as represented in film, literature, and non-fiction. Only one of the following may be counted: Comparative Literature 381 (Topic: Cold War Culs: Beyond Empire), German 394C (Topic: Cold War Culs: Beyond Empire), (Topic 3), Russian, East European, and Eurasian Studies 386 (Topic: Cold War Culs: Beyond Empire). Additional prerequisite: Graduate standing.

Topic 4: Introduction to German Film. Introduction to German films and approaches to them from film studies. German 394C (Topic: Introduction to German Film) and 394C (Topic 4) may not both be counted. Additional prerequisite: Graduate standing.

Topic 5: European Migration Cultures. Study the issues around migration and cultural contact in Europe, through lenses from the social sciences, history, and cultural studies. Additional prerequisite: Graduate standing.

Topic 6: Power and Identities: Marginalization. Examine theories of power and decolonization illuminating how individuals are marginalized by dominant cultures, supported by historical case studies. Additional prerequisite: Graduate standing.

GER 397P. Topics in Applied Linguistics and Pedagogy.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing or consent of instructor.

Topic 1: Second Language Comprehension and Processing. Same as Language Teaching and Coordination 388 (Topic 1). Explore how second language (L2) learners process language and construct meaning during sentence comprehension. Consider theoretical constructs and research methods as well as the practical applications of sentence processing research. Only one of the following may be counted: German 397P (Topic: 2nd Lang Sentence Compr/Proc), 397P (Topic 1), Language Teaching and Coordination 388 (Topics: (Topic: 2nd Lang Sentence Compr/Proc), 388 (Topic 1).

Topic 2: Second Language Assessment and Testing. Explore how various tools of assessment are designed and implemented in the field of applied linguistics, in language teaching, and for program direction. German 397P (Topic: Second Language Assessment) and 397P (Topic 2) may not both be counted.

Topic 4: Course and Curricular Design. Examine how theories of teaching and learning influence how courses and series of courses are designed to foster certain learning outcomes. Additional prerequisite: Graduate standing.

GER 698. Thesis.
The equivalent of three lecture hours a week for two semesters. Offered on the credit/no credit basis only. Prerequisite: For 698A, graduate standing in Germanic studies and consent of the graduate adviser; for 698B, German 698A.

GER 398R. Master's Report.
Preparation of a report to fulfill the requirement for the master’s degree under the report option. The equivalent of three lecture hours a week for one semester. Offered on the credit/no credit basis only. Prerequisite: Graduate standing in Germanic studies and consent of the graduate adviser.

GER 398T. Supervised Teaching in German.
Analysis of the major foreign language teaching methodologies; curriculum and curricular materials development. Three lecture hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing.

May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Admission to candidacy for the doctoral degree.
**Professional Courses**

**GK - Greek**

**Greek: GK**

**Lower-Division Courses**

**GK 601C. Beginning Greek.**
Studies the fundamentals of grammar and reading in ancient Greek. Six lecture hours a week for one semester. Only one of the following may be counted: Greek 601C; 804; 506 and 507.

**GK 502. First-Year Modern Greek I.**
Introduction to grammar and reading. Five lecture hours a week for one semester. Greek 502 and 602C may not both be counted.

**GK 602C. Beginning Modern Greek.**
Six lecture hours a week for one semester. Greek 502 and 602C may not both be counted. Greek 602C and 503 may not both be counted.

**GK 503. First-Year Modern Greek II.**
Continuation of Greek 502. Five lecture hours a week for one semester. Greek 602C and 503 may not both be counted. Prerequisite: Greek 502 with a grade of at least C.

**GK 804. Intensive Beginning Greek.**
An accelerated course for highly motivated students that combines the material covered in Greek 506 with that covered in the first part of Greek 507. Offered in the summer session as part of the Intensive Greek Program. The Intensive Greek Program meets for five hours each weekday during the summer session. Only one of the following may be counted: Greek 601C; 804; 506 and 507. The student must complete both Greek 804 and 412 in order to earn credit for either; the same grade will be awarded for both courses. Prerequisite: Concurrent enrollment in Greek 412. Students who enroll in 804 must take Greek 412 in the same summer session.

**GK 506. First-Year Greek I.**
Studies the fundamentals of grammar and reading in ancient Greek. Five lecture hours a week for one semester. Only one of the following may be counted: Greek 601C; 804; 506 and 507.

**GK 507. First-Year Greek II.**
Continuation of Greek 506. Five lecture hours a week for one semester. Only one of the following may be counted: Greek 601C; 804; 506 and 507. Greek 507 and 412 may not both be counted. Prerequisite: Greek 506 with a grade of at least C.

**GK 309K. Conference Course.**
Supervised individual instruction in second-year ancient or modern Greek reading. Conference course. May be repeated for credit. Prerequisite: Consent of instructor.

**GK 310. Second-Year Modern Greek I.**
Culture, language, and literature of present-day Greece. Three lecture hours a week for one semester. Greek 310 and 610C may not both be counted. Prerequisite: Greek 602C or 503 with a grade of at least C.

**GK 610C. Intermediate Modern Greek.**
Continuation of Greek 602C. Six lecture hours a week for one semester. Greek 310 and 610C may not both be counted. Greek 610C and 310K may not both be counted. Prerequisite: Greek 602C or 503 with a grade of at least C.

**GK 310K. Second-Year Modern Greek II.**
Continuation of Greek 310. Three lecture hours a week for one semester. Greek 610C and 310K may not both be counted. Prerequisite: Greek 310 with a grade of at least C.

**GK 311. Intermediate Greek I.**
Continuation of Greek 601C or 507. Introductory readings from classical authors such as Lysias, Plato, and Xenophon. Includes grammar review. Three lecture hours a week for one semester. Prerequisite: Greek 601C or 507 with a grade of at least C, or Greek 804 and 412 with a grade of at least C in each.

**GK 412. Intensive Greek.**
An accelerated course for highly motivated students. Completion of this course is equivalent to completion of Greek 506 and 507. Students who enroll in 412 must take Greek 804 in the same summer session. A grade of A may allow the student to advance to Greek 324 with consent of the Greek 324 instructor. The Intensive Greek Program meets for five hours each weekday during the summer session. Greek 507 and 412 may not both be counted. Prerequisite: Concurrent enrollment in Greek 804.

**GK 312K. Intermediate Greek II.**
Continuation of Greek 311. Selected readings from classical and biblical authors. Three lecture hours a week for one semester. Greek 312K and 312L may not both be counted. Prerequisite: Greek 311 with a grade of at least C.

**GK 312L. Intermediate Greek II: Biblical Greek.**
Continuation of Greek 311. A parallel to Greek 312K with a focus on biblical Greek. Three class hours a week for one semester. Greek 312K and 312L may not both be counted. Prerequisite: Greek 311 with a grade of at least C.

Topics in Greek.

This course is used to record credit the student earns while enrolled at another institution in a program administered by the University's Study Abroad Office. Credit is recorded as assigned by the study abroad adviser in the Department of Classics. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

**Upper-Division Courses**

**GK 324. Advanced Greek.**
Reading and analysis of classical authors such as Homer, Herodotus, Euripides, and Plato. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Greek 312K with a grade of at least C.

Topic 1: Euripides.
Topic 2: Herodotus.
Topic 3: Homer's Iliad.
Topic 4: Plato.
Topic 5: Sophocles. Greek 324 (Topic: Junior Reading: Sophocles)
Topic 6: Life of Themistocles. Greek 324 (Topic: Life of Themistocles) and 324 (Topic 6) may not both be counted.
Topic 7: Apollonius. Greek 324 (Topic: Apollonius) and 324 (Topic 7) may not both be counted.
Topic 8: Greek Love Poetry. Greek 324 (Topic: Greek Love Poetry) and 324 (Topic 8) may not both be counted.
Topic 9: Xenophon. Greek 324 (Topic: Xenophon) and 324 (Topic 9) may not both be counted.

Topic 11: Daphnis and Chloe: Ancient Romance. Greek 324 (Topic: Daphnis And Chloe: Anc Romance) and 324 (Topic 11) may not both be counted.

GK 326. Advanced Greek Grammar and Composition.
Study of syntax, style, and principles of written composition. Three lecture hours a week for one semester. Prerequisite: Credit or registration for Greek 324.

GK 328C. Pauline Epistles.
Three lecture hours a week for one semester. Greek 328 (Topic 1) and 328C may not both be counted. Prerequisite: Greek 312K or 312L with a grade of at least C-; or Greek 412 with a grade of at least A-.

Three lecture hours a week for one semester. Greek 328 (Topic 2) and 328D may not both be counted. Prerequisite: Greek 312K or 312L with a grade of at least C-; or Greek 412 with a grade of at least A-.

GK 328E. Biblical Greek: Acts.
Three lecture hours a week for one semester. Only one of the following may be counted: Greek 328 (Topic: Biblical Greek: Acts), 328 (Topic 3), and 328E. Prerequisite: Greek 312K or 312L with a grade of at least C-; or Greek 412 with a grade of at least A-.

Topics in Greek.
This course is used to record credit the student earns while enrolled at another institution in a program administered by the University's Study Abroad Office. Credit is recorded as assigned by the study abroad adviser in the Department of Classics. University credit is awarded for work in an exchange program; it may be counted as coursework taken residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

GK 365. Seminar in Greek.
Critical study of authors such as Thucydides, Demosthenes, and Aeschylus. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Greek 324 or 328.

Topic 1: Aeschylus.
Topic 2: Sophocles.
Topic 3: Thucydides.
Topic 4: Aristophanes.

Topic 5: Plato and Greek Prose. Greek 365 (Topic: Plato and Greek Prose) and 365 (Topic 5) may not both be counted.

Topic 6: Female Poets of Ancient Greece. Greek 365 (Topic: Female Poets of Ancient Greece) and 365 (Topic 6) may not both be counted.

Topic 7: Callimachus. Greek 365 (Topic: Callimachus) and 365 (Topic 7) may not both be counted.

Topic 8: Aristotle. Greek 365 (Topic: Aristotle On Tragedy) and 365 (Topic 8) may not both be counted.

Topic 9: Apollonius Argonautica.

Topic 10: Homer's Iliad: Research and Writing. Greek 365 (Topic: Homer Iliad) and 365 (Topic 10) may not both be counted.

Topic 11: Homer's Odyssey. Greek 365 (Topic: Homer Odyssey) and 365 (Topic 11) may not both be counted.

Topic 12: Classical Historiography. Greek 365 (Topic: Classical Historiography) and 365 (Topic 12) may not both be counted.

Topic 13: Wisdom Poetry. Greek 365 (Topic: Wisdom Poetry) and 365 (Topic 13) may not both be counted.

Topic 14: Plato's Symposium. Greek 365 (Topic: Plato's Symposium) and 365 (Topic 14) may not both be counted.

Topic 15: Plato Phaedrus. Greek 365 (Topic: Plato Phaedrus) and 365 (Topic 15) may not both be counted.

GK 370. Advanced Conference Course.
Supervised reading. Conference course. May be repeated for credit. Prerequisite: Greek 310K or 324, and consent of instructor.

GK 679H. Honors Tutorial Course.
Supervised conference course for honors candidates in Greek. Three conference hours a week for two semesters. Prerequisite: For 679HA, upper-division standing and admission to the honors program in Greek; for 679HB, Greek 679HA.

Graduate Courses

GK 380J. Proseminar in Classical Literature.
Brief survey of the history of classical literature; orientation to the major periods and genres. Three hours a week for one semester. Designed for first-year graduate students. Prerequisite: Graduate standing.

GK 180K. Proseminar.
An introduction to the research methodology and the ancillary disciplines used in current classical studies, or to certain disciplines such as meter, textual criticism. One hour a week for one semester. Topics other than those listed below may also be taught. May be repeated for credit when the topics vary. Offered on the credit/no credit basis only. Prerequisite: Graduate standing.

Topic 1: Research Methods in Classical Studies. Offered on the credit/no credit basis only.

Topics given in recent years include Greek oratory, Aristophanes, and Homer. Three lecture hours a week for one semester. Topics other than those listed below may also be taught. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

Topic 1: Aeschyulus.
Topic 2: Sophocles.
Topic 3: Thucydides.
Topic 4: Aristophanes.

GK 383K. Current Concepts and Research in Greek.
An overview of important theories, issues, and research in classics. Three hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing.

GK 385. Graduate Reading Course.
Topics given in recent years include Plato and Greek prose, Sophocles, and Sophists. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

GK 385W. Graduate Reading Course: Biblical Greek.
Graduate level translation and analysis of topics such as the Pauline epistles or the Gospel of John. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

GK 186K, 386K. Conference Course in Greek Literature.
Conference course. May be repeated for credit. Prerequisite: Graduate standing and consent of instructor.

**GOV 307L. American Government.**
A basic survey of American government, including fundamental political institutions, federal, state, and local; special attention to the United States and Texas Constitutions. Three lecture hours or two lecture hours and one discussion hour a week for one semester. May be paired with Government 305C, 306C, 312L, or 312P to satisfy the legislative Core requirement for government. Offered on the letter-grade basis only.

**GOV 310L. Issues and Policies in American Government.**
Analysis of underlying themes concerned with American political institutions and policies, including the United States Constitution. Three lecture hours or two lecture hours and one discussion hour a week for one semester. May be paired with Government 3010L to satisfy the legislative Core requirement for government. Offered on the letter-grade basis only.

**GOV 312L. Constitutional Principles: Core Texts.**
Close readings from primary texts that have shaped or that reflect deeply upon American democracy, including the Declaration of Independence, The Federalist Papers, and Tocqueville’s Democracy in America. Three lecture hours or two lecture hours and one discussion hour a week for one semester. May be paired with Government 310L to satisfy the legislative Core requirement for government. Offered on the letter-grade basis only.

**GOV 314L. Constitutional Principles: Core Texts.**
Close readings from primary texts that have shaped or that reflect deeply upon American democracy, including the Declaration of Independence, The Federalist Papers, and Tocqueville’s Democracy in America. Three lecture hours or two lecture hours and one discussion hour a week for one semester. May be paired with Government 310L to satisfy the legislative Core requirement for government. Offered on the letter-grade basis only.

**GOV 314N. United States Politics and Government.**
Introduction to varying topics in government and politics. Three lecture hours a week for one semester. Does not fulfill any part of the legislative requirement for government. May be repeated for credit when the topics vary.

2. **Topic 7: Race, Politics, and Identity in Asian America.** Same as Asian American Studies 310 (Topic 2). An introduction to Asian American politics. Subjects include the American political process, and the historic and contemporary role of Asian Americans within that process. Only one of the following may be counted: Asian American Studies 310 (Topic: Race, Identity, and Politics in Asian America), 310 (Topic 2), Government 314 (Topic: Race, Identity and Politics in Asian America), 314 (Topic 7).
3. **Topic 11: Introduction to Politics in East Asia.** Same as Asian Studies 301M (Topic 17). Introduction to politics and political systems of Japan, China, Taiwan, North Korea, and South Korea. Only one of the following may be counted: Asian Studies 301M (Topic: Introduction to Politics in East Asia), 301M (Topic 17), Government 314 (Topic: Introduction to Politics in East Asia), 314 (Topic 11).

**GOV 314C. Competing Visions of the Good Life.**
Same as Core Texts and Ideas 303. Introduces the great rival conceptions of the moral basis and goals of political life as elaborated by revolutionary thinkers throughout the history of political philosophy, including Aristotle, Aquinas, Locke, late modern critics of the Enlightenment, and others. Three lecture hours a week for one semester. Only one of the following may be counted: Core Texts and Ideas 303, Government 314 (Topic 6), 314C.

GOV 314E. Classics of Social and Political Thought.
Same as Core Texts and Ideas 302. Explores the origins of social scientific thought in the history of political philosophy and traces the development of one or more of the social sciences in modern times. Focuses on fundamental ideas about human nature, civil society, and politics, explored through reading such authors as Aristotle, Aquinas, Locke, Rousseau, Marx, Weber, Durkheim, and Freud. Three lecture hours or two lecture hours and one discussion hour a week for one semester. Only one of the following may be counted: Core Texts and Ideas 302, Government 314 (Topic: Classics of Social and Political Thought), 314 (Topic 10), 314E.

GOV 319C. Black and Latinx Intersections.
Same as African and African Diaspora Studies 316F, Mexican American Studies 318F, and Sociology 309D. Examine the complex relationships between and among Black and Latinx communities and the political and structural forces and contexts that shape their interactions. Explore Black identity within the Latinx population, racial politics, coalitions of Black American and Latinx groups, race among Latinxs, racial inequality, and the politics of immigration. Three lecture hours a week for one semester. Only one of the following may be counted: African and African Diaspora Studies 316F, Government 319C, Mexican American Studies 318F, 319 (Topic: Black/Latinx Intersections), Sociology 309D.

GOV 319D. The New Latinas/os/xs.
Same as Anthropology 310J, Mexican American Studies 318G, and Sociology 309G. Explore the trajectories of various communities many have called the new Latinas/os/xs by identifying how race, gender, sexuality, class, indigeneity, language, migration, and geography influence the lives, identities, and sociopolitical incorporation of new Latinas/os/xs. Three lecture hours a week for one semester. Only one of the following may be counted: Anthropology 310J, Government 319D, Mexican American Studies 318G, 319 (Topic: The New Latinas/os/xs), Sociology 309G.

This course is used to record credit the student earns while enrolled at another institution in a program administered by the University's Study Abroad Office. Credit is recorded as assigned by the study abroad adviser in the Department of Government. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

Upper-Division Courses

GOV 320K. United States Constitutional Development: Structures.
Primarily for prelaw students and government majors. A survey of the origin and growth of the American constitutional system, with emphasis on political structures and processes. Three lecture hours a week for one semester. Prerequisite: Six semester hours of lower-division coursework in government.

GOV 320L. Arab-Israeli Politics.
Same as Middle Eastern Studies 341 (Topic 5). In-depth study of domestic, regional, and international factors involved in politics in the Middle East, including simulation of diplomatic interaction in the Arab-Israeli conflict. Government 320L and Middle Eastern Studies 341 (Topic 5) may not both be counted. Prerequisite: Upper-division standing.

GOV 320N. United States Constitutional Development: Rights.
Primarily for prelaw students and government majors. A survey of the origin and growth of the American constitutional system with an emphasis on the development of civil rights and civil liberties in America. Three lecture hours a week for one semester. Government 320N and 357M (Topic: American Constitutional Development II) may not both be counted. Prerequisite: Six semester hours of lower-division coursework in government.

GOV 321M. Politics in Japan.
Same as Asian Studies 321M. Survey of postwar Japanese politics; the occupation, governmental institutions, interest groups, protest movements, industrial policy, the government-business relationship, and political and economic reform. Three lecture hours a week for one semester. Asian Studies 321M and Government 321M may not both be counted. Prerequisite: Six semester hours of lower-division coursework in government.

GOV 322M. Politics in China.
Same as Asian Studies 322M. Survey of twentieth-century China: historical trends; 1911 revolution; Warlord-Nationalist period; Communist revolution; post-1949 issues; new social and political institutions. Three lecture hours a week for one semester. Only one of the following may be counted: Asian Studies 322M, 361 (Topic: Politics in China), Government 322M. Prerequisite: Six semester hours of lower-division coursework in government.

GOV 324C. Political Ideologies and Manifestos.
Same as European Studies 348 (Topic 16), Religious Studies 335C, and Russian, East European, and Eurasian Studies 335 (Topic 33). Survey major political ideologies like socialism, capitalism, and fascism; as well as the more recent so-called “Fourth Political Theory” of Russian ideologue Aleksandr Dugin, (variable) popular ideologies, and internet manifestos. Explore each ideology through original texts and utopian/dystopian representations in popular culture (e.g., literature, film, music, graphic art, architecture, design). Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 348 (Topic 16), Government 324C, Religious Studies 335C, Russian, East European, and Eurasian Studies 335 (Topic: Polit Ideologies/Manifestos), 335 (Topic 33). Prerequisite: Upper-division standing.

GOV 324D. Populism in Central and Eastern Europe.
Same as European Studies 348 (Topic 12) and Russian, East European, and Eurasian Studies 335 (Topic 34). Survey the political nature, profile, and patterns of populism in selected post-communist democracies of Central and Eastern Europe. Examine populism in terms of impact on agenda setting, political process, and governance of the region in focus at specific national and European Union-wide levels. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 348 (Topic 12), Government 324D, 360N (Topic: Populism Central/Europe), Russian, East European, and Eurasian Studies 335 (Topic: Populism Central/Europe), 335 (Topic 34). Prerequisite: Upper-division standing.

GOV 324E. Intelligence and Espionage in the Eastern Bloc.
Same as European Studies 348 (Topic 19) and Russian, East European, and Eurasian Studies 335 (Topic 36). Examine the specific national approaches to foreign and domestic intelligence and espionage of former Communist bloc countries from early twentieth century to the collapse of communism in Eastern Europe. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 348 (Topic 19), Government 324E, Russian, East European, and Eurasian Studies 335 (Topic 36). Prerequisite: Upper-division standing.
GOV 324J. Governments and Politics of Eastern Europe.
Same as European Studies 348 (Topic 1: Governments and Politics of Eastern Europe) and Russian, East European, and Eurasian Studies 335 (Topic 2: Governments and Politics of Eastern Europe). Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 348 (Topic 1), Government 324J, Russian, East European, and Eurasian Studies 335 (Topic 2). Prerequisite: Six semester hours of lower-division coursework in government.

GOV 324L. Governments and Politics of Western Europe.
Same as European Studies 350. Comparative study of peoples, institutions, parties, interest groups, and bureaucracy in the countries of Western Europe, concentrating on the major political systems of Britain, France, Germany, and Italy. Three lecture hours a week for one semester. European Studies 350 and Government 324L may not both be counted. Prerequisite: Six semester hours of lower-division coursework in government.

GOV 325. Political Parties.
Character of the American party system, organization and leadership; pressure politics; the nominating process, campaigns, suffrage, elections, and the expression of public opinion. Three lecture hours a week for one semester. Prerequisite: Six semester hours of lower-division coursework in government.

GOV 326D. Data Science for the Social World.
Same as Sociology 326D. Introduction to data science for the political and economic world. Explore a variety of political and economic data and develop proficiency in R and Excel. Three lecture hours a week for one semester. Only one of the following may be counted: Government 326D, 355M (Topic: Data Science for the Social World), Sociology 326D. Prerequisite: Upper-division standing.

GOV 327L. Public Opinion and American Politics.
The nature of and major influences on public attitudes, the measurement of public opinion, and the role of public opinion in government. Three lecture hours a week for one semester. Prerequisite: Six semester hours of lower-division coursework in government.

GOV 328L. Introduction to Latin American Government and Politics.
Same as Latin American Studies 337M (Topic 5: Introduction to Latin American Government and Politics). An introductory survey of Latin American political systems: governmental organization, political processes, and current problems. Three lecture hours a week for one semester. Prerequisite: Six semester hours of lower-division coursework in government.

This course is used to record credit the student earns while enrolled at another institution in a program administered by the University’s Study Abroad Office. Credit is recorded as assigned by the study abroad adviser in the Department of Government. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

GOV 330K. The American President.
Development of the power and influence of the president; nomination, election, and responsibility; case studies of presidential problems; comparison of president and other executives. Three lecture hours a week for one semester. Prerequisite: Six semester hours of lower-division coursework in government.

GOV 331L. Law and Society.
Designed primarily for prelaw students. The role of law in the context of major social issues; legal research and oral argument. Three lecture hours a week for one semester. Prerequisite: Six semester hours of lower-division coursework in government.

GOV 335C. Religion in American Political Thought.
Same as Religious Studies 346P. Explore religion and politics in the United States through reading of mostly primary sources addressing religious arguments taking positions on historical and contemporary issues. Three lecture hours a week for one semester. Only one of the following may be counted: Government 335C, 335M (Topic 6), Religious Studies 346 (Topic 2), 346P. Prerequisite: Six semester hours of lower-division coursework in Government.

GOV 335D. Natural Law Theory.
Same as Philosophy 342 (Topic 1). Study of the fundamental moral principles that are built into the design of human nature and lie at the roots of conscience. Three lecture hours a week for one semester. Only one of the following may be counted: Government 335D, 335M (Topic: Natural Law Theory), 335M (Topic 12), and Philosophy 342 (Topic: Natural Law Theory), Philosophy 342 (Topic 1). Prerequisite: Upper-division standing and six semester hours of lower-division coursework in government.

GOV 335E. Hegel and the Formation of Modern European Identity.
Same as Core Texts and Ideas 335E and European Studies 348 (Topic 6). An in-depth study of how Hegel identifies the social conditions necessary for personal self-realization but also for freedom by means of political community. Three lecture hours a week for one semester. Only one of the following may be counted: Core Texts and Ideas 335 (Topic: Hegel and the Formation of Modern European Identity), 335 (Topic 3), 335E, European Studies 348 (Topic: Hegel and the Formation of Modern European Identity), 348 (Topic 6), Government 335E, 335M (Topic: Hegel and the Formation of Modern European Identity), 335M (Topic 13). Prerequisite: Upper-division standing and six semester hours of lower-division coursework in government.

GOV 335F. Women in the History of Political Thought.
Same as Core Texts and Ideas 335W and Women’s and Gender Studies 345 (Topic 32). Examines the themes of women, the family, and the private sphere in the history of political theory. Three lecture hours a week for one semester. Only one of the following may be counted: Core Texts and Ideas 335 (Topic: Women in Hist of Polit Thought), 335 (Topic 5), 335W, Government 335F, 335M (Topic: Women in History of Political Thought), 335M (Topic 17), Women’s and Gender Studies 345 (Topic: Women in History of Political Thought), 345 (Topic 32). Prerequisite: Upper-division standing and six semester hours of lower-division coursework in government.

GOV 335G. African American Social and Political Thought.
Same as African and African Diaspora Studies 351M, American Studies 321J, and Core Texts and Ideas 326J. Examines the speeches and writings by major theorists and critics of the prophetic tradition of black political thought. Three lecture hours a week for one semester. Only one of the following may be counted: African and African Diaspora Studies 351M, 374D (Topic 21), American Studies 321J, Core Texts and Ideas 326 (Topic 3), 326J, Government 335G, 335M (Topic 10). Prerequisite: Upper-division standing and six semester hours of lower-division coursework in government.

GOV 335I. Political Bioethics.
Analyze the decisional challenges facing political communities in deciding how to regulate future genetic manipulation of human embryos.
as therapy for diseases and as enhancement of normal capacities. Three lecture hours a week for one semester. Government 335I and 355M (Topic: Political Bioethics) may not both be counted. Prerequisite: Upper-division standing.

GOV 335M. Topics in Political Thought.
Intensive examination of selected issues in political thought. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Upper-division standing and six semester hours of lower-division coursework in government.

GOV 335N. Topics in American State Government and Politics.
Analysis of varying topics in the study of American state government and politics. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Six semester hours of lower-division coursework in government.

GOV 335O. Politics and Literature.
Same as Core Texts and Ideas 324. Explores the "old battle between the poets and philosophers," in which the two sides battle for recognition as the deepest source of wisdom about politics and ethics. Includes readings from great works of political philosophy and literature. Three lecture hours or two lecture hours and one discussion hour a week for one semester. Only one of the following may be counted: Core Texts and Ideas 324, Government 335M (Topic: Politics and Literature), 335M (Topic 15), 335O. Prerequisite: Upper-division standing and six semester hours of lower-division coursework in government.

GOV 335P. Classics of Social Scientific Thought.
Same as Core Texts and Ideas 365. Studies a selection of foundational modern classics in economics, psychology, sociology, political science, and anthropology, drawn mainly from the nineteenth and twentieth centuries. Three lecture hours or two lecture hours and one discussion hour a week for one semester. Only one of the following may be counted: Core Texts and Ideas 365, Government 335M (Topic: Classics of Social Scientific Thought), 335P. Prerequisite: Upper-division standing.

GOV 335Q. Global Justice.
Overview of contemporary theories on core issues of justice across national borders. Three lecture hours a week for one semester. Only one of the following may be counted: Government 335M (Topic: Global Justice), 335M (Topic 11), 335Q. Prerequisite: Upper-division standing and six semester hours of lower-division coursework in government.

GOV 335R. Intellectual World of the American Founders.
A study of readings about politics, history, economics, ethics, religion, and law and their intellectual influence on founders such as Thomas Jefferson, George Washington, James Madison, and Alexander Hamilton. Three lecture hours a week for one semester. Only one of the following may be counted: Government 335M (Topic: Intellectual World of the American Founders), 335M (Topic 14), 335R. Prerequisite: Upper-division standing and six semester hours of lower-division coursework in government.

GOV 336M. Governments and Politics of Russia.
Issues of nationalism and state-building facing Russia and its neighbors. Evaluation of the post-Soviet experience from the perspectives of both domestic and foreign policy. Three lecture hours a week for one semester. Government 336M and Russian, East European, and Eurasian Studies 335 (Topic 3: Governments and Politics of Russia) may not both be counted. Prerequisite: Six semester hours of lower-division coursework in government.

GOV 337C. The Politics of Mexico.
Same as Latin American Studies 337T. Explore Mexico's political and economic development. Three lecture hours a week for one semester. Only one of the following may be counted: Government 337C, 337M (Topic 6), Latin American Studies 337M (Topic 11), 337T. Prerequisite: Six semester hours of lower-division coursework in Government.

GOV 337D. Law and Democracy in Latin America.
Same as Latin American Studies 337O. Explore many of the challenges to the rule of law across Latin America and how they affect the quality of democracy in the region. Three lecture hours a week for one semester. Only one of the following may be counted: Government 337D, 337M (Topic 7), Latin American Studies 337M (Topic 12), 337O. Prerequisite: Six semester hours of lower-division coursework in Government.

GOV 337E. International Politics of Latin America.
Same as Latin American Studies 337P. Analyze Latin America's political and economic relations with respect to external actors. Three lecture hours a week for one semester. Only one of the following may be counted: Government 337E, 337M (Topic 8), Latin American Studies 337M (Topic 13), 337P. Prerequisite: Six semester hours of lower-division coursework in Government.

GOV 337F. Politics, Economy, and Society of Contemporary Brazil.
Same as Latin American Studies 337Q. Examine major economic, political, and sociological developments in Brazil. Three lecture hours a week for one semester. Only one of the following may be counted: Government 337F, 337M (Topic 9), Latin American Studies 337M (Topic 14), 337Q. Prerequisite: Six semester hours of lower-division coursework in Government.

GOV 337G. The Politics of Development in Latin America.
Same as Latin American Studies 337T. Examine the struggle for development in Latin America. Three lecture hours a week for one semester. Only one of the following may be counted: Government 337G, 337M (Topic 2), 337M (Topic 16), Latin American Studies 337M (Topic 2), 337M (Topic 16), 337T. Prerequisite: Six semester hours of lower-division coursework in Government.

GOV 337J. Race Politics and Caribbeans.
Same as African and African Diaspora Studies 345U, Mexican American Studies 364R, and Sociology 322N. Examine racial and political themes among Spanish-speaking Caribbeans on the islands and in the United States. Explore racial politics in the three countries and compares notions of identity, experiences with racism and anti-racist protest with the United States. Three lecture hours a week for one semester. Only one of the following may be counted: African and African Diaspora Studies 345U, Government 337J, Mexican American Studies 364R, 374 (Topic: Race Politics & Caribbeans), Sociology 322N. Prerequisite: Upper-division standing.

GOV 337N. Race and Ethnicity Politics.
Same as African and African Diaspora Studies 360K, Mexican American Studies 364Q, and Sociology 322K. Explore racial and ethnic politics throughout the United States with a focus on Black and Latino politics. Examine group identity, racial inequality, policy making, activism, criminal justice system, and immigration. Three lecture hours a week for one semester. Only one of the following may be counted: African and African Diaspora Studies 360K, Government 337N, Mexican American Studies 364Q, 374 (Topic: Race and Ethnicity Politics), Sociology 322K. Prerequisite: Upper-division standing.
GOV 337V. Mexican American Political Thought.
Same as Mexican American Studies 364I. Critically explore the multiple complementary and contradictory intellectual expressions of Mexican American political thought. Pay particular attention to Texas from the mid-nineteenth century through the period of the Chicoano Movement in the latter part of the twentieth century. Three lecture hours a week for one semester. Only one of the following may be counted: Government 337M (Topic: Mex Amer Political Thought), 337V, Mexican American Studies 364I, 374 (Topic: Mex Amer Political Thought). Prerequisite: Upper-division standing.

GOV 338L. East Asian International Relations.
Same as Asian Studies 338L. Survey of Russian/Soviet, Japanese, Chinese, and American foreign policies of the twentieth century, emphasizing Pacific-region interests; historical policies; intermittent conflicts, such as China versus Japan, Korean War, Indochina Wars; China's emergence as a nuclear power. Three lecture hours a week for one semester. Only one of the following may be counted: Asian Studies 338L, 361 (Topic: East Asian International Relations), Government 338L. Prerequisite: Upper-division standing and six semester hours of lower-division coursework in government.

GOV 339L. Research Methods in Government.
An introduction to research design, data collection and analysis, and the use of the computer and related equipment. Three lecture hours a week for one semester. Prerequisite: Six semester hours of lower-division coursework in government.

GOV 341M. Decision Theory.
An introduction to the basic concepts and models using decision theory in political science, with particular emphasis on utility analysis, game theory, coalition formation, and voting behavior. Three lecture hours a week for one semester. Prerequisite: Six semester hours of lower-division coursework in government.

GOV 342N. Public Choice.
The political-economic models that have developed in this area of social science. Three lecture hours a week for one semester. Prerequisite: Six semester hours of lower-division coursework in government.

GOV 344. American Foreign Relations.
The aims, methods, and accomplishments of United States foreign policy since World War II, by geographic areas and by special problems. Three lecture hours a week for one semester. Prerequisite: Six semester hours of lower-division coursework in government.

GOV 344L. Introduction to Comparative Politics.
Introductory survey of basic concepts, perspectives, approaches, and trends in comparative politics, with emphasis on the formal-legal, group, class, elite, political culture, structural-functional, and systems approaches. Three lecture hours a week for one semester. Prerequisite: Six semester hours of lower-division coursework in government.

GOV 345C. Gender and Politics in a Comparative Perspective.
Same as Women's and Gender Studies 345M. Examine the patterns of women's representation over time, and in different regions of the world. Explore why gender equality in political institutions is important, tracing the evolution of feminism over time. Three lecture hours a week for one semester. Only one of the following may be counted: Government 345C, 355M (Topic: Gender/Pol in a Comp Persp), 365N (Topic: Gender/Pol in a Comp Persp), Women's and Gender Studies 345M. Prerequisite: Upper-division standing.

GOV 347K. Governments and Politics of South Asia.
Same as Asian Studies 347K. A survey of political developments, governmental organization, and economic and social problems in South Asia. Three lecture hours a week for one semester. Prerequisite: Six semester hours of lower-division coursework in government.

GOV 347L. Introduction to Political Theory.
Study of political theory: what it is; its origins; tradition; political theory today. Three lecture hours a week for one semester. Prerequisite: Six semester hours of lower-division coursework in government.

GOV 347N. Governments and Politics of Southeast Asia.
A survey of past and present governments and politics of the entire Southeast Asia region. Three lecture hours a week for one semester. Government 347N and 365L (Topic: Governments and Politics in Southeast Asia) may not both be counted. Prerequisite: Six semester hours of lower-division coursework in government.

GOV 347P. Politics of Protecting the Great Barrier Reef.
Same as Geography 322G. Examine the numerous environmental challenges Australia's Great Barrier Reef (GBR) faces. Explore the livelihoods of the people who depend on or impact the GBR, and the people who are trying to save it. Three lecture hours a week for one semester. Geography 322G and Government 347P may not both be counted. Prerequisite: Upper-division standing.

GOV 348C. The European Union and Regional Integration.
Same as European Studies 348 (Topic 5). Designed to provide a detailed introduction to the European Union, one of America's major economic and political partners and one of the major actors in contemporary international relations. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 348 (Topic: European Union and Regional Integration), 348 (Topic 5), Government 348C, 365N (Topic: European Union and Regional Integration), 365N (Topic 25). Prerequisite: Upper-division standing.

GOV 350K. Statistical Analysis in Political Science.
Elementary statistical techniques and their applications to problems in political science. Three lecture hours a week for one semester. Prerequisite: Six semester hours of lower-division coursework in government.

GOV 351C. The Classical Quest for Justice.
Same as Core Texts and Ideas 320. Introduces students to classical political thought through a study of seminal works of antiquity, focusing on those of Plato and Aristotle. Three lecture hours a week for one semester. Only one of the following may be counted: Core Texts and Ideas 320, 335 (Topic: Classical Quest for Justice), Government 335M (Topic: Classical Quest for Justice), 351C. Prerequisite: Completion of at least thirty semester hours of coursework.

GOV 351D. The Theoretical Foundations of Modern Politics.
Same as Core Texts and Ideas 321. Examines competing foundations of the ongoing development of political and social modernity. Examines a selection of major authors from Machiavelli to Nietzsche. Three lecture hours a week for one semester. Only one of the following may be counted: Core Texts and Ideas 321, 335 (Topic: The Theoretical Foundations of Modern Politics), Government 335M (Topic: The Theoretical Foundations of Modern Politics), 351D, Western Civilization 320 (Topic: The Theoretical Foundations of Modern Politics). Prerequisite: Completion of at least thirty semester hours of coursework.

GOV 351E. Contemporary Political Theory.
Introduces ongoing debates about identity, power, justice, rights, and democracy that are central to the theories of contemporary thinkers.
from Arendt to Habermas. Three lecture hours a week for one semester. Government 355M (Topic: Contemporary Political Theory) and 351E may not both be counted. Prerequisite: Completion of at least thirty semester hours of coursework.

**GOV 351G. Critics of Modern Liberalism.**
Same as Core Texts and Ideas 322. Selected critics of the philosophy of the Enlightenment from both the Left and the Right, and from the time of Rousseau to the present. Three lecture hours or two lecture hours and one discussion hour a week for one semester. Only one of the following may be counted: Core Texts and Ideas 322, Government 355M (Topic: Liberalism and its Critics), 351G. Prerequisite: Upper-division standing.

**GOV 351J. Might and Right among Nations.**
Same as Core Texts and Ideas 323. Major alternative approaches to the question of the moral character of international relations, as elaborated by some of the greatest political thinkers. Three lecture hours or two lecture hours and one discussion hour a week for one semester. Only one of the following may be counted: Core Texts and Ideas 323, 335 (Topic: Might and Right among Nations), Government 335M (Topic: Might and Right among Nations), 351J, Western Civilization 320 (Topic: Might and Right among Nations). Prerequisite: Upper-division standing and six semester hours of lower-division coursework in government.

**GOV 351L. Morality and Politics.**
Same as Core Texts and Ideas 325. Interdisciplinary readings from major works exploring issues of ethics and leadership. Three lecture hours or two lecture hours and one discussion hour a week for one semester. Only one of the following may be counted: Core Texts and Ideas 325, Government 335M (Topic: Morality and Politics), 351L. Prerequisite: Upper-division standing.

**GOV 351P. Tyranny and Politics.**
Explore what tyranny is and how it relates to political life. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

**GOV 351R. Kant and Our Modern Age.**
Explore the philosophical principles in the works of Immanuel Kant (1724-1804) as one of the most important and still influential contributors to the European Enlightenment. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

**GOV 351S. Xenophon and Machiavelli.**
Explore the themes of morality and leadership in the writings of two great political philosophers, the ancient Athenian Xenophon and the renaissance Florentine Machiavelli. Three lecture hours a week for one semester. Government 351S and 355M (Topic: Xenophon and Machiavelli) may not both be counted. Prerequisite: Upper-division standing.

**GOV 353D. Darwin and the Politics of Evolution.**
Same as Core Texts and Ideas 372. A careful reading of Darwin's influential Origin of the Species by Means of Natural Selection, together with an examination of the religious, political, and scientific controversies the book has inspired from its first publication to the present day. Three lecture hours or two lecture hours and one discussion hour a week for one semester. Only one of the following may be counted: Core Texts and Ideas 370 (Topic: The Politics of Evolution), 372, Government 335M (Topic: The Politics of Evolution), 353D. Prerequisite: Upper-division standing and six semester hours of lower-division coursework in government.

**GOV 355C. Applied Research Methods I.**
Introduction to the research process in the social sciences. The primary emphasis is on engaging in research projects, writing research proposals, analyzing data, and presenting research. Three lecture hours a week for one semester. Only one of the following may be counted: Government 355C, 355M (Topic: Applied Research Methods in Political Science), 355M (Topic 2). Prerequisite: Upper-division standing and six semester hours of lower-division coursework in government.

**GOV 355D. Applied Research Methods II.**
Introduction to the research process in the social sciences. The primary emphasis is on engaging in research projects, writing research proposals, analyzing data, and presenting research. Three lecture hours a week for one semester. Only one of the following may be counted: Government 355D, 355M (Topic: Applied Research Methods in Political Science), 355M (Topic 2). Prerequisite: Government 355C.

**GOV 355J. Human Behavior as Rational Action.**
An economic approach in studying rational action. Three lecture hours a week for one semester. Government 355J and 355M (Topic 1) may not both be counted. Prerequisite: Upper-division standing and six semester hours of lower-division coursework in government.

**GOV 355M. Topics in Political Science.**
Emphasis on varying topics in government and politics of contemporary interest and concern. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Six semester hours of lower-division coursework in government.

**GOV 355N. World War I in Real Time.**
Follows the timeline of World War I events as they happened. Using the tools of political science, engages modern, cutting edge theories and evidence about the origins and conduct of war to address why "the seminal tragedy of modern times" occurred when it did, and what we can learn from it in the present. Three lecture hours a week for one semester. Government 355M (Topic: World War I in Real Time) and 355N may not both be counted. Prerequisite: Upper-division standing and six semester hours of lower-division coursework in government.

**GOV 355P. Political Sociology.**
Same as Sociology 320K. A survey of approaches to the study of the state as a social structure; political power and power systems; ideology; political parties and elites. Three lecture hours a week for one semester. Government 355P and Sociology 320K may not both be counted. Prerequisite: Forty-five semester hours of coursework.

**GOV 357C. Constitutional Interpretation.**
Same as Core Texts and Ideas 326C. Designed to improve reasoning and communication skills through constitutional interpretation. Determining what the Constitution means, how to determine what it means, and who should determine what it means. Three lecture hours a week for one semester. Only one of the following may be counted: Core Texts and Ideas 326 (Topic: Constitutional Interpretation), 326 (Topic 1), 326C, Government 357C, 357M (Topic 5). Prerequisite: Upper-division standing and six semester hours of lower-division coursework in government.

**GOV 357D. Civil Liberties.**
Same as Core Texts and Ideas 326L. Explore the United States constitution and Supreme Court with a focus on civil rights and liberties. Three lecture hours a week for one semester. Only one of the following may be counted: Core Texts and Ideas 326 (Topic: Civil Liberties), 326L, Government 357D, 357M (Topic 4). Prerequisite: Six semester hours of lower-division coursework in Government.

**GOV 357E. Supreme Court and Public Policy.**
Explore the effects of American politics and culture on the Supreme Court and vice versa. Three lecture hours a week for one semester. Government 357E and 357M (Topic 3) may not both be counted.
Prerequisite: Six semester hours of lower-division coursework in Government.

GOV 357F. Constitutional Structure of Power.
Explore the structures of power in a constitutional democracy. Three lecture hours a week for one semester. Only one of the following may be counted: Government 357F, 357M (Topic: Constitutnl Struct of Power), 357M (Topic 7). Prerequisite: Six semester hours of lower-division coursework in Government.

GOV 357G. Structure of Individual Liberties.
Same as Core Texts and Ideas 326S. Explore the ways in which the Constitution protects individual rights while accommodating the often competing claims of state, groups, and communities. Three lecture hours a week for one semester. Only one of the following may be counted: Core Texts and Ideas 326 (Topic: Structure of Indiv Liberties), 326S, Government 357G, 357M (Topic 8). Prerequisite: Six semester hours of lower-division coursework in Government.

GOV 357J. Law of Politics.
Explore theoretical and philosophical issues at the intersection of law and politics. Three lecture hours a week for one semester. Only one of the following may be counted: Government 357J, 357M (Topic: Law of Politics), 357M (Topic 10). Prerequisite: Six semester hours of lower-division coursework in Government.

GOV 357L. Judicial Process and Behavior.
Introduction to traditional and modern approaches to the study of the judicial process, with emphasis on the nature and origin of judicial decisions and the factors that affect judicial decision making. Three lecture hours a week for one semester. Prerequisite: Six semester hours of lower-division coursework in government.

GOV 357M. Topics in Public Law.
Intensive study of various aspects of law and the legal system. Three lecture hours or two lecture hours and one discussion hour a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Six semester hours of lower-division coursework in government.

GOV 357V. Asian American Jurisprudence.
Same as Asian Studies 321T and Asian American Studies 325N. Examine the historical development of United States law and its relationship to Asian Americans, and of Asian American jurisprudence as an independent field of legal scholarship. Three lecture hours a week for one semester. Only one of the following may be counted: American Studies 321 (Topic 5), 321T, Asian American Studies 325 (Topic 5), 325N, Government 357M (Topic 9), 357V. Prerequisite: Upper-division standing.

GOV 358. Introduction to Public Policy.
A survey of American public policy, with emphasis on modern problems and trends. Three lecture hours a week for one semester. Prerequisite: Six semester hours of lower-division coursework in government.

GOV 360C. Introduction to International Relations.
Three lecture hours a week for one semester. Government 360C and 360N (Topic 10) may not both be counted. Prerequisite: Upper-division standing and six semester hours of lower-division coursework in Government.

Same as International Business 360D. Explore the conditions and motivations behind the use of military force in world politics. Three lecture hours a week for one semester. Only one of the following may be counted: Government 360D, 360N (Topic 12), International Business 360D. Prerequisite: Six hours of lower-division coursework in Government.

GOV 360E. International Political Economy.
Study of the changing relationship between political and economic power in international relations. Three lecture hours a week for one semester. Government 360E and 360N (Topic 11) may not both be counted. Prerequisite: Upper-division standing and six semester hours of lower-division coursework in government.

GOV 360F. Global Governance.
Explore the forces that shape global stability and instability with a focus on international agreements. Three lecture hours a week for one semester. Only one of the following may be counted: Government 360F, 360N (Topic: Global Governance), 360N (Topic 13). Prerequisite: Six semester hours of lower-division coursework in Government.

GOV 360G. Causes of War.
Same as Russian, East European, and Eurasian Studies 335 (Topic 21). Three lecture hours a week for one semester. Only one of the following may be counted: Government 360G, 360N (Topic 2), Russian, East European, and Eurasian Studies 335 (Topic: Causes of War), 335 (Topic 21).

GOV 360I. The Politics of International Trade.
Examine the relationship between international trade, and domestic and international politics. Three lecture hours a week for one semester. Only one of the following may be counted: Business, Government, and Society 370 (Topic: Pol of International Trade), Government 360L, 360N (Topic: Pol of International Trade). Prerequisite: Six semester hours of lower-division coursework in Government.

GOV 360J. Globalization and the Nation State.
Explore the evolution of the global economy. Three lecture hours a week for one semester. Government 360J and 360N (Topic: Globalization/The Nation State) may not both be counted. Prerequisite: Six semester hours of lower-division coursework in Government.

GOV 360O. Business and Society.
Explore the relationship between firms and society, including the role of regulation and government policy in shaping economic outcomes. Examine how governments encourage economic activity. Three lecture hours a week for one semester. Only one of the following may be counted: Business, Government, Society 370 (Topic: Business and Society), 370 (Topic 6), Government 355M (Topic: Business and Society), 360N (Topic: Business and Society), 360P. Prerequisite: Six semester hours of lower-division coursework in government and upper-division standing.

GOV 360P. International Organization.
In-depth introduction to the theory and practice of international organizations. Three lecture hours a week for one semester. Only one of the following may be counted: Government 360N (Topic: International Organizations), 360N (Topic 3), 360P. Prerequisite: Upper-division standing and six semester hours of lower-division coursework in government.
GOV 360R. Civil Wars and Ethnic Violence.
Study of the ethnic conflicts and civil wars that pose the greatest threats to international peace and security today. Three lecture hours a week for one semester. Only one of the following may be counted: Government 360N (Topic: Civil Wars and Ethnic Violence), 360N (Topic 16), 360R. Prerequisite: Upper-division standing and six semester hours of lower-division coursework in government.

GOV 360S. Terrorism and Counterterrorism.
Examines the historical origins of terrorist violence, the primary causes of terrorist acts committed both by opposition and government forces, as well as counter terrorist measures taken by states and international organizations. Three lecture hours a week for one semester. Only one of the following may be counted: Government 360N (Topic: Terrorism and Counterterrorism), 360N (Topic 17), 360S. Prerequisite: Upper-division standing and six semester hours of lower-division coursework in government.

GOV 362C. Globalization and the Coronavirus Pandemic.
Same as European Studies 348 (Topic 18), German, Scandinavian, and Dutch Studies 362C, and Sociology 323G. Examine the modern globalization process that also incorporates a description of the current Coronavirus pandemic as a phenomenon that is inextricably linked with modern globalization. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 348 (Topic: Globalization/Coronavirus Pandemic), 348 (Topic: Globalization/Coronavirus Pandemic), 348 (Topic 15), German, Scandinavian, and Dutch Studies 360 (Topic: Globalization/Coronavirus Pandemic), 360 (Topic: Globalization/Coronavirus Pandemic), Government 355M (Topic: Globalization/Coronavirus Pandemic), 355M (Topic: Globalization/Coronavirus Pandemic), 362C (Topic: Globalization/Coronavirus Pandemic), 321K (Topic: Globalization/Coronavirus Pandemic), 321K (Topic: Globalization/Coronavirus Pandemic), 323G. Prerequisite: Upper-division standing.

GOV 362L, 662L. Government Research Internship.
Fieldwork in research and analysis on governmental and political problems. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. Only six semester hours of an internship course in government may be counted toward a major in government. Prerequisite: Six semester hours of lower-division coursework in government and consent of instructor.

GOV 662N. Archer Center Washington Internship.
Fieldwork in research and analysis on governmental and political problems. The equivalent of six lecture hours and twenty fieldwork hours a week for one semester. Prerequisite: Thirty semester hours of coursework and consent of instructor.

GOV 362S. Memories of War.
Same as American Studies 321W, European Studies 346 (Topic 42), and German, Scandinavian, and Dutch Studies 362D. Consider the ways the wars of the twentieth and twenty-first century are being remembered in Germany and the United States - from poems, novels and films to monuments and the controversial debates about military conflicts that the two countries have been involved in. Utilize theories of social memory, and concepts of individual and social mourning, to analyze how war affects individual lives, how societies mourn, and how remembering war impacts national identity and politics. Three lecture hours a week for one semester. Only one of the following may be counted: American Studies 321 (Topic: Memories of War), 321W, European Studies 346 (Topic: Memories of War), 346 (Topic 42), German, Scandinavian, and Dutch Studies 360 (Topic: Memories of War), 362D, Government 362S. Prerequisite: Upper-division standing.

GOV 362U. Security and Policy in Eastern Europe and Russia.
Same as European Studies 348 (Topic 13) and Russian, East European, and Eurasian Studies 335 (Topic 31). Examine key contemporary security issues and policy dilemmas through the perspective of post-communist Eastern European countries in the context of European Union (EU) enlargement waves, and in the framework of their membership in supranational organizations. Consider the transformation of regional states' national security strategies, threat perception, and priorities transitioning from former Warsaw pact to full-fledged EU and NATO membership in shaping their respective national security priorities. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 348 (Topic 13), Government 362U, 365N (Topic: Security/Policy E Eur/Rus), Russian, Eastern Europe, and Eurasian Studies 335 (Topic: Security/Policy E Eur/Rus), 335 (Topic 31). Prerequisite: Upper-division standing.

GOV 363U. Switzerland and Globalization.
Same as European Studies 348 (Topic 15) and German, Scandinavian, and Dutch Studies 361T. Investigate how the small European country of Switzerland positions itself in a globalized world and how it competes and thrives in it. Explore the questions of how globalization impacts a small, affluent country and how its economy copes with globalization. Consider Swiss history, and its development of direct democracy, to understand Swiss exceptionalism, its response to contemporary issues, and its influence abroad. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 348 (Topic: Switzerland/Globalization), 348 (Topic 15), German, Scandinavian, and Dutch Studies 360 (Topic: Switzerland/Globalization), 361T, Government 365N (Topic: Switzerland/Globalization), 363U. Prerequisite: Upper-division standing.

GOV 364C. Islam and Politics.
Same as Middle Eastern Studies 341 (Topic 9) and Religious Studies 358C. An introduction to Islamic political thought. Three lecture hours a week for one semester. Only one of the following may be counted: Government 364C, 365N (Topic: Islam and Politics), Islamic Studies 373 (Topic: Islam and Politics), 373 (Topic 19), Middle Eastern Studies 341 (Topic: Islam and Politics), 341 (Topic 9), Religious Studies 358 (Topic: Islam and Politics), 358C. Prerequisite: Upper division standing.

GOV 364D. Evolution of Special Operation Forces.
Explore the global evolution of Special Operations Forces from different theoretical perspectives, including historical institutionalism, complexity, and bureaucratic politics. Three lecture hours a week for one semester. Only one of the following may be counted: Government 355M (Topic: Evolution of Spec Op Forces), 364D, 365N (Topic: Global Evol Spec Op Forces). Prerequisite: Six semester hours of lower-division coursework in government and upper-division standing.

GOV 364F. Soundtrack of Revolutions.
Same as Middle Eastern Studies 342 (Topic 70) and Sociology 320S. Examine the significance of music in the social and political uprisings of countries across the Middle East. Three lecture hours a week for one semester. Only one of the following may be counted: Government 364F, Middle Eastern Studies 342 (Topic: Soundtrack of Revolutions), 342 (Topic 70), Sociology 320S. Prerequisite: Upper-division standing.

GOV 364V. Political Warfare and Propaganda.
Same as Russian, East European, and Eurasian Studies 335 (Topic 24). Examine the phenomenon of political warfare in a contemporary global context, focusing on Russia and Eastern Europe. Explore the evolution of techniques of political warfare, including psychological warfare and propaganda. Three lecture hours a week for one semester. Only one of the following may be counted: Government 360N (Topic:
Prerequisite: Six semester hours of lower-division coursework in government.

**GOV 365C. Japanese Foreign Policy.**
Same as Asian Studies 361 (Topic 22). An introduction to the foreign and domestic determinants of Japanese foreign policy. Three lecture hours a week for one semester. Only one of the following may be counted: Asian Studies 361 (Topic 22), Government 365C, 365L (Topic 2). Prerequisite: Upper-division standing and six semester hours of lower-division coursework in government.

**GOV 365D. International Relations of East and Southeast Asia.**
Same as Asian Studies 361 (Topic 23). An introduction to the international relations of East and Southeast Asia, with particular attention to postwar economic and security issues, the changing political landscape of the post-Cold War period, and the development and functions of regional institutions. Three lecture hours a week for one semester. Only one of the following may be counted: Asian Studies 361 (Topic 23), Government 365D, 365L (Topic 3). Prerequisite: Upper-division standing and six semester hours of lower-division coursework in government.

**GOV 365E. Political Economy of Asia.**
Same as Asian Studies 361 (Topic 36). Explores the political economies of East Asia with an emphasis on Japan, China, South Korea, and Taiwan. Three lecture hours a week for one semester. Only one of the following may be counted: Asian Studies 361 (Topic: Political Economy of Asia), 361 (Topic 36), Government 365E, 365L (Topic: Political Economy of Asia), 365L (Topic 4). Prerequisite: Upper-division standing and six semester hours of lower-division coursework in government.

**GOV 365F. Asian Regionalism and Multilateral Cooperation.**
Same as Asian Studies 361 (Topic 40). Addresses the nature, functional principles, leadership, and policy-making process of contemporary Asian regionalism in comparison to the experiences of European integration. Three lecture hours a week for one semester. Only one of the following may be counted: Asian Studies 361 (Topic: Asian Regionalism and Multilateral Cooperation), 361 (Topic 40), Government 365F, 365L (Topic: Asian Regionalism and Multilateral Cooperation), 365L (Topic 5). Prerequisite: Upper-division standing and six semester hours of lower-division coursework in government.

**GOV 365G. The Military in Politics.**
Same as Latin American Studies 337M (Topic 9) and Russian, East European, and Eurasian Studies 335 (Topic 10). Three lecture hours a week for one semester. Only one of the following may be counted: Government 365G, 365N (Topic 3); Latin American Studies 337M (Topic 9); Russian, East European, and Eurasian Studies 335 (Topic 10). Prerequisite: Upper-division standing and six semester hours of lower-division coursework in government.

**GOV 365I. Authoritarianism.**
Explore the history and political science explanations of authoritarian governments. Three lecture hours a week for one semester. Only one of the following may be counted: Government 365I, 365N (Topic: Authoritarianism), Middle Eastern Studies 341 (Topic: Authoritarianism). Prerequisite: Six semester hours of lower-division coursework in government.

**GOV 365J. Australian Society and Politics.**
Three lecture hours a week for one semester. Government 365J and 365N (Topic 10) may not both be counted. Prerequisite: Upper-division standing.

**GOV 365L. Studies in Asian Politics.**
Special studies of political behavior and institutions, problems, or developments in individual countries or in the region. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Six semester hours of lower-division coursework in government.

**GOV 365O. State Building in China and Taiwan.**
Same as Asian Studies 361G. Compare and contrast the state building process in mainland China and Taiwan. Three lecture hours a week for one semester. Only one of the following may be counted: Asian Studies 361 (Topic: State Build in China/Taiwan), 361G, Government 365L (Topic: State Build in China/Taiwan), 365O. Prerequisite: Six semester hours of lower-division coursework in Government.

**GOV 365Q. Comparative Political Parties.**
Analysis of varying topics in the comparative study of political processes. Three lecture hours a week for one semester. Government 365N (Topic: Comparative Political Parties) and 365Q may not both be counted. Prerequisite: Six semester hours of lower-division coursework in government and three semester hours of coursework in European Studies.

**GOV 365R. Institutions and Comparative Political Economic Development.**
Comparative study of political processes. Three lecture hours a week for one semester. Government 365N (Topic: Institutions & Comp Pol-Ec Dev) and 365R may not both be counted. Prerequisite: Upper-division standing and six semester hours of lower-division coursework in government.

**GOV 365S. Comparative Legal Systems.**
Comparative study of the nature of courts and law, their position in political systems, and their potential impact on society. Three lecture hours a week for one semester. Only one of the following may be counted: Government 365N (Topic: Comparative Legal Systems), 365N (Topic 23), 365S. Prerequisite: Upper-division standing and six semester hours of lower-division coursework in government.

**GOV 365T. Suicide Terrorism.**
Studies the causes of suicide terrorism at elite, community, and rank-and-file levels. Three lecture hours a week for one semester. Only one of the following may be counted: Government 365N (Topic 15), 365T, Islamic Studies 372 (Topic: Suicide Terrorism), Middle Eastern Studies 341 (Topic: Suicide Terrorism). Prerequisite: Upper-division standing and six semester hours of lower-division coursework in government.

**GOV 365U. European Environmental Politics.**
Same as European Studies 348 (Topic 3). The history of environmental politics in both the member states of the European Union and the EU itself, including conceptual treatment of general environmental politics and policies, history of European environmentalism, and institutional responses at important 'traditional' and new EU member states. Also examines EU environmental policies themselves, such as the EU Emissions Trading System, chemicals policy, and GMO policy. Only one of the following may be counted: European Studies 348 (Topic: European Environmental Politics), 348 (Topic 3), Government 365N (Topic: European Environmental Politics), 365N (Topic 20) 365U. Prerequisite: Six semester hours of lower-division coursework in government.
GOV 365V. Comprehensive Notions of European Security.
Same as European Studies 348 (Topic 4). Examines the conceptual and practical aspects of European comprehensive security via the institutions charged with implementing it: the European Union (EU), the North Atlantic Treaty Organization (NATO), and the Organization for Security and Cooperation in Europe (OSCE). Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 348 (Topic: Comprehensive Notions of European Security), 348 (Topic 4), Government 365N (Topic: Comprehensive Notions of European Security), 365N (Topic 21), 365V. Prerequisite: Six semester hours of lower-division coursework in government.

GOV 365W. Human Rights and World Politics.
Same as Women's and Gender Studies 340 (Topic 76). Introduction to the political and policy dimensions of human rights. Three lecture hours a week for one semester. Only one of the following may be counted: Government 365N (Topic: Human Rights and World Politics), 365N (Topic 24), 365W, Women's and Gender Studies 340 (Topic: Human Rights and World Politics), 340 (Topic 76). Prerequisite: Upper-division standing and six hours of lower-division coursework in government.

GOV 366C. The Ethics of Foreign Intervention.
Explore questions related to an outside power intervening in another country, such as whether foreign military intervention is ever justified and whether outside powers have a responsibility to protect vulnerable populations. Three lecture hours a week for one semester. Government 365N (Topic: Ethics of Foreign Intervention) and 366C may not both be counted. Prerequisite: Six semester hours of lower-division coursework in Government.

GOV 366D. Capitalism, Socialism, and Democracy.
Explore tensions between capitalism, socialism, and democracy and investigate the interdependence of economics and politics. Three lecture hours a week for one semester. Government 365N (Topic: Capitalism, Socialism, Democ) and 366D may not both be counted. Prerequisite: Six semester hours of lower-division coursework in Government.

GOV 366E. Immigration and Comparative Politics.
Explore key issues in the study of migration policy and immigration politics. Three lecture hours a week for one semester. Government 365N (Topic 2) and 366E may not both be counted. Prerequisite: Six semester hours of lower-division coursework in Government.

GOV 366F. Issues in Third World Development.
Same as Latin American Studies 337L. Explore important issues in the politics of developing countries. Three lecture hours a week for one semester. Only one of the following may be counted: Government 365N (Topic 17), 366F, Latin American Studies 337L, 337M (Topic: Iss in Third-World Development). Prerequisite: Six semester hours of lower-division coursework in Government.

GOV 366G. British Politics and Government.
Explore key aspects of British politics and government. Three lecture hours a week for one semester. Government 365N (Topic: British Politics and Govt) and 366G may not both be counted. Prerequisite: Six semester hours of lower-division coursework in Government.

GOV 366L. Israel: Society and Politics.
Same as Jewish Studies 365 (Topic 10). Analysis of Israeli politics and society in a comparative perspective with a major focus on the social and political cleavages in Israel. Three lecture hours a week for one semester. Only one of the following may be counted: Government 365N (Topic 16), 366L, Jewish Studies 365 (Topic 10). Prerequisite: Six semester hours of lower-division coursework in Government.

GOV 366J. Ethnic Politics in Taiwan and Asia.
Same as Asian Studies 361F. Explore ethnic politics in Taiwan including some comparison with ethnic politics in neighboring countries. Three lecture hours a week for one semester. Only one of the following may be counted: Asian Studies 361 (Topic: Ethnic Polit in Taiwan/Asia), 361F, Government 365L (Topic: Ethnic Polit in Taiwan/Asia), 366J. Prerequisite: Six semester hours of lower-division coursework in Government.

Explore global development including patterns of development, variation in development, and the impact of development. Three lecture hours a week for one semester. Government 365N (Topic: Intl Dev and Global Justice) and 366L may not both be counted. Prerequisite: Six semester hours of lower-division coursework in Government.

GOV 366M. International Political Economy of Lower-Income Countries.
Same as Geography 326G and Sociology 324P. Explore the ways that China, India, Brazil and other lower-income countries are transforming the patterns in global finance, trade, aid, women's empowerment, and the control or corruption. Three lecture hours a week for one semester. Only one of the following may be counted: Geography 326G, Government 355M (Topic: Intl Pol Econ Low-Incm Countrs), 366M, Sociology 324P. Prerequisite: Upper-division standing.

GOV 366N. Contemporary Middle Eastern Cinema.
Same as Middle Eastern Studies 342 (Topic 73). Introduction to some of the most pertinent social and political themes in celebrated films across Arab countries, Turkey, Iran, and Israel and Palestine. Three lecture hours a week for one semester. Only one of the following may be counted: Government 366N, Middle Eastern Studies 342 (Topic: Contemp Middle Eastern Cinema), 342 (Topic 73), Radio-Television-Film 342 (Topic: Contemp Middle Eastern Cinema). Prerequisite: Upper-division standing.

GOV 366O. Rule of Law in the Middle East.
Same as Middle Eastern Studies 341 (Topic 11) and Religious Studies 358L. Three lecture hours a week for one semester. Only one of the following may be counted: Government 366O, Islamic Studies 373 (Topic 25), Middle Eastern Studies 341 (Topic 11), Religious Studies 358L. Prerequisite: Upper-division standing.

GOV 366P. The Shock of Modernity in the Middle East.
Same as History 331I, Middle Eastern Studies 342 (Topic 77), and Religious Studies 359K. Explore cross cultural contacts between the East and the West during the modern period. Analyze Islamic civilization in the Middle East of the modern era by addressing the development of religion, law, government, and morality during and after the colonial period. Three lecture hours a week for one semester. Only one of the following may be counted: Government 366P, History 331I, Middle Eastern Studies 342 (Topic: Modernity in the Mid East), 342 (Topic 77), Religious Studies 359K. Prerequisite: Upper-division standing.

GOV 366R. Cultures of Revolution in the Middle East.
Same as Asian Studies 343E, History 334G, and Middle Eastern Studies 342 (Topic 80). Examine the cultural production that surrounds key moments of political and social change in the Middle East. Three lecture hours a week for one semester. Only one of the following may be counted: Asian Studies 343E, Government 366R, History 334G, Middle Eastern Studies 342 (Topic: Cultures of Revolution), 342 (Topic 80). Prerequisite: Upper-division standing.

GOV 367C. Partition of India in History and Memory.
Same as Asian Studies 346E and History 367J. Discover the experiences and memories of many different groups affected by the Partition of British India in 1947 while tracing the effects of the Partition until the
present. Three lecture hours a week for one semester. Only one of the following may be counted: Asian Studies 346E, 361 (Topic: Partition of India Hist/Lit), 379 (Topic 15), Government 367C, History 350L (Topic: Partition of India Hist/Lit), 350L (Topic 98), 367J, Islamic Studies 372 (Topic: Partition of India Hist/Lit). Prerequisite: upper-division standing.

GOV 368T. German Nationalisms.
Same as European Studies 346 (Topic 22), German, Scandinavian, and Dutch Studies 361K, and Russian, East European, and Eurasian Studies 335 (Topic 20). History of diverse views and movements regarding German national identity within their respective contexts, 1800-present. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 346 (Topic 22), German, Scandinavian, and Dutch Studies 361K, Government 365N (Topic 6), 365N (Topic 19), 368T, Russian, East European and Eurasian Studies 335 (Topic 20). Prerequisite: Upper-division standing.

GOV 368U. Politics of Memory: Germany and the United States.
Same as American Studies 321R, European Studies 348 (Topic 9), and German, Scandinavian, and Dutch Studies 361U. Examine the role that narratives of the past play in politics and policies in both Germany and the United States, by engaging with key theoretical and empirical debates. Focus on the role of memory in German and US immigration politics. Three lecture hours a week for one semester. Only one of the following may be counted: American Studies 321 (Topic: Politics Of Memory: GER/US), 321R, European Studies 348 (Topic: Politics Of Memory: GER/US), 348 (Topic 9), German, Scandinavian, and Dutch Studies 360 (Topic: Politics Of Memory: GER/US), 361U, Government 365N (Topic: Politics Of Memory: GER/US), 368U. Prerequisite: Upper-division standing.

GOV 368V. Nazi Culture and Politics.
Same as European Studies 348 (Topic 10), German, Scandinavian, and Dutch Studies 361V, and History 361R. Explore fundamental questions about the unique role of culture in modern democracies and dictatorships by taking an overview of culture and politics in the Third Reich. Examine questions about the relationship between political propaganda and modern entertainment, mass media and authoritarianism, political aesthetics and ideology, and the dynamics of oppression, resistance, and consent. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 348 (Topic: Nazi Culture and Politics), 348 (Topic 10), German, Scandinavian, and Dutch Studies 360 (Topic: Nazi Culture and Politics), 361V, Government 365N (Topic: Nazi Culture and Politics), 368V, History 361R, 362G (Topic: Nazi Culture and Politics). Prerequisite: Upper-division standing.

GOV 370C. Election Campaigns.
The study of contemporary American election campaigns. Three lecture hours a week for one semester. Government 370C and 370L (Topic 1) may not both be counted. Prerequisite: Upper-division standing and six semester hours of lower-division coursework in government.

GOV 370E. Congressional Elections.
Examination of congressional campaigns and election outcomes from both historical and contemporary perspectives. Three lecture hours a week for one semester. Government 370E and 370L (Topic 12) may not both be counted. Prerequisite: Upper-division standing and six semester hours of lower-division coursework in government.

GOV 370F. Public Opinion and Representation.
Examine the relationship between the public and elected officials in representative democracy. Three lecture hours a week for one semester. Government 370F and 370L (Topic: Public Opinion/Representation) may not both be counted. Prerequisite: Six semester hours of lower-division coursework in Government.

GOV 370L. The Politics of Food in America.
Examine politics and political history of food production and consumption in the United States. Three lecture hours a week for one semester. Only one of the following may be counted: Government 370L, 370L (Topic: Politics of Food in America), 370L (Topic 21). Prerequisite: Six semester hours of lower-division coursework in Government.

GOV 370J. Campaigns and Elections.
Introduction to American political campaigns and elections with a focus on federal elections. Three lecture hours a week for one semester. Only one of the following may be counted: Government 370J, 370L (Topic: Campaigns and Elections), 370L (Topic 20). Prerequisite: Upper-division standing and six semester hours of lower-division coursework in government.

GOV 370K. Racial and Ethnic Politics.
An examination of the role of racial and ethnic minorities in politics and of the impact of politics on these minorities. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Six semester hours of lower-division coursework in government.

GOV 370L. Topics in American Government and Politics.
Analysis of varying topics in the study of American government and politics. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Six semester hours of lower-division coursework in government.

GOV 370M. Research on the United States Congress.
Independent research on lawmaking in the modern United States Congress. Three lecture hours a week for one semester. Prerequisite: Six semester hours of lower-division coursework in government.

GOV 370N. Research on the United States Congress II.
Continuation of independent research on lawmaking in the modern United States Congress. Three lecture hours a week for one semester. Prerequisite: Government 370M.

GOV 370O. The Politics of Title IX.
Examine how the passage of Title IX has affected the educational and career opportunities of women in the United States, with a particular emphasis on collegiate athletics. Three lecture hours a week for one semester. Government 370L (Topic: The Politics of Title IX) and 370O may not both be counted. Prerequisite: Six semester hours of lower-division coursework in Government.

Focus on the role of Congress and the President in the policy-making process. Three lecture hours a week for one semester. Government 370L (Topic: Policy-Making Process) and 370P may not both be counted. Prerequisite: Upper-division standing.

GOV 370Q. Political Psychology.
Study of the role of psychological theories in understanding politics and forming political views. Three lecture hours a week for one semester. Government 370L (Topic 16) and 370Q may not both be counted. Prerequisite: Upper-division standing and six semester hours of lower-division coursework in government.

GOV 370R. Money in United States Politics.
Study of the nature and consequences of campaign finance on American politics. Three lecture hours a week for one semester. Only one of the

**GOV 370S. Social Movements: Theory and Practice.**
Three lecture hours a week for one semester. Government 370L (Topic 9) and 370S may not both be counted. Prerequisite: Upper-division standing and six semester hours of lower-division coursework in government.

**GOV 370T. The Presidency in the Constitutional Order.**
Explores the thought that national politics has become more prone to institutional and partisan conflict, policy gridlock and that national institutions do not function as intended. Three lecture hours a week for one semester. Only one of the following may be counted: Government 370L (Topic: The Presidency in the Constitutional Order), 370L (Topic 26), 370T. Prerequisite: Upper-division standing and six semester hours of lower-division coursework in government.

**GOV 370U. Urban Politics.**
Same as Urban Studies 355U. Examine politics in American cities. Three lecture hours a week for one semester. Only one of the following may be counted: Government 370L (Topic: Urban Politics), 370L (Topic 11), 370U, Urban Studies 350 (Topic 1), 355U. Prerequisite: Six semester hours of lower-division coursework in Government.

**GOV 370V. The Politics of Health Care.**
The role of political institutions and the public in the development of the American health care system. Three lecture hours a week for one semester. Only one of the following may be counted: Government 370L (Topic: The Politics of Health Care), 370L (Topic 23), 370V. Prerequisite: Upper-division standing including six semester hours of coursework in Government.

**GOV 370W. The United States as a Territorial Nation.**
Explore the territorial or geographic dimension of US political development, examining how the United States became a continent-wide republic and, later, an overseas power. Three lecture hours a week for one semester. Government 370L (Topic 19) and 370W may not both be counted. Prerequisite: Six semester hours of lower-division coursework and upper-division standing.

**GOV 371C. Problems in United States Politics.**
Examine potential problems in United States politics, seeking to conceptualize and measure them, and explore their causes, effects, and possible solutions. Three lecture hours a week for one semester. Government 370L (Topic: Problems in US Politics) and 371C may not both be counted. Prerequisite: Six semester hours of lower-division coursework in Government.

**GOV 371D. Race, Policing, and Incarceration.**
Explore inequalities between black Americans and white Americans considering origins of inequalities, and their social and political consequences. Three lecture hours a week for one semester. Government 370K (Topic: Race/Policing/Incarceration) and 371D may not both be counted. Prerequisite: Six semester hours of lower-division coursework in Government.

**GOV 371E. Policy Formulation and Implementation.**
Examine the policy-making process in the United States. Focus on the actors and institutions involved in the formulation and implementation of public policy. Three lecture hours a week for one semester. Government 370L (Topic: Policy Formulation/Implementation) and 371E may not both be counted. Prerequisite: Six semester hours of lower-division coursework in Government.

**GOV 371F. The Black Church in African American Politics.**
Same as African and African Diaspora Studies 350S and Religious Studies 346K. Explore the political role of the Black church in the African American experience. Three lecture hours a week for one semester. Only one of the following may be counted: African and African Diaspora Studies 350S, 374D (Topic 14), Government 370K (Topic 4), 371F, Religious Studies 346 (Topic 7), 346K. Prerequisite: Six semester hours of lower-division coursework in Government.

**GOV 371G. African-American Politics.**
Same as African and African Diaspora Studies 350Q. Explore the evolution, nature, and role of African-American politics within the American political system. Three lecture hours a week for one semester. Only one of the following may be counted: African and African Diaspora Studies 350Q, 374D (Topic 13), Government 370K (Topic 3), 371G. Prerequisite: Six semester hours of lower-division coursework in Government.

**GOV 371H. The United States Congress.**
Examine the modern Congress and analyze various factors influencing the legislative process. Three lecture hours a week for one semester. Government 370L (Topic 7) and 371H may not both be counted. Prerequisite: Six semester hours of lower-division coursework in Government.

**GOV 371I. Politics of Voter Suppression.**
Explore the politics of vote suppression and its policy remedies, including manipulation of the size and composition of elections. Examine how excluded citizens have addressed such measures via politics, policy reforms, and court appeals. Three lecture hours a week for one semester. Only one of the following may be counted: Government 355M (Topic: Pol of Voter Suppression), 370L (Topic: Pol of Voter Suppression), 371I. Prerequisite: Upper-division standing and six hours of lower-division coursework in government.

**GOV 371J. The Black Church in African American Politics.**
Same as African and African Diaspora Studies 350S and Religious Studies 346K. Explore the political role of the Black church in the African American experience. Three lecture hours a week for one semester. Only one of the following may be counted: African and African Diaspora Studies 350S, 374D (Topic 14), Government 370K (Topic 4), 371F, Religious Studies 346 (Topic 7), 346K. Prerequisite: Six semester hours of lower-division coursework in Government.

**GOV 371L. Latino Politics.**
Same as Latin American Studies 337S and Mexican American Studies 374 (Topic 15). Explore the political experiences of the United States Latino populations. Three lecture hours a week for one semester. Only one of the following may be counted: Government 370K (Topic 2), 371L, Latin American Studies 337M (Topic 8), 337S, Mexican American Studies 374 (Topic 15). Prerequisite: Six semester hours of lower-division coursework in government.

**GOV 371M. African-American Women's Political Activism.**

**GOV 371N, 671N. Administrative Internship.**
Students perform research and related activities in a national, state, or local administrative agency. Written reports required. The equivalent of three or six lecture hours a week for one semester. Only six semester hours of an internship course in government may be counted toward a
major in government. Prerequisite: Twelve semester hours of coursework in government and consent of instructor.

GOV 371O. American Political Development.
Examine how American politics, institutions, and political culture evolved and changed from the founding to the present. Three lecture hours a week for one semester. Only one of the following may be counted: Government 355M (Topic: American Political Development), 370L (Topic 27), 371O. Prerequisite: Six semester hours of lower-division coursework in government.

GOV 371P. Race and United States Social Policy.
Same as African and African Diaspora Studies 360L and Sociology 340S. Examine the relationship between race and the development of United States social policy. Explore how specific social policies affect racial and ethnic inequality. Three lecture hours a week for one semester. Only one of the following may be counted: African and African Diaspora Studies 360L, 370 (Topic: Race and US Social Policy), Government 371P, Sociology 340S. Prerequisite: Upper-division standing.

Analysis of the key topics in religion and politics in the United States. Three lecture hours a week for one semester. Government 370L (Topic: Politics and Religion in the United States) and 371R may not both be counted. Prerequisite: Upper-division standing and six semester hours of lower-division coursework in government.

GOV 371S. News Media as a Political Institution.
Analyze the roles that the institutional and social media have in American politics and government. Three lecture hours a week for one semester. Only one of the following may be counted: Government 355M (Topic: News Media as a Pol Institutn), 370L (Topic 14), 371S. Prerequisite: Upper-division standing.

GOV 371U. Politics and Film.
Explore the importance of political life as it has been captured on screen and examine the role of film in important political events. Three lecture hours a week for one semester. Government 370L (Topic: Politics and Film) and 371U may not both be counted. Prerequisite: Six semester hours of lower-division coursework in Government.

GOV 371V. Latina/o/x Citizenship.
Same as Anthropology 326R, Mexican American Studies 364M, and Sociology 323L. Explore the concepts of membership, belonging, immigration and citizenship in the Latina/o/x experience. Examine how historically, politically, socially, and culturally. Latinas/os/xs have been construed as belonging or not belonging members of the United States society. Three lecture hours a week for one semester. Only one of the following may be counted: Anthropology 326R, Government 371V, Mexican American Studies 364M, Sociology 323L. Prerequisite: Upper-division standing.

GOV 372N, 672N. Campaigns and Elections Internship.
Students perform research and related activities in political campaigns and polling. Written reports required. The equivalent of three or six lecture hours a week for one semester. Only six semester hours of an internship course in government may be counted toward a major in government. Prerequisite: Twelve semester hours of coursework in government and consent of instructor.

GOV 373N, 673N. Legislative Internship.
Students perform research and related activities in a national, state, or local legislature. Written reports required. The equivalent of three or six lecture hours a week for one semester. Only six semester hours of an internship course in government may be counted toward a major in government. Prerequisite: Twelve semester hours of coursework in government and consent of instructor.

GOV 374N. Political Internship.
Students perform research and related activities for an entity directly related to government and politics. Written reports required. The equivalent of three lecture hours a week for one semester. Only six semester hours of an internship course in government may be counted toward a major in government. Prerequisite: Twelve semester hours of coursework in government.

GOV 379C. Regime Perspectives on American Politics.
Same as Core Texts and Ideas 326R and Liberal Arts Honors 351J. Explore American politics and culture and examine how the parts of America fit together as a whole. Three lecture hours a week for one semester. Only one of the following may be counted: Core Texts and Ideas 326R, 335 (Topic: Regime Persp Amer Poltc-Honors), Government 379C, 379S (Topic 3), Liberal Arts Honors 350 (Topic: Regime Persp on Amer Politics), 351J. Prerequisite: Upper-division standing, six semester hours of government coursework, and a grade point average of at least 3.50.

GOV 379D. Citizenship in Democratic Politics.
Same as Liberal Arts Honors 351K. Examine the role of ordinary citizens in democratic politics. Three lecture hours a week for one semester. Only one of the following may be counted: Government 379D, 379S (Topic: Citizens in Democratic Pol-Hon), Liberal Arts Honors 350 (Topic: Citizens in Democratic Pol), 351K. Prerequisite: Upper-division standing, six semester hours of coursework in Government, and a grade point average of at least 3.50.

GOV 379E. Homer and Plato.
Same as Liberal Arts Honors 351L. Examine the works of Homer and Plato. Explore the ideas of human nature, existence, leadership, courage, honor, ambition, justice, necessity, fate, divine power, human freedom, and moral responsibility. Three lecture hours a week for one semester. Only one of the following may be counted: Government 379E, 379S (Topic: Homer and Plato-Honors), Liberal Arts Honors 350 (Topic: Homer and Plato), 351L. Prerequisite: Upper-division standing, six semester hours of lower-division coursework in government, and a grade point average of at least 3.50.

GOV 379F. Politics in Fiction.
Examine perspectives on American politics and government through works of fiction. Three lecture hours a week for one semester. Only one of the following may be counted: Government 379F, 379S (Topic 2), Liberal Arts Honors 350 (Topic: Politics in Fiction). Prerequisite: Six semester hours of lower-division coursework in Government and upper-division standing.

GOV 379G. Jerusalem and Athens.
Same as Core Texts and Ideas 330J and Liberal Arts Honors 351M. Examine the age-old confrontation between the teaching of the Bible and the politics and philosophy of the ancient Greeks. Three lecture hours a week for one semester. Only one of the following may be counted: Core Texts and Ideas 330J, 335 (Topic: Jerusalem and Athens-Honors), 375 (Topic: Jerusalem and Athens-Honors), Government 379G, 379S (Topic: Jerusalem and Athens-Honors), 379S (Topic 4), Liberal Arts Honors 350 (Topic: Jerusalem and Athens), 351M. Prerequisite: Upper-division standing, six semester hours of coursework in government, and a grade point average of at least 3.50.

GOV 679H. Honors Tutorial Course.
Lectures and supervised individual research and the writing of a substantial paper on a special topic in the field of government. No grade
is awarded until the student has completed the two-semester sequence. Three lecture hours a week for two semesters. Prerequisite: For 679HA, upper-division standing, admission to the Government Honors Program, and written consent of the Government Honors Program adviser; for 679HB, Government 679HA.

GOV 379S. Honors Seminar.
Substantive focus varies each semester. Topics include but are not limited to constitutional interpretation, political thought, the evolution of American politics, and comparative politics. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Completion of thirty semester hours of coursework, including at least six hours of government.

Graduate Courses

GOV 380R. Mathematical Methods for Political Analysis.
An introduction to mathematical concepts essential for quantitative analysis, such as statistics and formal political theory. Three lecture hours a week for one semester. Prerequisite: Graduate standing and consent of the graduate adviser.

GOV 381J. Political Institutions and Processes.
Local, state, and national political institutions and policy processes, and specific areas of public policy. Field core course. Three lecture hours a week for one semester. Prerequisite: Graduate standing and consent of the graduate adviser.

GOV 381L. Seminar in American Government and Politics.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing, twenty-four semester hours of coursework in government or related fields, and consent of the graduate adviser.

GOV 381R. Political Behavior.
Political socialization, political psychology, public opinion, and electoral behavior. Field core course. Three lecture hours a week for one semester. Prerequisite: Graduate standing and consent of the graduate adviser.

GOV 381S. Seminar in Political Behavior.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of the graduate adviser.

Intensive study of selected classical and contemporary theorists and source materials related to political theory and philosophy. Field core course. Three lecture hours a week for one semester. Prerequisite: Graduate standing, twenty-four semester hours of coursework in government or related fields, and consent of the graduate adviser.

GOV 382M. Seminar in Political Theory and Philosophy.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing, twenty-four semester hours of coursework in government or related fields, and consent of the graduate adviser.

Topic 1: Contemporary Political Theory. Analysis of contemporary theoretical problems and detailed study of the works of contemporary Western theorists.
Topic 2: American Political Thought. Examination of the origins and development of political ideas that have influenced the evolution of the American political system.
Topic 9: Rousseau.

GOV 383K. Problems in the Study of Politics.
Normative orientations in research, theory formation and empirical assessment, various conceptions of explanation, and historical development of the social sciences. Three lecture hours a week for one semester. Prerequisite: Graduate standing, twenty-four semester hours of coursework in government or related fields, and consent of the graduate adviser. Some reading knowledge of Spanish or Portuguese is recommended.

Topic 1: Brazilian Public Policies. Same as Latin American Studies 384L (Topic 1: Brazilian Public Policies). Three lecture hours a week for one semester.

GOV 384L. Seminar: Latin American Politics.
Analysis of selected problems in politics and international relations of the countries of Latin America. Two class hours and one conference hour a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing, twenty-four semester hours of coursework in government or related fields, and consent of the graduate adviser. Some reading knowledge of Spanish or Portuguese is recommended.

Topic 1: Brazilian Public Policies. Same as Latin American Studies 384L (Topic 1: Brazilian Public Policies). Three lecture hours a week for one semester.

GOV 384M. Seminar in Public Policy and Administration.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing, twenty-four semester hours of coursework in government or related fields, and consent of the graduate adviser.

Topic 4: Comparative Theory. Analysis of the structure and operation of complex public bureaucracies.
Topic 7: Comparative Public Policy.
Topic 8: Public Policy Clinic.

GOV 384N. Seminar in Public Law.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing, twenty-four semester hours of coursework in government or related fields, and consent of the graduate adviser.
GOV 385K. Foundations of Public Policy.
Introduction to major institutions, values, processes, and problems that shape contemporary public policies. Review and appraisal of current international, national, state, and local policy debates. Sampling of theoretical literature in policy analysis, American politics, institutional and organizational theory, macroeconomic management, democratic theory, policy evaluation, and politics-governance conflicts. Field core course. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

GOV 385L. Seminar in Methodology.
Intensive examination of selected issues in the methodology of political inquiry. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of the graduate adviser.

GOV 185M. Colloquium in Politics.
Field roundtables, reports of current research, and panel discussions of significant issues in the study of politics. One lecture hour a week for one semester. May be repeated for credit when the topics vary. Offered on the credit/no credit basis only. Prerequisite: Graduate standing and consent of the graduate adviser.

GOV 385N. Introduction to Formal Political Analysis.
Critical, comparative survey of important formal theories of political processes, stressing general approaches rather than mathematical results. Presupposes no technical background. Field core course. Three lecture hours a week for one semester. Prerequisite: Graduate standing and consent of the graduate adviser.

GOV 385R. Seminar in Formal Theory.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of the graduate adviser.

GOV 386J. Social Science Research for Political Professionals.
Restricted to students in the option III master's program in applied politics. A survey of research methods focused on applications for policy, legislative, and advocacy purposes. Covers quantitative and qualitative methods including basic statistical analysis as well as legal and public source research. Three lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

GOV 386L. Survey Methods for Campaigns and Advocacy.
Restricted to students in the option III master's program in applied politics. An introduction to the use of statistical methods in political practice, including an overview of statistical concepts; special attention is paid to survey design, analysis, and use of common statistical applications. Three lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Graduate standing.

GOV 388K. The Study of International Relations.
Comparison of various theories of international politics and analysis of basic forces that underlie national policies and condition the nature and concerns of contemporary international relations. Discussion, reading, and research. Field core course. Three lecture hours a week for one semester. Prerequisite: Graduate standing, twenty-four semester hours of coursework in government or related fields, and consent of the graduate adviser.

GOV 388L. Seminar in International Relations.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing, twenty-four semester hours of coursework in government or related fields, and consent of the graduate adviser.

GOV 390K. Comparative Study of Political Systems.
Theory and method of comparative political study; varieties of governmental institutions in Western and non-Western countries; comparative examination of political institutions. Field core course. Three lecture hours a week for one semester. Prerequisite: Graduate standing, twenty-four semester hours of coursework in government or related fields, and consent of the graduate adviser.

GOV 390L. Seminar in Comparative Government and Politics.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing, twenty-four semester hours of coursework in government or related fields, and consent of the graduate adviser.

GOV 399K. Study of International Conflict.
Studies of the determinants of foreign policy in selected countries, with consideration of both domestic and international factors.

GOV 399N. American Foreign Policy.
Topics in the study of American foreign policy, including the problems and instruments of American diplomacy, and the process by which policy is made.

Study of the political determinants and the substantive issues of national security policy with particular emphasis upon the United States.

GOV 399S. Contemporary Issues in International Relations.
An analysis of major current developments and issues in international politics and military relations.

GOV 399T. International Law and Organization.
An analysis of the forms and functions of international law and organization, with particular emphasis on the case method as means of adjusting interstate relations.

GOV 399U. International Political Economy.

GOV 399V. Theory and International Relations.

GOV 399W. Competing Approaches to World Politics.

GOV 399X. Comparative Study of Political Systems.

GOV 399Y. Seminar in Comparative Government and Politics.

GOV 399Z. Study of International Conflict.

GOV 601. Social Science Research for Political Professionals.

GOV 603. Social Science Research for Political Professionals.

GOV 605. Social Science Research for Political Professionals.

GOV 607. Social Science Research for Political Professionals.

GOV 608. Survey Methods for Campaigns and Advocacy.

GOV 609. Social Science Research for Political Professionals.

GOV 610. Survey Methods for Campaigns and Advocacy.

GOV 611. Social Science Research for Political Professionals.

GOV 612. Survey Methods for Campaigns and Advocacy.

GOV 613. Social Science Research for Political Professionals.

GOV 615. Social Science Research for Political Professionals.

GOV 616. Survey Methods for Campaigns and Advocacy.

GOV 617. Social Science Research for Political Professionals.

GOV 618. Survey Methods for Campaigns and Advocacy.

GOV 619. Social Science Research for Political Professionals.

GOV 621. Social Science Research for Political Professionals.

GOV 623. Social Science Research for Political Professionals.

GOV 624. Survey Methods for Campaigns and Advocacy.

GOV 625. Social Science Research for Political Professionals.

GOV 626. Survey Methods for Campaigns and Advocacy.

GOV 627. Social Science Research for Political Professionals.

GOV 629. Social Science Research for Political Professionals.

GOV 630. Survey Methods for Campaigns and Advocacy.

GOV 631. Social Science Research for Political Professionals.

GOV 633. Social Science Research for Political Professionals.

GOV 634. Survey Methods for Campaigns and Advocacy.

GOV 635. Social Science Research for Political Professionals.

GOV 637. Social Science Research for Political Professionals.

GOV 638. Survey Methods for Campaigns and Advocacy.

GOV 639. Social Science Research for Political Professionals.

GOV 641. Social Science Research for Political Professionals.

GOV 642. Survey Methods for Campaigns and Advocacy.

GOV 643. Social Science Research for Political Professionals.

GOV 645. Social Science Research for Political Professionals.

GOV 646. Survey Methods for Campaigns and Advocacy.

GOV 647. Social Science Research for Political Professionals.

GOV 649. Social Science Research for Political Professionals.

GOV 650. Survey Methods for Campaigns and Advocacy.

GOV 651. Social Science Research for Political Professionals.

GOV 653. Social Science Research for Political Professionals.

GOV 655. Social Science Research for Political Professionals.

GOV 656. Survey Methods for Campaigns and Advocacy.

GOV 657. Social Science Research for Political Professionals.

GOV 659. Social Science Research for Political Professionals.

GOV 661. Social Science Research for Political Professionals.

GOV 663. Social Science Research for Political Professionals.

GOV 665. Social Science Research for Political Professionals.

GOV 666. Survey Methods for Campaigns and Advocacy.

GOV 667. Social Science Research for Political Professionals.

GOV 668. Survey Methods for Campaigns and Advocacy.

GOV 669. Social Science Research for Political Professionals.

GOV 671. Social Science Research for Political Professionals.

GOV 672. Survey Methods for Campaigns and Advocacy.

GOV 673. Social Science Research for Political Professionals.

GOV 674. Survey Methods for Campaigns and Advocacy.

GOV 675. Social Science Research for Political Professionals.

GOV 676. Survey Methods for Campaigns and Advocacy.

GOV 677. Social Science Research for Political Professionals.

GOV 678. Survey Methods for Campaigns and Advocacy.

GOV 679. Social Science Research for Political Professionals.

GOV 681. Social Science Research for Political Professionals.

GOV 682. Survey Methods for Campaigns and Advocacy.

GOV 683. Social Science Research for Political Professionals.

GOV 685. Social Science Research for Political Professionals.

GOV 687. Social Science Research for Political Professionals.

GOV 689. Social Science Research for Political Professionals.
Topic 11: Seminar in Russian, East European, and Eurasian Civilizations and Cultures.
Topic 14: Comparative Political Institutions.
Topic 16: Politics of Mexico.
Topic 18: Comparative Politics: Latin America. Same as Latin American Studies 384L (Topic 6: Comparative Politics: Latin America).

Topic 23: The New Middle East: A Critical Approach. Same as Anthropology 391 (Topic 36) and Middle Eastern Studies 386 (Topic 26). Examine new analytical approaches to understanding the Middle East, including its social and political dynamics, utilizing an interdisciplinary approach. Only one of the following may be counted: Anthropology 391 (Topic 36), Government 390L (Topic 23), Middle Eastern Studies 386 (Topic: New Middle East), 386 (Topic 26).

GOV 391J. Statistical Analysis in Political Science I.
An introductory course covering estimation theory and hypothesis testing for statistical models in political science and the basic probability theory needed for statistical theory. Three lecture hours a week for one semester. Prerequisite: Graduate standing and consent of the graduate adviser.

GOV 391K. Seminar in Political Science.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing, twenty-four semester hours of coursework in government or related fields, and consent of the graduate adviser.

Topic 7: Scope and Methods of Political Science. History, scope, and methods of political science as a discipline; major paradigms and current subfields; conceptions of explanation in the social sciences; concept formation, theory construction, and empirical assessment; problems of interpretation, comparison, measurement, and experimentation; designs for research; normative orientations in research.
Topic 8: Writing and Publishing in Political Science. Examine the craft of writing and data presentation in the social sciences. Government 391K (Topic: Writing & Publishing Poli Sci) and 391K (Topic 8) may not both be counted.
Topic 9: Writing Seminar in Political Theory. Examine the craft of writing and publishing in political science. Designed for students specializing in political theory.

GOV 391L. Statistical Analysis in Political Science II.
Multivariate statistical techniques and their applications to problems in political science. Field core course. Three lecture hours a week for one semester. Prerequisite: Graduate standing, one course in statistics, and consent of the graduate adviser.

GOV 391R. Research Colloquium in Political Science.
Forum for development of research projects and dissertation proposals. Three lecture hours a week for one semester. Offered on the credit/no credit basis only. Prerequisite: Graduate standing and consent of the graduate adviser.

Readings in the literature of political science in fields in which the student is preparing for the qualifying examinations for the Doctor of Philosophy. May be repeated for credit. Prerequisite: Graduate standing, twenty-four semester hours of coursework in government or related fields, and consent of the graduate adviser.

GOV 698. Thesis.
The equivalent of three lecture hours a week for two semesters. Offered on the credit/no credit basis only. Prerequisite: For 698A, graduate standing in government, twelve semester hours of upper-division or graduate coursework in government, six of which must be in the field of the thesis subject, and consent of the graduate adviser; for 698B, Government 698A.

GOV 398R. Master's Report.
Preparation of a report to fulfill the requirement for the master's degree under the report option. The equivalent of three lecture hours a week for one semester. Offered on the credit/no credit basis only. Prerequisite: Graduate standing in government and consent of the graduate adviser.

GOV 398T. Supervised Teaching in Government.
Teaching under the close supervision of the course instructor; group meetings with the instructor, individual consultations, and reports throughout the teaching period. Three lecture hours a week for one semester. Offered on the credit/no credit basis only. Prerequisite: Graduate standing, appointment as a teaching assistant, and consent of the graduate adviser.

May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Admission to candidacy for the doctoral degree.

Professional Courses
GRG - Geography

Geography: GRG

Lower-Division Courses
GRG 301C, 401C. The Natural Environment.
An introduction to the study of the Earth from a holistic perspective including geologic, atmospheric, ecological, and water sciences and its relevance to present-day environmental problems. Three lecture hours and one-and-one-half laboratory hours a week for one semester.

GRG 301K (TCCN: GEOL 1347). Weather and Climate.
A survey of meteorological phenomena and climatological processes of the earth. Three lecture hours a week for one semester.

GRG 302L. Landscapes and Cosmovision in Mesoamerica.
Explore the ancient civilizations of Mesoamerica, the ways in which they are studied, the landscapes they inhabited, their worldview, and the persistence of the past into the present. Discover how different societies manifested a core set of beliefs shared by all Mesoamerican civilizations.
while at the same time maintaining local cultural identities. Assess changes in Mesoamerica both spatially and temporally from the Archaic Period through the Spanish Conquest, colonialism, and into modern times. Three lecture hours a week for one semester. Geography 302L and 302S (Topic: Landscape and Cosmovision Mesoam) may not both be counted. Offered on the letter-grade basis only.

**GRG 302S. Special Topics in Geography.**
Three lecture hours a week for one semester. May be repeated for credit when the topics vary.

**GRG 304E, 404E. Environmental Science: A Changing World.**
Surveys the major global environmental concerns affecting the Earth and its residents from the perspectives of the environmental sciences. Three lecture hours and one-and-one-half laboratory hours a week for one semester.

**GRG 305 (TCCN: GEOG 1302). This Human World: An Introduction to Geography.**
Introductory survey of human geography, including human-environment relations, cultural patterns and processes, and geography's relation to other fields of study. Three lecture hours and one laboratory hour a week for one semester.

**GRG 306C. Conservation.**
Introduction to environmental management, with emphasis on the major causes and consequences of environmental degradation. The course is organized around the premise that people cannot solve environmental problems unless they know how and why they occur; a major objective is to identify and understand the sociocultural forces that drive environmental degradation. Three lecture hours a week for one semester.

**GRG 307C. Introduction to Urban Studies.**
Same as Urban Studies 301. A multidisciplinary study of cities and complex urban environments; historical and contemporary issues from both national and international perspectives. Three lecture hours a week for one semester.

**GRG 309C. Creating the Sustainable Society.**
Same as Sociology 309C. Overview of sustainability as something human beings must strive to create in an era of global warming and ever greater social inequalities, both between and within countries. Three lecture hours a week for one semester. Only one of the following may be counted: Geography 302P (Topic: Creating Sustainable Societies), 309C, Sociology 304 (Topic: Creating Sustainable Societies), 309C.

**GRG 310C, 410C. Spatial Data and Analysis.**
Fundamental concepts in spatial data acquisition, analysis, and presentation, with emphasis on the needs of professionals in cartography, geographic information systems (GIS), and remote sensing. Three lecture hours and one-and-one-half laboratory hours a week for one semester.

**GRG 312E, 412E. Digital Earth.**
Explore concepts in geospatial technologies that are becoming increasingly important tools in research, policy, and everyday life. Discuss geospatial data sources (ex. GPS, citizen science, satellite imagery), applications (ex. disaster relief, biodiversity conservation, disease spread), and broader implications of their use (ex. privacy, ethical, legal issues). For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester.

**GRG 319. Geography of Latin America.**
Same as Latin American Studies 319. Adaptations to population growth and spatial integration in cultural landscapes of great natural and ethnic diversity; problems of frontiers and cities. Three lecture hours a week for one semester.

**GRG 19S, 219S, 319S, 419S, 519S, 619S, 719S, 819S, 919S. Topics in Geography.**
This course is used to record credit the student earns while enrolled in another institution in a program administered by the University's Study Abroad Office. Credit is recorded as assigned by the study abroad adviser in the Department of Geography and the Environment. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

**Upper-Division Courses**

**GRG 320J. Environmental Justice.**
Examine the socio-political, economic, and racialized history of both environmental ruin and environmental justice via a critical geographic lens connecting feminist political ecology, antiracist and abolitionist ecologies, decolonial geographies, and critical physical geographies. Three lecture hours a week for one semester. Only one of the following may be counted: Geography 320J, 356 (Topic: Environmental Justice), Liberal Arts Honors 350 (Topic: Environmental Justice). Offered on the letter-grade basis only. Prerequisite: Upper-division standing.

**GRG 320K. Land and Life: The American Southwest.**
Historical geography of the southwestern United States, emphasizing the ways of life of American Indian, Spanish, mestizo, and Anglo cultures. Three lecture hours a week for one semester, with one field trip to be arranged. Prerequisite: Upper-division standing.

**GRG 320M. Geography of Media.**
Explores communication media from a geographical perspective. Subjects include place images, changing attitudes about public and private spaces, social networking, and the geography of communications infrastructure. Three lecture hours a week for one semester. Only one of the following may be counted: Geography 320M, 356 (Topic: Geography of Media), 356T (Topic 7). Offered on the letter-grade basis only. Prerequisite: Upper-division standing.

**GRG 320N. Exhibitions and Public Spectacle.**
Same as Comparative Literature 323 (Topic 46), European Studies 347 (Topic 41), and German, Scandinavian, and Dutch Studies 361N. Investigate exhibits, world's fairs, museum, monuments, theme parks, and historical reconstructions from Europe and the US, with attention to images of how their sponsoring nations or other entities want to be seen. Examine evidence for both the good and bad sides of national pride and identity. Explore examples of how large-scale culture projects and the public interact. Consider the lasting marks left on the cities and countries sponsoring them. Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic: Exhibitionism and Public Spectacle), 323 (Topic 46), European Studies 347 (Topic: Exhibitionism and Public Spectacle), 347 (Topic 41), Geography 320N, 356T (Topic: Exhibitionism and Public Spectacle), German, Scandinavian, and Dutch Studies 360 (Topic: Exhibitionism and Public Spectacle), 361N. Prerequisite: Upper division standing.

**GRG 321D. Development and Social Movement in East and Southeast Asia.**
Same as Asian Studies 361J. Examine the notions of development and the ways in which development is associated with state building.
moral economy, political performance, and accumulation regimes. Explore the development of civil society and social movement in East Asia, and explanations of the mechanisms and drivers of displacement. Conceptualize the "Right to the City", and alternative right-based approaches to land, housing, infrastructure, commons and public resources. Three lecture hours a week for one semester. Only one of the following may be counted: Asian Studies 361 (Topic: Development and Movement), 361J, Geography 321D, 356T (Topic: Development and Movement). Prerequisite: Upper-division standing.

GRG 321F. Food in the Racialized City.
Same as African and African Diaspora Studies 352P and American Studies 371C. Explore a variety of issues related to producing, accessing, and consuming food in city spaces in the context of racial inequalities. Investigate and question constructs such as "food" and "city" as means of exploring different points of view and approaches to studying not only food and cities but also various approaches to food justice. Three lecture hours a week for one semester. Only one of the following may be counted: African and African Diaspora Studies 352P 370 (Topic: Food in the Racialized City), American Studies 371C, Geography 321F. Prerequisite: Upper-division standing.

GRG 321L. Archaeology of Climate Change.
Same as Anthropology 324L (Topic 57). Examines why climate changes, the methods for recording climate change, and includes case studies of the varied responses of past human societies to climate change in different geographic regions and time periods with varying socio-political and economic systems. Three lecture hours a week for one semester. Only one of the following may be counted: Anthropology 324L (Topic: Archaeology of Climate Change), 324L (Topic 57), Geography 321L, 356 (Topic: Archaeology of Climate Change). Prerequisite: Upper-division standing.

GRG 321U. Race, Social Justice, and the City.
Same as Urban Studies 322R. Examine the way that race and inequality are built into the structures and ideas surrounding urban life through the spatial and racial structures of capitalist development, racialized migration, and redevelopment and gentrification campaigns. Analyze how United States cities are racial geographies. Three lecture hours a week for one semester. Only one of the following may be counted: Geography 321U, Urban Studies 322R, Urban Studies 354 (Topic: Race, Social Just & the City). Prerequisite: Upper-division standing.

GRG 322D. Human Health and the Environment.
Same as Urban Studies 332D. Introduction to environmental health concepts. Examine current events to explore the relationship between environment and health and whether an environmental condition is or is not an important threat to health. Discuss the complexity of determining "proof" in this field. Three lecture hours a week for one semester. Only one of the following may be counted: Geography 322D, 356T (Topic 9), Urban Studies 332D, 350 (Topic 2). Prerequisite: Upper-division standing.

GRG 322G. Politics of Protecting the Great Barrier Reef.
Same as Government 347P. Examine the numerous environmental challenges Australia’s Great Barrier Reef (GBR) faces. Explore the livelihoods of the people who depend on or impact the GBR, and the people who are trying to save it. Three lecture hours a week for one semester. Geography 322G and Government 347P may not both be counted. Prerequisite: Upper-division standing.

GRG 322L. Geographies of Latin American to United States Migration.
Same as Latin American Studies 325E. Examine the contemporary complex multi-scalar origins, patterns, and processes of Latin American and Caribbean migration and settlement in the United States. Through a place-specific, spatially contextualized, and historically situated approach, explore the collective and individual experiences of migrants, asylum seekers, and refugees from select nations including: Mexico, Guatemala, Honduras, El Salvador, Puerto Rico, the Dominican Republic, Haiti, and Cuba. Analyze the multi-layered factors shaping diverse Latin American migratory patterns and processes. Three lecture hours a week for one semester. Only one of the following may be counted: Geography 322L, 356T (Topic: Geog of Lat American-U.S. Migr), Latin American Studies 325E, 330 (Topic: Geog of Lat American-U.S. Migr). Prerequisite: Upper-division standing.

GRG 322M. Maya Art and Architecture.
Same as Anthropology 323V, Art History 347M, and Latin American Studies 327 (Topic 5). Introduction to the artistic traditions of the ancient Maya, tracing their development up to the time of European contact. Students will examine various important themes of Maya culture including history, ritual, and cosmology as revealed in sculpture, hieroglyphs, painting, and architectural design. Three lecture hours a week for one semester. Only one of the following may be counted: Anthropology 323V, 324L (Topic: Maya Art and Architecture), Art History 347M, Latin American Studies 327 (Topic 5), Geography 322M, 356T (Topic: Maya Art/Architecture).

Same as Latin American Studies 330 (Topic 3). Field study of environmental and social change in selected landscapes in South America, such as protected areas; places of food production; transportation routes; migrant landscapes; urban areas; sites of cultural and historical importance; and issues of human rights. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

GRG 324E. Applications and Ethics of Digital Spatial Technologies.
Explore the applications and ethical considerations of remote sensing, the Global Positioning System (GPS), and Geographic Information System (GIS) technologies and practice. Three lecture hours a week for one semester. Geography 324E and 356T (Topic: Dig Spatial Tech: App/Ethics) may not both be counted. Prerequisite: Upper-division standing.

GRG 324F. Race, Capitalism, and the Environment.

GRG 324M. Sustainable Maya Geographies - Past to Future.
Same as Anthropology 326M and Latin American Studies 330 (Topic 6). Explore landscapes, conservation, and human-environment dynamics in the Maya region of Central America from more than 10,000 years ago to modern times. Compare sustainable practices from the past with those of indigenous Maya communities today to guide the future. Three lecture hours a week for one semester. Only one of the following may be counted: Anthropology 326M, Geography 324M, 356T (Topic: Sust Maya Geog: Past to Future), Latin American Studies 330 (Topic 6). Prerequisite: Upper-division standing.

GRG 325. Geography of Texas.
Texas as an environmental and cultural borderland: as a transition zone between plains and mountains, humid and arid, South and West, Anglo-
America and Latin America. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

**GRG 325E. The Healthy, Livable City.**
Same as Urban Studies 325E. Explore the design of the built environment and its potential for addressing and preventing many childhood and adult health concerns in the United States. Examine how to create healthy, walkable, vital communities for all. Three lecture hours a week for one semester. Only one of the following may be counted: Geography 325E, Geography 356 (Topic: The Healthy, Livable City), Urban Studies 325E, 352 (Topic: The Healthy, Livable City). Prerequisite: Upper-division standing.

**GRG 326. Regions and Cultures of Europe.**
Same as European Studies 346 (Topic 19) and Russian, East European, and Eurasian Studies 345 (Topic 2). Spatial patterns in Europe, with emphasis on cultural, historical, and political geography. Only one of the following may be counted: European Studies 346 (Topic: Regions and Cultures of Europe), 346 (Topic 19), Geography 326, Russian, East European, and Eurasian Studies 345 (Topic 2). Prerequisite: Upper-division standing.

**GRG 326C. Sensing: Elemental Media.**
Same as Anthropology 323U and Urban Studies 320E. Explore a sensory ethnographic investigation of urban ecology, organized around air, water, earth, and fire as themes for engaging with the city through media and the senses. Three lecture hours a week for one semester. Only one of the following may be counted: Anthropology 323U, 324L (Topic: Sensing: Elemental Media), Geography 326C, Urban Studies 320E. Prerequisite: Upper-division standing.

**GRG 326G. International Political Economy of Lower-Income Countries.**
Same as Government 366M and Sociology 324P. Explore the ways that China, India, Brazil and other lower-income countries are transforming the patterns in global finance, trade, aid, women's empowerment, and the control or corruption. Three lecture hours a week for one semester. Only one of the following may be counted: Geography 326G, Government 355M (Topic: Intl Pol Econ Low-Incm Countrs), 366M, Sociology 324P. Prerequisite: Upper-division standing.

**GRG 327. Geography of the Former Soviet Union.**
Same as Russian, East European, and Eurasian Studies 345 (Topic 4: Geography of the Former Soviet Union). A systematic introduction to cultural, physical, political, and economic geography of the former Soviet Union. Focus on the fundamental transformation that the former Socialist Union Republics, now sovereign states, have undergone since 1991. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

**GRG 328E. Geography in Eastern Europe and Eurasia.**
Same as Comparative Literature 323 (Topic 78), History 361U, and Russian, East European, and Eurasian Studies 335 (Topic 37). Explore alternatives to nation-state imaginaries across Eastern Europe and Eurasia. Examine spatial thinking, utopia, dystopia, the history of geosciences, counter-mapping, and the decolonial geopolitics of space. Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic 78), Geography 328E, History 361U, Russian, East European, and Eurasian Studies 335 (Topic 37). Prerequisite: Upper-division standing.

**GRG 328F. Black Geographies.**
Same as African and African Diaspora Studies 352Q, American Studies 371D, and Anthropology 3230. Explore the relationship between Blackness and the production of space and place. Examine the tensions and possibilities that emerge when Black people are rendered un-geographic as a fundamental component of racial capitalism while they are simultaneously creating spaces of freedom under constant threats to Black life. Three lecture hours a week for one semester. Only one of the following may be counted: African and African Diaspora Studies 352Q, 370 (Topic: Black Geographies), American Studies 371D, Anthropology 3230, Geography 328F. Prerequisite: Upper-division standing.

**GRG 328L. Asian Diaspora on Indigenous Lands.**
Same as Asian American Studies 330I. Explore Indigenous and Asian entanglements and solidarities on Turtle Island (North America) and the Pacific. Examine settler colonialism, racial capitalism, war and militarism, racism and power, and environmental change. Three lecture hours a week for one semester. Only one of the following may be counted: Asian American Studies 335 (Topic: Asian Dias on Indigen Lands), 330I, Geography 328L. Prerequisite: Upper-division standing.

This course is used to record credit the student earns while enrolled at another institution in a program administered by the University’s Study Abroad Office. Credit is recorded as assigned by the study abroad adviser in the Department of Geography and the Environment. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

**GRG 330F. Geographies of International Development in Africa.**
Same as African and African Diaspora Studies 340M. Critically examines the major approaches to "Development" in colonial and postcolonial eras, with a focus on a range of African resources: from water to wildlife, forests to farms, airways to rangelands, and including a consideration of African bodies themselves as sites of development and resistance. Three lecture hours a week for one semester. Only one of the following may be counted: African and African Diaspora Studies 340M, 372F (Topic: Intl Development in Africa), 372F (Topic 1), Geography 330F, 356T (Topic: Intl Development in Africa), 356T (Topic 10). Prerequisite: Upper-division standing.

**GRG 330W, 430W. Water and Watersheds.**
Exposure to numerical analyses techniques developed by hydrologists and to fundamental equations controlling water transfer over and through earth materials. Learn how to administer hydrologic applications to practical problems in physical geography, geology, civil engineering, ecology, and environmental sciences. For 330W, three lecture hours a week for one semester; for 430W, three lecture hours and one-and-one-half laboratory hours a week for one semester. Geography 330W and 356 (Topic: Water and Watersheds) may not both be counted. Prerequisite: Upper-division standing and Geography 301C.

**GRG 331E. East European Transnational Worlds to 1914.**
Same as History 361T and Russian, East European, and Eurasian Studies 335 (Topic 38). Examine an overview of major developments in the economic, political, social, cultural, and gender and sexuality fields of East European history before 1914. Explore diplomacy, institutional legacies of war and peace, urban and rural developments and inequalities, spaces of language and religion, race, labor migration, and the arts. Three lecture hours a week for one semester. Only one of the following may be counted: Geography 331E, History 361T, Russian, East European, and Eurasian Studies 335 (Topic 38). Prerequisite: Upper-division standing.
GRG 331K. Nature, Society, and Adaptation.
Same as Anthropology 324L (Topic 17: Cultural Ecology). Long-term trajectories of change in human environment relationships, including issues of human evolution and human nature, violence, population, food, agriculture, urbanization, globalizing modernization, and environmental impacts; issues of sustainability, cultural survival, human rights, and environmental protection. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

GRG 333C. Severe and Unusual Weather.
A continuation of Geography 301K, focuses on atmospheric hazards such as severe thunderstorms and their offspring (hail, lightning, tornadoes, damaging winds and flash floods) as well as tropical cyclones. Covers human risk perception in relation to atmospheric hazards. Three lecture hours a week for one semester, with additional field hours to be arranged. Prerequisite: Geography 301K.

GRG 333K. Climate Change.
Examines changes in climatic systems over both short and long time periods in relation to impacts on physical and ecological systems. Discusses past, present, and future changes in climatic conditions and the methods used to make those evaluations. Three lecture hours a week for one semester. Geography 333K and 356T (Topic: Climate Change) may not both be counted. Prerequisite: Upper-division standing.

GRG 334. Conservation, Resources, and Technology.
Analysis of the relationship between the human population and its resource base, with particular emphasis on current problems in environmental resource management. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

GRG 334E. Children's Environmental Health.
Discuss environmental health issues as they pertain to children's health. Focus on emerging scientific and public health issues such as water quality, air pollution, endocrine-disrupting chemicals, and the food environment. Three lecture hours a week for one semester. Geography 334E and 356 (Topic 1) may not both be counted. Prerequisite: Upper-division standing.

GRG 334K. Soils.
Morphology, genesis, properties, and distribution of world soils. Factors of soil formation. Three lecture hours a week for one semester. Prerequisite: Upper-division standing; and six semester hours of coursework in physical geography or one or more of the geological or natural sciences, or the equivalent.

GRG 334L. Vulnerability to Natural Hazards.
Same as Latin American Studies 330 (Topic 5). An interdisciplinary approach, set right at the nexus of both physical and human geography, to studying the types of natural disasters that occur throughout Earth with a focus on tropical areas. Explore a region's susceptibility to natural disasters by studying the physical phenomena that incite specific hazards so that their spatial distribution can be outlined. Utilize theoretical frameworks that can expose the social causes of human vulnerability, the political repercussions of disasters, and how disaster response varies from country to country depending on varying political stances and economic conditions. Three lecture hours a week for one semester. Only one of the following may be counted: Geography 334C, 334L, Latin American Studies 330 (Topic: Environment Hazards Latin America/Caribbean), 330 (Topic 5). Prerequisite: Upper-division standing.

GRG 335C. Quaternary Landscapes.
Changing physical and biotic landscapes on the Ice Age earth during the last two million years. Reconstruction of Quaternary geomorphic landscapes based on principles and applications of geochronology and paleoclimatology. Three lecture hours a week for one semester. Geography 335C and 385C may not both be counted. Prerequisite: Upper-division standing and Geography 301C.

GRG 335D. Anthropocene.
Evaluates the role of humans in changing Earth systems. Examines the evidence used to reconstruct past environments, to decipher the ecological and biogeographical consequences of land use, to measure altered surface processes, to distinguish the anthropogenic contribution to climate change, and to predict likely future scenarios. Explores the interaction of human history with altered biophysical patterns and processes. Assesses the recognition of the Anthropocene as a potential new epoch in Earth history, including the implications of that recognition for environmental stewardship. Three lecture hours a week for one semester. Geography 335D and 356T (Topic: Anthropocene) may not both be counted. Offered on the letter-grade basis only. Prerequisite: Upper-division standing, and three semester hours of coursework in physical geography or one of the geological or natural sciences.

GRG 335K. Mountain Geoecology.
Geological evolution of mountains. Physical geography of mountains: climates, soils, vegetation, landforms and geomorphic processes. Three lecture hours a week for one semester. Prerequisite: Upper-division standing and six semester hours of coursework in physical geography or one or more of the geological or natural sciences.

GRG 335N. Landscape Ecology.
The study of spatial patterns in the earth's biosphere found within landscapes, typically areas measured in square kilometers. Examines the processes that create those patterns, drawing from ecology, biogeography, and many other disciplines. Also explores the practical applications of landscape ecology to the study of natural environments and those managed or altered by human activities. Three lecture hours a week for one semester. Geography 335N and 356T (Topic: Landscape Ecology) may not both be counted. Prerequisite: Upper-division standing and three semester hours of coursework in physical geography or one of the geological or natural sciences.

GRG 336. Contemporary Cultural Geography.
Same as Urban Studies 340. Recent theoretical developments in cultural geography, with a focus on landscapes and the everyday practices that imbue them with meaning; the ways those meanings are contested and are the foci of struggle; and how the relationship between culture and space plays a central role in the social construction of identity. Three lecture hours a week for one semester. Only one of the following may be counted: Geography 336, Urban Studies 340, 354 (Topic 8). Prerequisite: Upper-division standing.

GRG 336C. National Parks and Protected Areas.
Introduces current conservation principles and management strategies; outlines the challenges, changes, and dilemmas associated with protected areas. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

GRG 337. The Modern American City.
Same as Architecture 350R (Topic 1) and Urban Studies 337. Issues facing residents of United States cities, such as transportation and housing, poverty and crime, metropolitan finance, environmental and architectural design; historical/comparative urban evolution. Three lecture hours a week for one semester. Only one of the following may be counted: Architecture 350R (Topic 1), Geography 337, Urban Studies 337, 352 (Topic 1). Prerequisite: For students in the School of Architecture, upper-division standing; for others, upper-division standing and consent of instructor.
GRG 338C. Rivers and Landscapes: Fluvial Geomorphology.
Drainage basin evolution and channel adjustment, variability of river systems in differing geomorphic regimes, relationships between fluvial systems and other components of physical geography, and the role of humans as geomorphic agents. Three lecture hours a week for one semester, with additional field hours to be arranged. Prerequisite: Upper-division standing; and Geography 301C or Geological Sciences 401, or the equivalent.

Analysis of geomorphic processes and their effects on landform development. For 339, three lecture hours a week for one semester; for 439, three lecture hours and one-and-one-half laboratory hours a week for one semester. Prerequisite: Upper-division standing, and credit or registration for Geography 301C or Geological Sciences 401.

GRG 339K. Environment, Development, and Food Production.
Assessment of various types of agriculture with regard to environmental factors and management techniques. Three lecture hours a week for one semester. Geography 339K and 390S may not both be counted. Prerequisite: Upper-division standing.

Study of current environmental problems from the perspective of political ecology, which critically examines political, economic, and social relations between humans and the natural world. Uses case studies from Africa, Latin America, Asia, and the Middle East to address climate change, deforestation, desertification, biodiversity, and environmental justice. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

GRG 440L. Landuse/Landcover Change Practicum.
Focuses on best practices for classifying and mapping land use and land cover, as well as how they change over time in an experiential learning environment. Develop testable hypotheses answered by the original data analysis and interpretation. Two lecture hours and three laboratory hours a week for one semester. Geography 440L and 356T (Topic: Landuse/Landcover Change Practicum) may not both be counted. Prerequisite: Upper-division standing.

GRG 340U. Internship and Service Learning.
Same as Urban Studies 360. Internship experience in an urban studies-related public or nonprofit agency. The opportunity to apply the knowledge, theory, and understanding gained from courses in areas of specialization to urban issues in a professional setting. Includes an academic service-learning component. Approximately five to ten hours a week for one semester. Only one of the following may be counted: Geography 340U, 356T (DIRECTED INTRNSHPS IN URB STD&S), Urban Studies 360. Prerequisite: Upper-division standing; and Urban Studies 301 and 315.

GRG 341K. Landscapes of Mexico and Caribbean America.
Same as Latin American Studies 330 (Topic: 2: Landscapes of Mexico and Caribbean America). The natural regions and cultural landscapes of Mexico, Central America, and the West Indies. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

GRG 342C. Sustainable Development.
Historical and contemporary analysis of international development with a focus on the prospects for environmental sustainability. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

GRG 342N. Sustainable Landscapes and Seascapes.
Survey the ecological, economic, and social dimensions of sustainable uses of land-based and aquatic natural resources. Examine the sustainability of landscapes utilized for forestry, farming, agroforestry, and rangeland systems, as well as the riverscapes and seascapes utilized by people. Three lecture hours a week for one semester. Geography 342N and 356T (Topic: Sus Landscapes & Seascapes) may not both be counted. Offered on the letter-grade basis only. Prerequisite: Upper-division standing. Credit or registration for Geography 335N is recommended.

GRG 342S. Sustainability, Equity, and Health.
Same as Health and Society 347E. Three lecture hours a week for one semester. Only one of the following may be counted: Geography 342S, 356 (Topic: Sustainability/Equity/Health), Health and Society 340 (Topic: Sustainability/Equity/Health), 347E. Prerequisite: Upper-division standing.

GRG 343E. Mapping Latin America.
Same as History 363E and Latin American Studies 330 (Topic 4). Discuss the role of maps in the creation of Latin America as a specific sort of place. As such, allows familiarity with a broad overview of Latin American history from Pre-Columbian civilizations to the modern period. Three lecture hours a week for one semester. Only one of the following may be counted: Geography 343E, 356T (Topic: Mapping Latin America), 356T (Topic 12), History 363E, 363K (Topic: Mapping Latin America), 363K (Topic 4), Latin American Studies 330 (Topic: Mapping Latin America), 330 (Topic 4). Prerequisite: Upper-division standing.

GRG 344G. Environmental Law.
Examine environmental law and its impact on all life. Analyze key federal environmental statutes and leading cases in which these statutes have been interpreted by courts. Three lecture hours a week for one semester. Geography 344G and 356 (Topic: Environmental Law) may not both be counted. Prerequisite: Upper-division standing.

GRG 344K. Global Food, Farming, and Hunger.
Examination of contemporary transformations in global agro-food systems, with emphasis on the current paradox of epidemic obesity in some parts of the world and enduring hunger in others. Three lecture hours a week for one semester. Geography 344K and 356T (Topic: Farming, Food, and Global Hunger) may not both be counted. Prerequisite: Upper-division standing.

GRG 346. The Human Use of the Earth.
The state of the world from an ecological perspective. Case studies are drawn from a wide range of ecological settings and involve both traditional and modern societies. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

GRG 349S. Global Sustainability and Soil.
Same as Liberal Arts Honors 352J. Restricted to Plan I majors in the College of Liberal Arts. Examine soil as a resource from the perspectives of natural and sustainability science, including soil ecology and biodiversity, formation, fertility for ecosystems and farming systems, soil health, distinguishing characteristics in nature, taxonomy, and soil spatial variability around the globe. Three lecture hours a week for one semester. Only one of the following may be counted: Geography 349S, 356 (Topic: Global Sustainability/Soil), Liberal Arts Honors 350 (Topic: Global Sustainability/Soil), 352J. Offered on the letter-grade basis only. Prerequisite: Upper-division standing, Geography 401C, and a cumulative grade point average of at least 3.25.
GRG 350E. Geoprocessing.
Computer programming and scripting applied to geospatial data. Three lecture hours a week for one semester. Geography 350E and 356T (Topic: Geoprocessing) may not both be counted. Offered on the letter-grade basis only. Prerequisite: Upper-division standing and Geography 460G.

GRG 350K. Geographies of Globalization.
Examines globalization in historical and contemporary contexts, with a focus on race, class, and gendered power. Three lecture hours a week for one semester. Geography 350K and 356T (Topic: Introduction to Globalization) may not both be counted.

GRG 356. Topics in Environmental Geography.
Topics include environmental assessment methods and techniques, the conservation movement, and climate and people. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Upper-division standing.

GRG 356C. Geo-Archaeology and Environmental History.
Long-term ecology as reconstructed from settlement and land-use histories. Empirical case studies in environmental history from the Mediterranean region, the Near East, and Mesoamerica. Applications to degradation, desertification, sustainability, and global change. Three lecture hours a week for one semester. Only one of the following may be counted: Anthropology 382N, Geography 356C, 382K. Prerequisite: Upper-division standing.

GRG 356D. Water Resources in Latin America and the Caribbean.
Same as Latin American Studies 331. Examine the variability of landscapes, climatic regions, and anthropogenic activities found throughout Latin America and the insular Caribbean to explore the complex issues related to water resource accessibility. Three lecture hours a week for one semester. Only one of the following may be counted: Geography 356 (Topic: Water Res: Lat Amer/Caribbean), 356D, Latin American Studies 330 (Topic: Water Res: Lat Amer/Caribbean), 331. Prerequisite: Upper-division standing.

GRG 356T. Topics in Geography.
Three lecture hours a week for one semester. Some topics may require additional field trips. May be repeated for credit when the topics vary. Prerequisite: Varies with the topic.

Topic 1: The Culture of Cities. Same as American Studies 370 (Topic 13) and Urban Studies 320T. Examines the social, geographical, and cultural evolution of the United States from a rural and small-town society to an urban and suburban nation. Subjects may include the segregation of public and private space; the formation of urban subcultures organized by gender, work, race, religion, and sexuality; social and spatial divisions between rich and poor and native-born and immigrant; and the increasing importance of "cultural capital" in reshaping urban politics and in conflicts over revitalization and gentrification. Three lecture hours a week for one semester. Only one of the following may be counted: American Studies 370 (Topic 13), Geography 356T (Topic 1), Urban Studies 320T, 354 (Topic 4). Additional prerequisite: Upper-division standing.

Topic 2: Memory and Place. Same as American Studies 370 (Topic 23). Explores how cultural memory is produced in its various forms, from memorials, public art, and commodities to popular culture, rituals, and museums, and how public remembering is inevitably anchored in specific geographic places. Additional prerequisite: Upper-division standing.

Topic 3: Geographical Information Systems and Remote Sensing for Archaeology and Paleontology. Same as Anthropology 324L (Topic 33). Designed to give students interested in the fields of archaeology, physical anthropology, and paleontology a foundation in the use of geographical information systems (GIS) and the analysis of remotely sensed data from satellites and aerial photographs. Additional prerequisite: Upper-division standing.

Topic 4: Northern Lands and Cultures. Same as European Studies 346 (Topic 9) and Russian, East European, and Eurasian Studies 345 (Topic 6). Develops geographical understanding of the Circumpolar region of the North, an ancient human habitat, home to distinct millennia-old civilizations. Only one of the following may be counted: European Studies 346 (Topic: Northern Lands and Cultures), 346 (Topic 9), Geography 356T (Topic: Northern Lands and Cultures), 356T (Topic 4), Russian, East European, and Eurasian Studies 345 (Topic: Northern Lands and Cultures), 345 (Topic 6). Additional prerequisite: Upper-division standing.

Topic 5: Urban Publics. Same as Urban Studies 324C. The concept of the public in the city and how it has shifted over time along the lines of gender, ethnicity, race, and class. Examines contemporary struggles over defining the urban public and how those struggles are linked to social, cultural, political, and economic forces. Subjects include uses of public space, the public sphere, eminent domain, urban politics, civic engagement, and political participation. Three lecture hours a week for one semester. Only one of the following may be counted: Geography 356T (Topic 5), Urban Studies 324C, 354 (Topic: Urban Publics). Additional prerequisite: Upper-division standing.

Topic 6: The Environmental Change and Management of Large Rivers. An interdisciplinary perspective on the physical processes of large rivers. Subjects include land degradation; deforestation; river engineering; flood processes; sedimentology; floodplains management; ecohydrology; Quaternary fluvial geomorphology; and paleohydrology. Only one of the following may be counted: Geography 356T (Topic: Environmental Change and Management of Large Rivers), 356T (Topic 6), Latin American Studies 330 (Topic: Environmental Change and Management of Large Rivers). Prerequisite: Upper-division standing.

Topic 8: Global Societies. The use of geographical perspectives to make sense of the global society. Subjects include globalization, war, economic crisis, and social movements. Geography 356T (Topic: Global Societies) and 356T (Topic 8) may not both be counted. Additional prerequisite: Upper-division standing.

Topic 14: Geography of Religion in Eastern Europe and Russia. Same as Religious Studies 357G and Russian, East European, and Eurasian Studies 345 (Topic 9). A comprehensive overview of major religious culture regions in the former Eastern bloc countries. Three lecture hours a week for one semester. Only one of the following may be counted: Geography 356T (Topic: Geography of Religion in Eastern Europe and Russia), 356T (Topic 14), Religious Studies 357 (Topic: Geography of Religion in Eastern Europe and Russia), 357 (Topic 5), 357G, Russian, East European, and Eurasian Studies 345 (Topic: Geography of Religion in Eastern Europe and Russia), 345 (Topic 9). Additional prerequisite: Upper-division standing.

GRG 357. Medical Geography.
The geographic distribution, expansion, and contraction of the infectious diseases that have the greatest influence in shaping human societies today: malaria, AIDS, and others. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

GRG 358E. Geography and Religion.
Same as Humanities 350 (Topic 3). Ideas about the relationships among the natural world, myth, and ritual; principal focus on Christianity, Islam, and Judaism and their offshoots and antagonists in the Western world. Geography 358E and Humanities 350 (Topic 3) may not both be counted. Prerequisite: Upper-division standing.
GRG 460G. Environmental Geographic Information Systems.
An introduction to the creation and use of geographic information systems. Three lecture hours and two lab hours a week for one semester. Prerequisite: Upper-division standing.

The use of electromagnetic energy to sense objects in the natural environment; interpretation and recognition of patterns detected by sensors. Three lecture hours and one and one-half laboratory hours a week for one semester. Prerequisite: Upper-division standing.

Advanced classification techniques for satellite image processing and landscape pattern analysis. Three lecture hours and one and one-half discussion hours a week for one semester. Geography 356 (Topic: Advanced Remote Sensing and Pattern Analysis) and 464K may not both be counted. Prerequisite: Upper-division standing, and Geography 462K or the equivalent or consent of instructor.

GRG 366C. Comparative Ecosystems.
The important ecosystem processes that affect the distributions, characteristics, and management of natural environments at landscape, regional, and continental scales. Ecosystem functions, including nutrient cycling, carbon balance, and the role of natural disturbances in a wide range of ecosystems, from the tundra to the rain forests and grasslands of the tropics. Three lecture hours a week for one semester. Geography 356T (Topic: Comparative Ecosystems) and 366C may not both be counted. Prerequisite: Upper-division standing and Geography 462K or the equivalent or consent of instructor.

GRG 370D. Spatial Reasoning with Geographic Information Systems.
Using Geographic Information Systems (GIS) and spatial analysis, examine different types of real-world problems. Read newspaper and journal articles about real issues or problems and explore how they can be addressed and potentially solved. Focus on specific problems and learn about the GIS tools and techniques that are appropriate for each scenario. Three lecture hours a week for one semester. Geography 356T (Topic: Spatial Reasoning with GIS) and 370D may not both be counted. Offered on the letter-grade basis only. Prerequisite: Geography 460G.

GRG 373F. Field Techniques.
Introduction to the collection and mapping of environmental and cultural data, involving both classroom lectures and outdoor exercises. Three lecture hours a week for one semester. Prerequisite: Upper-division standing, a major in geography, and consent of instructor.

GRG 366K. Biogeography.
Contemporary patterns of plant and animal distribution, and the environmental and historical processes affecting them. Three lecture hours a week for one semester. Prerequisite: Upper-division standing and three semester hours of coursework in physical geography or one of the geological or natural sciences.

GRG 367D. Climate Change and Vegetation Response in the Kalahari.
Using the Kalahari as a basis for understanding, explore the ecological dynamics of savanna systems and their interactions with climatic variability over time and space. The focus on monitoring and assessment to inform rangeland management includes vegetation sampling and calculations of carrying capacity. Examine how savanna systems dynamics are comparable across regions, and thus are both globally and UT-locally relevant. The equivalent of three lecture hours a week for one semester. Geography 356T (Topic: Climate Change and Vegetation Response in the Kalahari) and 367D may not both be counted. Offered on the letter-grade basis only. Prerequisite: GPA of at least 2.0.

GRG 367K. Vegetation Ecology.
Plant autecology and synecology. Ecological factors and processes of plant communities. Vegetation geoeconomy, succession, and dynamics. Three lecture hours a week for one semester. Prerequisite: Upper-division standing and six semester hours of coursework in physical geography or one or more of the geological or natural sciences.

GRG 368C. Spatial Analysis and Geographic Information Systems.
Addresses spatial problem solving by focusing on both the theoretical/conceptual and practical aspects of geographic information systems modeling. Describes geographic information systems techniques and spatial statistics used to quantify and measure spatial patterns. Three lecture hours a week for one semester. Prerequisite: Upper-division standing and Geography 460G (360G).

GRG 368D. Enviro-Cultural Dynamics in Botswana.
Examines the Kalahari case study of the San "First People" and their history of treatment in the Central Kalahari Game Reserve compared to other more recently arriving peoples. Explores how cultural groups are differentially treated and how that treatment and their ties to and uses of the landscape evolves over time. The equivalent of three lecture hours a week for one semester. Geography 356T (Topic: Enviro-Cultural Dynamics in Botswana) and 368D may not both be counted. Offered on the letter-grade basis only. Prerequisite: GPA of at least 2.0.

GRG 369D. GIS Applications in Social and Environmental Science.
A hands-on approach to covering the appropriate use of geographical information systems (GIS) and spatial statistical analysis in different sub-disciplines. Three lecture hours a week for one semester. Geography 356T (Topic: GIS Applications in Social and Environmental Science) and 369D may not both be counted. Offered on the letter-grade basis only. Prerequisite: Geography 412E or 460G.

GRG 470C. Advanced Geographic Information Systems.
Study of methods of spatial analysis, design and implementation of a geographic information system, vector and raster modeling, and advanced applications of geographic information systems. Three lecture hours and one and one-half laboratory hours a week for one semester. Prerequisite: Upper-division standing and Geography 460G (360G).

GRG 370D. Spatial Reasoning with Geographic Information Systems.
Using Geographic Information Systems (GIS) and spatial analysis, examine different types of real-world problems. Read newspaper and journal articles about real issues or problems and explore how they can be addressed and potentially solved. Focus on specific problems and learn about the GIS tools and techniques that are appropriate for each scenario. Three lecture hours a week for one semester. Geography 356T (Topic: Spatial Reasoning with GIS) and 370D may not both be counted. Offered on the letter-grade basis only. Prerequisite: Geography 460G.

GRG 373F. Field Techniques.
Introduction to the collection and mapping of environmental and cultural data, involving both classroom lectures and outdoor exercises. Three lecture hours a week for one semester. Prerequisite: Upper-division standing, a major in geography, and consent of instructor.

GRG 373K. Field Methods for Landscape Characterization.
The design of research questions and the acquisition of data for the characterization of landscapes. Utilizes geographical and ecological field-based methods. Three lecture hours a week for one semester. Prerequisite: Upper-division standing and Geography 301C or the equivalent.

GRG 374. Frontiers in Geography.
Restricted to geography majors and students seeking a secondary school teaching certificate with geography as the second teaching field. Current concerns and methodology in the field of geography; an introduction to theory and research in geography. The equivalent of three lecture hours a week for one semester, with one field trip to be arranged. Prerequisite: Upper-division standing and consent of the undergraduate adviser.
GRG 476T. Topics in Geography.
Three lecture hours and one and one-half laboratory hours a week for one 
semester. May be repeated for credit when the topics vary. Prerequisite: 
Upper-division standing.

GRG 679H. Honors Tutorial Course.
For honors candidates in geography. Individual reading of selected works 
for one semester, followed in the second semester by the writing of 
an honors thesis. Regular conferences with the faculty supervisor are 
also required. Conference course for two semesters. Prerequisite: For 
679HA, admission to the Geography Honors Program no later than two 
semesters before expected graduation; for 679HB, Geography 679HA. A 
University grade point average of at least 3.00 and a grade point average 
in geography of at least 3.50 are required for admission to the Geography 
Honors Program.

GRG 379K. Conference Course.
Supervised individual study of selected problems in geography. 
Conference course. May be repeated for credit. Prerequisite: Six 
semester hours of upper-division coursework in one or more of the 
social, geological, or natural sciences; and consent of instructor.

GRG 379L. Practicum: Internships in Applied Geography.
Research and staff experience working in an appropriate government 
agency or private business. At least six but no more than nine hours 
of work a week for one semester. Prerequisite: Completion of at least 
seventy semester hours of coursework, including twelve semester hours 
of geography, and consent of the undergraduate adviser.

Graduate Courses

GRG 380. Field Course in Geography.
Collection of data, formulation of meaningful categories of regions, 
development of hypotheses of cause-and-effect relations through direct 
contact with the phenomena and processes in the area where a problem 
is located. Three lecture hours a week for one semester. Prerequisite: 
Graduate standing and consent of instructor.

GRG 380C. Myth, Ritual, Place, and Environment.
Impact of local religious lore and practice on cultural landscapes, 
conservation, and sense of place; cultural and environmental 
consequences of the spatial expansion of world religions; other themes 
in the geography of religion, including civil religion and environmental 
theology. Three lecture hours a week for one semester. Prerequisite: 
Graduate standing.

GRG 380D. Environment and Health in Latin America.
Same as Latin American Studies 388 (Topic 4: Environment and Health 
in Latin America). Issues related to health, health care, and development 
in Latin America and the Caribbean, considered with the recognition that 
health depends on the interactions of social, economic, and political 
factors as well as on health care services. Three lecture hours a week for 
one semester. Prerequisite: Graduate standing.

GRG 380E. Geomorphology of the Southwest.
Geography of West Texas and New Mexico; late Cenozoic basalt flows, 
volcanic ashes, sand sheets, alluvium, paleolake deposits, glacial 
moraines, colluvium, and soils; interpretation of geomorphology and landscape 
ecology. Includes a ten-day field trip. The equivalent of three lecture 
hours a week for one semester, with additional field hours to be arranged. 
Prerequisite: Graduate standing and consent of instructor.

GRG 380F. Field Techniques in Sediments and Soils.
Designed to provide experience in field description of sediments 
and soils in Central Texas; second half of course focuses on field 
interpretation of geomorphology and landscape evolution using 
sedimentary deposits and soils. The equivalent of three lecture hours a 
week for one semester. Prerequisite: Graduate standing.

GRG 381. Seminar in Historical Geography.
Topics include Latin America, Anglo-America, Texas, boundaries, 
settlement origins and patterns, origins of agriculture. The equivalent of 
three lecture hours a week for one semester. May be repeated for credit 
when the topics vary. Prerequisite: Graduate standing in geography or a 
related social science, and consent of instructor.

GRG 381C. Mapping the Middle East.
Ways in which the Middle East is and has been represented 
cartographically. Cartographic representations of the region during 
the fifteenth and sixteenth centuries; the nature and evolution of a 
distinctive Islamic cartographic tradition; the role and use of maps 
during the nineteenth and twentieth centuries both in the extension of 
colonialism and in the creation of modern states; and the contemporary 
use, applications, and implications of geographic information systems 
in organizing and representing data spatially. Prerequisite: Consent of 
instructor.

GRG 381D. Soil Geomorphology.
Examine three aspects of soil geomorphology: soil formation as it relates 
to earth surface processes, soils and sustainability, and soil ecosystem 
interactions. Three lecture hours a week for one semester. Geography 
381D and 396T (Topic: Soil Geomorphology) may not both be counted. 
Prerequisite: Graduate standing.

GRG 382K. Geo-Archaeology and Environmental History.
Same as Anthropology 382N. Long-term ecology as reconstructed 
from settlement and land-use histories. Empirical case studies in 
environmental history from the Mediterranean region, the Near East, and 
Mesoamerica. Applications to degradation, desertification, sustainability, 
and global change. Three lecture hours a week for one semester. Only 
one of the following may be counted: Anthropology 382N, Geography 
356C, 382K. Prerequisite: Graduate standing.

GRG 383C. Seminar in Environment and Development.
A third- and fourth-world perspective on the geographic implications of 
international development; emphasis on local and global environmental 
effects. Three lecture hours a week for one semester. May be repeated 
for credit when the topics vary. Prerequisite: Graduate standing in 
geoarchaeology or a related social science.

Topic 2: Environment and Development in the Middle East.

GRG 383F. Long-Term Climate Change and History.
Climate and atmospheric science considered with long-term climate 
and historical and archaeological change over Earth history, focusing 
on the Quaternary to the future. Three lecture hours a week for one 
semester. Geography 383F and 396T (Topic: Long-Term Climate Change 
and History) may not both be counted. Prerequisite: Graduate standing.

GRG 384C. Watershed Systems and Environmental Management.
The effect of landcover change on drainage basin processes, considered 
from a geomorphological perspective over varying temporal and spatial 
ranges. Topics may include watershed management, stream channel 
restoration, fluvial geomorphic processes, and Geographic Information 
Systems applications to drainage basin processes. Three lecture hours 
a week for one semester, with additional field hours to be arranged. 
Prerequisite: Graduate standing.
GRG 385. Seminar in Regional Geography.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing; consent of instructor.

**Topic 1: Regional Geography of Latin America.** Same as Latin American Studies 388 (Topic 1: Regional Geography of Latin America). Topics include land and life in Central America; culture, environment, and development in Latin America; recent trends in Latin American geography.

**Topic 2: Europe.** Topics include various aspects of the economic and political geography of individual nations or regions, such as regional differences in Southeast Europe, agricultural developments in European Community countries, trade, viability of individual countries, the changing resources picture in Western and Eastern Europe.

**Topic 3: Anglo-America.** Topics include agricultural patterns of the United States, comparative regional studies, measurement and delimitation of regions, analysis of population shifts.

**Topic 4: Asia.** Topics include economic regionalization in Asia, spatial structure of Asian manufacturing, regional discrimination analysis for selected areas and variables in Asia, urban structure in South Asia, developmental activity and spatial change in India.

**Topic 5: Regional Geography of the Middle East and North Africa.** Same as Middle Eastern Studies 381 (Topic 11: Regional Geography of the Middle East and North Africa). Topics include developmental activity and spatial change in the Middle East, comparative regional studies.

GRG 385C. Quaternary Landscapes.
Changing physical and biotic landscapes on Ice Age earth during the past two million years. Reconstruction of Quaternary geomorphic landscapes based on principles and applications of geochronology and paleoclimatological. Three lecture hours a week for one semester. Geography 335C and 385C may not both be counted. Prerequisite: Graduate standing.

GRG 385H. Wetlands: Earth System Science and History.
Biophysical, historical, and policy/restoration components of wetlands with global and regional case studies. Three lecture hours a week for one semester. Geography 385H and 396T (Topic: Wetlands and Floodplains) may not both be counted. Prerequisite: Graduate standing.

GRG 386C. Seminar in Quaternary Studies.
Issues and new developments in regional and global aspects of Quaternary climates, biota, prehistory, and landscape evolution. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

GRG 387C. Political Ecology.
An introduction to the history of development theory, economic globalization, studies in the history of science, issues of social justice, and critical studies of environmental history. Three lecture hours a week for one semester. Geography 387C and 396T (Topic: Political Ecology) may not both be counted. Prerequisite: Graduate standing.

Focuses on a theoretical and empirical understanding of the economic, cultural, political, and policy dimensions of globalization; study of the impact of globalization on people and places; understanding of class and identity conflicts using case studies from Latin America, the United States, Europe, Africa, the Middle East, and Asia; and exploration of theories of social movement with examples from the global North and South. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

GRG 387K. Geoarchaeology of Mesoamerica.
Examine three areas of Mesoamerican geoarchaeology: regional environments, the lines of scientific evidence for current and past environments, and human-environmental interactions from the Pleistocene to the present. Three lecture hours a week for one semester. Geography 387K and 396T (Topic: Geoarchaeology of Mesoamerica) may not both be counted. Prerequisite: Graduate standing.

GRG 388. Seminar in Resources and Conservation.
Development of the conservation movement, problems of resource misuse, conservation practices, state and national conservation policies, nature and distribution of natural resources. Three lecture hours a week for one semester. Prerequisite: Graduate standing in geography or a related social science, and consent of instructor.

Same as Latin American Studies 388 (Topic 2: Indigenous Maps, Architecture, and Enculturation of Colonial Mexico). The encounter of Spanish and indigenous cultures and ecologies; regional diversity of agricultural, urban, and economic development from 1521 to 1810; ethnic transformation and new socioeconomic configurations. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

GRG 388R. Forest Hydrology.
Traces the history of forest hydrology as a science that describes the natural complexities of water movement through forested headwater landscapes and the changes imposed to these processes by disturbances associated with extreme weather events, deforestation, timber harvesting, wildfires, and climate change. Three lecture hours a week for one semester. Geography 388R and 396T (Topic: Forest Hydrology) may not both be counted. Prerequisite: Graduate standing.

GRG 389P. Hydrogeomorphology.
Hydrologic and geomorphologic applications to practical problems in physical geography, geology, civil engineering, ecology, and environmental sciences. Three lecture hours a week for one semester. Geography 389P and 396T (Topic: Hydro-Geomorphology) may not both be counted. Prerequisite: Graduate standing.

GRG 390. Cultural and Humanistic Geography.
Analysis of human-environment interactions by employing the concepts of place, home, and dwelling. Discussion of humanistic and postmodern geographical research. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

GRG 390C. Landscape, Meaning, and Society.
The creation, transformation, and meaning of landscapes within different societies through time. Iconographical analysis of the built environment; impress of belief and ideology on landscape; analysis of nationalistic and authoritarian landscapes; problems of defining and mapping ethnicity; civilizational process and behavior; institutional vandalism, place annihilation, and the destruction and effacement of landscape symbols; cultural and geographical foundations and unintended consequences of global economic integration. Three lecture hours a week for one semester. Prerequisite: Graduate standing and consent of instructor.

GRG 390K. Issues in Geography.
Examines the history, philosophy, and ontology of geography, including its various subfields. Three lecture hours a week for one semester. Required of all first-year graduate students in geography. Prerequisite: Graduate standing in geography, or graduate standing and consent of the graduate adviser.
GRG 390L. Research in Geography.
Builds on topics explored in Geography 390K by focusing on epistemology and research in the field of geography. Students develop plans for research and write a research proposal. Three lecture hours a week for one semester. Required of all first-year graduate students in geography. Prerequisite: Graduate standing and Geography 390K.

GRG 390S. Environment, Development, and Food Production.
Assessment of various types of nonmechanized agriculture with regard to environmental factors and management techniques. Three lecture hours a week for one semester. Geography 339K and 390S may not both be counted. Prerequisite: Graduate standing and consent of instructor.

GRG 391C. Dynamics of Earth Systems.
An overview of climate, vegetation, soil, and landform processes. Principles and methodology of physical geography. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

GRG 391M. Multivariate Techniques in Spatial Analysis.
The application of multivariate data analytic techniques including regression, factor, canonical, and discriminatory analysis of spatial problems. Three lecture hours a week for one semester. Prerequisite: Graduate standing, and Geography 360L or a basic course in inferential statistics.

GRG 392C. The Anthropocene in the Longue Duree.
Explore the "Anthropocene" (early to future) from the perspectives of multiple disciplines including geography, anthropology, archaeology, geology, and ecology. Discuss its drivers, its historical roots, and its chronologies. Three lecture hours a week for one semester. Geography 392C and 396T (Topic: Anthropocene In The Longue Dur) may not both be counted. Prerequisite: Graduate standing and consent of instructor.

GRG 392D. Grant Writing in Geography.
Designed to train students to write competitive and successful applications for extramural grants and fellowships. One lecture hour a week for one semester. Prerequisite: Graduate standing.

GRG 392M. Seminar in Biodiversity Conservation.
Examines issues that involve the conservation and sustainable use of plants, animals, and ecosystems. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

GRG 393C. Seminar in Digital Landscapes.
Explores the theoretical and applied issues associated with the acquisition, analysis, simulation, and visualization of digital geographic information, with an emphasis on current trends in landscape characterization, landscape ecology, biodiversity, global change, environmental remote sensing, and socio-ecological systems. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

GRG 393D. Geographical Information Systems and Ecological Modeling.
Covers the steps involved in conceptualizing and formulating predictive models in a raster geographical information systems environment. Although many of the topics covered are fairly generic and can be applied to any application area in which raster data are used, species distribution models will be used as the example application area. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

Imagery generated by remote sensors applied to research and problem solving in the physical and cultural environment. Three lecture hours and two laboratory hours a week for one semester. Prerequisite: Graduate standing.

GRG 393M. Advanced Remote Sensing and Quantitative Landscape Ecology.
Advanced digital image processing of optical satellite imagery for landscape composition and pattern analysis. Three lecture hours and one and one-half discussion hours a week for one semester. Prerequisite: Graduate standing, and Geography 393K or the equivalent or consent of instructor.

GRG 394. Seminar in Urban Analysis.
Research seminar in urban issues: demographic, environmental, and transportation modeling; metropolitan finance; and urban social pathologies. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

GRG 394F. Feminist Geographies.
Uses a feminist geographic lens to interrogate a range of historical and contemporary geopolitical and geoecological issues including (re)productive labor struggles, migration, development, globalization, colonialism, nationalism, militarization and transnational resistance movements. Three lecture hours a week for one semester. Only one of the following may be counted: Geography 394F, 396T (Topic: Feminist Geographies), Women and Gender Studies 393 (Topic: Feminist Geographies). Prerequisite: Graduate standing.

GRG 394L. Advanced Applications of Information Technology.
Advanced issues in computer cartography, geographic information systems, three-dimensional environmental reconstruction and rendering, terrain modeling, animation of environmental processes, and hypertext and multimedia authoring. Interdisciplinary subjects, such as the application of geographic information systems to archaeological research, historical demography, and habitat mapping and analysis. Three lecture hours a week for one semester. Prerequisite: Graduate standing and consent of instructor.

Same as Anthropology 395K. A graduate-level introduction to cultural behavior, adaptation, evolution and transformation, with emphasis on demography, diffusion, migration, ethnicity, and institutions. Three lecture hours a week for one semester. Prerequisite: Graduate standing in anthropology, geography, or a related field, and consent of instructor.

GRG 395D. Latin American Cultures, Environment, and Development.
Same as Latin American Studies 388 (Topic 3: Latin American Cultures, Environment, and Development). Exploration through Latin American examples of issues of cultural identity and territory, adaptive strategies, environmental impact, conservation, cultural survival, parks and people, and sustainable development. Three lecture hours a week for one semester. Prerequisite: Graduate standing and consent of instructor.

GRG 395K. Getting and Staying Funded.
Written, oral, and multi-media skills for improved success in academic and non-academic professional arenas including, but not limited to, grant and thesis proposal writing, CV and job application writing, audience-targeted formal and informal oral presentations, multimedia production
(e.g., poster, video), and career timeline planning. Three lecture hours a week for one semester. Only one of the following may be counted:

**GRG 395K, 396T (Topic: Advanced Proposal Writing Bootcamp), 396T (Topic: Strategic Communication/Advanced Proposal Writing).** Prerequisite: Graduate standing.

**GRG 396. Techniques in Pollen Analysis.**
Field sampling, laboratory processing, microscopy, pollen grain morphology, pollen counting, and data-handling techniques. Two lecture hours and four laboratory hours a week for one semester. Prerequisite: Graduate standing and consent of instructor.

**GRG 396C. Seminar in Current Geographic Research.**
Review and discussion of recent research projects across the field of geography; includes analysis of theories and methodologies, and various methods for presenting results. Three lecture hours a week for one semester. Offered on the credit/no credit basis only. Prerequisite: Graduate standing in geography or a related field, and consent of instructor.

**GRG 396K. Quaternary Palynology.**
Methods, principles, and applications of pollen analysis to vegetational, paleoenvironmental, and ethnobotanical reconstructions. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

**GRG 396T. Topics in Geography.**
Three lecture hours a week for one semester. Some topics may require additional field trips. May be repeated for credit when the topics vary. Prerequisite: Graduate standing; additional prerequisites vary with the topic.

**GRG 197, 297, 397. Conference Course in Geography.**
Supervised study and research. For every hour of credit earned, the equivalent of one lecture hour a week for one semester. May be repeated for credit. Prerequisite: Graduate standing and consent of supervising professor.

**GRG 698. Thesis.**
The equivalent of three lecture hours a week for two semesters. Offered on the credit/no credit basis only. Prerequisite: For 698A, graduate standing in geography and consent of the graduate adviser; for 698B, Geography 698A.

**GRG 398R. Master’s Report.**
Preparation of a report to fulfill the requirement for the master’s degree under the report option. The equivalent of three lecture hours a week for one semester. Offered on the credit/no credit basis only. Prerequisite: Graduate standing in geography and consent of the graduate adviser.

**GRG 398T. Supervised Teaching in Geography.**
Teaching under the close supervision of the course instructor; group meetings with the instructor, individual consultations, and reports throughout the teaching period. Three lecture hours a week for one semester. Prerequisite: Graduate standing and appointment as a teaching assistant.

**GRG 399W, 699W, 999W. Dissertation.**
May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Admission to candidacy for the doctoral degree.

**Professional Courses**
GSD - German, Scandinavian, and Dutch Studies

German, Scandinavian, and Dutch Studies: GSD

Lower-Division Courses

GSD 301. Introduction to the Study of Northern Europe.
Same as European Studies 307 (Topic 3). Introduces significant moments in and monumets from the cultural histories of the German-speaking, Scandinavian, and Dutch nations from their beginnings to the present. Designed to discuss representative problems in research and analysis in cultural studies and the humanities. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 307 (Topic: Introduction to the Study of Northern Europe), 307 (Topic 3), German, Scandinavian, and Dutch Studies 301.

GSD 310. Introductory Topics on Northern Europe.
Introduction to important topics in the history of Northern Europe's culture, including areas from history, the arts, film studies, language and linguistics, and literature. Three lecture hours a week for one semester. Only one of the following may be counted unless the topics vary: German, Scandinavian, and Dutch Studies 310, Germanic Civilization 301, and Scandinavian 302. May be repeated for credit when the topics vary.

Topic 1: American Jews: The Yiddish Experience. Same as American Studies 315 (Topic 6), Jewish Studies 311 (Topic 9), and Religious Studies 316E. Focuses on over a century of Yiddish-based contributions to American literature, music, and film, including works by Isaac Bashevis Singer, Michael Chabon, Woody Allen, and the Marx Brothers. Three lecture hours a week for one semester. Only one of the following may be counted: American Studies 315 (Topic 4), 315 (Topic 6); German, Scandinavian, and Dutch Studies 310 (Topic 1); Jewish Studies 311 (Topic 6), 311 (Topic 9); Religious Studies 313 (Topic 1), 316k (Topic 2), 316E.

GSD 311C. Movies Go To War.
Same as American Studies 315C, Comparative Literature 305 (Topic 3), and European Studies 307 (Topic 4). A comparison of films from various nations about major twentieth century wars to the historical facts of the conflicts as practiced in critical comparative analysis of histories as representations. Only one of the following may be counted: American Studies 315 (Topic: Movies Go to War, World War I to Vietnam), 315C, Comparative Literature 305 (Topic: Movies Go to War, World War I to Vietnam), 305 (Topic 3), European Studies 307 (Topic: Movies Go to War, World War I to Vietnam), 307 (Topic 4), German, Scandinavian, and Dutch Studies 311C, Germanic Civilization 311 (Topic 2: Movies Go to War, World War I to Vietnam).

GSD 311D. Race and Gender Stereotypes in Germany.
Same as European Studies 306 (Topic 1). Examination of pseudoscientific popular theories of "race" and gender that developed in Germany and elsewhere in Europe in the nineteenth century, and how these affected the lives of millions and shaped current thinking about "racial" and gender differences. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 306 (Topic: Bad Blood), 306 (Topic 1), German, Scandinavian, and Dutch Studies 311D, Germanic Civilization 301 (Topic: Bad Blood).

GSD 311E. Grimms' Fairy Tales.
Same as Comparative Literature 305 (Topic 4) and European Studies 307 (Topic 5). Reading and discussion of tales from the Grimms' collection, as well as some of the relevant secondary literature. Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 305 (Topic: Grimms' Fairy Tales), 305 (Topic 4), European Studies 307 (Topic: Grimms' Fairy Tales), 307 (Topic 5), German, Scandinavian, and Dutch Studies 310 (Topic: Grimms' Fairy Tales), 311E.

GSD 311F. Germany and Globalization.
Same as American Studies 315 (Topic 8) and European Studies 308 (Topic 1). Three lecture hours a week for one semester. Only one of the following may be counted: American Studies 315 (Topic: Germany and Globalization), 315 (Topic 8), European Studies 308 (Germany and Globalization), 308 (Topic 1), German, Scandinavian, and Dutch Studies 310 (Topic: Germany and Globalization), 311F.

GSD 311G. Luther's World.
Same as European Studies 306 (Topic 6), History 304Q, and Religious Studies 315M. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 306 (Topic: Luther’s World), 306 (Topic 6), German, Scandinavian, and Dutch Studies 310 (Topic: Luther’s World), 311G, History 304Q, 306N (Topic: Luther’s World), Religious Studies 315 (Topic: Luther’s World), 315M.

Same as European Studies 307 (Topic 11). Using case studies, trace Sweden's long history with innovation, starting with classic innovations produced with direct governmental support in the eighteenth century and continuing into present day with innovations like Spotify and Swish leading the way. Three lecture hours a week for one semester. European Studies 307 (Topic 11) and German, Scandinavian, and Dutch Studies 311 may not both be counted.

This course is used to record credit the student earns while enrolled at another institution in a program administered by the University's Study Abroad Office. Credit is recorded as assigned by the study abroad adviser in the Department of Germanic Studies. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. Only one of the following may be counted: German, Scandinavian, and Dutch Studies 119S, 219S, 319S, 419S, 519S, 619S, 719S, 819S, 919S, 119S, 219S, 319S, 419S, 519S, 619S, 719S, 819S, 919S. Scandinavian 119S, 219S, 319S, 419S, 519S, 619S, 719S, 819S, 919S. May be repeated for credit when the topics vary.

Upper-Division Courses

GSD 321W. German Cultural History.
Restricted to students enrolled in the University of Wuerzburg Summer Program. Excursions, local research, and exposure to a German viewpoint on contemporary European affairs. The equivalent of three lecture hours a week for one semester. Taught in Wuerzburg, Germany. German, Scandinavian, and Dutch Studies 321W and Germanic Civilization 327E (Topic 7: German Cultural History) may not both be counted.

This course is used to record credit the student earns while enrolled at another institution in a program administered by the University's Study Abroad Office. Credit is recorded as assigned by the study abroad adviser in the Department of Germanic Studies. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. Only one of the following may be counted: German, Scandinavian, and Dutch Studies 129S, 229S, 329S, 429S, 529S, 629S, 729S, 829S, 929S, 129S, 229S, 329S, 429S, 529S,
GSD 331C. Films of Ingmar Bergman.
Same as Comparative Literature 323 (Topic 11) and European Studies 347 (Topic 13). An introduction to the films of Ingmar Bergman. Only one of the following may be counted: Comparative Literature 323 (Topic: Films of Ingmar Bergman), 323 (Topic 11), English 322 (Topic 18), European Studies 347 (Topic: Films of Ingmar Bergman), 347 (Topic 13), German, Scandinavian, and Dutch Studies 331C, Scandinavian 327 (Topic 9). Prerequisite: Upper-division standing.

GSD 331D. Feminism and Film: Women Filmmakers in Northern and Central Europe.
Same as Comparative Literature 323 (Topic 33), European Studies 347 (Topic 24), and Women's and Gender Studies 340 (Topic 65). An introduction to the work of women filmmakers from Scandinavia, Germany, as well as to the viewing and interpretation of films in general. Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic: Women Filmmakers in Northern and Central Europe), 323 (Topic 33), European Studies 347 (Topic: Women Filmmakers in Northern and Central Europe), 347 (Topic 24), German, Scandinavian, and Dutch Studies 330 (Topic: Women Filmmakers in Northern and Central Europe), 331D, Women's and Gender Studies 340 (Topic: Women Filmmakers in Northern and Central Europe), 340 (Topic 65). Prerequisite: Upper-division standing.

GSD 331E. Scandinavian Cinema Since 1980.
Same as Comparative Literature 323 (Topic 50) and European Studies 347 (Topic 36). Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic: Scandinavian Cinema Since 1980), 323 (Topic 50), European Studies 347 (Topic: Scandinavian Cinema Since 1980), 347 (Topic 36), German, Scandinavian, and Dutch Studies 330 (Topic: Scandinavian Cinema Since 1980), 331E. Prerequisite: Upper division standing.

GSD 331F. Central Europe Goes to Hollywood.
Same as American Studies 321I. Survey research tools and methods used to study the history of Hollywood film industries and the roles that films and film professionals play; based on films and industry careers connected to Central Europe. Three lecture hours a week for one semester. Only one of the following may be counted: American Studies 321 (Topic: Central Eur Goes to Hollywood), 321I, German, Scandinavian, and Dutch Studies 330 (Topic: Central Eur Goes to Hollywood), 331F, 360 (Topic: Central Eur Goes to Hollywood), Radio-Television-Film 377H (Topic: Central Eur Goes to Hollywood). Prerequisite: Upper-division standing.

GSD 341D. Social Dramas of Henrik Ibsen.
Same as Comparative Literature 323 (Topic 17), European Studies 347 (Topic 12), and Women's and Gender Studies 345 (Topic 14). A detailed introduction to Ibsen's social dramas (1877-1899), emphasizing their unity as a prolonged commentary on the society of his era and the variety of its human problems. Special emphasis on subjects such as: the family and the home; the public world of reputation, work, and citizenship; the predicaments of men and women in a male-dominated society; and the motives of our interventions into the lives of others. Only one of the following may be counted: Comparative Literature 323 (Topic: Social Dramas of Henrik Ibsen), 323 (Topic 17), English 322 (Topic 17), European Studies 347 (Topic: Social Dramas of Henrik Ibsen), 347 (Topic 12), German, Scandinavian, and Dutch Studies 341D, Women's and Gender Studies 345 (Topic 14). Prerequisite: Upper-division standing.

GSD 341E. Hans Christian Andersen.
Same as Comparative Literature 323 (Topic 12) and European Studies 347 (Topic 14). Introduction to such Hans Christian Andersen tales as "The Little Mermaid," "The Ugly Duckling," and "The Emperor's New Clothes." Examination of their author and the romantic period in which they were written, as well as their historical, philosophical, and literary context. Only one of the following may be counted: Comparative Literature 323 (Topic: Hans Christian Andersen), 323 (Topic 12), English 322 (Topic 19), European Studies 347 (Topic: Hans Christian Andersen), 347 (Topic 14), German, Scandinavian, and Dutch Studies 341E, Germanic Civilization 332E (Topic 4), Scandinavian 373 (Topic 4). Prerequisite: Upper-division standing.

GSD 341F. Women and the Holocaust.
Same as Comparative Literature 323 (Topic 19), European Studies 346 (Topic 10), Jewish Studies 363 (Topic 11), and Women's and Gender Studies 340 (Topic 50). Introduction to both the history of Jewish and German women during World War II and the Holocaust, and to women's narratives and self-representations of this period. Historical sources, memoirs, films, and interviews will be used as source material. Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic: Women's Narratives of the Holocaust and World War II), 323 (Topic 19), European Studies 346 (Topic: Women's Narratives of the Holocaust and World War II), 346 (Topic 10), German, Scandinavian, and Dutch Studies 341F, Germanic Civilization 332E (Topic: Women's Narratives of the Holocaust and World War II), Jewish Studies 363 (Topic 11), Women's and Gender Studies 340 (Topic: Women's Narratives of the Holocaust and World War II), 340 (Topic 50). Prerequisite: Upper-division standing.

GSD 341G. Isak Dinesen/Karen Blixen.
Same as Comparative Literature 323 (Topic 14), European Studies 347 (Topic 15), and Women's and Gender Studies 345 (Topic 13). An introduction to the twentieth-century Danish author Karen Blixen, focusing on her major themes such as gender and destiny, and examining her role as a literary figure. Only one of the following may be counted: Comparative Literature 323 (Topic: Isak Dinesen/Karen Blixen), 323 (Topic 14), European Studies 347 (Topic: Isak Dinesen/Karen Blixen), 347 (Topic 15), German, Scandinavian, and Dutch Studies 341G, Women's and Gender Studies 345 (Topic 13). Prerequisite: Upper-division standing.

GSD 341J. Contemporary Scandinavian Stories.
Same as Comparative Literature 323 (Topic 10) and European Studies 347 (Topic 16). An analysis of contemporary Scandinavian literature and films, how they reflect Scandinavian reality, and how Scandinavian identity is created through sports, food, and politics. Only one of the following may be counted: Comparative Literature 323 (Topic: Contemporary Scandinavian Stories), 323 (Topic 10), European Studies 347 (Topic: Contemporary Scandinavian Stories), 347 (Topic 16), German, Scandinavian, and Dutch Studies 341J, Germanic Civilization 332E (Topic: Contemporary Scandinavian Stories), Scandinavian 373 (Topic: Contemporary Scandinavian Stories). Prerequisite: Upper-division standing.

GSD 341K. The Scandinavian Contribution to World Literature.
Same as Comparative Literature 323 (Topic 16) and European Studies 347 (Topic 17). Close readings of the most influential Scandinavian texts, including works by Nobel Prize-winning authors such as Knut Hamsun and Selma Lagerlof, as well as the playwrights August Strindberg and Henrik Ibsen while addressing important themes caused by the revolutionary transition to modernity in Scandinavia around 1900, including emancipation of women and sexuality. Only one of the following may be counted: Comparative Literature 323 (Topic: The Scandinavian Contribution to World Literature), 323 (Topic 16), Scandinavian 374 (Topic 16).

GSD 341L. Vikings and Their Literature.
Same as Comparative Literature 323 (Topic 43) and European Studies 347 (Topic 35). Three lecture hours a week for one semester. Only one of the following may be counted: Anthropology 324L (Topic: Vikings and Their Literature), Comparative Literature 323 (Topic: Vikings and Their Literature), 323 (Topic 43), English 322 (Topic: Vikings and Their Literature), European Studies 347 (Topic: Vikings and Their Literature), 347 (Topic 35), German, Scandinavian, and Dutch Studies 340 (Topic: Vikings and Their Literature), 341L. Prerequisite: Upper-division standing.

GSD 341M. Arendt and de Beauvoir.
Same as Comparative Literature 323 (Topic 45), European Studies 347 (Topic 37), and Women's and Gender Studies 340 (Topic 61). Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic: Arendt And De Beauvoir), 323 (Topic 45), European Studies 347 (Topic: Arendt And De Beauvoir), 347 (Topic 37), German, Scandinavian, and Dutch Studies 340 (Topic: Arendt And De Beauvoir), 341M, Women's and Gender Studies 340 (Topic: Arendt And De Beauvoir), 340 (Topic 61). Prerequisite: Upper division standing.

GSD 341N. Nobel Prizes: Literature and Politics.
Same as Comparative Literature 323 (Topic 48) and European Studies 347 (Topic 38). An introduction to Nobel Prize winning authors from northern Europe in the context of literary prizes and the politics of literary reputation. Analyze and compare literary works, set novels into historical context, investigate what popular and scholarly reviews do, and research in both popular and scholarly sources. Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic: Nobel Prizes: Literature and Politics), 323 (Topic 48), European Studies 347 (Topic: Nobel Prizes: Literature and Politics), 347 (Topic 38), German, Scandinavian, and Dutch Studies 340 (Topic: Nobel Prizes: Literature and Politics), 341N. Prerequisite: Upper division standing.

GSD 341P. Northern European Children’s Literature.
Same as Comparative Literature 323 (Topic 47) and European Studies 347 (Topic 39). Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic: Northern European Children’s Literature), 323 (Topic 47), European Studies 347 (Topic: Northern European Children’s Literature), 347 (Topic 39), German, Scandinavian, and Dutch Studies 340 (Topic: Northern European Children’s Literature), 341P. Prerequisite: Upper division standing.

GSD 341Q. Northern European Comics.
Same as Comparative Literature 323 (Topic 49) and European Studies 347 (Topic 40). A study of graphic novels from Scandinavia, Germany, and Holland to understand the art form of comics and the influence of the cultures in which they were produced. Readings, all in English, cover various genres and time periods. Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic: Northern European Comics), 323 (Topic 49), European Studies 347 (Topic: Northern European Comics), 347 (Topic 40), German, Scandinavian, and Dutch Studies 340 (Topic: Northern European Comics), 340 (Topic 1), 341Q. Prerequisite: Upper division standing.

GSD 341S. German Media: Print to Television.
Same as Radio-Television-Film 352 (Topic 2). Examine the history of media technology and its cultural and political implication in the German (speaking) context. Three lecture hours a week for one semester. Only one of the following may be counted: German, Scandinavian, and Dutch Studies 330 (Topic: German Media: Print to TV), 341S, Radio-Television-Film 352 (Topic: German Media: Print to TV), 352 (Topic 2). Prerequisite: Fifty-four semester hours of college coursework.

GSD 351C. Language, Culture, and the Texas German Experience.
Same as American Studies 370 (Topic 47), Anthropology 324L (Topic 55), and Linguistics 373 (Topic 10). The evolution of the culture and language of German immigrants to Texas from the 1840s through the present and how they have influenced other ethnic groups in Texas. Three lectures a week for one semester. Only one of the following may be counted: American Studies 370 (Topic: Language, Culture, and the Texas German Experience), 370 (Topic 47), Anthropology 324L (Topic: Language, Culture, and the Texas German Experience), 324L (Topic 55), Germanic Civilization 327E (Topic 11) German, Scandinavian, and Dutch Studies 351C, Linguistics 350 (Topic: Language, Culture, and the Texas German Experience), 373 (Topic 10). Prerequisite: Upper-division standing.

GSD 351D. Identity, Codes, and Culture.
Same as Comparative Literature 323 (Topic 75) and Russian, East European, and Eurasian Studies 325 (Topic 48). Explore how to read identities as patterns in literary texts, linguistic and cultural corpora with digital methods, and come to a deeper understanding of individual texts and textual phenomena. Examine digital research methods, tools, and use cases. Work hands-on with literary and linguistic sources. Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic 75), German, Scandinavian, and Dutch Studies 351D, Russian, East European, and Eurasian Studies 325 (Topic 48). Prerequisite: Upper-division standing.

GSD 360. Topics in Culture and Society.
In-depth explorations of contemporary and historical moments in the cultures, social relations, cultural histories, and intellectual histories of the nations in Northern Europe and its cultural networks. Three lecture hours a week for one semester. Additional hours may be required for some topics. Only one of the following may be counted unless the topics vary: German, Scandinavian, and Dutch Studies 360, Germanic Civilization 327E, 340E, 360E, 362E, Scandinavian 327, 335. May be repeated for credit when the topics vary. Prerequisite: Upper-division standing.

**Topic 1: Holocaust Aftereffects.** Same as Comparative Literature 323 (Topic 40), European Studies 346 (Topic 23), Jewish Studies 365 (Topic 14), Religious Studies 357V, and Women’s and Gender Studies 340 (Topic 66). Explores the historical, political, psychological, theological, and cultural fallout of the Holocaust, as well as literary and cinematic responses in Europe and the United States. Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic 40), European Studies 346 (Topic 23), German, Scandinavian, and Dutch Studies 360 (Topic 1), Jewish Studies 365 (Topic 14), Liberal Arts Honors 350 (Topic: Holocaust Aftereffects), 351Q, Religious Studies 357 (Topic 18), 357V, Women’s and Gender Studies 340 (Topic: Holocaust Aftereffects), 340 (Topic 66). Additional prerequisite: Upper-division standing.

**Topic 3: Heretics and Freedom Fighters, 1350-1650.** Same as European Studies 346 (Topic 8), History 362T, and Religious Studies 357F. Explores the theologies, politics, and personal identities that emerged and passed away in this era. Three lecture hours a week for one semester. Only one of the following may be counted: Czech
GSD 361C. Introduction to Germanic Religion and Myth.
Same as European Studies 347 (Topic 3) and Religious Studies 357T. Survey of the sources and main features of Germanic religion and of the transition from paganism to Christianity in northern Europe and the Germanic territories of western Europe. Subjects include cosmogonic myths; the origin of man and of society; the concept of the soul; gods and goddesses and their mythology; and the organization of worship. Three lecture hours a week for one semester. Only one of the following may be counted: English 322 (Topic 2), European Studies 347 (Topic 3), German, Scandinavian, and Dutch Studies 361C, Religious Studies 365 (Topic 2), Religious Studies 357 (Topic 17), 357T. Prerequisite: Upper-division standing.

GSD 361D. Medieval Women Mystics.
Same as European Studies 347 (Topic 18), Religious Studies 357U, and Women's and Gender Studies 340 (Topic 51). The life and writings of Saint Birgitta of Sweden, fourteenth-century visionary, religious reformer, and pilgrim, examined and compared with her predecessor Hildegard of Bingen (Germany), her successor Margery Kempe (England), as well as Margery's mentor, Julian of Norwich. Social and historical contexts for all four of these women mystics will be explored in depth. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 347 (Topic 18), German, Scandinavian, and Dutch Studies 361D, Germanic Civilization 327E (Topic 10), Religious Studies 357 (Topic 15), 357U, Scandinavian 373 (Topic 8), Women's and Gender Studies 340 (Topic 51). Prerequisite: Upper-division standing.

GSD 361E. Tolerance in Dutch Culture.
Same as European Studies 347 (Topic 19) and Women's and Gender Studies 340 (Topic 37). The historical roots of Dutch "tolerance" and how it plays a role in current Dutch culture and attitudes towards religious, gender, and sexual differences, as well as drug use, prostitution, and euthanasia. Exploration of the stereotypes and the actuality of these Dutch attitudes and policies from an international comparative perspective. Only one of the following may be counted: European Studies 347 (Topic: Dutch Culture: Too tolerant?), 347 (Topic 19), German, Scandinavian, and Dutch Studies 361E, Germanic Civilization 327E (Topic: Dutch Culture: Too tolerant?), 340 (Topic 37). Prerequisite: Upper-division standing.

GSD 361F. Squaring the Vienna Circle.
Same as Comparative Literature 323 (Topic 18), European Studies 347 (Topic 20), and Philosophy 329F. Traces the origin of the Vienna Circle of Logical Empiricism in nineteenth-century Europe, and introduces central texts and problems of intellectual history and historical epistemology at the roots of today's analytic philosophy. Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic: Squaring the Vienna Circle), 323 (Topic 18), European Studies 347 (Topic: Squaring the Vienna Circle), 347 (Topic 20), German, Scandinavian, and Dutch Studies 361F, Germanic Civilization 362E (Topic: Squaring the Vienna Circle), Philosophy 327 (Topic: Squaring the Vienna Circle), 329F, 354 (Topic: Squaring the Vienna Circle). Prerequisite: Upper-division standing.

GSD 361G. Northern Gods, Northern Faiths: The Conversion of Scandinavians, Finns, Northern Slavs and Shamans.
Same as Religious Studies 357N and Russian, East European, and Eurasian Studies 345 (Topic 7). An introduction to the basic source texts for several pre-Christian belief systems evolving in geographic proximity and their influence on one another including pre-Christian Slavic; pre-Christian Scandinavian; pre-Christian Sami and Finnish; and ancient and modern Siberian shamanism. Three lecture hours a week for one semester. Only one of the following may be counted: German, Scandinavian, and Dutch Studies 361G, Religious Studies 357 (Topic 16), 357N, Russian, East European, and Eurasian Studies 345 (Topic 7). Prerequisite: Upper-division standing.

GSD 361J. Protest, Revolt, and Revolution in West Germany.
Same as European Studies 346 (Topic 20). Explores pivotal political and cultural movements in post-1945 West Germany, including the student movement, terrorism, feminism, the Green movement, and the anti-nuclear movement. Students engage with a wide array of primary and secondary sources ranging from literature and films to essays, newspaper articles, and speeches in order to examine the roots and results of protest, revolt, and revolution during this period of German history. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 346 (Topic: Protest, Revolt, and Revolution in Postwar Germany), 346 (Topic 20), German, Scandinavian, and Dutch Studies 360 (Topic: Protest, Revolt, and Revolution in Postwar Germany), 361J, Germanic Civilization 360E (Topic: Protest, Revolt, and Revolution in Postwar Germany). Prerequisite: Upper-division standing.

GSD 361K. German Nationalisms.
Same as European Studies 346 (Topic 22), Government 368T, and Russian, East European, and Eurasian Studies 335 (Topic 20). History of diverse views and movements regarding German national identity within their respective contexts, 1800-present. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 346 (Topic 22), German, Scandinavian, and Dutch Studies 361K, Government 365N (Topic 6), 365N (Topic 19), 368T, Russian, East European and Eurasian Studies 335 (Topic 20). Prerequisite: Upper-division standing.

GSD 361L. Anti-Semitism in History and Literature.
Same as Comparative Literature 323 (Topic 42), European Studies 346 (Topic 29), and Jewish Studies 364 (Topic 1). Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 346 (Topic: Anti-Semitism in History and Literature), 346 (Topic 29), Comparative Literature 323 (Topic: Anti-Semitism in History and Literature), 323 (Topic 42), German, Scandinavian, and Dutch Studies 360 (Topic: Anti-Semitism in History and Literature), 361L, Jewish Studies 361 (Topic: Anti-Semitism in History and Literature), 364 (Topic 1). Prerequisite: Upper-division standing.

GSD 361M. Berlin.
Same as Comparative Literature 323 (Topic 44), European Studies 347 (Topic 34), History 361F, and Urban Studies 326F. Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic: Berlin), 323 (Topic 44), European Studies 347 (Topic: Berlin), 347 (Topic 34), German, Scandinavian, and Dutch Studies 360 (Topic: Berlin), 361M, History 361F, 362G (Topic: Berlin), 362G (Topic 17), Urban Studies 326F, 353 (Topic: Berlin), 353 (Topic 7). Prerequisite: Upper-division standing.
GSD 361N. Exhibitions and Public Spectacle.
Same as Comparative Literature 323 (Topic 46), European Studies 347 (Topic 41), and Geography 320N. Investigate exhibits, world's fairs, museum, monuments, theme parks, and historical reconstructions from Europe and the US, with attention to images of how their sponsoring nations or other entities want to be seen. Examine evidence for both the good and bad sides of national pride and identity. Explore examples of how large-scale culture projects and the public interact. Consider the lasting marks left on the cities and countries sponsoring them. Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic: Exhibitionism and Public Spectacle), 323 (Topic 46), European Studies 347 (Topic: Exhibitionism and Public Spectacle), 347 (Topic 41), Geography 320N, 356T (Topic: Exhibitionism and Public Spectacle), German, Scandinavian, and Dutch Studies 360 (Topic: Exhibitionism and Public Spectacle), 361N. Prerequisite: Upper-division standing.

GSD 361P. Sports and Politics in Germany.
Same as European Studies 348 (Topic 8). Explore how fascism, communism, liberal democracy, and the current nationalist backlash against immigration have all used the popularity of sports to achieve their strategic goals, from the 1936 Nazi Olympics to Germany's 2014 World Cup victory and beyond. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 348 (Topic: Sports and Politics in Germany), 348 (Topic 8), German, Scandinavian, and Dutch Studies 360 (Topic: Sports and Politics in Germany), 361P. Prerequisite: Upper division standing.

GSD 361Q. German Scholars: US Exile.
Same as American Studies 321L, European Studies 346 (Topic 34), and Philosophy 334Q. Examine the migration of established European intellectuals into the US, due to the Second World War. Explore how they worked against their persecutors for their own cultural heritage and to influence US intellectual life. Investigate the ethical dilemmas faced in transplanting their lives and projects into new contexts. Three lecture hours a week for one semester. Only one of the following may be counted: American Studies 321 (Topic: German Scholars: US Exile), 321L, Comparative Literature 323 (Topic: German Scholars: US Exile), 323 (Topic 56), European Studies 346 (Topic: German Scholars: US Exile), 346 (Topic 34), German, Scandinavian, and Dutch Studies 360 (Topic: German Scholars: US Exile), 361Q, Philosophy 334Q, 354 (Topic: German Scholars: US Exile). Prerequisite: Upper-division standing.

GSD 361R. Viking Language: Runes and Sagas.
Same as Comparative Literature 323 (Topic 51) and European Studies 347 (Topic 42). Three lecture hours a week for one semester. Only one of the following may be counted: Comparative Literature 323 (Topic: Viking Language: Runes and Sagas), 323 (Topic 51), European Studies 347 (Topic: Viking Language: Runes and Sagas), 347 (Topic 42), German, Scandinavian, and Dutch Studies 360 (Topic: Viking Language: Runes and Sagas), 361R. Prerequisite: Upper-division standing.

GSD 361S. European Immigration to Texas in the Nineteenth Century.
Same as American Studies 321K and European Studies 346 (Topic 33). Three lecture hours a week for one semester. Only one of the following may be counted: American Studies 321 (Topic: European Immigration to Texas in the Nineteenth Century), 321K, European Studies 346 (Topic: European Immigration to Texas in the Nineteenth Century), 346 (Topic 33), German, Scandinavian, and Dutch Studies 360 (Topic: European Immigration to Texas in the Nineteenth Century), 361S. Prerequisite: Upper-division standing.

GSD 361T. Switzerland and Globalization.
Same as European Studies 348 (Topic 15) and Government 363U. Investigate how the small European country of Switzerland positions itself in a globalized world and how it competes and thrives in it. Explore the questions of how globalization impacts a small, affluent country and how its economy copes with globalization. Consider Swiss history, and its development of direct democracy, to understand Swiss exceptionalism, its response to contemporary issues, and its influence abroad. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 348 (Topic: Switzerland/Globalization), 348 (Topic 15), German, Scandinavian, and Dutch Studies 360 (Topic: Switzerland/Globalization), 361T, Government 365N (Topic: Switzerland/Globalization), 363U. Prerequisite: Upper-division standing.

GSD 361U. Politics of Memory: Germany and the United States.
Same as American Studies 321R, European Studies 348 (Topic 9), and Government 368U. Examine the role that narratives of the past play in politics and policies in both Germany and the United States, by engaging with key theoretical and empirical debates. Focus on the role of memory in German and US immigration politics. Three lecture hours a week for one semester. Only one of the following may be counted: American Studies 321 (Topic: Politics Of Memory: GER/US), 321R, European Studies 348 (Topic: Politics Of Memory: GER/US), 348 (Topic 9), German, Scandinavian, and Dutch Studies 360 (Topic: Politics Of Memory: GER/US), 361U, Government 365N (Topic: Politics Of Memory: GER/US), 368U. Prerequisite: Upper-division standing.

GSD 361V. Nazi Culture and Politics.
Same as European Studies 348 (Topic 10), Government 368V, and History 361R. Explore fundamental questions about the unique role of culture in modern democracies and dictatorships by taking an overview of culture and politics in the Third Reich. Examine questions about the relationship between political propaganda and modern entertainment, mass media and authoritarianism, political aesthetics and ideology, and the dynamics of oppression, resistance, and consent. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 348 (Topic: Nazi Culture and Politics), 348 (Topic 10), German, Scandinavian, and Dutch Studies 360 (Topic: Nazi Culture and Politics), 361V, Government 365N (Topic: Nazi Culture and Politics), 368V, History 361R, 362G (Topic: Nazi Culture and Politics). Prerequisite: Upper-division standing.

GSD 361W. Jewish Folklore.
Same as Anthropology 325T, Jewish Studies 363 (Topic 25), and Religious Studies 357P. Three lecture hours a week for one semester. Only one of the following may be counted: Anthropology 325L (Topic: Jewish Folklore), 325T, German, Scandinavian, and Dutch Studies 360 (Topic: Jewish Folklore), 361W, Jewish Studies 363 (Topic: Jewish Folklore), 363 (Topic 25), Religious Studies 357 (Topic: Jewish Folklore), 357P. Prerequisite: Upper-division standing.

GSD 362C. Globalization and the Coronavirus Pandemic.
Same as European Studies 348 (Topic 18), Government 362C, and Sociology 323G. Examine the modern globalization process that also incorporates a description of the current Coronavirus pandemic as a phenomenon that is inextricably linked with modern globalization. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 348 (Topic: Globalization/Coronavirus Pandemic), 348 (Topic: Globalization/Coronavirus Pandemic), 348 (Topic 18), German, Scandinavian, and Dutch Studies 360 (Topic: Globalization/Coronavirus Pandemic), 362C, Government 355M (Topic: Globalization/Coronavirus Pandemic), 355M (Topic: Globalization/Coronavirus Pandemic), 362C, Sociology 321K (Topic: Globalization/Coronavirus Pandemic).
GSD 362D. Memories of War.

Same as American Studies 321W, European Studies 346 (Topic 42), and Government 362S. Consider the ways the wars of the twentieth and twenty-first century are being remembered in Germany and the United States - from poems, novels and films to monuments and the controversial debates about military conflicts that the two countries have been involved in. Utilize theories of social memory, and concepts of individual and social mourning, to analyze how war affects individual lives, how societies mourn, and how remembering war impacts national identity and politics. Three lecture hours a week for one semester. Only one of the following may be counted: American Studies 321 (Topic: Memories of War), 321W, European Studies 346 (Topic: Memories of War), 346 (Topic 42), German, Scandinavian, and Dutch Studies 360 (Topic: Memories of War), 362D, Government 362S. Prerequisite: Upper-division standing.

GSD 362E. German-American Immigration and Ethnicity.

Same as American Studies 360D and History 357Q. Explore German immigration to the United States from the colonial era to the present. Examine the motivations for migration; settlement patterns; construction of identity through traditions and festivals; German American's economic, social, and cultural contributions to the United States; and challenges to assimilation. Three lecture hours a week for one semester. Only one of the following may be counted: American Studies 360D, German, Scandinavian, and Dutch Studies 360 (Topic: German-American Immigration/ETH), 362E, History 357Q. Prerequisite: Upper-division standing.

GSD 362F. Arabs and Vikings: Art and Culture.

Same as Art History 328N and Middle Eastern Studies 343 (Topic 13). Explore the art and culture of the global Middle Ages through close examination of recent films, popular and academic publications, and works of art and architecture that reveal the interconnection between the European and the Islamic worlds. Three lecture hours a week for one semester. Only one of the following may be counted: Art History 328N, 361N (Topic: Arabs/Vikings Art Culture), German, Scandinavian, and Dutch Studies 360 (Topic: Arabs/Vikings Art Culture) 362F, Middle Eastern Studies 343 (Topic: Arabs/Vikings Art Culture), 343 (Topic 13). Prerequisite: Upper-division standing.

GSD 362G. Radical Chic: Revolutions from Europe.

Same as American Studies 321M and European Studies 347 (Topic 56). Explore innovative European ideas that reshaped United States history and society: Freud and settlement houses, models for education (from Switzerland to Dewey at the University of Chicago), and the labor movement (Marx to Eugene V. Debs and Mother Jones) Three lecture hours a week for one semester. Only one of the following may be counted: American Studies 321M, European Studies 347 (Topic 56), German, Scandinavian, and Dutch Studies 362G. Prerequisite: Upper-division standing.

GSD 362I. People of the Midnight Sun - Sami Culture and Civilization.

Same as Religious Studies 356P. Examine the indigenous people of Scandinavia, the Sami, including their history, culture, and self-expression. Explore issues of indigeneity, decolonization, and religious repression. Three lecture hours a week for one semester. Only one of the following may be counted: German, Scandinavian, and Dutch Studies 360 (Topic: Midnight Sun People: Sami), 362I, Religious Studies 356P, 361 (Topic: Midnight Sun People: Sami). Prerequisite: Upper-division standing.

GSD 377. Capstone Research in German, Scandinavian, and Dutch Studies.

Work leading to assembling a capstone portfolio in German, Scandinavian, and Dutch Studies, including tutorials on norms for presentation, writing, documentation, and research. The equivalent of three lecture hours a week for one semester. Prerequisite: Upper-division standing, German, Scandinavian, and Dutch Studies 301, nine semester hours of upper-division coursework in German, Scandinavian, and Dutch Studies, and consent of instructor.

GSD 379. Conference Course in German, Scandinavian, and Dutch Studies.

Supervised individual study of selected problems in German, Scandinavian, and Dutch Studies. Conference course. May be repeated for credit. Prerequisite: Upper-division standing and consent of instructor.

GSD 679H. Honors Tutorial Course.

Supervised individual research on a literary or linguistic problem, culminating in an honors paper of some length. The equivalent of three lecture hours a week for two semesters. Prerequisite: For 679HA, upper-division standing, six semester hours of upper-division coursework in German, Scandinavian, and Dutch Studies, a University grade point average of at least 3.00, a grade point average in German, Scandinavian, and Dutch Studies of at least 3.50, and admission to the German, Scandinavian, and Dutch Studies Honors Program; for 679HB, German, Scandinavian, and Dutch Studies 679HA.

Graduate Courses

Professional Courses

H E - Human Ecology

Human Ecology: H E

Lower-Division Courses

H E 101P. Professional Development I.

Explore common career paths, identify professional and personal goals, and develop entry-level career portfolios. One lecture hour a week for one semester. Human Development and Family Sciences 340 and Human Ecology 101P may not both be counted.

H E 102P. Ethics Across Life.

Examine applied ethics in the workplace and in adult life with a focus on working in teams and organizations effectively. One lecture hour a week for one semester. Human Development and Family Sciences 340 and Human Ecology 102P may not both be counted. Prerequisite: Credit or registration for Human Ecology 101P.

H E 103P. Professional Development II.

Explore a practical approach to professional self-presentation, leadership and decision-making, and career development. One lecture hour a week for one semester. Human Development and Family Sciences 340 and Human Ecology 103P may not both be counted. Prerequisite: Human Ecology 101P and credit or registration for Human Ecology 102P.

H E 115H. Freshman Honors Seminar.

Research presentations by students, faculty, and invited scientists on current issues in human ecology, human development and family sciences, and nutrition. One lecture hour a week for one semester. Prerequisite: Admission to the honors degree option in human development and family sciences or nutrition; three semester hours of honors-designated coursework in chemistry, biology, or mathematics with a grade of at least B-; and Human Development and Family Sciences
Upper-Division Courses

H E 225H. Sophomore Honors Seminar.
Students plan, conduct, write, and present research on a current topic in human ecology. Two lecture hours a week for one semester. Prerequisite: Six semester hours of honors-designated coursework in chemistry, biology, or mathematics; concurrent enrollment in a course chosen from a list maintained in the departmental office; and consent of instructor and the departmental honors adviser.

H E 355. Problems Course.
Intensive study of selected problems of a transdisciplinary nature. The equivalent of three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Consent of instructor; additional prerequisites vary with the topic.

Topic 1: Research in Family Economics.

Graduate Courses

Problems may be chosen from the areas of family and consumer economics or textiles and apparel. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of instructor.

Professional Courses

H S - Health and Society

Health and Society: H S

Lower-Division Courses

H S 301. Introduction to Health and Society.
Same as Sociology 308S. A broad, multidisciplinary overview that introduces students to the study of health and society. Three lecture hours a week for one semester. Only one of the following may be counted: Health and Society 301, Sociology 308 (Topic: Introduction to Health and Society), 308S.

Continue exploring how social forces shape health behaviors and outcomes. Examine varied current subjects related to health, paying particular attention to methodological approaches and research designs used in the interdisciplinary health sciences. Explore career possibilities. Three lecture hours a week for one semester. Prerequisite: Health and Society 301.

H S 310P. Physical Activity and Society.
Same as Sociology 302P. Explores the way in which people are physically active in a social context - primarily in the United States. Examines how social forces influence physical activity including cultural, economic, historical, and demographic considerations. Examines physical activity on both the individual and population levels to better understand benefits and barriers to activity through the social context. Three lecture hours a week for one semester. Only one of the following may be counted: Sociology 302P; 304 (Topic: Physical Activity and Society), Health and Society 310P.

This course is used to record credit the student earns while enrolled at another institution in a program administered by the University's Study Abroad Office. Credit is recorded as assigned by the study abroad adviser in the Health and Society major. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

Upper-Division Courses

This course is used to record credit the student earns while enrolled at another institution in a program administered by the University's Study Abroad Office. Credit is recorded as assigned by the study abroad adviser in the Health and Society major. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

An overview of the health care system in the United States and analysis of health policy issues primarily from the perspective of health economics. Three lecture hours or two lecture hours and one discussion hour a week for one semester. Only one of the following may be counted: Health and Society 330, Public Health 358D, Sociology 358D. Prerequisite: Upper-division standing.

H S 330C. Climate Change and Health.
Explore the basic science of climate change, including historical changes and how they have led to health problems and wars. Focus on global warming and how it will cause health problems in the coming decades. Examine solutions and moral and ethical dimensions to both global warming and its effects on human health. Three lecture hours a week for one semester. Health and Society 330C and 340 (Topic: Climate Change and Health) may not both be counted. Prerequisite: Upper-division standing.

H S 331C. COVID-19 Social Impacts and Public Dilemmas.
Explore the COVID-19 pandemic through multiple social, cultural, and economic lenses. Consider how globalization has influenced transportation networks and economic relationships that shape infectious disease transmission in the twenty-first century. Examine the effectiveness of different public health efforts to curb the spread of this virus. Discuss how the public health efforts of different nations and international governing bodies reveal different cultural values, political realities, and healthcare systems. Three lecture hours a week for one semester. Health and Society 331C and 340 (Topic: COVID Socl Impact/Pub Dilem) may not both be counted. Prerequisite: Upper-division standing.

H S 340. Topics in Health and Society.
Selected topics on health and society. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Upper-division standing; additional prerequisites may vary with the topic.

Topic 5: Health Disparities. Examine health disparities and outcomes in four areas: core medical sociological theories and models; the biology of stress; intersections of race, class, and gender for health; and introduction to genetics and health disparities. Health and Society 340 (Topic: Health Disparities) and 340 (Topic 5) may not both be counted.

Topic 6: Cancerland. Same as Sociology 320C. Explores the social and cultural terrain of cancer research, treatment, and public policy in the United States. Three lecture hours a week for one semester. Only one of the following may be counted: Health and Society 340 (Topic 6), Sociology 320C, 321K (Topic: Cancerland). Additional prerequisite: Upper-division standing.
**Topic 7: Contemporary Practice of Medicine.** Explores what it means to be a practicing physician in contemporary America. Structured as a series of guest lectures by doctors from different medical specialties and at different stages in their careers; physician scientists and academicians; hospital administrators and related professionals; providers of medical care from international settings; and ethicists. Three lecture hours a week for one semester. Health and Society 340 (Topic 7) and Sociology 321K (Topic: Contemporary Practice of Medicine) may not both be counted. Additional prerequisite: Upper-division standing.

**Topic 8: Economic Sociology of Health.** Same as Sociology 322J. Provides a look at the economics of health and health care through a sociological lens. Examines how the multidimensional nature and distribution of health and healthcare are shaped by a variety of social and economic factors. Gain an understanding of the power of incentives, markets, and cost-benefit analysis, as well as the limits of these tools, in creating effective health care policy. Three lecture hours a week for one semester. Only one of the following may be counted: Health and Society 340 (Topic 8), Sociology 321K (Topic: Economic Sociology of Health), 322J. Additional prerequisite: Upper-division standing.

**Topic 9: Valuing Mental Health.** Explores the value of health in general and mental health specifically. Comparison of notions of health and illness, non-communicable disease and mental illness, and relative valuations in health and mental health. Development of sound, sensitive, and defensible opinions about mental health through the use of plays, poems, songs, videos, short stories, and personal accounts of illness and disability. Three lecture hours a week for one semester. Health and Society 340 (Topic 9) and Sociology 321K (Topic: Valuing Mental Health) may not both be counted. Additional prerequisite: Upper-division standing.

**Topic 11: Medical Sociology.** Same as Sociology 341C. Explores the social context of health, illness, and the health care system in American society. Discussion of the processes of medicalization and demedicalization, social factors influencing health and health care, the organization of the health care delivery system and patient outcomes, and the social meaning and experiences of illness. Three lecture hours a week for one semester. Only one of the following may be counted: Sociology 321K (Topic: Medical Sociology), 341C, or Health and Society 340 (Topic 11). Additional prerequisite: Upper-division standing.

**H S 341. Health and Justice.**
Same as Philosophy 325J. Examines ethical, political, and legal issues surrounding medicine, society, and healthcare. Three lecture hours or two lecture hours and one discussion hour a week for one semester. Only one of the following may be counted: Philosophy 325J, 365 (Topic: Health and Justice), Health and Society 341. Prerequisite: Upper-division standing.

**H S 341C. Comparative United States Health Systems.**
Examine the social and economic distribution of health and health care and how underlying social values shape both the health of a population and its approach to health care. Analyze health care systems worldwide to see what the advantages and disadvantages of these models are for different segments of society compared to the US model. Three lecture hours a week for one semester. Health and Society 340 (Topic: Comparative US Health Systems) and 341C may not both be counted. Prerequisite: Upper-division standing.

**H S 347E. Sustainability, Equity, and Health.**
Same as Geography 342S. Three lecture hours a week for one semester. Only one of the following may be counted: Geography 342S, 356 (Topic: Sustainability/Equity/Health), Health and Society 340 (Topic: Sustainability/Equity/Health), 347E. Prerequisite: Upper-division standing.

**H S 350E. Foundations of Epidemiology.**
Same as Health Education 343. Introduction to the basic tenets of epidemiology as well as the different types of epidemiological study designs. Three lecture hours a week for one semester. Only one of the following may be counted: Health Education 343, Health and Society 340 (Topic 1), 350E. Prerequisite: Consent of instructor.

**H S 378. Seminar in Health and Society.**
Focuses on a key topic or debate within the Health and Society area of study and develops students' abilities to use data and write a research or policy paper that informs that topic or debate. Three lecture hours a week for one semester. Prerequisite: Upper-division standing; and Health and Society 301 or Sociology 308S.

**H S 679H. Honors Tutorial Course.**
A supervised conference course to provide training in research and writing. The equivalent of three lecture hours a week for two semesters. Offered on the letter-grade basis only. Prerequisite: For 679HA, upper-division standing and admission to the honors program in Health and Society; for 679HB, Health and Society 679HA.

**Graduate Courses**

**Professional Courses**

**HCT - Health Care Transformation**

**Health Care Transformation: HCT**

**Lower-Division Courses**

**Upper-Division Courses**

**Graduate Courses**

**HCT 280. Aspiration, Innovation, and Inertia in Health Care.**
Review examples of successful health care transformation from around the globe. Explore changes and innovations leaders can enable in culture, strategy, and measurement to achieve high-value transformation that restores health care to its purpose–achieving better health. Two lecture hours a week for one semester. Prerequisite: Graduate standing.

**HCT 180C, 280C, 380C. Independent Study.**
Restricted to students pursuing a Master of Science in Health Care Transformation. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. May be repeated for credit. Prerequisite: Graduate standing and consent of instructor.

**HCT 281. Creating Value for Individuals and Families.**
Introduction to methodology for defining relevant patient segments, assessing patients’ unmet and unarticulated needs, and identifying outcomes that matter to patients and families. Explore the person-in-environment perspective and the social determinants of health, with the goal of understanding how high-value solutions can improve health outcomes, reduce health disparities, and enable progress toward the Quadruple Aim. Two lecture hours a week for one semester. Prerequisite: Graduate standing.

**HCT 382. Redefining Health Delivery Solutions.**
Distinguish between situations in need of process improvement and situations where new solutions need to be created to enable improved health outcomes. Explore how to reduce unwarranted variation and manage improvement cycles. Analyze process improvement techniques such as managing bottlenecks, balancing workflow, and scheduling.
Three lecture hours a week for one semester. Prerequisite: Graduate standing.

**HCT 283, 383. Systems and Technology Strategy.**
Explore the role of information and technology (IT) to support a successful strategy for creating value for individuals and families. Explore organization needs from IT systems, how technology can support strategy, and how to create a platform business that addresses a health problem. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. Health Care Transformation 383 and 390 may not both be counted. Prerequisite: Graduate standing.

**HCT 386. Health Care Finance and Payment.**
Analyze financial information in not-for-profit and for-profit contexts, as well as budgeting, forecasting, and cost and managerial accounting. Use these tools to manage strategic decisions and to explore the effects of different funding and payment approaches. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

**HCT 387. Measuring Outcomes that Matter.**
Explore the fundamentals of outcome measurement: identifying meaningful outcomes; finding and creating validated and clinically actionable measures; designing systems for collecting, analyzing, and reporting health outcomes data; and accelerating learning by clinical teams. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

**HCT 289, 389. Leadership and Communication for Managing Change.**
Explore communication and team-building skills. Assess individual strengths and weaknesses and examine how to build high-performance teams, give and receive feedback, manage ambiguity, resolve conflict, manage change, and lead transformation. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. Health Care Transformation 388 and 389 may not both be counted. Prerequisite: Graduate standing.

**HCT 292, 392. Strategy for Transformation.**
Explore how strategic thinking differs from strategic planning and how to apply concepts of uniqueness, tradeoffs, fit, and cause to articulate and achieve effective strategy. Using a variety of case examples, examine how to improve the value delivered by multi-facility or multi-location organizations as well as scale high-value initiatives for high-volume implementation. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. Health Care Transformation 391 and 392 may not both be counted. Prerequisite: Graduate standing.

**HCT 396C. Project Planning and Preparation.**
Design an action learning project aimed at improving some aspect of health and/or health care in a team setting. Includes background research, identifying an organizational setting and client, creating a business proposition and project “pitch,” and creating measurement and analysis plans. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. Prerequisite: Graduate standing.

**HCT 297C, 397C. Project Measurement and Implementation.**
Implement a project, conduct outcome measurement, analyze the organizational setting and team, and gather data for analysis. Refine goals, outcomes, and analysis plans to adapt to meet the needs of the selected project. For each semester hour of credit earned, one lecture hour a week for one semester. Prerequisite: Graduate standing.

**HCT 198C, 298C, 398C. Project Evaluation and Dissemination.**
Analyze experiential learning project results, write a final report, and design a final poster to present to classmates, faculty, and organizational sponsors. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. Prerequisite: Graduate standing.

**Professional Courses**

**HDF - Human Development and Family Sciences**

**Human Development and Family Sciences:**

**HDF Lower-Division Courses**

**HDF 304 (TCCN: TECA 1303). Family Relationships.**
Same as Women's and Gender Studies 301 (Topic 4). The process of family interaction over the life cycle. Application of research findings to the understanding of relationships. Only one of the following may be counted: Human Development and Family Sciences 304, 304H, Women's and Gender Studies 301 (Topic 4).

**HDF 304H. Family Relationships: Honors.**
The process of family interaction over the life cycle. Application of research findings to the understanding of relationships. Three lecture hours a week for one semester. Only one of the following may be counted: Human Development and Family Sciences 304, 304H, Women's and Gender Studies 301 (Topic 4). Offered on the letter-grade basis only. Prerequisite: Consent of the department.

**HDF 305. Health and Development Across the Lifespan.**
Investigate the experiences of health and well-being across the life span of both individuals and families. Apply research findings to explore how physical and mental health are influenced by societal contexts. Three lecture hours a week for one semester.

**HDF 306. Introduction to Gender and Sexuality.**
Same as Women's and Gender Studies 301 (Topic 31). Explore social, emotional, cognitive, and physical aspects of gender and sexuality within the contexts of individual human development, families, and cultures. Three lecture hours a week for one semester.

**HDF 312. Family Resource Management.**
Management concepts and theory in resource allocation used to meet family and life demands. Three lecture hours a week for one semester. Prerequisite: Credit or registration for Human Development and Family Sciences 304.

**HDF 313 (TCCN: TECA 1354). Child Development.**
Same as Women's and Gender Studies 313. Motor, language, cognitive, social, and emotional development in the family context. Three lecture hours a week for one semester. Only one of the following may be counted: Human Development and Family Sciences 313, 313H, 313. Prerequisite: Credit or registration for Human Development and Family Sciences 113L.

**HDF 313H. Child Development: Honors.**
Motor, language, social, and emotional development of children in the family context, with an emphasis on research findings and evaluations. Three lecture hours a week for one semester. Only one of the following may be counted: Human Development and Family Sciences 313, 313H, Women's and Gender Studies 301 (Topic 5: Child Development). Offered on the letter-grade basis only. Prerequisite: Credit or registration for
Human Development and Family Sciences 114H, and consent of the department.

**HDF 113L. Child Development Laboratory.**
Observe children at the University Child and Family Laboratory and relate observations to the issues discussed in related coursework. One and one-half laboratory hours a week for one semester. Human Development and Family Sciences 113L and 114H may not both be counted. Prerequisite: Credit or registration for Human Development and Family Sciences 313 or 313H, and consent of the department.

**HDF 114H. Child Development Laboratory: Honors.**
Observe children at the University Child and Family Laboratory and relate observations to the issues discussed in related coursework. One and one-half laboratory hours a week for one semester. Human Development and Family Sciences 113L and 114H may not both be counted. Prerequisite: Credit or registration for Human Development and Family Sciences 313 or 313H, and consent of the department.

**HDF 315L. Research Methods in Human Development and Family Sciences.**
Survey of research methods, including observational and experimental techniques. Three lecture hours a week for one semester. Prerequisite: Statistics and Data Sciences 302; credit with a grade of at least C- or registration for Human Development and Family Sciences 304 or 304H, 313 or 313H, and 113L.

This course is used to record credit the student earns while enrolled at another institution in a program administered by the University’s Study Abroad Office. Credit is recorded as assigned by the study abroad advisor in the School of Human Ecology. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

**Upper-Division Courses**

**HDF 322. Personal and Family Finance.**
Overview from the individual and family perspectives of financial planning tools, cash management, consumer credit, basic tax preparation, and insurance selection. Includes application of knowledge to hypothetical situations and case studies. Three lecture hours a week for one semester. Human Development and Family Sciences 322 and Finance 322F may not both be counted. Prerequisite: Upper-division standing.

This course is used to record credit the student earns while enrolled at another institution in a program administered by the University’s Study Abroad Office. Credit is recorded as assigned by the study abroad advisor in the School of Human Ecology. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

**HDF 335. Adult Development.**
Adulthood and the development, changes, and maturation that occurs, including the impact of relationships in adulthood. Three lecture hours a week for one semester. Prerequisite: Upper-division standing and Human Development and Family Sciences 313 or 313H, and 113L with a grade of at least C- in each.

**HDF 337. Personal Relationships.**
Studies intimate relationships, including dating, cohabitation, marriage, and gay and lesbian relationships, as well as situational factors that may influence basic relationship processes. Three lecture hours a week for one semester. Prerequisite: Upper-division standing; Human Development and Family Sciences 304 or 304H, and 315L with a grade of at least C- in each.

**HDF 338. Developmentally Appropriate Practices with Young Children.**
Developmentally appropriate practices, the importance of play, arranging environments, material selection, and a basic understanding about centers and activities for young children. Three lecture hours a week for one semester, with an additional three to six hours of fieldwork sometime during the semester. Prerequisite: Upper-division standing; and a grade of at least C- in one of the following: Human Development and Family Sciences 313 and 113L, 313H and 113L, or Psychology 304.

**HDF 340. Ethical, Philosophical, and Professional Development Issues.**
Explores ethical and philosophical issues; personal values and choices; professional development and leadership; and career goals, opportunities, and challenges as they relate to human development and family sciences. Three lecture hours a week for one semester. Human Development and Family Sciences 340 and Human Ecology 101P may not both be counted. Human Development and Family Sciences 340 and Human Ecology 102P may not both be counted. Human Development and Family Sciences 340 and Human Ecology 103P may not both be counted. Prerequisite: Upper-division standing.

**HDF 342. Development of Psychopathology from Infancy through Adolescence.**
A developmental approach to the study of emotional and behavioral disorders from infancy through adolescence, including attachment disorders, autism, attention deficit disorder, conduct disorder, phobias, obsessive-compulsive disorder, depression, eating disorders, and schizophrenia. Also includes contrasting theories of psychopathology, epidemiology and outcomes of childhood disorders, therapeutic approaches and their efficacy, and developmental resilience. Three lecture hours a week for one semester. Human Development and Family Sciences 342 and Psychology 339 may not both be counted. Prerequisite: Upper-division standing; Human Development and Family Sciences 313 or 313H, and 113L with a grade of at least C- in each.

**HDF 343. Human Development in Minority and Immigrant Families.**
Examines the theories of human development and cultural psychology as they apply to the developmental issues of minority and immigrant children and families. Three lecture hours a week for one semester. Human Development and Family Sciences 343 and 378K (Topic: Child Development in Minority and Immigrant Families) may not both be counted. Prerequisite: Upper-division standing and Human Development and Family Sciences 313 or 313H, 113L, and 315L with a grade of at least C- in each.

**HDF 345. Peer Relationships.**
Children’s peer relationships from toddlerhood to adolescence. Three lecture hours a week for one semester. Human Development and Family Sciences 345 and 378K (Topic: Peer Relationships) may not both be counted. Prerequisite: Upper-division standing; Human Development and Family Sciences 313 or 313H, 113L, and 315L with a grade of at least C- in each.
**HDF 347. Socioeconomic Problems of Families.**

An analysis of how socioeconomic factors, including income, education, employment, and their intersection with race and gender affect child development and family functioning. Three lecture hours a week for one semester. Prerequisite: Upper-division standing, and six semester hours of coursework in anthropology, economics, education, human development and family sciences, psychology, social work, or sociology.

**HDF 351. Infant Development and Attachment Relationships.**

The development of emerging social language and cognitive capacities during infancy and toddlerhood and the development and consequences in infant-caregiver attachment security. Three lecture hours a week for one semester. Prerequisite: Upper-division standing; and Human Development and Family Sciences 313 or 313H, 113L, and 315L, with a grade of at least C- in each.

**HDF 352. Field Experience: Community.**

Practicum in applied settings concerning human development and family sciences. One lecture hour and ten to twelve hours of fieldwork a week for one semester. May be repeated for credit. Offered on the letter-grade basis only. Prerequisite: Upper-division standing; a University grade point average of at least 2.00; the following coursework with a grade of at least C- in each course: Human Development and Family Sciences 304 or 304H, 313 or 313H, 113L, 315L, and 340; Statistics and Data Sciences 302; Mathematics 408C, 408N, 408R, or Statistics and Data Sciences 332; and nine additional semester hours of upper-division coursework in human development and family sciences. Admission by application only, filed with the Department of Human Development and Family Sciences by May 1 for enrollment in the following spring semester, or by December 1 for enrollment in the following fall semester.

**HDF 352L. Field Experience: Early Childhood.**

Study and implementation of skills necessary for planning, guiding, and interacting with young children and their families; and for the management of facilities that provide services for young children. One lecture hour and at least twenty laboratory hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Upper-division standing; and Human Development and Family Sciences 313 or 313H, 113L, and 315L, with a grade of at least C- in each.

**HDF 652F. Field Practicum: Community.**

Designed for students in their last semester. Practicum in settings concerning human development and family sciences. One lecture hour and at least twenty laboratory hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Upper-division standing; a University grade point average of at least 2.00; the following coursework with a grade of at least C- in each course: Human Development and Family Sciences 304 or 304H, 313 or 313H, 113L, 315L, and 340; Statistics and Data Sciences 302; Mathematics 408C, 408N, 408R, or Statistics and Data Sciences 332; and nine additional semester hours of upper-division coursework in human development and family sciences. Admission by application only, filed with the Department of Human Development and Family Sciences by May 1 for enrollment in the following spring semester, or by December 1 for enrollment in the following fall semester.

**HDF 652P. Field Practicum: Early Childhood.**

Designed for students in their last semester. Study and implementation of skills necessary for planning, guiding, and interacting with young children and their families; and for the management of facilities that provide services for young children. One lecture hour and at least twenty laboratory hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Upper-division standing; a University grade point average of at least 2.00; the following coursework with a grade of at least C- in each course: Human Development and Family Sciences 304 or 304H, 313 or 313H, 113L, and 315L, Statistics and Data Sciences 302; Mathematics 408C, 408N, 408R, or Statistics and Data Sciences 332; Human Development and Family Sciences 338, 340, and 466; three additional semester hours of upper-division coursework in human development and family sciences; and consent of instructor. Admission by application only, filed with the Department of Human Development and Family Sciences by May 1 for enrollment in the following spring semester, or by December 1 for enrollment in the following fall semester.
practice professional interactions with children and families. For each semester hour of credit earned, three hours of fieldwork a week. May be taken twice for credit. May be repeated for credit. Offered on the pass/fail basis only. Prerequisite: University grade point average of at least 2.00, Human Development and Family Sciences 313 or 313H with a grade of at least C; and consent of instructor.

The determinants of parenting attitudes and behavior and the effects on children of variations in sensitivity, discipline, and other aspects of parenting. Three lecture hours a week for one semester. Prerequisite: Upper-division standing and Human Development and Family Sciences 313 or 313H, 113L, and 315L with a grade of at least C- in each.

Apply research experience in areas of a transdisciplinary nature. For each semester hour of credit earned, the equivalent of three laboratory hours a week for one semester. May be taken twice for credit. May be repeated for credit. Prerequisite: Upper-division standing and Human Development and Family Sciences 304 or 304H, and 315L with a grade of at least C- in each.

HDF 360. Methods of Family Life Education.
An examination, integrating theory and applied knowledge, of the best practices for working with families. Three lecture hours a week for one semester. Prerequisite: Upper-division standing and Human Development and Family Sciences 304 or 304H, and 315L with a grade of at least C- in each.

HDF 362. Children and Public Policy.
The positive and negative effects of policy on children and the policy landscape in several major domains of child and family life in the United States and in other countries. Three lecture hours a week for one semester. Prerequisite: Six semester hours of upper-division coursework in human development and family sciences, anthropology, education, psychology, sociology, or social work.

HDF 266C. Guidance in Adult-Child Relationships.
Explore the theory and implementation of positive child and adult interactions, communication, and guidance strategies. Two lecture hours a week for one semester. Only one of the following may be counted: Human Development and Family Sciences 266C, 466, Women's and Gender Studies 345 (Topic 4: Guidance in Adult-Child Relationships), 466. Prerequisite: Credit or registration for Human Development and Family Sciences 266L, Human Development and Family Sciences 313 or 313H, and 113L or 114H and three semester hours of upper-division coursework in human development and family sciences, education, psychology, or sociology with a grade of at least C- in each; consent of instructor and consent of the department.

HDF 266L. Guidance in Adult Child Relationships Lab.
Interact with children and families at the Priscilla Pond Flawn Child and Family Laboratory while under supervision, to explore the development of skills in positive child and adult interactions, communication, guidance strategies, and observational data collection. Four hours of fieldwork a week for one semester. Only one of the following may be counted: Human Development and Family Sciences 266L, 466, Women's and Gender Studies 345 (Topic 4: Guidance in Adult-Child Relationships), 466. Prerequisite: Credit or registration for Human Development and Family Sciences 266C. Human Development and Family Sciences 313 or 313H, and 113L or 114H and three semester hours of upper-division coursework in human development and family sciences, education, psychology, or sociology, with a grade of at least C- in each; consent of instructor and consent of the department.

The biological, cognitive, and social changes that occur during the second decade of life, including the developmental issues faced by adolescents. Three lecture hours a week for one semester. Prerequisite: Upper-division standing; Human Development and Family Sciences 313 or 313H, 113L, and 315L, with a grade of at least C- in each.

HDF 372K. Families in Transition.
Analysis of interaction, transitions, and crises over the family life span. Three lecture hours a week for one semester. Prerequisite: Upper-division standing and the following courses with a grade of at least C- in each: Human Development and Family Sciences 304 or 304H, and 315L and 337.

HDF 378K. Advanced Child and Family Development.
Concepts, theories, and issues in human development and family sciences. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Six semester hours of upper-division coursework in human development and family sciences (or child development), anthropology, education, psychology, sociology, or social work, and consent of instructor.

Topic 5: Media and the Family.
Topic 6: Introduction to Early Childhood Intervention.
Topic 9: Introduction to Child Life. Introduction to the role of child life specialists in health care settings and the application of general human development principles to the care of hospitalized children and adolescents. Human Development and Family Sciences 378K (Topic: Introduction to Child Life) and 378K (Topic 9) may not both be counted.
Topic 10: Sexuality in Human Development and Family Sciences. Introduction to contemporary understandings of sexuality in the context of human development and families, organized around major subjects in the field of sexuality studies. Human Development and Family Sciences 378K (Topic: Sexuality in Human Development and Family Sciences) and 378K (Topic 10) may not both be counted.

HDF 378L. Theories of Child and Family Development.
Study and analysis of major theories in human and family development. Three lecture hours a week for one semester. Prerequisite: The following with a grade of at least C- in each: Human Development and Family Sciences 313 or 313H, 113L, 315L, and three additional semester hours of upper-division coursework in human development and family sciences.

HDF 379H. Honors Tutorial Course.
Supervised individual research on a special topic in human development and family sciences; oral presentation and preparation of a scholarly paper covering the research. May be based on laboratory, library, or field research. Conference course. May be repeated once for credit. Prerequisite: Upper-division standing, a University grade point average of at least 3.00, admission to the human development and family sciences honors program, and consent of the honors adviser. Name of honors adviser and application procedure are available in the division office.

Graduate Courses
HDF 380K. Research Methods.
Two lecture hours and one and one-half laboratory hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite:
Graduate standing in human development and family sciences, or
gradient standing and consent of instructor.

**Topic 1: Research Methods in Human Development and Family
Sciences.**

**Topic 2: Foundational Statistics and Nested Models in Human
Development and Family Sciences.** This course focuses on data
organization and statistics used in the social behavioral sciences. It
begins with a review of basic data management, inferential statistics,
graphing, advanced regression, and ANOVA, then concludes with an
introduction into the analysis of nested data.

**Topic 3: Analyzing Development and Change.**

**Topic 4: Advanced Regression and Structural Models.**

**HDF 192, 292, 392, 692. Research Problems.**

Directed research in various topics in the area of human development
and family sciences. One, two, three, or six lecture hours a week for one
semester. May be repeated for credit when the topics vary. Prerequisite:
Graduate standing in human development and family sciences, or
graduate standing and consent of instructor.

**Topic 1: Child Development.**

**Topic 2: Family Relationships.**

**Topic 3: Marital Relationships.**

**Topic 4: Peer Relationships.**

**Topic 5: Parent-Child Relationships.**

**Topic 6: The Family and Public Policy.**

**Topic 7: The Family and the Mass Media.**

**HDF 394. Graduate Seminar.**

Seminars in various topics in the area of human development and family
sciences. Three lecture hours a week for one semester. May be repeated
for credit when the topics vary. Prerequisite: Graduate standing in human
development and family sciences, or graduate standing and consent of
instructor.

**Topic 1: Parent-Child Interaction.**

**Topic 2: Family-Peer Relationships.**

**Topic 3: Marital Relationships.**

**Topic 4: Sex Roles in Family Relationships.**

**Topic 5: Immigration and the Family.**

**Topic 6: Intergenerational Parenting.**

**Topic 7: Divorce.**

**Topic 8: Family Systems Theory.**

**Topic 9: Children and Poverty.**

**Topic 10: Adult Development.**

**Topic 11: Issues in Early Childhood Development.**

**Topic 12: Attachment and Development through the Life Span.**

**Topic 13: The Self in Relationships.**

**Topic 14: Adoptive Family Relationships.**

**Topic 15: Development of Close Relationships.**

**Topic 16: Prevention, Intervention, and Evaluation in Human
Development and Family Sciences.** Human Development and Family
Sciences 394 (Topic: Prevention, Intervention, and Evaluation in Human
Development and Family Sciences) and 394 (Topic 17) may
not both be counted.

**HDF 395. Recent Advances in Human Development and
Family Sciences.**

Research and theory focused on the interplay between individual
development, family relationships, and institutions and relationships
outside the family. Three lecture hours a week for one semester. May be
repeated for credit when the topics vary. Prerequisite: Graduate standing
in human development and family sciences, or graduate standing and
consent of instructor.

**Topic 1: Child and Adolescent Development.**

**Topic 2: Contextual Influences on Individual and Family Development.**

**Topic 3: Adult Development and Aging.** A multidisciplinary overview
of adult development from young adulthood through old age.
Examines major sociological, psychological, and biological theory and
research in the field of adult development such as adult development
and the aging process from cells to social security with an emphasis
on social and emotional development, as well as psychological
aspects of adult development.

**Topic 4: The Formation and Development of Intimate Relationships.**

Critical review of theory and research on dating and marital
relationships, with an emphasis on how relationships change over
time. Subjects include attraction, relationship initiation and formation,
relationship maintenance processes and relationship dissolution.

**HDF 397P. Practicum in Human Development and Family
Sciences.**

Practicum hours to be arranged. Prerequisite: Graduate standing and
consent of the graduate adviser.

**HDF 698. Thesis.**

The equivalent of three lecture hours a week for two semesters. Offered
on the credit/no credit basis only. Prerequisite: For 698A, graduate
standing in human development and family sciences and consent of the
graduate adviser, for 698B, Human Development and Family Sciences
698A.

**HDF 398T. Supervised Teaching in Human Development and
Family Sciences.**

Teaching under close supervision, group meetings, individual
conferences, and reports. Conference course. Prerequisite: Graduate
standing and appointment as a teaching assistant.

**HDF 399W, 699W, 999W. Dissertation.**

May be repeated for credit. Offered on the credit/no credit basis only.
Prerequisite: Admission to candidacy for the doctoral degree.

**Professional Courses**

**HDO - Human Dimensions of Organizations**

**Human Dimensions of Organizations: HDO**

**Lower-Division Courses**

**HDO 301. Introduction to the Human Dimensions of
Organizations.**

Introduction to organizations and how the liberal arts can examine,
analyze, and change them. Defines organizations from a liberal arts
standpoint; survey of career opportunities related to the human
dimensions of organizations. Three lecture hours a week for one
semester.

**HDO 310. Researching People-Centered Problems.**

Introduction to mixed-methods research using active learning and
project-based assignments. Explore the basics of qualitative and
quantitative research methods, research ethics, teamwork, project
management, and problem-solving. Three lecture hours a week for one
semester. Human Dimensions of Organizations 310 and 320 may not
both be counted. Prerequisite: Human Dimensions of Organizations 301.
Upper-Division Courses

Analyze and synthesize organizational studies from a liberal arts viewpoint. Examine types of organizations, explore problems these organizations face, and consider the ways distinct methodologies might address these problems. Three lecture hours a week for one semester. Only one of the following may be counted: Cognitive science, business, philosophy, and linguistics. Three lecture hours a week for one semester. Human Dimensions of Organizations 310 and 320 may not both be counted. Prerequisite: Human Dimensions of Organizations 301.

HDO 322L. Law and Organizations.
Same as Sociology 322L. Examine the intersection of law and organizational/workplace practices. Explore how law regulates the workplace (e.g., laws about sexual harassment), how organizations do or do not comply with the law, and the ways that organizational practices may affect legal standards. Three lecture hours a week for one semester. Human Dimensions of Organizations 322L and Sociology 322L may not both be counted. Prerequisite: Forty-five semester hours of coursework.

HDO 325. Strategic Human Resources Management.
Same as Management 325. Restricted to students in a business major. Overview of the personnel function, covering recruitment, compensation, equal employment, job analysis, training, benefits, employee discipline, collective bargaining, safety, and health. Three lecture hours a week for one semester. Human Dimensions of Organizations 325 and Management 325 may not both be counted. Prerequisite: Credit or registration for Human Dimensions of Organizations 310, 320, Management 334M, 336, or 336H.

HDO 325N. Organizational Ethics.
Same as Philosophy 325N. Examine the practical and theoretical aspects of ethical issues in organizations, including philosophical, psychological, anthropological, and strategic approaches. Three lecture hours or two lecture hours and one discussion hour a week for one semester. Only one of the following may be counted: Human Dimensions of Organizations 325N, Philosophy 325N, 365 (Topic: Organizational Ethics). Prerequisite: Upper-division standing.

HDO 330. Topics in Human Dimensions of Organizations.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Upper-division standing and Human Dimensions of Organizations 301.

HDO 350. Identities in Organizations.
Explore how intersecting identities shape both individuals’ and groups’ experiences of various organizations. Three lecture hours a week for one semester. Human Dimensions of Organizations 330 (Topic: Cultural Competence in Orgs) and 350 may not both be counted. Prerequisite: Upper-division standing and Human Dimensions of Organizations 301.

HDO 359H. Honors Research I.
The equivalent of three lecture hours a week for one semester. Prerequisite: Human Dimensions of Organizations 301 and 320 with a grade of at least B-; and admission to the honors program.

HDO 365. Bias.
Same as Cognitive Science 365 and Linguistics 365. An interdisciplinary introduction to bias from the perspectives of psychology, political science, business, philosophy, and linguistics. Three lecture hours a week for one semester. Only one of the following may be counted: Cognitive Science 365, 360 (Topic: Bias), Linguistics 365, 350 (Topic: Bias), Human Dimensions of Organizations 330 (Topic: Bias), 365. Prerequisite: Upper-division standing.

HDO 379. Applying the Human Dimensions of Organizations.
Restricted to human dimensions of organizations majors. Explores multidisciplinary methods of the human dimensions of organizations with an external entity. Focus on the role of the liberal arts viewpoint in practical settings. Three lecture hours a week for one semester. Prerequisite: Upper-division standing, Human Dimensions of Organizations 320, and consent of adviser.

HDO 379H. Honors Research II.
Supervised conference course for honors candidates in Human Dimensions of Organizations. The equivalent of three lecture hours a week for one semester. Prerequisite: Human Dimensions of Organizations 359H with a grade of at least A-.

Graduate Courses

Restricted to students in the human dimensions of organizations degree program. Examines broad aspects of the role of culture in organizations through a variety of disciplinary lenses. Culture includes both global cultures, as well as cultures created by organizations. Three lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Graduate standing and consent of instructor.

HDO 381. Individual Perspectives on the Human Dimensions of Organizations.
Restricted to students in the human dimensions of organizations degree program. A general introduction to the roles of individuals in organizations from a multidisciplinary perspective. Three lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Graduate standing and consent of instructor.

HDO 382. Approaches to Leadership.
Restricted to students in the human dimensions of organizations degree program. Examines broad aspects of organizational leadership through a variety of disciplinary lenses. Three lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Graduate standing and consent of instructor.

HDO 383. Society, Culture and Organizational Diversity.
Restricted to students in the human dimensions of organizations degree program. Examines multidisciplinary frameworks for understanding society and culture in organizations. The effects of gender, race/ethnicity, sexual orientation, culture, and globalization on organizational change may be discussed. Three lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Graduate standing and consent of instructor.

HDO 384. Organizational Inertia, Decision Making and Change.
Restricted to students in the human dimensions of organizations degree program. Reviews theories and methods for understanding how organizational environments support habits, and how individuals and groups make decisions. Three lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Graduate standing and consent of instructor.

HDO 385. Organizational Ethics.
Restricted to students in the human dimensions of organizations degree program. Examines ethics as they pertain to organizational contexts. Two lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Graduate standing and consent of instructor.
HDO 386. Persuasion and Argumentation.
Restricted to students in the human dimensions of organizations degree program. Focuses on how effective persuasion works within organizations and at the individual level. Three lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Graduate standing and consent of instructor.

HDO 287. The Structure of Organizations.
Restricted to students in the human dimensions of organizations degree program. A multidisciplinary approach to understanding how money, information, and influence flow through organizations and between related organizations. Two lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Graduate standing and consent of instructor.

HDO 388. Conference Course in Human Dimensions of Organizations.
Restricted to students in the human dimensions of organizations degree program. Individual directed study of selected topics in related human dimensions of organizations field. The equivalent of three lecture hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing and consent of the graduate adviser.

HDO 289. Writing and Researching Organizations.
Restricted to students in the human dimensions of organizations degree program. Exposure to various approaches to organizational writing and research. Explores the ways these approaches might inform student Capstone Projects. Examines strategies to plan, organize, and execute an organization-based research project. Two lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Graduate standing and consent of the graduate adviser.

HDO 390. Qualitative Research Methods.
Restricted to students in the human dimensions of organizations degree program. Covers qualitative approaches to studying people in organizational settings. Approaches may include narrative, phenomenology, grounded theory, ethnography, case studies. Three lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Graduate standing and consent of instructor.

Restricted to students in the human dimensions of organizations degree program. Quantitative approaches for studying the human dimensions of organizations. Examines the mechanics and assumptions of common methods in quantitative methods, including experimental design, survey research, and quantitative coding of archival data. Emphasizes students' ability to know and identify what types of research questions are best-suited to the different quantitative approaches. Reviews the types of data that various designs produce, and some basic statistical assessments of quantitative data. Three lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Graduate standing and consent of instructor.

HDO 292. Computational Methods.
Restricted to students in the human dimensions of organizations degree program. Analyzing and interpreting data drawn from large-scale data sets. Approaches include social network analysis, web analytics, and linguistic corpus analysis. Two lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Graduate standing and consent of instructor.

HDO 695. Capstone Project.
Restricted to students in the human dimensions of organizations degree program. Focuses on the completion of the capstone project, the culmination of work in the human dimensions of organization degree.

The equivalent of six lecture hours a week for one semester. Offered on the credit/no credit basis only. Prerequisite: Graduate standing, consent of the graduate adviser, and consent of instructor.

HDO 197. Practicum in Human Dimensions of Organizations.
Restricted to students in the human dimensions of organizations degree program. Applied study in human dimensions of organizations. The equivalent of one lecture hour a week for one semester, plus additional hours to be arranged. May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Graduate standing, consent of the graduate adviser, and consent of instructor.

Professional Courses

HEB - Hebrew

Hebrew: HEB

Lower-Division Courses

HBE 601C. Intensive Hebrew I.
First semester of intensive Hebrew language instruction. Six lecture hours a week for one semester. Hebrew 601C and 506 may not both be counted. Hebrew 601C and 507 may not both be counted.

HBE 602C. Intensive Biblical Hebrew I.
Introduction to the language and texts of the Hebrew Bible, taught in the interactive style of a modern language classroom. Six lecture hours a week for one semester.

HBE 506. First-Year Hebrew I.
Not open to native speakers of Hebrew. Modern Israeli Hebrew, including the writing system, basic sentence structure, vocabulary, and simple conversation. Five lecture hours a week for one semester. Hebrew 601C and 506 may not both be counted.

HBE 507. First-Year Hebrew II.
Not open to native speakers of Hebrew. Continuation of Hebrew 506. Five lecture hours a week for one semester. Hebrew 601C and 507 may not both be counted. Prerequisite: Hebrew 506 with a grade of at least C.

HBE 611C. Intensive Hebrew II.
Second semester of intensive Hebrew language instruction. Six lecture hours a week for one semester. Hebrew 611C and 412K may not both be counted. Hebrew 611C and 412L may not both be counted. Prerequisite: Hebrew 601C or 507 with a grade of at least C.

HBE 612C. Intensive Biblical Hebrew II.
Continuing the study of the language and texts of the Hebrew Bible, taught in the interactive style of a modern language classroom. Six lecture hours a week for one semester. Prerequisite: Hebrew 602C with a grade of at least C.

HBE 412K. Second-Year Hebrew I.
Not open to native speakers of Hebrew. Modern Israeli Hebrew. Continuation of Hebrew 507 with expanded grammar and conversation. Four lecture hours a week for one semester. Hebrew 611C and 412K may not both be counted. Prerequisite: Hebrew 507 with a grade of at least C.

HBE 412L. Second-Year Hebrew II.
Not open to native speakers of Hebrew. Continuation of Hebrew 412K, with emphasis on conversation and composition. Four lecture hours a week for one semester. Hebrew 611C and 312L, 412L may not both be counted. Prerequisite: Hebrew 412K (or 312K) with a grade of at least C.

**Topics in Hebrew.**

This course is used to record credit the student earns while enrolled at another institution in a program administered by the University's Study Abroad Office. Credit is recorded as assigned by the study abroad adviser in the Department of Middle Eastern Studies. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

**Upper-Division Courses**

**HEB 320K. Hebrew via Popular Culture.**

Three lecture hours a week for one semester. Hebrew 320K and 346 (Topic: Hebrew via Popular Culture) may not both be counted. Prerequisite: Hebrew 611C or 412L (or 312L) with a grade of at least C.

**HEB 320L. Hebrew through the Media.**

Three lecture hours a week for one semester. Hebrew 346 (Topic: Hebrew through the Media) and 320L may not both be counted. Prerequisite: Hebrew 611C.

**Topics in Hebrew.**

This course is used to record credit the student earns while enrolled at another institution in a program administered by the University's Study Abroad Office. Credit is recorded as assigned by the study abroad adviser in the Department of Middle Eastern Studies. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

**Graduate Courses**

**HEB 380C. Topics in Hebrew Language.**

Taught in English with readings in Hebrew. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of instructor.

- **Topic 2: Advanced Readings in Modern Hebrew.**
- **Topic 5: Mishnaic Hebrew/Talmud Aramaic.**
- **Topic 8: Biblical Hebrew.**
- **Topic 21: The Bible in Hebrew: Genesis through Deuteronomy.** Read and analyze Genesis, Exodus, Leviticus, Numbers, and Deuteronomy in Hebrew. Hebrew 380C (Topic: Bible in Hebrew I) and 380C (Topic 21) may not both be counted.
- **Topic 22: The Bible in Hebrew: Joshua through Chronicles.** Read and analyze the Books of Joshua, Judges, Samuel, Kings, and Chronicles in Hebrew. Hebrew 380C (Topic: Bible in Hebrew II) and 380C (Topic 22) may not both be counted.
- **Topic 23: The Bible in Hebrew: Isaiah through Book of Twelve.** Read and analyze the Books of Isaiah, Jeremiah, Ezekiel, and the Book of the Twelve in Hebrew. Hebrew 380C (Topic: Bible in Hebrew III) and 380C (Topic 23) may not both be counted.
- **Topic 24: The Bible in Hebrew: Psalms through Nehemiah.** Read and analyze the Books of Psalms, Proverbs, Job, Song of Songs, Ruth, Lamentations, Ecclesiastes, Esther, Daniel, Ezra, and Nehemiah in Hebrew. Hebrew 380C (Topic: Bible in Hebrew IV) and 380C (Topic 24) may not both be counted.

**HEB 381H. Intensive Graduate Language Instruction I.**

Intensive cultural and literacy-focused training in Hebrew at the beginning level in preparation for research with Hebrew sources. Incoming students are placed in the appropriate level by means of a departmental placement test. Six lecture hours a week for one semester. Prerequisite: Graduate standing.

**HEB 381J. Intensive Graduate Language Instruction II.**

Intensive cultural and literacy-focused training in Hebrew at the intermediate level in preparation for research with Hebrew sources. Incoming students are placed in the appropriate level by means of a departmental placement test. Six lecture hours a week for one semester. Prerequisite: Graduate standing and Hebrew 381H with a grade of at least B.

**HEB 381K. Intensive Biblical Language Instruction I.**

Introduction to the language and texts of the Hebrew Bible, taught in the interactive style of a modern language classroom. Six lecture hours a week for one semester. Prerequisite: Graduate standing.

**HEB 381L. Intensive Biblical Language Instruction II.**

Continuing the study of the language and texts of the Hebrew Bible, taught in the interactive style of a modern language classroom. Six lecture hours a week for one semester. Prerequisite: Graduate standing and Hebrew 381K with a grade of at least C.

**HEB 381M. Hebrew Via Popular Culture.**

Three lecture hours a week for one semester. Prerequisite: Graduate standing and Hebrew 381J or the equivalent with a grade of at least C.
HEB 381N. Hebrew Through the Media.
Three lecture hours a week for one semester. Prerequisite: Graduate standing and Hebrew 381M or the equivalent with a grade of at least C.

HEB 384C. Topics in Hebrew Literature.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

Topic 2: Contemporary Israeli Fiction.
Topic 3: Mizrahi Writing in Israel.

Study of selected works of Hebrew literature in English translation and Israeli film and television programs with English subtitles. Three lecture hours a week for one semester; additional hours may be required for some topics. May be repeated for credit when the topics vary, but no more than six hours may be counted toward the Master of Arts or the Doctor of Philosophy in Hebrew studies. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

Topic 1: Post-Zionist Perspectives in Israeli Literature. Israeli literature through the context of the historical, cultural, and artistic movement known as post-Zionism.
Topic 2: The Book of Job: Text and Language. Hebrew 380C (Topic: The Book of Job: Text and Language) and 385 (Topic 2) may not both be counted.
Topic 3: Dead Sea Scrolls: Language and Literature.

Supervised individual study of selected problems in Hebrew studies. Conference course. May be repeated for credit. Prerequisite: Graduate standing and consent of instructor.

HEB 698. Thesis.
The equivalent of three lecture hours a week for two semesters. Offered on the credit/no credit basis only. Prerequisite: For 698A, graduate standing in Hebrew studies and consent of the graduate adviser; for 698B, Hebrew 698A.

May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Admission to candidacy for the doctoral degree.

Professional Courses

HED - Health Education

Health Education: HED

Lower-Division Courses
HED 110. Freshman Seminar.
Provides an overview of the life skills that are critical to success, such as academic, social, and health behaviors. Offered on the pass/fail basis only.

HED 311. Introduction to Health Promotion and Behavioral Science.
Restricted to health education and kinesiology majors. Provides an introduction to the concepts and core principles of health promotion and behavioral science. Three lecture hours a week for one semester. Offered on the letter-grade basis only.

HED 112. Foundations of Stress Management.
Examine stress, mindfulness, and multiple means of stress management. Explore the science of stress and how it impacts health, the history and benefits of mindfulness, and engage with different stress management practices each week; including learning the practices’ history, scientific benefits, and varying experiences. Use healthy coping strategies on a consistent basis and tools to address stressors that will arise from being a college student. One lecture hour a week for one semester. Offered on the letter-grade basis only.

This course is used to record credit the student earns while enrolled at another institution in a program administered by the University’s Study Abroad Office. Credit is recorded as assigned by the study abroad adviser in the Department of Kinesiology and Health Education. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

Upper-Division Courses
HED 127L, 227L, 327L, 627L. Fieldwork in Health Promotion.
Restricted to health education and kinesiology majors. Applied experiences in development, delivery, or evaluation of professional health promotion programs. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester, with additional hours to be arranged. No more than twelve semester hours in the following courses may be counted: Health Education 127L, 227L, 327L, 627L, Kinesiology 127L, 227L, 327L, 627L. The six-hour fieldwork/internship will require 270 hours overall or about 20 hours per week. Prerequisite: Upper-division standing, consent of the instructor, and a University grade point average of at least 2.50.

HED 628. Internship in Health Promotion.
Applied experiences in development, delivery, or evaluation of professional health promotion programs. One conference hour and seventeen hours of fieldwork a week for one semester. May be repeated once for credit. Prerequisite: Upper-division standing, consent of the director of the degree program in kinesiology, and a University grade point average of at least 2.50. A higher grade point average may be required.

HED 329K. Child and Adolescent Health.
Restricted to students in the College of Education. The foundations of child and adolescent health; health education; and the biological, environmental, and behavioral health determinants of health. Includes the application of evidence-based child and adolescent health promotion concepts; prominent health risk behaviors established during youth that increase the risk of morbidity and mortality, and the application of personal health and wellness information. Three lecture hours a week for one semester.

HED 129S, 229S, 329S, 629S. Topics in Health Education.
Restricted to health education and kinesiology majors. Credit is recorded while the student is enrolled at another institution in a program administered by the University’s Study Abroad Office. For each semester hour of credit earned, the equivalent of one lecture hour a week for one semester. Credit is recorded as assigned by the study abroad adviser in the Department of Kinesiology and Health Education. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary. May be repeated for credit when the topics vary.
HED 335. Theories of Substance Use and Abuse.
Restricted to health education and kinesiology majors. An introduction to the psychological, social, pharmacological, and cultural aspects of substance use and abuse. Includes a study and critique of the theories of substance use and abuse. Three lecture hours a week for one semester.

HED 343. Foundations of Epidemiology.
Same as Health and Society 350E. Introduction to the basic tenets of epidemiology as well as the different types of epidemiological study designs. Three lecture hours a week for one semester. Only one of the following may be counted: Health Education 343, Health and Society 340 (Topic 3), 350E. Prerequisite: Consent of instructor.

HED 350. Theories of Health Promotion Behavioral Science.
Restricted to health promotion majors. Introduction to the field of health promotion, as applicable in the fields of health and education: theories, processes, activities, and settings for health promotion practice. Three lecture hours a week for one semester. Health Education 350 and 370K (Topic 1) may not both be counted. Prerequisite: Upper-division standing, Health Education 311.

HED 351. Needs Assessment and Program Planning.
Restricted to health promotion majors. Introduction to the processes of planning, implementing, and evaluating health promotion programs. Three lecture hours a week for one semester. Only one of the following may be counted: Health Education 351, 352K (Topic 1), 371K. Prerequisite: Upper-division standing, at least 60 semester hours of coursework, and Health Education 311, 343, and 350.

Analysis and synthesis of the literature and discussion of current and specific issues in health. Three lecture hours a week for one semester. Laboratory work is required for some topics. May be repeated for credit when the topics vary. Prerequisite: Varies with the topic.

Examines psychosocial issues in adult physical and mental health within the context of adult psychological development, using a biopsychosocial approach. Examines psychosocial factors in the major health risks in adulthood and in preventative health behavior. Also considers psychosocial factors in stress and coping and their implications for health.

HED 360. Adolescent Health Risk Behavior.
Overview of the biological, psychological, social, and environmental determinants of adolescent risk-taking behavior. Focuses on selected behaviors that can result in adolescent mortality, morbidity and social problems including: violence, sexual behavior, obesity-related behaviors, depression, alcohol, tobacco, and other substance use. Three lecture hours a week for one semester. Health Education 360 and 370K (Topic 2) may not both be counted.

HED 361. Psychosocial Issues in Women’s Health.
Same as Women’s and Gender Studies 345 (Topic 35). Explores psychosocial issues in women’s physical and mental health, including traditional reproductive issues, disorders that are more common in women than in men, and the leading causes of death in women. Covers gender influences on health risk behaviors, and societal influences on women’s health through a consideration of social norms and roles. Three lecture hours a week for one semester. Only one of the following may be counted: Health Education 352K (Topic 2: Psychosocial Issues in Women’s Health), 361, Women’s and Gender Studies 345 (Topic 35). Prerequisite: Upper-division standing.

HED 364. Strategic Health Communication.
Restricted to health education majors, kinesiology majors, and youth and community studies majors. Introduces essential components of effective communication strategies and persuasive messaging techniques to aid in the development of a strategic health campaign for a client in an allied health field. Three lecture hours a week for one semester. Health Education 352K (Topic 4) and 364 may not both be counted.

HED 365. Social Determinants of Health and Health Disparities.
Explore social determinants of health and health disparities in the United States and globally, as well as strategies to address them. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

HED 366. Human Sexuality.
Introduction to health and sexuality. Explore sexuality, health, and rights and how they relate to the past, present, future, emerging issues, controversial issues, and cutting-edge areas. Examine the evolution of sexual rights, global sexual health, how health and sexuality constructs positive and negative messages throughout communities, nationally, and globally, methods to improve sexual health, and advocacy. Three lecture hours a week for one semester. Prerequisite: Upper-division standing and at least 45 semester hours of coursework.

HED 370K. Topical Seminar in Health Promotion.
Identification, causes, incidence, prevention, control, and social implications of major problems in health. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Varies with the topic.

Topic 1: Foundations of Health Promotion I. Restricted to health promotion students. Introduction to the field of health promotion, as applicable in the fields of health and education: theories, processes, activities, and settings for health promotion practice. Health Education 350 and 370K (Topic 1) may not both be counted. Additional prerequisite: Upper-division standing

Topic 3: Environmental Health. Provides an introduction to the key areas of environmental health in developed and developing countries. Using the perspectives of the population and community, the course will cover factors associated with the development of environmental health problems.

Topic 4: Public Health Challenges Along the United States-Mexico Border. Explore border health issues and health promotion strategies to address them using a bi-national framework. Health Education 370K (Topic: Publ Hlth Chalngs US/Mex Brdr) and 370K (Topic 4) may not both be counted.

HED 371K. Foundations of Health Promotion II.
Introduction to the processes of planning, implementing, and evaluating health promotion programs. Three lecture hours a week for one semester. Only one of the following may be counted: Health Education 351, 352K (Topic 1), 371K. Prerequisite: Upper-division standing and Health Education 370K (Topic 1).

HED 373. Evaluation and Research Design.
Restricted to health promotion students. Develop knowledge and application of research methods and program evaluations in health promotion settings. Subjects include experimental and non-experimental research, validity, reliability, experimental and quasi-experimental research designs, data collection procedures, measurement of health knowledge, attitudes, behaviors, and data analysis. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.
HED 178C, 278C, 378C, 678C. Fieldwork in Health.
Undergraduate research and/or experience with a health agency in the field attempting to analyze or solve community health problems through education; students are supervised by the health agency and by the kinesiology and health education faculty. For each semester hour of credit earned, two laboratory hours a week for one semester. May be repeated for credit when the topics vary. Offered on the pass/fail basis only. Prerequisite: Upper-division standing and consent of instructor.

HED 378D. Peer Health Leadership I.
Restricted to students in the University Health Services program. Literature and discussion of current and specific issues in health. One conference hour and eight hours of fieldwork a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Consent of instructor.

Topic 3: Clinic Volunteer Program. Restricted to students in the University Health Services Clinical Volunteer Program. Analysis of literature and weekly discussion of current and specific issues relating to health. Focus on teamwork and leadership skills through a group capstone presentation at the end of the semester.

HED 178E. Peer Health Leadership II.
Restricted to students in the University Health Services program. Literature and discussion of current and specific issues in health. One conference hour and two hours of fieldwork a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Consent of instructor.

Topic 3: Clinic Volunteer Program. Restricted to students in the University Health Services Clinical Volunteer Program.

HED 178F. Peer Health Leadership III.
Restricted to students in the University Health Services program. Literature and discussion of current and specific issues in health. One conference hour and two hours of fieldwork a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Consent of instructor.

Topic 3: Clinic Volunteer Program. Restricted to students in the University Health Services Clinical Volunteer Program.

HED 178G. Applied Peer Education.
Continue to examine concepts related to peer education, public health, and health promotion. Discuss campus resources and learn how to integrate that information in workshops, campus events, and public health initiatives. Work collaboratively in “pods” which aim to promote comprehensive health promotion strategies across campus. Explore group facilitation and peer-led discussion skills. One-and-one-half lecture hours and the equivalent of two service hours a week for one semester. Only one of the following may be counted: Health Education 378D (Topic 1), 378D (Topic 2), 378I. Offered on the letter-grade basis only. Prerequisite: Consent of instructor.

HED 178J. Fieldwork in Peer Education.
Continue to explore the skills necessary to be effective public health promotion peer educators. Deliver workshops, serve as mentors to the new class of peer educators, attend Longhorn Wellness Center (LWC) events, represent the LWC at campus functions, and develop initiatives and projects in committees. Examine how peer educator skills apply to professional development skills. One-and-one-half lecture hours and the equivalent of two service hours a week for one semester. Only one of the following may be counted: Health Education 178E (Topic 1), 178E (Topic 2), 178J. Offered on the pass/fail basis only. Prerequisite: Health Education 178G, 378I, and consent of instructor.

Graduate Courses
HED 386. Research Methodologies.
Disciplines of research methods, research design, data-producing techniques, treatment and interpretation of data, reporting on research. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

Topic 1: Research Methods: Proposal Writing. Additional prerequisite: Educational Psychology 371 or an equivalent introductory statistics course with a grade of at least C.

HED 395. Advanced Topical Studies.
Group and individual studies of advanced topics; critique and synthesis of research findings and of literature. The equivalent of three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing.

Topic 1: Foundations of Health Promotion.

Introduction of the business model approach as an evaluation and justification of worksite wellness.

Topic 4: Intervention Mapping: Health Promotion Program Development.
Topic 6: Theories of Health Behavior.
Topic 7: Foundations of Epidemiology.
Topic 8: Theories of Substance Abuse.
Topic 11: Human Sexuality.
Topic 12: Child and Adolescent Health Psychology. Introduction to the psychological, social, and physical aspects of childhood and adolescence. Issues are addressed from a developmental-contextual perspective.
Topic 16: Organizational and Social Change for Health Promotion.
Topic 17: Mind/Body Health. The scientific basis for mind/body health; overview of clinically tested mind/body interventions in each dimension of health: emotional, psychological, physical, spiritual, intellectual, and social.
Topic 19: Public Health Communication: Case Studies. Introduction to applications of social cognitive learning theory and innovation diffusion theory in the design of campaigns to change health behaviors.

Topic 21: Risk and Resilience in Children and Adolescents. Introduction to the theories and methods of child and adolescent risk and resilience. Examines resiliency processes in populations at elevated risk for negative outcomes and explores how empirical research contributes to the development of programs aimed at strengthening resilience in at-risk youth.

Topic 22: Politics of Health and Long-Term Care Reform. Provides graduate students with the knowledge and ability to teach in higher education. An overview of diverse instructional strategies, common issues in teaching and learning, short- and long-term planning, practical aspects of course design and management, as well as assessment and grading practices. Reviews historical perspectives on the research in teaching and learning. Three lecture hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing and written consent form.

HED 197, 397. Research Problems. Individual or group research in a specialized area of health education. The equivalent of one or three lecture hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing and written consent form.

HED 397P, 697P. Graduate Internship. Supervised practice in a professional organization or institution. The equivalent of nine or eighteen laboratory hours a week for one semester. May be repeated for credit by doctoral students. Prerequisite: Graduate standing and written consent form.

HED 698. Thesis. The equivalent of three lecture hours a week for two semesters. Offered on the credit/no credit basis only. Prerequisite: For 698A, graduate standing in health education and written consent of the graduate adviser; for 698B, Health Education 698A and written consent of the graduate adviser.

HED 399W, 699W, 999W. Dissertation. May be repeated for credit. Offered on the credit/no credit basis only. Prerequisite: Admission to candidacy for the doctoral degree.

Professional Courses

**HHM - Humanities, Health, and Medicine**

**Humanities, Health, and Medicine: HHM**

**Lower-Division Courses**

**Upper-Division Courses**

**Graduate Courses**

HHM 380. Introduction to Humanities, Health, and Medicine. Survey the history, aims, and challenges of the field of humanities, health, and medicine, as well as the field's current role in health-professional education and practice. Explore subfields within the health humanities such as the history of medicine, narrative medicine, literature and medicine, medical anthropology, disability studies, medicine and the arts, and bioethics. Three lecture hours a week for one semester. Prerequisite: Graduate standing.

HHM 383. Topics in Theories and Methods. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of the graduate advisor.
HIN 312L. Second-Year Hindi II.
Not open to native speakers of Hindi. Continuation of Hindi 312K. Three lecture hours a week for one semester. Hindi 612 and 312L may not both be counted. Prerequisite: Hindi 312K with a grade of at least C.

HIN 118. Practice in Spoken Hindi.
Not open to native speakers of Hindi. Instruction and practice in conversation for intermediate-level students. Two lecture hours a week for one semester. Prerequisite: Hindi 507 with a grade of at least C.

This course is used to record credit the student earns while enrolled at another institution in a program administered by the University's Study Abroad Office. Credit is recorded as assigned by the study abroad adviser of the Department of Asian Studies. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

Upper-Division Courses
HIN 125. Advanced Practice in Spoken Hindi.
Instruction and practice in conversation for advanced students. Two lecture hours a week for one semester. Prerequisite: Hindi 118 with a grade of at least C.

This course is used to record credit the student earns while enrolled at another institution in a program administered by the University's Study Abroad Office. Credit is recorded as assigned by the study abroad adviser in the Department of Asian Studies. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

HIN 330. Topics in Hindi Language and Literature.
Study of specific subjects related to Hindi culture as reflected in its literary productions and other modes of expression. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Hindi 312L with a grade of at least C.

Professional Courses
HIN - Hindi

Hindi: HIN

Lower-Division Courses
HIN 604. Accelerated First-Year Hindi.
For speakers of Hindi who have not studied it formally. Six lecture hours a week for one semester. Hindi 604 and 506 may not both be counted; Hindi 604 and 507 may not both be counted; Hindi 604 and Urdu 604 may not both be counted; Hindi 604 and Urdu 506 may not both be counted; Hindi 604 and Urdu 507 may not both be counted.

HIN 506. First-Year Hindi I.
Not open to native speakers of Hindi. Modern Hindi of India. Five class hours a week for one semester. Hindi 604 and 506 may not both be counted; Hindi 506 and Urdu 604 may not both be counted.

HIN 507. First-Year Hindi II.
Not open to native speakers of Hindi. Continuation of Hindi 506. Five class hours a week for one semester. Hindi 604 and 507 may not both be counted; Hindi 507 and Urdu 604 may not both be counted. Prerequisite: Hindi 506 with a grade of at least C.

Continuation of Hindi 604. Six lecture hours a week for one semester. Hindi 612 and 312K may not both be counted; Hindi 612 and 312L may not both be counted. Prerequisite: Hindi 604 with a grade of at least C.

HIN 312K. Second-Year Hindi I.
Not open to native speakers of Hindi. Modern Hindi of India. Three lecture hours a week for one semester. Hindi 612 and 312K may not both be counted. Prerequisite: Hindi 507 with a grade of at least C.

HIN 385. Topics in Humanities, Health, and Medicine.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing and consent of the graduate advisor.

HMM 386. Conference Course.
Independent study on a subject relevant to the field of humanities, health, and medicine. The equivalent of three lecture hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing and consent of the graduate advisor.

HMM 387. Internship.
The equivalent of three lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Graduate standing and consent of the graduate advisor.

HMM 698. Thesis.
The equivalent of three lecture hours a week for two semesters. Offered on the credit/no credit basis only. Prerequisite: For 698A, graduate standing, consent of the graduate advisor, and consent of instructor; for 698B, Humanities, Health, and Medicine 698A.

HMM 398R. Master's Report.
The equivalent of three lecture hours a week for one semester. Offered on the letter-grade basis only. Prerequisite: Graduate standing, consent of the graduate advisor, and consent of instructor.

Upper-Division Courses
HIN 125. Advanced Practice in Spoken Hindi.
Instruction and practice in conversation for advanced students. Two lecture hours a week for one semester. Prerequisite: Hindi 118 with a grade of at least C.

This course is used to record credit the student earns while enrolled at another institution in a program administered by the University's Study Abroad Office. Credit is recorded as assigned by the study abroad adviser in the Department of Asian Studies. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

HIN 330. Topics in Hindi Language and Literature.
Study of specific subjects related to Hindi culture as reflected in its literary productions and other modes of expression. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Hindi 312L with a grade of at least C.

Upper-Division Courses
HIN 125. Advanced Practice in Spoken Hindi.
Instruction and practice in conversation for advanced students. Two lecture hours a week for one semester. Prerequisite: Hindi 118 with a grade of at least C.

This course is used to record credit the student earns while enrolled at another institution in a program administered by the University's Study Abroad Office. Credit is recorded as assigned by the study abroad adviser in the Department of Asian Studies. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

HIN 330. Topics in Hindi Language and Literature.
Study of specific subjects related to Hindi culture as reflected in its literary productions and other modes of expression. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Hindi 312L with a grade of at least C.
HIN 330C. Discourses of Identity in Hindi Fiction.
Explore four prominent identity discourses in Hindi literature involving traditionally marginalized communities or identities in India. Consider writings from women as well as those from marginalized communities such as Dalit, Tribal, and Transgender (Hi) groups. Focus on texts in the original Hindi, as well as interactive class discussion in Hindi, to develop advanced vocabulary and grammar. Three lecture hours a week for one semester. Hindi 330 (Topic: Debates in Hindi Literature) and 330C may not both be counted. Prerequisite: Hindi 312L with a grade of at least C.

HIN 130D. Hindi Across Disciplines.
Reading and discussion of Hindi language materials related to the subject matter of another designated course in Asian studies, with a focus on linguistic and literary features, and crucial passages. One lecture hour a week for one semester. May not be counted toward fulfillment of the foreign language requirement for any bachelor's degree. May be repeated for credit. Prerequisite: Registration for an appropriate Asian studies course, and written consent of instructor on a form obtained from the undergraduate adviser.

HIN 330E. Realism and Urbanism in Hindi.
Focus on texts or films in Hindi to develop vocabulary and grammar, and explore Realism and Urbanism as two prominent themes in twentieth-century Hindi literature. Consider how authors addressed changes in life and family values in the Indian urban middle class, and how they transformed the literary taste of Hindi readership from marvelous tales to reading short stories with social critique. Three lecture hours a week for one semester. Hindi 330 (Topic: Panorama of Hindi Literature) and 330E may not both be counted. Prerequisite: Hindi 312L with a grade of at least C.

HIN 332. Style and Register in Hindi.
Practicing skills in reading, listening, writing, and speaking in everyday social situations and some formal situations. Relevant for students working toward the "Advanced" level on the American Council for the Teaching of Foreign Languages (ACTFL) proficiency scale, and equivalent to level two on the Interagency Language Roundtable (ILR) scale. Three lecture hours a week for one semester. Hindi 330 (Topic: Style and Register in Hindi) and 332 may not both be counted. Prerequisite: Hindi 312L with a grade of at least C.

HIN 360. Conference Course in Hindi Language and Literature.
Supervised individual study of selected problems in Hindi language and literature. Conference course. May be repeated for credit. Prerequisite: Upper-division standing and written consent of instructor on form obtained from the undergraduate adviser.

Graduate Courses
HIN 381. Conference Course in Hindi Language and Culture.
Supervised individual study in Hindi language or culture. The equivalent of three lecture hours a week for one semester. May be repeated for credit. Prerequisite: Graduate standing and written consent of instructor on a form obtained from the graduate coordinator.

HIN 384. Topics in Hindi Language and Culture.
Study of various aspects and periods of Hindi language and culture. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Graduate standing, and six semester hours of upper-division coursework in Hindi or consent of instructor; additional prerequisites vary with the topic.

Topic 1: Advanced Reading, Composition, and Conversation I.

Topic 2: Advanced Reading, Composition, and Conversation II. Additional prerequisite: Hindi 384 (Topic 1).

Topic 3: Readings in Hindi.

Topic 4: Contemporary Hindi Narratives. Hindi 330 (Topic 1: Contemporary Hindi Narratives) and 384 (Topic 4) may not both be counted.

Topic 5: Hindi Drama and Film. Hindi 330 (Topic 2: Hindi Drama and Film) and 384 (Topic 5) may not both be counted.

Topic 6: Hindi Literature in the Nationalist Era. Hindi 330 (Topic 3: Hindi Literature in the Nationalist Era) and 384 (Topic 6) may not both be counted.

Topic 7: Language and Identity at the Margins of Hindi Fiction. Hindi 330 (Topic 4: Language and Identity at the Margins of Hindi Fiction) and 384 (Topic 7) may not both be counted.

Topic 8: Style and Register in Hindi. Practice and improve skills in reading, listening, writing, and speaking for everyday social situations and some formal situations. Relevant to students working toward the "Advanced" level on the American Council for the Teaching of Foreign Languages (ACTFL) proficiency scale, equivalent to level 2 on the Interagency Language Roundtable (ILR) scale. Three lecture hours a week for one semester. Hindi 384 (Topic: Style and Register in Hindi) and 384 (Topic 8) may not both be counted. Additional prerequisite: Graduate standing, and reading and writing comprehension of Hindi equivalent to two academic years’ study of Hindi, or consent of instructor.

Topic 9: Discourses of Identity in Hindi Fiction. Explore four prominent identity discourses in Hindi literature involving traditionally marginalized communities or identities in India. Consider writings from women as well as those from marginalized communities such as Dalit, Tribal, and Transgender (Hi) groups. Focus on texts in the original Hindi, as well as interactive class discussion in Hindi, to develop advanced vocabulary and grammar. Hindi 384 (Topic: Debates in Hindi Literature) and 384 (Topic 9) may not both be counted.

Topic 10: Realism and Urbanism in Hindi. Focus on texts or films in Hindi to develop vocabulary and grammar, and explore Realism and Urbanism as two prominent themes in twentieth-century Hindi literature. Consider how authors addressed changes in life and family values in the Indian urban middle class, and how they transformed the literary taste of Hindi readership from marvelous tales to reading short stories with social critique. Hindi 384 (Topic: Panorama of Hindi Literature) and 384 (Topic 10) may not both be counted.

Professional Courses
HIS - History

History: HIS

Lower-Division Courses
HIS 301F (TCCN: HIST 2321). The Premodern World.
Same as Ancient History and Classical Civilization 310 (Topic 4). Survey of world history from human origins to the sixteenth century. Three lecture hours or two lecture hours and one discussion hour a week for one semester. Only one of the following may be counted: Ancient History and Classical Civilization 310 (Topic: The Premodern World), 310 (Topic 4), History 301F.

Survey of world history from the sixteenth century to the present. Three lecture hours or two lecture hours and one discussion hour a week for one semester. Only one of the following may be counted: History 301G , 301J, 306N (Topic: Modern World).
HIS 301R. Introduction to Russian, East European, and Eurasian Studies.
Same as Russian, East European, and Eurasian Studies 301. An introduction to the former Soviet Union and Eastern Europe through each of the major disciplines represented in the program: language, literature, anthropology, geography, history, government, sociology, and economics. Three lecture hours a week for one semester. Only one of the following may be counted: Government 314 (Topic 4), History 301R, 306N (Topic 4), Russian, East European, and Eurasian Studies 301.

HIS 302C. Introduction to China.
Same as Asian Studies 302C. Introduction to Chinese civilization, past and present, including religion, literature, arts, philosophy, and history. Three lecture hours a week for one semester. Only one of the following may be counted: Asian Studies 302C, History 302C, 306N (Topic: Introduction to China).

HIS 302F. Female Voices in China.
Same as Asian Studies 302E and Women's and Gender Studies 301 (Topic 33). Introduction (in translation) to the most important texts and other sources by, for, and about women in Chinese intellectual, political, social, and cultural history. Three lecture hours a week for one semester. Only one of the following may be counted: Asian Studies 301M (Topic: Female Voices in China), 302E, History 302F, Women's and Gender Studies 301 (Topic 33).

HIS 302P. Popular Culture in Modern Japan.
Same as Asian Studies 304C. Introduction to the history of popular culture in modern Japan focusing on works of literature, film, and visual culture. Three lecture hours a week for one semester. Only one of the following may be counted: Asian Studies 301M (Topic: Popular Culture in Modern Japan), 304C, History 302P.

HIS 304K. English Civilization before 1603.
Survey of English civilization from Roman times to the death of Queen Elizabeth I. Three lecture hours a week for one semester.

HIS 304L. English Civilization since 1603.
Survey of English history from the seventeenth century to the present. Three lecture hours a week for one semester.

HIS 304Q. Luther's World.
Same as European Studies 306 (Topic 6), German, Scandinavian, and Dutch Studies 311G, and Religious Studies 315M. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 306 (Topic: Luther's World), 306 (Topic 6), German, Scandinavian, and Dutch Studies 310 (Topic: Luther's World), 311G, History 304Q, 306N (Topic: Luther's World), Religious Studies 315 (Topic: Luther's World), 315M.

HIS 304R. Judaism, Christianity, and Islam: An Introduction.
Same as Jewish Studies 311 (Topic 2), Middle Eastern Studies 311C, and Religious Studies 304. Examines the intertwined historical developments of the religions of Judaism, Christianity, and Islam, and explores the principal beliefs and practices of Jews, Christians, and Muslims. Three lecture hours a week for one semester. Only one of the following may be counted: Core Texts and Ideas 304 (Topic: Judaism, Christianity, Islam), History 304R, Islamic Studies 311 (Topic 2), Jewish Studies 311 (Topic 2), Middle Eastern Studies 311C, Religious Studies 304.

HIS 304S. Jews, Pagans, and Christians.
Same as Classical Civilization 304G and Religious Studies 304G. Investigate, using a range of primary and secondary readings, how religious identity was imagined and expressed in the 4th-6th centuries CE. Examine the complex interactions of, in particular, Jews, Christians, and Pagans. Three lecture hours a week for one semester. Only one of the following may be counted: Classical Civilization 304C (Topic: Pagans/Christians Late Roman Emp), 304G, History 304S, Religious Studies 304G, 315 (Topic: Pagans/Christians Late Roman Emp).

HIS 305K. History of East Asia to 1800.
Same as Asian Studies 301M (Topic 3: History of East Asia to 1800). A survey of the traditional history and culture of China, Japan, Korea, and Vietnam. Three lecture hours a week for one semester.

HIS 305L. History of East Asia since 1800.
Same as Asian Studies 301M (Topic 4: History of East Asia since 1800). A survey of the modern history of China, Japan, Korea, and Vietnam. Three lecture hours a week for one semester.

HIS 306C. Cuisine and Culture of Central and Eastern Europe.
Same as European Studies 307 (Topic 6) and Russian, East European, and Eurasian Studies 302C. An in-depth survey of the culinary traditions, history, and practices of Central and Eastern Europe. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 307 (Topic: Cuisine and Culture of Central and Eastern Europe), 307 (Topic 6), History 306C, Russian, East European, and Eurasian Studies 302 (Topic: Cuisine and Culture of Central and Eastern Europe), 302C.

HIS 306J. Introduction to the Middle East: Adjustment and Change in Modern Times.
Same as Government 303D and Middle Eastern Studies 301L. The responses of the societies of the Middle East and North Africa (Turkey, Iran, Afghanistan, Israel, and the Arab world) to Western cultural and political challenges, primarily since about 1800. Three lecture hours a week for one semester. Only one of the following may be counted: Government 303D, 314 (Topic 3), History 306J, 306N (Topic 5), Middle Eastern Studies 301L.

HIS 306K. Introduction to the Middle East: Religious, Cultural, and Historical Foundations.
Same as Middle Eastern Studies 301K and Religious Studies 314K. A survey of the history and civilization of the Middle East from the sixth to the fourteenth century. Three lecture hours a week for one semester. Only one of the following may be counted: History 306K, Middle Eastern Studies 301K, Religious Studies 314 (Topic: Intro M East: Rel/Cul/Hist Fnd), 314K.

HIS 306N. Topics in History.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary.

**Topic 3: Key Ideas and Issues in Latin America.** Same as Latin American Studies 301. Broad introductory course to acquaint students with the main areas of interest in Latin American studies.

**Topic 7: Introduction to Islam.** Same as Asian Studies 301M (Topic 15), Middle Eastern Studies 310D, and Religious Studies 319. The beliefs, theology, history, and main social and legal institutions of Islam, including the concept of God and society, the role of women, and Islamic government and movements. Three lecture hours or two lecture hours and one discussion hour a week for one semester. Only one of the following may be counted: Asian Studies 301M (Topic 15), History 306N (Topic 7), Islamic Studies 310, Middle Eastern Studies 310D, Religious Studies 319.

**Topic 10: Jewish Civilization: Beginnings to 1492.** Same as Jewish Studies 304M, Middle Eastern Studies 310 (Topic 6), and Religious Studies 313M. Introduction to the history, culture, and religion of the Jewish people from around 1000 BC to the end of the medieval period.
Subjects may include ancient Israel, late Second Temple sectarianism, the rise of Christianity, rabbinic Judaism, medieval Jewish philosophy, Jewish mysticism, and Hebrew poetry. Three lecture hours a week for one semester. Only one of the following may be counted: History 306N (Topic: Jewish Civilization I), 306N (Topic 10), Jewish Studies 304M, 311 (Topic: Jewish Civilization I), Middle Eastern Studies 310 (Topic: Jewish Civilization: Beginnings to 1492), 310 (Topic 6), Religious Studies 313 (Topic: Jewish Civilization I), 313M.

**Topic 11: Jewish Civilization: 1492 to the Present.** Same as European Studies 306 (Topic 4), Jewish Studies 304N, and Religious Studies 313N. Subjects may include trends toward secularization, the emancipation of European Jewry, the emergence of American Jewry, the Holocaust, the establishment of the State of Israel, and the Arab-Israeli conflict. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 306 (Topic: Jewish Civilization: 1492 to the Present), 306 (Topic 4), History 306N (Topic 11), Jewish Studies 304N, 311 (Topic: Jewish Civilization: 1492 to the Present), Religious Studies 313 (Topic: Jewish Civilization: 1492 to the Present), 313N.

**Topic 13: Introduction to the History and Culture of Spain.** Same as Ancient History and Classical Civilization 310 (Topic 1) and European Studies 306 (Topic 2). The history of Spain from its beginnings in the stone age through the great social and economic upheavals of the twentieth century. Three lecture hours a week for one semester. Only one of the following may be counted: Ancient History and Classical Civilization 310 (Topic: Introduction to the History and Culture of Spain), 310 (Topic 1), European Studies 306 (Topic: Introduction to the History and Culture of Spain), 306 (Topic 2), History 306N (Topic: Introduction to the History and Culture of Spain), 306N (Topic 13).

**Topic 14: Prague, Magic, and the Struggle for Power.** Same as Russian, East European, and Eurasian Studies 302 (Topic 2). Examines historical texts from four different magical traditions to find the truth behind the fiction and the historical events that sometimes permitted and sometimes persecuted the religions, philosophies, and sciences that some call magic. Only one of the following may be counted: Czech 301K (Topic: Magic and Power in Prague: The Struggle for Power), 301K (Topic 2), History 306N (Topic: Magic and Power in Prague: The Struggle for Power), 306N (Topic 14), Religious Studies 306 (Topic: Magic and Power in Prague: The Struggle for Power), Russian, East European, and Eurasian Studies 302 (Topic: Magic and Power in Prague: The Struggle for Power), 302 (Topic 2).

**Topic 15: History of Human Sexuality.** Same as Women’s and Gender Studies 301 (Topic 28). The history of human sexuality is approached from four angles: sexual behaviors; sexual consequences; sexual regulation, and sexual science. Only one of the following may be counted: History 306N (Topic: History of Human Sexuality), 306N (Topic 15), Women’s and Gender Studies 301 (Topic: History of Human Sexuality), 301 (Topic 28).

**HIS 306Q. The Ancient Middle East.**
Same as Ancient History and Classical Civilization 310 (Topic 3), Middle Eastern Languages and Cultures 301J, and Middle Eastern Studies 301J. Survey the history of the Middle East from the beginning of the Neolithic period (9000 BCE) through the invasion of the region by Alexander the Great in 332 BCE and into the pre-Islamic era. Three lecture hours a week for one semester. Only one of the following may be counted: Ancient

**HIS 307C. Introduction to the History of India.**
Same as Asian Studies 307C. Survey of the history of the Indian subcontinent from prehistoric times to the present. Three lecture hours a week for one semester.

**HIS 307P. A History of Violence from 1500 to Present.**
Examine how violence acts as a force shaping history in the modern era. Historicize violence to understand how it has changed over time. Three lecture hours a week for one semester. History 306N (Topic: History of Violence Since 1500) and 307P may not both be counted.

**HIS 307Q. Introduction to Holocaust and Genocide Studies.**
Same as Government 307 and Jewish Studies 307. Examine interdisciplinary perspectives (including historical, political, socio-psychological, and cultural methods and insights) on genocide as a global phenomenon. Three lecture hours a week for one semester. Only one of the following may be counted: Government 307, History 307Q, Jewish Studies 307.

**HIS 309C. Medieval Material Culture.**
Same as Ancient History and Classical Civilization 310 (Topic 6) and Religious Studies 309C. Explore the history of medieval Europe primarily through the lens of material culture. Three lecture hours a week for one semester. Only one of the following may be counted: Ancient History and Classical Civilization 310 (Topic: Medieval Material Culture), 310 (Topic 6), History 306N (Topic: Medieval Material Culture), 309C, Religious Studies 309C, 315 (Topic: Medieval Material Culture).

**HIS 309J. The Roots of Religious Toleration.**

**HIS 309K (TCCN: HIST 2311). Western Civilization in Medieval Times.**
Same as Ancient History and Classical Civilization 310 (Topic 2) and Core Texts and Ideas 307E. Survey of medieval Europe from late antiquity to the fifteenth century. Three lecture hours a week for one semester. Only one of the following may be counted: Ancient History and Classical Civilization 310 (Topic: Western Civ in Medieval Times), 310 (Topic 2), Core Texts and Ideas 307E, 310 (Topic: Western Civ in Medieval Times), History 309K.

**HIS 309L (TCCN: HIST 2312). Western Civilization in Modern Times.**
Same as Core Texts and Ideas 307M. Survey of European civilization since the fifteenth century. Three lecture hours a week for one semester. Only one of the following may be counted: Core Texts and Ideas 307M, 310 (Topic: Western Civ in Modern Times), History 309L.

**HIS 309M. The Medieval Millennium in Europe.**
Same as Ancient History and Classical Civilization 310 (Topic 5). Explore new conceptions of medieval Europe by examining how the social practices, ideas, and institutions of the middle ages developed through interactions with Europe’s neighbors. Three lecture hours a week for one semester.
semester. Ancient History and Classical Civilization 310 (Topic 5) and History 309M may not both be counted.

HIS 310. Introduction to Modern Africa.
Same as African and African Diaspora Studies 310K. Introduction to modern Africa, with focus on colonial and postcolonial development in political organization, economics, sociolinguistics, and literature. Three lecture hours a week for one semester.

HIS 310E. Early Mesoamerican Religions.
Same as Anthropology 310I, Latin American Studies 310D, and Religious Studies 316M. Introduction to the study of indigenous religions in Mesoamerica, a geographic and cultural area spanning north-central Mexico through western Honduras, from approximately 250 BC - AD 1700. Examine the role of religion and ritual in daily life, as well as the lines of evidence available today for understanding them. Three lecture hours a week for one semester. Only one of the following may be counted: Anthropology 310I, History 310E, Latin American Studies 310D, Religious Studies 311 (Topic: Early Mesoamerican Religion), 316M.

Same as Latin American Studies 310 (Topic 1: Latin American Civilization: The Colonial Experience). A broad survey of the political, economic, social, and cultural aspects of the Latin American past, stressing both that area's achievements and its enduring problems. Three lecture hours a week for one semester. Only one of the following may be counted: History 310K, 346K, Latin American Studies 310 (Topic 1), 366 (Topic 2: Latin America before 1810).

HIS 310L. Latin American Civilization: The National Experience.
Same as Latin American Studies 310 (Topic 2: Latin American Civilization: The National Experience). A broad survey of the political, social, and cultural aspects of the Latin American past. Three lecture hours a week for one semester. Only one of the following may be counted: History 310L, 346L, Latin American Studies 310 (Topic 2), 366 (Topic 3: Latin America since 1810).

HIS 310M. Film and History in Latin America: Colonial Period.
Same as Latin American Studies 310 (Topic 5). Introduction to selected subjects in Latin American history and culture through film, readings, documentaries, class discussion, and lectures. Three lecture hours a week for one semester. Only one of the following may be counted: History 306N (Topic: Film History in Latin America: Colonial), 310M, Latin American Studies 310 (Topic: Film History in Latin America: Colonial), Latin American Studies 310 (Topic 5).

HIS 310N. Film and History in Latin America: Modern Period.
Same as Latin American Studies 310 (Topic 6). Introduction to selected subjects in Latin American history and culture through film, readings, documentaries, class discussion, and lectures. Three lecture hours a week for one semester. Only one of the following may be counted: History 306N (Topic: Film History in Latin America: Modern), 310N, Latin American Studies 310 (Topic: Film History in Latin America: Modern), 310 (Topic 6).

HIS 310P. Revolution and Decolonization in North Africa.
Same as Middle Eastern Studies 310P. Examine the history of anti-colonial struggles in North Africa and the victory over European colonial powers. Three lecture hours a week for one semester. Only one of the following may be counted: History 306N (Topic: Revltn/Decoloniztn N Africa), 310P, Middle Eastern Studies 310 (Topic: Revltn/Decoloniztn N Africa), 310P.

HIS 310R. Latin America and the United States.
Same as Latin American Studies 310R. An exploration of the different social, economic, political, and cultural structures and concerns that came to both divide and unite the western hemisphere (North, Central, and South America, as well as the Caribbean) following independence from Europe. Three lecture hours a week for one semester. Only one of the following may be counted: History 306N (Topic: Latin America and the US), 310R, Latin American Studies 310 (Topic: Latin America and the US), 310R.

HIS 311J. The History of Israel.
Same as Jewish Studies 311 (Topic 7) and Middle Eastern Studies 311. An introduction to the history of Israel, from the emergence of the modern Zionist movement beginning in 1881 to the present. Three lecture hours a week for one semester. Only one of the following may be counted: History 306N (Topic: History of Israel), 311J, Jewish Studies 311 (Topic: History of Israel), 311 (Topic 7), Middle Eastern Studies 310 (Topic: History of Israel), 311.

HIS 311K. Introduction to Traditional Africa.
Same as African and African Diaspora Studies 310L. Introductory, interdisciplinary course on the peoples and cultures of Africa. Three lecture hours a week for one semester.

Same as Mexican American Studies 316. Examines the origin and growth of the Mexican American community in the United States. Three lecture hours a week for one semester. History 314K and Mexican American Studies 316 may not both be counted.

HIS 315G. Introduction to American Studies.
Same as American Studies 310. An interdisciplinary introduction to the historical exploration of American culture. Three lecture hours a week for one semester. American Studies 310 and History 315G may not both be counted.

HIS 315K (TCCN: HIST 1301). The United States, 1492-1865.
Survey of United States history from the colonial period through the Civil War. Three lecture hours or two lecture hours and one discussion hour a week for one semester.

HIS 315L (TCCN: HIST 1302). The United States since 1865.
Survey of United States history since the Civil War. Three lecture hours or two lecture hours and one discussion hour a week for one semester.

HIS 317L (TCCN: HIST 2327, HIST 2381, HIST 2382). Topics in United States History.
Three lecture hours a week for one semester. May be repeated for credit when the topics vary.

Topic 1: Colonial America.
Topic 2: The Era of the American Revolution.
Topic 3: Introduction to African American History. Same as African and African Diaspora Studies 315K. Three lecture hours a week for one semester. Only one of the following may be counted: African and African Diaspora Studies 315K, 317D (Topic 1), History 317L (Topic 3).
Topic 4: Introduction to Asian American History. Same as Asian American Studies 312. Introduces students to the national and transnational histories of Asian Americans in the United States. Explores a wide range of themes related to the Asian American experience. Asian American Studies 312 and History 317L (Topic 4) may not both be counted.
Topic 5: United States Women, Sexuality, and Gender to 1865. Same as Women’s and Gender Studies 301 (Topic 11). History 317L (Topic
Topic 6: The United States in the 17th-Century Atlantic World. The United States during a period marked by the spread of knowledge and experience of the world through conflict, economic exchange, cultural creativity, exploration, New World colonization, technological innovation, and religious reformation and counter-reformation.

Topic 7: The United States and Africa. Same as African and African Diaspora Studies 315G. History of political, economic, and cultural relations between the United States and Africa from the early origins of the slave trade to the present. Three lecture hours a week for one semester. Only one of the following may be counted: African and African Diaspora Studies 315G, 317C (Topic 1), History 317L (Topic 7).

Topic 8: Introduction to Native American Histories. Same as American Studies 315O. Examine the history of Native American societies in North America from the earliest records to the present. Three lecture hours a week for one semester. Only one of the following may be counted: American Studies 315 (Topic: Intro to Native Am Histories), 315 (Topic: Intro to Amer Indian History), 315Q, History 317L (Topic 8).

Topic 9: The Black Power Movement. Same as African and African Diaspora Studies 315N. Examines the major organizations, key figures, and ideologies of the Black Power movement from the late 1960s and early 1970s. Three lecture hours a week for one semester. Only one of the following may be counted: African and African Diaspora Studies 315N, 317D (Topic 3), History 317L (Topic 9).

Topic 10: Rights in Modern America. Same as African and African Diaspora Studies 316C, American Studies 315J, and Women's and Gender Studies 301 (Topic 32). Three lecture hours a week for one semester. Only one of the following may be counted: African and African Diaspora Studies 316C, 317D (Topic: Rights in Modern America), American Studies 315 (Topic: Rights in Modern America), 315J, History 317L (Topic: Rights in Modern America), 317L (Topic 10), Women's and Gender Studies 301 (Topic: Rights in Modern America), 301 (Topic 32).

Topic 11: Latinx Histories. Same as Mexican American Studies 319 (Topic 3). Explore the cultures, politics, and policies that shape the many Latinx histories in the United States. Only one of the following may be counted: History 317L (Topic: Latino Histories), 317L (Topic 11), Mexican American Studies 319 (Topic: Latino Histories), 319 (Topic 3).

Topic 12: Mexican American Women, 1910-Present. Same as Mexican American Studies 319 (Topic 4) and Women's and Gender Studies 301 (Topic 13). Examines the history of Mexican and Mexican American women in the United States from the twentieth century to the present. Only one of the following may be counted: History 317L (Topic: Mexican American Women, 1910-Present), 317L (Topic 12), Mexican American Studies 319 (Topic: Mexican American Women, 1910-Present), 319 (Topic 4), Women's and Gender Studies 301 (Topic: Mexican American Women, 1910-Present), 301 (Topic 13).

Topic 15: Establishing America, 1565-1815. Introduction to the foundations of American History. History 317L (Topic: Establishing America, 1565-1815) and 317L (Topic 15) may not both be counted.

Topic 16: History of Religion in the United States. Same as American Studies 315 (Topic 5) and Religious Studies 316C. Examines instances of religious dominance and religious diversity in United States history. Moving from the pre-colonial period to the present, it examines the changing circumstances of several religious communities, including American Indians and Puritans, Protestant evangelicals, Mormons, Roman Catholics, Jews, Muslims, and Hindus. Three lecture hours a week for one semester. Only one of the following may be counted: American Studies 315 (Topic 5), History 317L (Topic 16), Religious Studies 316C, 316U (Topic 1).

Topic 17: Reading United States History Between the Lines. Explores how historians read between the lines and where they look for clues, looking at the many methods historians use to discover and make sense of their evidence.

Topic 18: Immigration and Ethnicity. Same as Asian American Studies 302 and Mexican American Studies 316C. Examine the changing population of the United States from colonial times to present. Three lecture hours a week for one semester. Only one of the following may be counted: Asian American Studies 302, 310 (Topic: Immigration and Ethnicity), History 317L (Topic: Immigration and Ethnicity), 317L (Topic 18), Mexican American Studies 316C, 319 (Topic: Immigration and Ethnicity).

Topic 20: Introduction to African American Women's History. Same as African and African Diaspora Studies 315I and Women's and Gender Studies 301 (Topic 34). Three lecture hours a week for one semester. Only one of the following may be counted: African and African Diaspora Studies 315I (Topic: Intro Afr Amer Women's Hist), 315I, History 317L (Topic: Intro Afr Amer Women's Hist), 317L (Topic 20), Women's and Gender Studies 301 (Topic 34).

Topic 21: American Jewish History. Same as American Studies 315Q and Jewish Studies 317. Examine the history of Jews in the United States from the seventeenth century to the present. Explore the formation of a distinct American Judaism and the involvement of Jews in American cultural and political affairs. Three lecture hours a week for one semester. Only one of the following may be counted: American Studies 315Q, History 317L (Topic: American Jewish History), 317L (Topic 21), Jewish Studies 311 (Topic: American Jewish History), 317.

Topic 22: Urban Economic Development in the United States and South Africa. Examine economic development within the United States and South Africa. History 317L (Topic: Urban Econ Development) and 317L (Topic 22) may not both be counted.

Topic 24: The Places of Mexican American History. Same as Mexican American Studies 316E. Examine Mexican American history from the point of view of three distinct places: Los Angeles, the mountains of northern New Mexico, and the far southern tip of Texas. Three lecture hours a week for one semester. Only one of the following may be counted: History 317L (Topic: Mex Amer History in US SW), 317L (Topic 24), Mexican American Studies 316E, 319 (Topic: Mex Amer History in US SW).

HIS 318N. Discovery History.
Analyze claims from popular books in the light of accurate historical sources. Introduction to the process of making discoveries in historical research. Three lecture hours a week for one semester. Only one of the following may be counted: History 317N (Topic: Discovery History), 317N (Topic 4), 318N.

HIS 318Q. Supervised Research.
Individual instruction.
HIS 319D. The Ancient Mediterranean World.
Same as Ancient History and Classical Civilization 319D and Classical Civilization 319D. Survey of the ancient Mediterranean from ca. 3000 BC to AD 476. Focus on the development of ideas and institutions in the Greek and Roman worlds and on the active cultural exchange among the diverse civilizations of the broader region that shaped Greek and Roman history and cultural identity. Three lecture hours or two lecture hours and one discussion hour per week for one semester. Only one of the following may be counted: Ancient History and Classical Civilization 319 (Topic 1), 319D, European Studies 301 (Topic: Ancient Mediterranean World), 306 (Topic: Ancient Mediterranean World), Middle Eastern Studies 310 (Topic: Ancient Mediterranean World), Classical Civilizations 319D, History 319D.

This course is used to record credit the student earns while enrolled at another institution in a program administered by the University’s Study Abroad Office. Credit is recorded as assigned by the study abroad advisor in the Department of History. University credit is awarded for work in an exchange program; it may be counted as coursework taken in residence. Transfer credit is awarded for work in an affiliated studies program. May be repeated for credit when the topics vary.

Upper-Division Courses

HIS 320E. Texas before 1900.
Same as Mexican American Studies 320E. Focus on the basic history of Texas from roughly 1450 to 1900. Investigate major events such as the Texas Revolution and Civil War with an emphasis on how and why Texas, its culture, and its groups of people changed or did not change over time. Three lecture hours a week for one semester. Only one of the following may be counted: History 320E, 320L, 320P Mexican American Studies 320E, 320L. Prerequisite: Upper-division standing.

HIS 320F. Texas, 1900 to the Present.
Same as Mexican American Studies 320F and Urban Studies 322T. Examine the steady dissociation of Texas from its Old South status to a transitional state and a power in national politics. Three lecture hours a week for one semester. Only one of the following may be counted: History 320F, 320R, Mexican American Studies 320F, 374 (Topic 16), Urban Studies 322T, 353 (Topic 2). Prerequisite: Upper-division standing.

HIS 320T. Topics in Texas History.
Explore selected topics in the field of Texas history. Three lecture hours a week for one semester. May be repeated for credit when the topics vary. Prerequisite: Upper-division standing.

**Topic 1: Mexican Americans in Texas History.** Same as Latin American Studies 366 (Topic 47) and Mexican American Studies 320J. Introduction to the historical experience of Mexican-American persons in Texas. Three lecture hours a week for one semester. Only one of the following may be counted: History 320T (Topic 1), 350R (Topic: Mexican Americans in Texas History), 350R (Topic 36), Latin American Studies 366 (Topic 47), Mexican American Studies 320J, Mexican American Studies 374 (Topic: Mexican Americans in Texas History). Additional prerequisite: Upper-division standing.

**Topic 2: Texas Black History.** Same as African and African Diaspora Studies 351J. Surveys the history of blacks in Texas from before American settlement to the present. Three lecture hours a week for one semester. Only one of the following may be counted: African and African Diaspora Studies 351J, 374D (Topic 15), History 320T (Topic 2), 365G (Topic 7). Additional prerequisite: Upper-division standing.

HIS 320W. Thinking Like a Historian.
To understand history as an academic discipline in terms of research methods, evidence, and analysis. Three lecture hours a week for one semester. Only one of the following may be counted: History 317N (Topic: Thinking Like a Historian), 317N (Topic 2), 318W, 320W. Prerequisite: Nine semester hours of coursework in history.

Same as Ancient History and Classical Civilization 325 (Topic 2). A survey of the Roman world from Augustus to Constantine the Great. Three lecture hours or two lecture hours and one discussion hour per week for one semester. Only one of the following may be counted: Ancient History and Classical Civilization 325 (Topic 2), Core Texts and Ideas 375 (Topic: History of Rome: The Empire), European Studies 346 (Topic: History of Rome: The Empire), History 321. Prerequisite: Upper-division standing.

HIS 321J. Africa and Rome.

Same as Ancient History and Classical Civilization 325 (Topic 1) and Core Texts and Ideas 327D. A survey of Roman history from the founding of Rome to the death of Julius Caesar. The equivalent of three lecture hours a week for one semester. Only one of the following may be counted: Ancient History and Classical Civilization 325 (Topic 1), Core Texts and Ideas 327D, 375 (Topic: History of Rome: The Republic), History 321M. Prerequisite: Upper-division standing.

HIS 322C. Cultural History of World Science to 1650.
Cultural history of science from ancient times to the seventeenth century. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

HIS 322D. The Scientific Revolution of the Seventeenth Century.
The history of science and its place in society from the mid-sixteenth century to the time of Isaac Newton. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

HIS 322G. History of the Modern Life Sciences.
History of the life sciences from the eighteenth century to the present. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

HIS 322M. History of Modern Science.
The history of science and its place in society from the time of Newton to the present. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

HIS 322R. Biology, Behavior, and Injustice.
Same as Core Texts and Ideas 374. Explores questions about human behavior related to biological factors as compared with personal experiences and societal standards. Three lecture hours a week for one semester. Only one of the following may be counted: Core Texts and Ideas 370 (Topic 2), 374, History 322R, 366N (Topic 16). Prerequisite: Upper-division standing.
HIS 322S. The History of Genetics and Eugenics.
The history of genetics and eugenic practices in the twentieth century. Three lecture hours a week for one semester. Prerequisite: Upper-division standing.

HIS 323L. Europe since 1919.
Same as European Studies 346 (Topic 24). Survey course emphasizing the impact of the two world wars on European social, political, and cultural life in the twentieth century. Three lecture hours a week for one semester. Only one of the following may be counted: European Studies 346 (Topic: Europe since 1919), 346 (Topic 24), History 323L. Prerequisite: Upper-division standing.

HIS 325Q. Russian Orthodox Religion and Culture.
Same as Religious Studies 357W and Russian, East European, and Eurasian Studies 325 (Topic 41). Examine the role and force of the Orthodox Church in Russian history, from the Christianization of the pagan Slavs in the 10th century, through the Russian Revolution into the Soviet era, and up to the present, while considering the prescriptive tenets of the Orthodox faith (religion) alongside descriptive experiences of life within and under Russian Orthodoxy (religiosity). Three lecture hours a week for one semester. Only one of the following may be counted: History 325Q, 366N (Topic: Rus Orthodox Religion/Cultr), Religious Studies 357 (Topic: Rus Orthodox Religion/Cultr), 357W, Russian, East European and Eurasian Studies 325 (Topic: Rus Orthodox Religion/Cultr), 325 (Topic 41). Prerequisite: Upper-division standing.
